ROYAL COMMISSION ON AGRICULTURE.

Whitehall, September 16, 1893.

The Queen has been pleased to issue a Commission, under Her Majesty's Royal Sign Manual, to the following effect :—

VICTORIA R.

Victoria, by the Grace of God of the United Kingdom of Great Britain and Ireland Queen, Defender of the Faith,

To Our right trusty and well-beloved Councillor, George John Shaw-Lefevre, First Commissioner of Works and Public Buildings, Chairman ; Our right trusty and well-beloved Cousin, Charles George Viscount Cobham; Our right trusty and well-beloved Councillor, George William Henry, Baron Vernon ; Our right trusty and well-beloved Councillor, Henry Chaplin ; Our trusty and well-beloved Sir Robert Nigel Fitzhardinge Kingscote, Knight Commander of Our Most Honourable Order of the Bath, late Lieutenant-Colonel of Our Regiment of Scots Guards, a Commissioner of Our Woods, Forests, and Land Revenues ; Our trusty and well-beloved Robert Giffen, Esquire, Companion of Our Most Honourable Order of the Bath, Doctor of Laws, one of the Assistant Secretaries to the Board of Trade ; Our trusty and well-beloved Charles Isaac Elton, Esquire, one of Our Counsel learned in the Law ; Our trusty and well-beloved Owen Thomas, Esquire, Captain in the Second Volunteer Battalion of the Royal Welsh Fusiliers ; Our trusty and well-beloved Francis Allston Channing, Esquire, Master of Arts ; Our trusty and well-beloved John Clay, Esquire ; Our trusty and well-beloved Cornelius Neale Dalton, Esquire ; Our trusty and well-beloved Robert Lacey Everett, Esquire ; Our trusty and well-beloved John Gilmour, Esquire ; Our trusty and well-beloved George Lambert, Esquire ; Our trusty and well-beloved William Cutlack Little, Esquire ; Our trusty and well-beloved Walter Hume Long, Esquire ; and Our trusty and well-beloved Charles Whitehead, Esquire, Fellow of the Linnæan Society, greeting !

Whereas We have deemed it expedient that a Commission should forthwith issue to inquire into the Agricultural Depression prevailing in that part of Our United Kingdom of Great Britain and Ireland called Great Britain, and whether it can be alleviated by legislation or other measures.

Now know ye, that We, reposing great trust and confidence in your knowledge and ability, have authorised and appointed, and do by these presents authorise and appoint, you, the said George John Shaw-Lefevre ; Charles George, Viscount Cobham ; George William Henry, Baron Vernon ; Henry Chaplin ; Sir Robert Nigel Fitzhardinge Kingscote ; Robert Giffen ; Charles Isaac Elton ; Owen Thomas ; Francis Allston Channing ; John Clay ; Cornelius Neale Dalton ; Robert Lacey Everett ; John Gilmour ; George Lambert ; William Cutlack Little ; Walter Hume Long ; and Charles Whitehead, to be Our Commissioners for the purposes of the said inquiry.

And for the better effecting the purposes of this Our Commission, We do by these presents give and grant unto you, or any five or more of you, full power to call before you such persons as you shall judge likely to afford you any information upon the subject of this Our Commission, and also to call for, have access to, and examine, all such books, documents, registers, and records as may afford you the fullest information on the subject, and to inquire of and concerning the premises by all other lawful ways and means whatsoever.

And We do by these presents authorise and empower you, or any five or more of you, to visit and personally inspect such places as you may deem it expedient so to inspect for the more effectual carrying out of the purposes aforesaid, and to employ such persons as you may think fit to assist you in conducting any inquiry which you may hold.

And We do further by these presents will and ordain that this Our Commission shall continue in full force and virtue, and that you, Our said Commissioners, or any five or more of you, may from time to time proceed in the execution thereof, and of every matter and thing therein contained, although the same be not continued from time to time by adjournment.

And We do further ordain that you, or any five or more of you, have liberty to report your proceedings under this Our Commission from time to time, if you shall judge it expedient so to do.

And Our further will and pleasure is that you do, with as little delay as possible, report to Us, under your hands and seals, or under the hands and seals of any five or more of you, your opinion upon the questions herein submitted for your consideration.

And for the purpose of aiding you in such matters, We hereby appoint Our trusty and well-beloved Herbert Lyon, Esquire, to be Secretary to this Our Commission.

Given at Our Court at Saint James's, the fourteenth day of September one thousand eight hundred and ninety-three, in the fifty-seventh year of Our Reign.

By Her Majesty's Command,
(Signed) H. H. ASQUITH.

FIRST REPORT.

TO THE QUEEN'S MOST EXCELLENT MAJESTY.

MAY IT PLEASE YOUR MAJESTY,

WE, the undersigned Commissioners appointed to inquire into the agricultural depression prevailing in the United Kingdom, and whether it can be alleviated by legislation or other measures, availing ourselves of Your Majesty's gracious permission to report our proceedings from time to time, desire humbly to present to Your Majesty the following report of the steps which we have taken in the prosecution of the inquiry entrusted to us.

Immediately on the issue of Your Majesty's Commission we resolved to appoint Assistant Commissioners, to visit specially selected areas in England and Scotland, for the purpose of reporting to us generally on the condition and prospects of agriculture in those districts.

Their reports have been presented to Your Majesty, and inquiries of a similar nature are now being conducted by Assistant Commissioners in other districts.

In order to assist us in deciding to which districts our inquiry should especially extend, we directed that a letter should be addressed to each of the Inspectors of the Land Department under the Board of Agriculture, asking them briefly to state their opinions as to the extent, duration, and effect of the present agricultural depression in their several districts. A short abstract of the replies received will be found in Appendix D.

Many of the principal landed proprietors in England and Scotland have been requested by us to furnish the particulars of their estate expenditure and outgoings or deductions from rentals since 1872. This information is not yet complete.

We have caused to be prepared some statistics as to the prices of certain agricultural products, which will be found in Appendix B., and we have been furnished, through the Board of Trade, with a statement showing the rates of Customs duty leviable in foreign countries on imports of grain and flour, which is printed in Appendix C.

We have, moreover, taken oral evidence from a considerable number of witnesses representing landowners, land agents and tenant farmers, several of whom were examined by the Royal Commission on Agriculture presided over by his Grace the Duke of Richmond and Gordon, 1879–82. Notes of this evidence are appended to our report.

We shall proceed to take further evidence from those engaged in the agricultural industry and in subjects cognate thereto.

All of which we submit to your Majesty's gracious consideration.

(Signed)

MINUTES OF EVIDENCE

TAKEN BEFORE THE

ROYAL COMMISSION

ON

AGRICULTURE.

At 23, Great George Street, Westminster, S.W.

First Day.

Thursday, 9th November 1893.

PRESENT:

THE RIGHT HON. GEORGE JOHN SHAW-LEFEVRE, M.P., IN THE CHAIR.

Viscount COBHAM.
The Right Hon. HENRY CHAPLIN, M.P.
Sir ROBERT NIGEL FITZHARDINGE KINGSCOTE, K.C.B.
ROBERT GIFFEN, Esq., C.B.
CHARLES ISAAC ELTON, Esq., Q.C.
Captain OWEN THOMAS.
JOHN CLAY, Esq.

CORNELIUS NEALE DALTON, Esq.
ROBERT LACEY EVERETT, Esq., M.P.
JOHN GILMOUR, Esq.
GEORGE LAMBERT, Esq., M.P.
WILLIAM CUTLACK LITTLE, Esq.
WALTER HUME LONG, Esq., M.P.
CHARLES WHITEHEAD Esq., F.L.S.

HERBERT LYON, Esq., *Secretary.*
R. F. CRAWFORD, Esq., } *Assistant Secretaries.*
FREEMAN THOMAS, Esq., }

Sir R. N. F. Kingscote, K.C.B.
9 Nov. 1893.

Sir R. NIGEL F. KINGSCOTE, K.C.B. (a Member of the Commission), examined.

Sir R. N. F. Kingscote, K.C.B.
9 Nov. 1893.

1. (*Chairman.*) You were appointed Commissioner of Her Majesty's Woods and Forests in 1885, on the retirement of Mr. Charles Gore, were you not?—I was.

2. Mr. Gore gave evidence before the Duke of Richmond's Commission in 1880, did he not?—Yes.

3. This Commission will be glad to supplement his evidence by any evidence that you are able to give as to the course of proceedings upon the Crown property in the interval. What is the total acreage of the estates under your charge?—They comprise about 69,500 acres, and are situate in 22 different counties.

Acreage of estates.

4. What are the principal counties in which they are situate?—The largest quantity of agricultural land in any one county, is in Yorkshire, where the Crown owns upwards of 17,300 acres, principally in four large estates, the largest about 6,600 acres, being at Sunk Island, the Humber, and which consists entirely of land reclaimed from that river. There is another estate of about 4,630 acres, situate at Swine and Benningholme, near Hull, and another of about 3,345 acres, near Boroughbridge, and the fourth of nearly 1,200 acres at Woodhouse Grange between York and Beverley.

5. Then what are the estates in Lincolnshire?—In Lincolnshire the Crown has about 12,720 acres of agricultural land situate principally at Billingborough, where there is an estate of about 4,020 acres, at or in the district round Holbeach, where there are some 4,600 acres, and at Wingland, near Sutton Bridge, where there are about 3,200 acres. This latter estate consists largely of land that has been reclaimed from the sea.

6. With reference to Wiltshire, what have you to say?—In Wiltshire the Crown has about 8,925 acres in what is practically one estate near Devizes. In Essex, about 4,000 acres in practically one estate, and the great part of which is land that formerly formed part of Hainault Forest. In Sussex there is an estate of about 3,600 acres near Brighton. In Kent there are estates at Eltham and in the Isle of Sheppey, comprising nearly 4,000 acres of agricultural land. In Oxfordshire there are some 3,740 acres, principally at Whichwood, being land formerly part of Whichwood Forest.

7. And besides those, there are smaller areas of land in other counties?—Yes.

8. But those you have mentioned are the large properties you manage?—Yes.

9. You manage those estates, I presume, through receivers?—Through two receivers or agents, who are practical land agents in large practice: Messrs. Clutton are the receivers for the Midland and Southern counties, and Mr. S. W. Gore, of the firm of Smith, Gore, and Co., is the receiver for the Northern Counties.

Rental.

10. What is the present actual aggregate rental of those properties?—Perhaps I had better say first that of the 69,500 acres of agricultural land belonging to the

Sir R. N. F. Kingscote, K.C.B.
9 Nov. 1893.

Crown which were in hand prior to Michaelmas 1892, about 1,677 acres were being cultivated by the Crown for the want of suitable tenants; the remainder, amounting to about 67,820 acres were let at a total rental for the year to Michaelmas 1892, of 79,999*l.*, which included tithe rentcharge, amounting to about 4,495*l.*

Deductions from rent.

11. Which is paid by the Crown?—Yes. From rental there were, however, authorised certain allowances and remissions of rent amounting in the whole to 8,661*l.*; deducting these allowances and remissions and the tithe rentcharge paid by the Crown, there will be a net rental of 66,842*l.* for 67,820 acres, or an average rent of somewhat less than 1*l.* an acre.

12. When you speak of allowances and remissions, were those temporary or permanent?—Temporary. In most cases being for the one year, but in a few for the two years. Allowances are, however, becoming almost permanent.

13. (*Lord Cobham.*) It would include allowances for grass seeds under this head, would it not?—I do not think that they would include grass seeds, I think that that would come under the head of improvements and outlay.

Drainage rates.

14. (*Chairman.*) Have the tenants to pay any burdens in the nature of drainage rates?—All the rates including drainage rates; on some of the Lincolnshire estates the latter are rather heavy.

Reductions in rent since 1879.

15. How far has that rental been reduced by you since 1880, when Mr. Gore gave his evidence?—He stated in his evidence in 1880, that the agricultural lands then under his charge consisted of about 70,000 acres, and that they were let at an average rent of 1*l.* 12*s.* 6*d.* per acre. This was in addition to the tithe rentcharge which was then usually paid by the tenants; but I think from this rental should be deducted the allowances and remissions which had been authorised, and that perhaps the net rental did not then exceed about 30*s.* per acre.

16. Then there has been a reduction in the interval from about 30*s.* an acre to about 1*l.* per acre, practically?—Yes.

17. When did those reductions begin?—Do you mean since 1880?

18. The reductions from rent have been spread gradually over the interval?—They have been spread gradually over the interval. I may say that each estate has been considered separately, and still more, certain farms on these estates; they are not all alike.

19. (*Mr. Chaplin.*) The general result is a reduction of about 10*s.* per acre?—Yes.

20. (*Mr. Lambert.*) Since when?—Since 1879.

21. Is that up to last year?—Up to Michaelmas, 1892.

Reductions in rent preceding 1880.

22. (*Mr. Giffen.*) Had there been reductions in the years preceding 1880?—Yes.

23. (*Mr. Chaplin.*) About half-a-crown?—Mr. Gore, in his evidence, brought it up to that time, and he said, "Remissions of rent to Michaelmas, 1878, per-"centage of rental, 15*l.* 4*s.*"

24. (*Chairman.*) The honourable Commissioner asked whether there had been actual reductions of rent?—I think before that they were temporary allowances only.

25. Then the rental that you compare the present with was the maximum rental of some previous years against which there had been temporary abatements, but no absolute reductions of rent?—The temporary allowances were taken off by Mr. Gore, and they are taken off by myself in what I have just stated.

26. From the rental of 1*l.* 10*s.*?—It is net rental compared with net rental.

Reductions in land and rent since 1879.

27. Then it would appear from what you say that the agricultural land in the possession of the Crown has been reduced since 1879, by about 500 acres, and the rental has diminished by 35,150*l.*?—That is so.

28. And that it is now rather less than 1*l.* per acre, as compared with 30*s.* per acre in 1879?—Yes.

29. During the same period has there been a very large expenditure of a permanent character upon improvements?—A very large expenditure.

Expenditure on improvements.

30. Has that been found necessary in consequence of the condition of the tenants, and of the agricultural depression in the interval?—Yes. I may say after the wet season of 1879 and the following seasons a great deal of drainage was done to benefit the tenants, and the other outlays were for buildings.

31 (*Mr. Long.*) Does that statement include outlay on buildings, farmhouses, and cottages?—I can give you that.

32. Can you give the figures of the amount spent in houses and cottages during that period?—Perhaps I had better compare it with Mr. Gore's statement. Mr. Gore in the information which he supplied to the Commission in 1880, stated the expenditure by the Crown in repairs and improvements on the agricultural estates in the year to the 31st March 1879. For some years prior to that time there had been a continuous expenditure in new works and improvements; and I find that in the 14 years between the 31st March 1879 and the 31st March 1893 there have been expended by the Crown sums amounting altogether to 257,000*l.* in works of repair and improvement on the agricultural properties in England.

33. (*Chairman.*) Did he state what the average expenditure previous to 1879 had been?—Mr. Gore gave the one year I see; the year to Michaelmas 1879, permanent improvements 26,478*l.*, and repairs 1,189*l.*

34. He did not state what the average of permanent improvements for the previous 10 years was?—No, he did not.

35. I presume that expenditure in 1879 was exceptional on account of the state of the year?—Yes, I suppose so.

36. It could hardly be taken as an average?—I can hand in a statement of the amounts expended by the Crown upon farms in charge of myself from the 31st March 1879 to the 31st March 1893, if you like. (*See* Appendix A., IV.)

37. (*Mr. Long.*) But taking the Wiltshire Estate of 8,000 acres most of the expenditure was incurred before you took charge, in the shape of building, was it not?—Yes.

38. What new houses, cottages, and farm buildings were built before you took them over, under Mr. Gore?—I can give the expenditure on repairs and improvements on that one estate.

39. (*Chairman.*) What has been the aggregate expenditure on improvements from 1879 to the present time?—257,016*l.* 5*s.* 11*d.*

40. That includes repairs?—That includes repairs. On permanent improvements there were 220,589*l.*, and on repairs 36,426*l.* (*The witness handed in the statement, see Appendix A., I.*)

41. I presume the expenditure on repairs may be considered as the average expenditure which the Crown is bound to undertake, and the expenditure on improvements is that which they voluntarily undertake on account of the condition of the farms?—According to the agreement the tenants should do all the repairs, but since there has been so much agricultural depression I have found it necessary for the Crown to do some of them.

42. Then this expenditure on repairs must be taken as a deduction from the rent?—I think most of it ought to be.

43. Because under your agreement the tenant was bound to do the repairs?—Yes, he was bound to do the repairs.

44. Then besides that there has been expenditure on permanent improvements of 220,000*l.*?—Yes, the expenditure on such works has averaged upwards of 15,750*l.* per annum.

45. I observe in the return which you have laid before me and which will be printed for the information of the Commission that the expenditure on permanent improvements was very large between the years 1880 and 1887?—Yes, very large.

46. Was that due to the succession of bad seasons and the necessity of drainage, or to what was it due?—Drainage was a great item during those years.

47. That was required in consequence of the bad seasons?—Yes, and I think other expenditure was made with a view of helping the tenant with buildings which he thought were necessary and when they were thought to be necessary by the Crown.

48. Since 1887 the expenditure appears to have fallen off, and has averaged from 6,000*l.* to 9,000*l.* a year?—Yes.

Sir R. N. F. Kingscote, K.C.B.

9 Nov. 1893.

49. What has that been mainly upon?—Drainage had been done before, so that there was no necessity for doing more, and the drainage was finished.

50. Can you give us the particulars of the estate to which the honorable member referred?—Do you mean Bishops Cannings and Bromham?

51. Yes?—I find that in the 14 years to 31st March 1893, the expenditure on Bishop Canning's estate in repairs and improvements was 32,857*l.*, and on the Bromham estate, which adjoins it, was 8,201*l.*

52. Had there been many changes of tenancy in the interval?—There had been some, but no very great changes.

Land in hand.

53. Where farms have come in hand have you found much difficulty in reletting them?—Yes, and we have been obliged to take some into our own hands.

54. What addition has there been to the land in hand in the mean time?—Since Michaelmas 1892 the land cultivated by the Crown for want of suitable tenants has increased by two farms, while one that was in hand has been relet, the net result being that the land in hand has increased by 811 acres making a total now in hand of 2,488 acres or about $\frac{1}{25}$th of the total. The lands now in hand consist of (1.) A farm near Bedford of about 324 acres which has been in hand for many years; (2.) Some grass land containing about 207 acres in the Isle of Sheppey; (3.) Grass land containing 357 acres at Wingland in Lincolnshire; (4.) Two farms at Whichwood, Oxfordshire, comprising together about 1,028 acres; One has been in hand for a few years, and the other came into hand as from Michaelmas last. (5.) A farm containing 572 acres at Shimpling, in Suffolk, which had to be taken in hand as from Michaelmas, 1892, in consequence of the tenant being unable to continue.

55. And these farms now are all worked by the Crown?—They are all worked by the Crown.

56. How is the capital supplied for the working of those farms? Is it out of the revenue account?—Out of the revenue account by permission of the Treasury.

57. Have there been losses on those farms, or are they carried on at any profit?—These particular farms? two of them, the grass lands at Wingland and the Isle of Sheppey are generally let by tender for feed, and on these there have not been any losses. But on some of the other farms which have come into hand there has been a considerable loss.

58. (*Mr. Chaplin.*) Do you get any rent for those farms that you speak of which are not let for grazing?—For some years I have had rent from them.

59. During the past year did you get much?—No, not last year.

60. (*Chairman.*) Are these farms unlet because tenants could not be found for them, or because the offers made for them were not, in your opinion, sufficient?—Because tenants could not be found for them. I may have had a very low offer which I did not think it proper to take, but I have used every effort to obtain a tenant by advertising and otherwise. I need not inform the Commission, I may say without exception, that when the farms have come into hand, they have come in in a very poor state indeed, and we have worked them up into a very fair state, I venture to think.

61. When you got them into a fair state, did you try to let them, or did you keep them?—I would keep them for two or three years to get them clean and into a better state of cultivation, and then I would try to let them when I got them into a better state.

62. (*Lord Cobham.*) Is that outlay charged to repairs?—No; the accounts for each farm are kept separate. I get so much money according to the acreage, and farm it with that capital.

63. (*Chairman.*) Then when you have to make a deduction from the gross rent of the tithe, then of the money expended in improvements, third of the money spent in repairs, and, fourth, in the money required to be expended on farms coming in hand on their becoming vacant, or for any losses on the farm, I presume the actual net result to the Treasury is considerably reduced?—Very considerably reduced at times, but I must say in one or two seasons the farms, or one or two of the farms in hand have paid their rental.

64. And those are in hand?—Those are in hand, but it is quite exceptional.

Sir R. N. F. Kingscot, K.C.B.

9 Nov. 1893.

65. Can you give us any statement of what has been the average amount actually paid into the Treasury during the interval?—From the farms in hand do you mean?

Net amount received by the Exchequer from agricultural land.

66. No, from the whole of the account of all those lands. You have told us about the reduction of rent. It has been very considerable, but you have not told us what is the actual net result of the payments into the Treasury in each year?—What we pay into the Treasury comes from every estate.

67. I mean the aggregate of all the estates?—We do not apportion it.

68. It includes, you mean, all other properties?—It includes all other properties, mineral and all others, and house property as well.

69. You cannot distinguish the landed estates in this respect from other properties?—Not in the amounts that we pay into the Exchequer.

70. It seems to me that it will be important to know what is the amount which the Crown has received in the interval after making all these deductions from the agricultural land?—I can put in a statement. I have it here in my hand. It shows the lands occupied by tenants in the Northern counties and in the Midland and Southern counties; the land in hand in the Midland and Southern counties; the rental for the year to the 10th of October in the Northern counties, and in the Southern and Midland counties; the allowances and remissions authorised for the year to the 10th October 1892, and the tithe in the same way. (*The statement was handed in, see Appendix A., II.*)

71. This does not seem to me to give what I want. This gives the rental after deduction of tithe, rentcharge, and allowances. What I want to know, and it will be interesting to know is, out of that rental of 67,000*l.* a year, how much really finds its way into the Treasury after payment of everything, after payment of money spent on improvements, on repairs, the tithe, rentcharge, and the money which you have to expend, either in taking land in hand, or in losses upon farms. Can you roughly, out of that 67,000*l.* a year, state what is the average you have paid into the Treasury. Perhaps you can supply that later?—I will try and make out a statement, but whether it will be a very reliable one or not, I do not know. (*See* Appendix A., III.)

72. It is evident from your statement that very large deductions have to be made from that 67,000*l.* a year?—Yes.

73. (*Mr. Dalton.*) Could you show the expenditure separately, as you charge capital expenditure against the revenue?—I have given the actual expenditure year by year. I will try and make out a statement.

74. (*Chairman.*) I think it would be interesting to know, because your position is that of a considerable number of other landowners, what is the net result of what you really do pay into the Treasury, after paying everything?—Quite so.

75. (*Mr. Little.*) Would not it be well to distinguish the money spent in improvements from those outgoings which are in the nature of repairs, the tithe rentcharge; improvements are a deduction from the cash received at the time, but they are an investment of capital, or may be so regarded. They may not be remunerative, but money spent on improvements is different in character to money spent on repairs or ordinary outlay?—Yes.

76. (*Chairman.*) Could you give us in respect of the four or five principal estates illustrations showing the expenditure on those estates with all improvements and the rent received?—Yes. I think I have read it out.

77. (*Mr. Long.*) Then the addition of the balances in this case would give us the figures that we want?—Yes.

78. (*Chairman.*) Has there been considerable difference in the different estates?—Very considerable.

Comparison between estates in different counties.

79. Which have been the worst properties in respect of the greatest reductions and the greatest expenditure required by the tenants for improvements?—Speaking broadly there has been very much less required in the Northern counties than in the Southern and Midland counties.

(*a.*) Yorkshire

80. Take the estates you mentioned in Yorkshire; do you consider those in the worst category or in the best?—In the best; they even differ there.

Sir R. N. F. Kingscote, K.C.B.
9 Nov. 1893.

81. Then in Lincolnshire, what do you say about the estates there?—There has been a great deal of money laid out in Lincolnshire.

(*b.*) Lincolnshire.

82. And are the reductions heavy?—Yes, but still not so heavy as further south, I should say.

83. (*Mr. Chaplin.*) What parts of Lincolnshire?—Near Holbeach, Billingborough, and Wingland.

(*c.*) Lancashire.

84. (*Chairman.*) I observe from the return you place in my hands that in the case of increases there is an estate at Aldingham where the rental in 1879 was 2,038*l.* and where in the present year with the addition of 100 acres to the area the rental is now 2,191*l.* showing that practically there has been no reduction there of rent?—There are allowances to come off that.

85. But there have been no permanent reductions of rent in Lancashire?—The present rent includes the tithe.

86. A deduction must be made for tithe?—Yes.

87. You take that into account as some reduction?—Yes, 268*l.*

(*d.*) Northamptonshire.

88. Then take Northamptonshire, there is an estate at Salcey with a farm of 254 acres in which the rental, in 1879, was 619*l.*, and is now 531*l.* There has been some reduction there?—A little. That is a peculiar estate; it is scattered with small holdings around the Salcey Forest. You must not take that as an example; there is a good deal of shooting on that.

(*e.*) Wiltshire.

89. I was going to point out the very great reductions in some of the others. On the other hand, take the estate in Wiltshire—Bishops Cannings—with an acreage of 7,023, the rental in 1879 was 8,000*l.*, and in 1893 the acreage had increased by 200 acres, and is now 7,226, and the rent is 4,516*l.* subject to a tithe paid by the Crown now of 133*l.*, making a reduction therefore of very nearly 50 per cent.?—Yes.

90. On the other hand, there is an estate at Bromham in Wiltshire, the acreage of which was 1,674, with a rental of 2,140*l.*, and where the present rental in a very small increased acreage is 1,800*l.*, a reduction of 300*l.* speaking in round figures?—And 300*l.* more for tithes.

(*f.*) Yorkshire.

91. It is not mentioned here. Then the estate in Yorkshire, at Swine, and Benningholme. There, again, the reductions appear to have been very great; with an acreage of 4,300 and a rental of 8,255*l.* the present acreage is the same, but the rent is reduced to 4,355*l.*, and from that tithe has to be deducted?—That is excessively bad land, a great deal of that estate has suffered very severely.

92. Generally speaking, I may say, looking over this list, you seem to have some of the worst land in England?—Some of it is quite the worst land.

93. They are the districts which have suffered most, I suppose?—Yes. (*The statement was handed in, see Appendix IV.*)

Leases.

94. Now with regard to leases, has it been the practice with the Crown to give leases?—Yes, it has. I have power to grant leases of land for agricultural purposes not exceeding 31 years, but at the present time I do not find any demand for leases.

95. Are there any leases still existing?—They are very nearly all run out.

96. And do you find that tenants will not take leases on renewal?—The utmost you can get them to do is to take the farm for two or three years, with yearly tenancies afterwards.

97. And, generally speaking, now the whole of the Crown property is let on those terms?—Yes.

98. And that is by the wish of the tenants and not of the Crown itself?—Yes.

99. The Crown is ready to grant leases?—Perfectly ready.

100. What length of lease would they grant?—21 years, generally.

Shooting rights.

101. And have the tenants the right of shooting?—Always; there is hardly an exception.

102. What do they do generally with the shooting; do they sublet it?—Yes.

103. Is that the rule?—There is no rule, but it is the practice.

104. (*Mr. Chaplin.*) It is the general practice?—It is the general practice to sublet it, I think, but I never interfere, or hardly ever.

Sir R. N. F. Kingscote, K.C.B.
9 Nov. 1893.

105. (*Chairman.*) Do you know the average that they get for their shooting?—No, it would vary very much.

106. Have you found it necessary in the interval to make any changes in the area of the farms when they come into hand?—You mean to divide them?

Sub-division of farms.

107. Yes.—No, I have not been able to do that.

108. You say you have not been able; is that on account of the difficulty of finding capital for them?—If I thought it very desirable I should endeavour to do it, but the outlay would be so very considerable that perhaps there would be no chance of letting it even then, and I have not thought it advisable to do so. I have tried to diminish some of the holdings by letting off parts of them, but I have no case that I know of where I have actually divided a large holding in two from the difficulty of putting up houses and buildings upon it.

109. Where you did so and found it necessary to lay out money in erecting new buildings, would that come out of the revenue for the year, or is there any capital account?—There is a capital account which has to be paid off in 25 years.

110. Is that an account from which you pay all things of this kind, or is that capital expenditure?—All the permanent improvements.

111. Then the money expended in permanent improvements is not paid out of the revenue account?—No; it is paid out of the capital account, and is paid off in the 25 years.

112. Have you got any sum standing to your account to the capital account, or how is that managed by the Crown?—The money is invested.

113. Out of other moneys in the hands of the Crown?—It is invested by the Commissioners.

114. Have you got any standing sum to your account for that purpose, or is it taken out of the general account?—It is taken out of the general account; it is paid out of the capital moneys.

115. Do you keep them separately?—We have two accounts, a capital and an income account.

116. But I understand you that out of other moneys that you have in hand you pay for these permanent improvements, and that is treated as a capital account?—Yes.

117. And is paid off annually by sums which are put to the general account in 25 years?—That is so.

118. Out of that money, you would provide any money which might be necessary for additional farms?—Yes.

119. Then it is not from want of capital, so to speak, that you have refrained from dividing farms?—Certainly not.

120. But from a feeling that under present circumstances it is doubtful, even when so divided, that you would get the rental which would justify the expenditure?—That is it.

Number and size of tenancies.

121. Will you state shortly the number of tenancies that you have got and the sizes of them?—I have got a return and I will give it to you shortly. We have taken all above three acres. In this return there are 67 holdings between three and 50 acres; 16 holdings between 50 and 100 acres; 37 of between 100 and 200 acres; 43 of between 200 and 300 acres; 19 of between 300 and 400 acres; 17 of between 400 and 500 acres; 13 of between 500 and 600 acres; 12 of between 600 and 700 acres; eight of between 700 and 800 acres; three of between 800 and 900 acres; one of between 900 and 1,000 acres; and eight tenants who hold about 1,000 acres. That makes a total of 244 agricultural holdings of above three acres, and of these five are in hand. There are therefore 240 tenants of holdings exceeding three acres.

122. There are 67 holdings between 3 and 50 acres. I presume these are not farms but probably land let to people who have other occupations?—Yes.

123. Small holdings of that kind?—That is so.

124. Then with regard to the farms above that; it would strike one that the average is rather high. Is the average size of the holding rather high or low—what do you say?—Perhaps you would call them high. The farms in Wiltshire are very large, long slips, taking in part of the Downs; and, again, on Sunk Island, there are large holdings.

Sir R. N. F. Kingscote, K.C.B.
Nov. 1893.

125. There are only 16 holdings between 50 and 100 acres, and 37 between 100 and 200 acres. The bulk of the farms therefore are above 200 acres?—Yes. (*The witness handed in the statement, see Appendix V.*)

Comparison between large and small farms.

126. Have you found much distinction in the condition of the smaller farms as compared with the larger ones during this time of depression. Have you had greater difficulty in obtaining rents from the one or the other?—I think not. I think taking it generally, as regards the larger farms one has been surer of one's rents, speaking generally. There are exceptions both ways.

127. Are the Crown tenants of the large farms, mostly men of capital?—I think so.

128. (*Mr. Lambert.*) Have you figures to show definitely on which farms the losses occur; do they occur on the small or the large holdings?—It would be very difficult to get that out.

129. (*Chairman.*) Have you been as ready, as far as you can, to let land in small holdings?—Yes, certainly.

Allotments.

130. And in allotments?—And in allotments.

131. Have applications been made to you by labourers and others for small holdings?—I have had applications for small holdings to a very small extent, and on one estate only.

132. How much is the total set apart in the Crown estates for allotments?—At Michaelmas, 1892, on the Crown estates under my charge there were upwards of 425 acres let for allotments, and set out in about 1,112 allotments and small holdings, and held by 790 tenants, including on the one property above mentioned 22 acres, set out in eight small holdings and held by eight tenants. That 22 acres, I believe, is the only real application I have had for small holdings.

Restrictions in cultivation.

133. Are the tenants under strict terms with regard to the course of cultivation?—They are. I can put in the agreement which is in use by the Crown, and the tenants are under certain restrictions. I could give what they are.

134. Are they not allowed to sell off the hay and straw?—No; according to the agreement they are not, unless they bring back the value in manure.

135. In practice, during the last 10 years, have you found it expedient to relax those rules?—I may say pretty nearly altogether.

136. Altogether?—No inquiry is made, not unless the Crown Surveyor sees that the farm is being run out, and then, perhaps, the attention of the tenant would be called to it if there had been any breach of the agreement.

Changes in cultivation.

137. Has there been much change in the cultivation of the farms during the last 10 years?—I think not, speaking generally.

138. Has much land been laid down in grass?—There has been an increasing demand for that, and the Crown has spent a good deal of money in giving seeds for that purpose, which would come under the head of improvements.

139. Taking those estates in Yorkshire and Lincolnshire, are they mainly arable farms?—Yes, mainly. The largest one in Sunk Island is entirely an arable estate.

140. Where wheat is grown?—Where wheat is grown.

141. Mainly?—I cannot say mainly now, because of late years they have taken to growing mustard very considerably.

142. (*Mr. Everett.*) For seed?—For seed, I meant for grinding, to sell to the mustard merchants.

143. That is what I meant?—Quite so.

144. (*Chairman.*) Then with regard to the estate in Essex that you mentioned at Hainault, has any change taken place there?—Very little I should say.

145. Is that a wheat district?—That is entirely wheat—arable land. I may say there that from the time it was broken up till the lease expired one man had a very large proportion of the holding and that has been divided into three holdings now. What he farmed altogether I think amounted nearly to 2,000 acres, and that has been divided into three holdings and pieces given off.

146. Have you felt the full effect yet of the last two years—the very low prices of wheat?—I think not; we certainly have not felt the effect of this last season.

147. You do not know, then, what effect it will have?—I am afraid it will be very disastrous. I have been round most of the estates and I may say that the complaints, or rather the cry of the bad season, is very loud, and I am afraid will be justified especially by the bulk of the corn crops.

Sir R. N. F. Kingscote K.C.B.
9 Nov. 1893

Effect of low prices and bad season.

148. And that following on a bad year last year?—Yes, in most places last year, but even this year there have been great differences. For instance, in the case of that large estate at Sunk Island, I find that it suffered very severely with drought, and on the Wolds of Yorkshire not so very far off where the Crown has only two small farms they say they have hardly had a better season having had rain at the right time. But that was about the exception of the whole of the estates.

Reductions in rent.

149. Apart from the last two years do you consider that the reductions of rent that had been made up to that time, had fairly met the demands of the tenants and that they were able to farm at a profit?—I certainly think so. I can only say that I try to see the tenants once a year if I possibly can, and I have been thanked for what has been done for them, and I rather think that they were satisfied. I cannot say about the profits that they have made, but I think I can say that, speaking broadly, they have felt satisfied with the reductions that have been made to them.

150. Had the reductions of rent that you speak of been mainly made or partly made before the last two years?—The reductions have been made ever since 1879 or 1880, but certainly the chief reductions have been made in the last two or three years. On reflection, I think that the heaviest reductions were made after the effects of 1879 and 1880, I should say so.

151. What I am now trying to estimate is whether, before the very serious effects of the last two years of 1892 and 1893, the reductions of rent had been such as to enable the farmers to conduct their business at a fair profit?—It has been my wish and endeavour to keep the tenants on the Crown land, and I may say, to "live and let live." My object is to keep them on their holdings.

152. Had you many changes of tenancies, would you say, during that period or not?—I should say not There were the usual deaths and some changes.

Land in hand.

153. The amount of land in hand although perhaps large in some sense is not very large in proportion to the total area of the Crown estates?—I think not, because there are 207 acres in the Isle of Sheppey in hand, and 357 acres in Wingland, and that 357 acres being the last reclaimed land I do not try to let except by auction for feeding. I keep it in hand and lay out money upon it in manures.

154. Deducting those, the proportion of land unlet to the whole area of the estate does not seem to be very considerable?—I do not think it is.

155. Is there anything else you wish to say?—I would like to put in a copy of the draft form of agreement. (*The witness handed in a copy of the agreement, see Appendix A., VI.*)

Particulars of estates.

156. Mr. Long who has been obliged to leave, has asked me to get from you a statement showing separately for each estate, the acreage and the rental for 1878, and the acreage and rental for 1892; also (*a*) the amount spent, in the meantime, in annual and necessary repairs, that is, maintenance; (*b*) the expenditure on improvements; (1) on buildings, (2) drainage, distinguishing them, and, giving a summary of the amount spent during, say, the preceding 20 years. Perhaps you will be able to supply us with that?—I should be very happy to do that if you could limit the number of the estates. It would take a great deal of time.

157. We only want four or five of the principal estates—not the smaller ones. Will you do it as far as you can?—Yes. (*See* Appendix A., III.)

Value of land in the Isle of Sheppey.

158. (*Mr. Whitehead.*) May I ask what is the cause of the reduction in the value of land in the Isle of Sheppey, which is, I believe, very strong and good land?—Simply that the seasons have been cold and wet, which has affected it very much, and you know it is almost entirely corn growing except upon the marshes, and the prices have affected the produce. Also it has been very deficient in produce; it has produced very much less during the last few years than many years previously.

159. And the reduction has been very great?—Very great indeed.

Sir R. N. F. Kingscote, K.C.B.
9 Nov. 1893.
Labourers.

160. That I know from my own experience?—Quite so.

161. (*Mr. Giffen.*) Can you tell us whether the number of labourers employed on these Crown lands has diminished or not? Have you any facts before you?—I am not able to tell you that. I think there is as much demand for the cottages now by the tenants as there was formerly.

162. I wish to know whether the labourers are better satisfied now than they were in 1880. Have you any facts before you on that subject?—I hear a great deal about it when I meet the tenants.

163. But you have nothing to show where it appears in the accounts or in any of the estate papers?—As to the number?

164. As to the number of labourers, or whether they are better off or worse off?—Only the cottages under each farm.

165. Except the cottages. Are they as numerous as ever?—They are as numerous as ever. I think if any cottages get worn out we are almost invariably asked to put up new ones, and probably there are the same number.

Rental valuation.

166. (*Mr. Gilmour.*) Some of the farms the Crown have in its own hands have paid their rental; on what valuation is that rental based?—We would take the rent before it came into our hands probably.

167. During the year you took it?—Yes.

168. And those farms since this reduction have been entered in the valuation roll by the assessor at a less rent, at a certain reduction?—Not that I know of.

169. Do they accept the valuation that the Crown puts upon the farm as its rental in the return given in?—I am hardly able to answer the question, but to my knowledge there has been no question about it. I think the assessments are reduced.

170. Reduced from the 1879 years?—Reduced from the 1879 years certainly.

171. I fancy that perhaps might be given us from the valuation roll very simply?—If you only want it for the farms in hand I could get it, but it would be a large business to get the others.

Expenditure on improvements.

172. (*Mr. Little.*) I should like to ask you one question, you mentioned 220,000*l.* as spent in improvements?—Yes.

173. Would you indicate generally what the nature of the improvements was?—Drainage, building of farm houses, barns—enlarging the farm buildings.

174. Would it include embanking from the sea? For instance, in Wingland would there be any?—At Wingland it would be done by the drainage authority.

175. Or making roads or developing a new estate?—Making roads would be included in that.

176. These improvements must be considered capital expenditure?—Capital expenditure.

177. And I think you said that they were not taken out of revenue?—No.

178. But they are included in the sum of 220,000*l.*?—Every one of them.

Land in hand.

179. Would you give us some general idea of the characteristics of the farms which you have been obliged to take in hand—what the nature of the farming is. Take, for instance, the 324 acres near Bedford?—Well, that farm is very stiff, cold, clay land.

180. Principally arable land?—Almost entirely, but I have endeavoured to lay down two or three fields.

Isle of Sheppey.

181. Is the Sheppey land on the London clay, or does the farm lie in the lower marsh?—Some of both. What is in hand is only the grass land.

182. Was that taken in hand because it was difficult to let?—We were unable to let it. The tenant gave it up and we could not get another tenant.

183. Some of the marsh lands are let with arable farms on the mainland, not taken alone?—They are. That is what we generally do; we could not get tenants for those.

184. Wingland you keep in hand for the purpose of making the land?—Yes, for the purpose of making the land; so that I can put manure into it when I like.

185. That is land reclaimed from the sea?—Yes.

186. And some of it has been ploughed?—Some of it has been ploughed.

187. It is now laid down to pasture?—It is now laid down to pasture.

Sir R. N. F. Kingscote, K.C.B.
9 Nov. 1893.
Whichwood estate.

188. Then Whichwood, 1,028 acres, that is disafforested land?—It is disafforested land.

189. Is that light soil?—It is light but of the worst sort, because in it stiff clay crops up incessantly, and you may say literally there is no grassland upon it.

190. And that, I presume, hardly pays the expenses of cultivation?—It did better two years ago, but I am afraid last year and this there will be no profit.

191. Then the Sussex farm; is that a down farm. Kingsdown it is, I understand?—In Suffolk, you mean?

Farms under the Agricultural Holdings Act.

192. As to the agreement you put in, I may just ask whether it has much altered since 1879?—It has very much altered in one way, that is under the Agricultural Holdings Act.

193. I mean in respect of cultivation and the sale of produce?—Yes; I have not got an old one here.

Restrictions in cultivation.

194. You said that the tenants were allowed to sell hay and straw, and bring back their value in manure?—Yes.

195. Is that the manurial value of the thing sold or a proportion of the amount received?—I do not think that it is specified exactly. The clause in the agreement is: "The lessee may sell and carry off the "premises hay and wheat straw (except the produce of "the last two years), not exceeding one half of the "produce in any year, on condition of bringing back "upon the premises within six months after any such "sale or carrying off, either one half of the market "value of the hay and straw sold or carried of, in good "rotten dung, bones, or other manure approved of in "writing by the lessor, or three-fourths of such market "value in linseed cake, cotton cake, or other feeding "stuff not produced on the holding, and approved of "in writing by the lessor."

196. And the return is based upon the amount received?—Yes.

197. And not upon the manurial value of the thing removed?—No.

District most affected by the depression.

198. (*Mr. Chaplin.*) Could you tell us which of your estates you think have suffered most—where the depression has been worst?—Well, according to the returns, Wiltshire is very bad; Essex is very bad this year; and I am afraid that Sussex will be very bad, for they suffered from the drought.

199. (*Chairman.*) You should distinguish between this year and previous years, because this year the drought is a very exceptional one?—Yes.

200. (*Mr. Chaplin.*) I only wish to know generally which has suffered most?—I can only repeat my answer to the Chairman, and that was that the Northern counties have suffered less than the Midland and Southern counties.

Reduction of rent.

201. And now you have said what the average reduction of rent has been on all those estates put together, could you tell us what has been the maximum reduction of rent on any particular estate?—It would appear here on this table. I have not worked that out. I think Bishops Cannings the one in Wiltshire would be as bad as any.

202. What has been the greatest reduction in rent there?—Well, the rent in 1879 was 8,014*l.*, and now it is 4,516*l.*, less 133*l.* of tithe which is paid by the Crown. I also think that in Bedfordshire the Stagsden estate is almost as bad. The rental in March 1879 was 4,552*l.*; it was in March 1893, 2,753*l.*, besides which 598*l.* was paid for tithe by the tenants, and is now paid by the Crown.

203. I do not know whether it is asking you to go too far, but could you tell us what is the largest reduction you have had to make on any particular farm?—I think that the Isle of Sheppey would be as bad as any place.

204. (*Chairman.*) Bedfordshire seems to be the largest proportional reduction of rent. It is rather over 50 per cent.?—Yes.

205. (*Mr. Chaplin.*) I will not press the thing now if you are not prepared to give an answer?—I can give you the whole of the estates if you like. I think I may say that in some cases 60, and as high as 70 per cent. has been given. Of course those are exceptions.

Sir R. N. F. Kingscote, K.C.B.
9 Nov. 1893.

206. With regard to the land that is in hand, is it in hand because you were unable to let it, or is it because you were not satisfied with the rents offered, or have you any other reason?—It has come in hand because I could not get a tenant for it. I have had an offer for this or that farm, but at a very inadequate rent as I consider.

207. Are there some farms for which you have had no offers at all?—I can hardly say that I have had an offer for the one at Stagsden. No offer has been put before me by the surveyor.

208. (*Chairman.*) For how long is that?—Ever since I have been Commissioner. I found it in hand when I came in.

209. (*Mr. Chaplin.*) You accounted for it by the fact that, broadly speaking, the land was in very bad condition when you took it in hand, and you said that you preferred to keep it till you got it cleaned, and into good condition, and when you have accomplished that you have sometimes let it?—Several times.

Comparison between large and small farms.

210. Do you think large farms go back again into the same bad condition as before?—Not since I have been Commissioner.

211. Could you give us any opinion as to what sized holdings have weathered the storm of the depression best?—The Chairman asked me that. I really cannot give an opinion, because there have been cases of both; but I still think that the larger farms, taking the Crown estates altogether, have been less in arrear than the smaller ones.

212. (*Chairman.*) What should you call very large farms, because something would turn upon that? What should you say was the size of the farms that have weathered the storm best?—400 or 500 acres.

213. Not larger than that?—No. On the other hand, there are some of the smallest that have given no trouble as regards rent.

214. Would you say that the medium sized farms, between 150 and 400 acres have suffered more than others, large and small?—It is very hard to know. I have had cases of all kinds that have suffered very much, and there has been a difficulty in getting the rent.

215. (*Mr. Chaplin.*) You are probably hardly able to give a general answer to this question, but I rather gather from what you say your impression is, that the farms over something like 400 acres would perhaps come off the best?—I think so. Certainly the large farms in the north of England have done best; the large ones in the south not so well, I may say worse than the smaller.

Effect of depression in Yorkshire and Lancashire.

216. Yorkshire has suffered least of any of the districts with which you are personally concerned, I understand?—I think it has.

217. And in Lancashire I think you said no permanent reductions of rent have been made, except the remission of the tithe?—Hardly any.

218. What is the reason of that?—Well, I was very much surprised for the first few years after I became Commissioner on going into Lancashire to see how little they suffered, I may say, from climate. I am afraid during the past few years they have suffered considerably; but for a certain time they did not seem to suffer at all.

219. You are of opinion that the depression in Lancashire is of more recent origin than in many other parts of the country?—Yes, and perhaps caused by the prices.

220. Has the time arrived, do you think, when you will be obliged to make reductions in Lancashire also?—I have had no report as yet from the Crown Surveyor.

221. You cannot say whether he has had applications made to him?—No, I am very much afraid that we shall have to make reductions.

Reduction of rent.

222. In the case of the reductions of rent that have been made, have they been reductions to old tenants or to new tenants upon taking a fresh occupation, or to both?—To both. I should say principally to old tenants.

Settlement of rent.

223. In the case of a new tenant who takes a farm in one of those districts where the depression has been now-a-days who settles the rent? Do the tenants practically make their own terms or do you stick to the offer?—They meet the Crown Surveyor who settles it with them I think, and then before it is let of course it is brought before me.

Sir R. N. F. Kingscote, K.C.B.
9 Nov. 1893.

224. What I want to arrive at is a little more than that; do the tenants say practically what rent they will give or not?—Now-a-days it has got pretty nearly to that Of course I should not let a farm on a big estate at less than 5*s.* an acre when all the other tenants were paying 10*s.* I would judge very much from what was being paid by the other tenants on the estate.

Farmers under the Agricultural Holdings Act.

225. With regard to the agreements under which farms are held, I understood you to say that they are now under the Agricultural Holdings Act?—Yes.

226. When was the change made?—When the Act came into force.

227. When the change was made, was it by the desire of the tenants, or at the option of the tenants, or was it the policy of your Department?—The policy of the Department I think. The Act was compulsory, as you know.

228. Compulsory unless there was an agreement to contract out of it?—Yes.

229. (*Chairman.*) Unless there was an agreement which in the opinion of the Court was better?—Yes.

230. (*Mr. Chaplin.*) There have been many cases which have come under my knowledge in which tenants have had the option of the Agricultural Holdings Act or remaining under the existing agreement or having no change, and they have chosen agreements in preference, but in this case, as I understand, it was the policy of the Department to adopt the Act?—Yes.

231. You have had a considerable number of changes I suppose in tenancies during the last few years?—We have had some, but, as I said before, no very large number.

232. You have had a certain number?—A certain number.

233. Among all the changes that you have had have you had any demand made for changes in the terms of the agreement or the Act. What I want to arrive at is whether in your experience you have found any sensible demand for greater changes in the nature of giving greater security of tenure or more compensation for improvements?—No; as far as I know they have been content with the Crown agreement.

Restrictions in cultivation.

234. The restriction of which you spoke, namely, as to the sale of produce off the farm, I understand is generally relaxed?—I think very much relaxed.

235. Is that because you find yourself unable to retain the restriction, or is it because you think it undesirable to maintain it?—Because when we get a tenant farming well we have been very glad to keep him and we let him do very much as he likes as long as he leaves his farm in a proper state of cultivation at the end of the period.

236. (*Chairman.*) Has it been a sensible relief to the tenants relaxing those rules about hay and straw?—I should say so, certainly.

237. They have sold hay and straw off the land?—I should think so; in fact I am sure they have in many cases.

Sub-division of farms.

238. (*Mr. Chaplin.*) On the question of dividing large holdings I understood you to say that in many cases you would think it desirable, and that you had the means of doing it, but that it had not been done because in your opinion it would not pay—was that so?—Yes.

239. Have you ever considered any means which might be adopted for promoting the division of land and for creating a greater number of farms of moderate size with any success?—Do you mean as to obtaining money for the purpose?

240. Yes?—No, I have not, because I have no doubt that if I thought it advisable and I went to the Treasury I should be surprised if they did not allow me to have the capital to do it, provided I could say that by laying out that capital there would be a good prospect of a fair per-centage for the capital.

241. You think it would be desirable if it could be done?—In some cases, not in all.

242. But you see great difficulty in getting over the preliminary expenses?—I do, to do it at a profit. I think it depends so very much upon locality.

Causes of the depression.

243. Are you in a position to say at all to what causes the tenants of your various estates chiefly attribute the depression in their industry?—I should say broadly the climate, bad seasons, and above all latterly the bad prices for everything, both corn and stock. Of course I hear complaints of labour, not so much the want of

Sir R. N. F. Kingscote, K.C.B.

9 Nov. 1893.

being able to obtain labour, but the deterioration of labour. You asked me about the Agricultural Holdings Act; there was no contracting out of it. The present Agricultural Holdings Act is, as you know, a compulsory Act, the old one was voluntary and the Crown contracted out of that Act as Mr. Gore said in his evidence in 1880.

The Agricultural Holdings Act.

244. That is the first Act?—Yes.

Rental.

245. (*Mr. Dalton.*) The average rental of the Crown agricultural lands now is 1*l.* an acre as I understand?—Under 1*l.* taking the whole average.

246. And in 1879 it was 30*s.* per acre?—About 30*s.*

247. What was the maximum that it ever attained in previous years?—I think Mr. Gore said 30*s.*

248. It never was higher, was it?—It was 32*s.* 6*d.*

249. And in what year would that be reached?—I should think 1877. Mr. Gore began to make allowances after 1877.

250. In 1877 your agricultural land reached this maximum?—I should say so.

251. Could you give a table of the preceding years to show how far back it was when it was at its present value, a little under 1*l.*?—I see Mr. Gore put in a statement from 1852 to 1879 which showed the changes of the acreage and the rental. It could be got out from that. It would be a very difficult thing to get out.

252. I want to know whether there has been at any time such a bad state of things as at present in the rental, or whether this fall from 1877 is a fall from the highest average rental that you have ever received from your land to the lowest?—You want to know whether the present rental has ever been so low?

253. Yes; and how far back you would probably have to go, roughly, for that?—I do not know how to get at it. Between 1852 and 1877 it increased considerably, but I should doubt its being as low as it is now. It would be very difficult to get out because there have been several estates bought since then. I do not know how to get at it quite.

254. You would take the rental from your estates?—Yes.

255. (*Chairman.*) Practically the rent is very much what it was in 1852, is it not?—Yes.

256. (*Mr. Dalton.*) You would only have to take the total rental and divide the number of acres, and you would get the average?—On the estates it would be so.

257. You would get a different class, but you would have the number of acres in each year, would you not be able to get the average in that way?—There is a great difficulty in getting it.

258. (*Chairman.*) In Huntingdonshire the estate of Great Staughton in 1852 the average was 1,062 as compared with 1,058 which is practically the same; the rental in 1852 was 468*l.*, and in 1879 it had risen to 1,546*l.*, and it is now 750*l.*?—There are allowances to the tenant.

259. But still making large deductions and allowances, the rent has not got down to what it was in 1852?—That is so.

Expenditure on improvements.

260. (*Mr. Dalton.*) There was a very large expenditure on improvements on this estate at Devizes, I think?—Yes.

261. What was the nature of the improvement?—I think there was a certain amount of draining in the low land, but the expenditure was principally in farm houses, cottages, and farm buildings.

262. It has not proved remunerative?—I should say not.

263. What class of improvements have you found most remunerative, buildings or drainage?—In many cases the drainage.

264. And they are all charged in the same way to capital?—Yes.

265. But the drainage and buildings are both carried to capital and charged 25 years?—Yes.

266. (*Mr. Lambert.*) Can you give me any comparison of the expenditure say for the 10 years preceding 1879, and the last 10 years, and whether or not the large expenditure which took place from say 1880 to 1887 was due to the fact that a smaller amount had been expended in the preceding years?—No, I do not think it is due to that. I am afraid Mr. Gore does not give it, but I should not think it is the fact. As I said before the large expenditure after 1879 for a few years I should say would be chiefly in drainage, and of course some new buildings. But I know as a fact that on one or two of the estates there were very large drainage works after those wet seasons.

Sir R. N. F. Kingscote, K.C.B.

9 Nov. 1893.

267. Then the tithe has now to be paid by you?—Yes.

Tithe.

268. Has the rent risen in proportion to the tithe, or have you had to give it back?—I tried to get it in some cases, but I think I may say that in many cases it is paid entirely by the Crown.

Local rate.

269. Can you give us any information at all as to what the amount of the local rates paid in 1879 was and the rates paid now—whether there has been any increase or not?—I am afraid I cannot give you that.

270. To get that information there would be a lot of trouble I have no doubt?—I thought of it when I knew I was going to give evidence, and we should have liked to have got it out, but we thought it really impracticable. (*See* Appendix A., III.)

271. Can you give us any general opinion as to whether the rates have increased since 1879?—As far as my own knowledge goes I could not give an opinion except that I know this, they have increased in some places, for instance, where there have been School Boards, and in Lincolnshire the drainage rates are perhaps rather higher.

272. Of course those rates have been paid by the tenants?—By the tenants.

Reductions of rent.

273. May I ask whether the reductions of rent have been greater on grass land or on land that grows corn?—Certainly on the corn-growing land.

274. And has it been greater on large or small holdings?—The actual remissions?

275. The actual remissions—the per-centage of remissions?—I really do not think I can answer that question. As I said before every estate has been treated separately and in some cases different farms upon the estates owing to position chiefly, and of course the nature of the soil.

276. But I presume on the same estate there were some small holdings and some large ones, have the remissions been on the large or on the small ones?—They have been treated very nearly equally. I do not mean to say that a holding of 30 acres of grass is treated in the same way as one of 30 acres of arable.

Condition of agriculture in Lancashire.

277. I mean the conditions being the same, can you give any reasons why the reductions of rent have not been made in Lancashire? Is it not owing to the cultivation or to a different method of cropping?—No, I think as a matter of fact during the bad wet seasons from 1880 up to six or seven years afterwards they did not suffer in the way that they did in other parts of the country from climate simply.

278. It is warmer there, is it?—It is warmer and there is not so much rain. It is situated on the seashore, well sheltered from the north and east, and I found on going there that they certainly have not suffered in the way that other parts of England have; but I am afraid during the last two years they have suffered.

279. Is there any difference in the rotation of crops in Lancashire from that in other parts of your estate?—No, I think not.

280. May I ask you whether there are any complaints of any restrictions under the agreement?—None have reached me.

281. And, of course, the rental, I presume, would be practically the same upon large and small holdings, the conditions being the same?—Certainly, with different estates.

282. May I ask you how you let your farms, whether by tender or how?—I let them by private agreement; I have put a farm up for tender, but I did not like it.

Method of letting farms.

283. Has it not been the practice to let the land then by tender?—No. I cannot say at any time that it was the practice. I think at Whichwood, when Whichwood was disafforested, that was let on tender, I know it was.

284. Then the rent is settled by you or your surveyor, and the tenant has to give that rental?—The surveyor sees the tenant or the would-be-tenant, and they come to an agreement between them, and it is then laid before me, and I accept it or not, as I think fit.

Sir R. N. F. Kingscote, K.C.B.

9 Nov. 1893.

285. Are the farms put up to public competition?—No. To auction do you mean?

286. No. Are different men allowed to compete for the farms?—Yes. They are advertised, and anybody may make an offer for them.

287. Then they practically would be let by tender?—No, I think not, because although one man might offer for it a higher rent than another man, perhaps his status would not be so good or there might be some reason why he should not have it.

Compensation under the Agricultural Holdings Act.

288. May I ask you under the Agricultural Holdings Act, how many tenants have been awarded compensation?—We have only had about one or two cases.

289. (*Lord Cobham.*) They went to arbitration, I suppose?—They went to arbitration.

290. (*Chairman.*) As against you?—As against us.

291. Generally speaking it would be as between the incoming tenant and the outgoing tenant, but you say there have been only one or two cases?—The only one I can call to mind is the one at Hainault, in Essex, a farm of 2,000 acres, that went to arbitration, and there is one only very small holding near Windsor that may go to arbitration.

292. (*Mr. Lambert.*) There are only two cases in the whole of the estates in which the tenants have been awarded compensation under the Agricultural Holdings Act?—That is so.

293. (*Chairman.*) As a general rule the tenant going out would be succeeded by another tenant, and the compensation would be paid by the incoming tenant to the outgoing man?—Yes.

294. (*Mr. Lambert.*) But that bargain would be concluded through the landlord?—No.

295. (*Chairman.*) There are a great many more than two changes of tenancy?—But I think they have been invariably settled between the outgoing and incoming tenants by valuers—merely calling in valuers. But we have had that one case under the Agricultural Holdings Act. There is one very small one pending now.

296. (*Mr. Lambert.*) You have only had two cases under the Agricultural Holdings Act upon the whole of your estates in which the tenants have been awarded compensation under the Agricultural Holdings Act?—That is so.

297. (*Chairman.*) Surely it is between the outgoing tenant and the incoming tenant?—The tenants have claimed under that Act.

298. Against the landlord?—Yes, and there is only one case.

299. I have got a very strong recollection of the Act, and my idea is that it is between the outgoing and the incoming tenant?—The outgoing tenant claims against the landlord.

300. (*Mr. Lambert.*) That is so, that the outgoing tenant would claim from the landlord?—Yes, that is my impression.

301. And you have only had one case in which the outgoing tenant has claimed from the landlord?—That is so, under the Act.

302. Are there many cases in which you have had to put in a distress for rent?—Very few indeed; there may have been one or two cases but very few; those that have occurred have been very small in number.

Difficulty in letting farms.

303. Have you had many applications for farms when you have had to let them? Have you had any difficulty in letting farms?—Frequently. I have several now that I should be glad to let.

304. In what part of the country?—The Whichwood estate, in Oxfordshire, is the worst, because it is all arable land. Again, the farm at Stagsden, in Bedfordshire, has been a very long time in hand and no one will take it.

305. And your tenants have a Crown agreement and practically they have the whole right of the shooting?—They have the whole right of the shooting.

Rate assessments.

306. (*Mr. Thomas.*) Do you know whether the assessment of those farms to the poor and other rates are reduced in proportion to the rent?—No doubt the tenants have looked after that themselves.

307. Do you employ any local men as agents or surveyors?—No, not generally.

Sir R. N. F. Kingscote, K.C.B.

9 Nov. 1894.

The Crown Surveyor.

308. Who looks after the landlords' and tenants' interest in that neighbourhood where you have got farms?—The Crown Surveyor.

309. Is the Crown Surveyor a practical agriculturist?—Certainly a practical agriculturist.

310. (*Mr. Everett.*) Were most of your tenants on lease or year by year before the depression set in?—Almost entirely on lease.

Whichwood Estate.

311. (*Mr. Elton.*) With reference to the Whichwood Estate, when was that disafforested—you did not give us the date?—Mr. Gore gave it in his evidence before the Royal Commission on Agriculture, on page 80, of the Digest and Appendix to Part I. of the Evidence taken before that Commission. He says:—"The disafforestation Act received the Royal Assent on the 8th July 1853. The Commissioners appointed under the provisions of that Act executed their award on the 13th June 1857."

312. Then you would be able to tell me whether it was all broken up at once after the disafforesting?—Yes.

313. It was not a gradual process?—I do not know how long it took. It took several years, I think.

314. Was the tithe set about the time it was broken up, because it was changed from waste land into arable land?—There has been very little or no tithe on it, I think.

315. I think I could put it in a simpler way; you have not got the difficulty which has arisen in other cases of forest land about a very high tithe being imposed directly it has been broken up? The tithe is not very high?—There is only 12*l.* tithe on the estate.

316. You can understand that there is a very high crop the very first year after the breaking up of an old forest land, and the tithe has been a great deal too high and it has led to a great deal of difficulty in the future?—You will see on page 80 of Mr. Gore's evidence he gives a full statement as to the estate.

Expenditure on improvements.

317. (*Lord Cobham.*) I think you said that the improvements and new works have averaged 16,000*l.* a year?—A little more, I am not sure that it is not 18,000*l.*

318. I want to correct that figure. I think you included repairs to make up the 18,000*l.*?—Yes, about 15,750*l.* per annum.

319. That is for new works. Do you see any reason to suppose that that rate of expenditure would not have to be maintained for the next ten years?—Certainly, I hope it will not.

320. You think it will not?—It will not certainly.

321. It is an enormous per-centage upon the income?—You will see by the return that in the last few years, very much less has been spent.

322. How much has it been for the last year or two, can you give us that?—For instance, in 1888, it was 13,000*l.*; in 1889, 7,000*l.*; in 1890, 6,900*l.*; in 1891, 6,200*l.*; in 1892, 9,700*l.*; and in 1893, 9,200*l.*

323. Was the last expenditure some years ago in consequence of the running out of long leases?—I think drainage was what caused the highest expenditure.

Allotments.

324. Have you had a favourable experience of allotments?—Yes. Still in some instances I find that they have fallen into few hands instead of keeping to the smaller quantities.

325. You have not lost money over them?—No.

326. Is there much demand for them?—We have not had much demand lately. I had a certain demand two or three years ago. But the Crown has always had considerable acreage in allotments. I think I could give it for you.

327. I have got it I think, 425 acres?—That is so.

Difficulty in letting farms.

328. (*Chairman.*) I understood you to say that in the case of farms unlet, the main difficulty is in consequence of their being in bad condition when they were given up?—I do not say that that is the reason that they have not been let. I think those which are hanging on hand are not let because they are almost entirely arable farms and stiff clay land.

329. But there have been, I presume, a certain number of changes of tenancies during the last ten years?—Yes.

Sir R. N. F. Kingscote, K.C.B.
9 Nov. 1893.

330. Out of the 240 tenants you speak of, taking an average farm in good condition, have you found it difficult to let such a farm during these last ten years? —No; especially in the North of England, we have had no difficulty.

331. In the South of England where a farm, I will not take the case of purely arable land in a stiff clay district, but I will take an average good farm in good condition, have you found it difficult to let?—I have found it difficult to let at the old rates. With reference to those which are in hand from the cause I have stated I have not been able to let them; but there have been very few changes.

Capital required for tenants.

332. Have you found men of capital ready to take them?—Sometimes not with the capital one would like, but a good practical man without capital is better than a man who is not practical, with capital.

333. What requirements do you generally make as regards capital?—No special requirements, but we try to ascertain that the would-be tenant has sufficient capital for the holding that he wishes to take.

334. What do you generally consider sufficient capital per acre?—I really would not like to give an opinion upon that; it is so very different in different places.

335. Taking a good fair average farm in good condition in the South of England, would you say 5*l.* or 6*l.* or 8*l.* an acre, should be the amount that the man should have?—I should sooner see him with 10*l.*; that is to start with everything.

336. To start with everything; what do you mean by that?—You so often get a man who has got something, he may have implements and a certain amount of stock coming from somewhere else, and he would not want then anything like the capital—I mean cash.

337. I understood you to say that although you have had great difficulty in that respect in past times, yet you have men ready to come in with the capital at a reduction of rent?—With the capital, with reservation, yes.

338. Has there been rather a desire to become a tenant of the Crown property?—Well, I think I may say honestly that they rather like farming under the Crown.

339. And you are prepared now to grant leases?—Certainly.

340. Even at the present rates?—Even at the present reduced rates, but I could hardly grant a long lease at the rates that might be taken on an annual tenancy.

Compensation under the Agricultural Holdings Act.

341. (*Mr. Little.*) I should like to clear up that about the valuation with reference to the outgoing and the incoming tenant. I understand that in only one case has a claim been made against the landlord in practice?—Yes.

342. But I presume in theory the incoming tenant agrees to pay whatever the landlord may be called upon to pay the outgoing tenant?—Yes.

343. And you allow the valuation to be made as between those two parties?—Yes.

344. And in only one case has a claim been made against the landlord?—Yes, against the landlord.

345. How would the tenants in the other cases, where they have not made a claim upon you, be compensated by the incoming tenant for anything in the way of cultivation and manures?—According to the valuation. I may say that we, under the agreement, usually appoint the valuer acting for the incoming tenant to act for the Crown also.

346. You appoint, but you perhaps accept the nomination of the incoming tenant or his recommendation?—Certainly, in agreement with him.

347. But the outgoing tenant receives compensation from the incoming tenant instead of you for the manures that are unexpended, the value of which is not exhausted at the time of quitting?—Yes.

348. The outgoing tenant has been compensated; he has been allowed to make his claim, and he has been compensated by the incoming tenant for such improvement as he has claimed for?—Yes, by arbitration.

349. By arbitration; after arbitration he has received what is deemed to be the value of the improvement?—That is so, certainly.

350. (*Mr. Clay.*) The fact is that you, as landlord, turn the obligation on to the incoming tenant?—With his consent by the appointment of a valuer.

351. But you make it a bargain that he is to take the outgoing tenant's compensation?—Yes.

352. (*Mr. Lambert.*) In how many cases where you have given your consent in writing, has the outgoing tenant claimed compensation from the incoming tenant under the Agricultural Holdings Act?—I do not accept from the outgoing tenant. I only accept from the incoming tenant.

353. Certainly, but the outgoing tenant has never claimed compensation from you under the Agricultural Holdings Act, except in two cases?—Yes, that is so.

354. I wish to know whether you have given your consent, in writing, to the incoming tenant to pay to the outgoing tenant any compensation under the Agricultural Holdings Act?—That is settled by the valuer.

355. But you have not given your consent in writing?—I have never given any consent in writing, and I do not think the consent is required.

356. (*Mr. Dalton.*) The consent is required if the incoming tenant is going to charge you any part of this compensation that he pays to the outgoing tenant, but only in those cases, I think?—The fact is that the agreements are generally not made under the Agricultural Holdings Act, but made by the custom of the country.

Sir R. N. F. Kingscote, K.C.B.
9 Nov. 1893.

Adjourned to to-morrow at 12 o'clock.

Second Day.

Friday, 10th November 1893.

PRESENT:

The Right Hon. GEORGE JOHN SHAW-LEFEVRE, M.P., in the Chair.

Viscount Cobham.
The Right Hon. Henry Chaplin, M.P.
Sir Robert Nigel Fitzhardinge Kingscote, K.C.B.
Robert Giffen, Esq., C.B.
Charles Isaac Elton, Esq., Q.C.
Captain Owen Thomas.
Francis Allston Channing, Esq., M.P.
John Clay, Esq.
Cornelius Neale Dalton, Esq.
Robert Lacey Everett, Esq., M.P.
John Gilmour, Esq.
George Lambert, Esq., M.P.
William Cutlack Little, Esq.
Walter Hume Long, Esq., M.P.
Charles Whitehead, Esq., F.L.S.

Herbert Lyon, Esq., *Secretary.*
R. F. Crawford, Esq., } *Assistant*
Freeman Thomas, Esq., } *Secretaries.*

Mr. Alfred de Bock Porter called and examined.

Mr. A. de Bock Porter. 10 Nov. 1893.

357. (*Chairman.*) You are the Secretary and Financial Adviser to the Ecclesiastical Commissioners, are you not?—Yes.

358. And you have been so for some years?—Yes; I was Financial Secretary from 1880 to 1888, and I have been Secretary and Financial Adviser from 1888 to the present time.

359. In that capacity, have you a general management of the estates belonging to the Ecclesiastical Commissioners; or, at all events, do you superintend the acting managers?—Yes.

Acreage of estates.

360. What is the extent of the estates now vested in the Commissioners?—About 279,000 acres in possession, and about 30,000 acres in reversion.

Episcopal and capitular estates.

361. Those, I suppose, are the capitular estates which have been handed over to you under various Acts of Parliament?—And also episcopal estates. They are estates formerly belonging to the bishops and chapters, and also to the non-residentiary prebends.

362. In many cases the properties which have been under your hands have been re-vested in the bishops again?—Yes. Under the 23rd and 24th of Victoria, chapter 124, the lands of each bishop were vested in the Commissioners on a change in the See, and the Commissioners were directed to set out a permanent estate, which is to be held by the bishop to produce his statutory income at a rack rent, their incomes having been derived previously from fines, &c.

363. They were not bound to take them?—They had the option of transferring their estates to the Commissioners in exchange for an annuity, to secure to them their statutory income.

364. Have they generally exercised that option?—Yes, every one of them.

365. And taken the income?—Yes, and taken the income; the Commissioners manage the estates.

Capitular estates.

366. Then in the case of capitular estates, what is done?—There is no such option, the chapters having no power to hand them back to the Commissioners. Some of the chapters have kept the estates, and there is no parliamentary provision for handing them back.

367. In all cases, have the capitular bodies estates vested in them?—Only a portion of them.

Acreage of estates in the various counties.

368. And the result of the whole transaction is, that you are left with 270,000 acres in hand, and 30,000 acres in reversion?—Yes.

369. Are those estates spread over the different parts of the country?—Yes; they are in nearly every county in the kingdom ranging from 52,000 acres in Durham to some six acres in Shropshire.

370. Is that a Return of them?—I have a few of them—the principal of them.

371. Let me look at it (*the paper was handed to the Chairman for inspection*).

Mr. A. de Bock Porter. 10 Nov. 1893.

372. From this Return it appears that in Durham there are 52,000 acres; in Yorkshire, 23,000 acres; in Lincolnshire, 22,000 acres; in Kent, 17,000 acres; in Cambridgeshire, 13,000 acres; in Worcestershire, 13,000 acres; in Wiltshire, 11,000 acres; in Somersetshire, 10,000 acres; in Nottinghamshire, 10,000 acres; and in other counties ranging from 2,700 acres up to 8,000 acres. Are those properties generally held in large estates together?—They vary very much. I have a list here of farms of over 500 acres; there are only 58 of more than 500 acres.

373. I meant to ask you whether these are properties held largely with a considerable number of farms adjoining one another?—The Commissioners' estates are not in ring fences because they belonged to different preferments; they are mostly isolated, and it is only where the Commissioners have been either buying or selling leasehold interests, with a view to consolidation, that they are at all compact; they are very much distributed for the most part.

Size of farms.

374. Then with regard to the size of the farms, what do you say?—I said that the Commissioners have only 58 farms of over 500 acres in extent.

375. Have you a considerable number of small holdings?—The Commissioners have about 3,000 holdings over 2 acres.

376. Is that a statement of the different sizes?—No, I have not got them graduated; it is such an enormous affair to get out.

377. Can you give us the kind of estate?—There are 3,000 farms of over 2 acres.

378. (*Mr. Lambert.*) Up to what limit?—We have 58 farms over 500 acres, and we have seven farms of over 1,000 acres.

Management.

379. (*Chairman.*) How are these estates managed?—The country is divided into two districts, and Messrs. Clutton are the agents for the southern district, and Messrs. Smiths, Gore, Dale, and Ingram for the northern district.

380. Are those agents gentlemen in private firms—in private business—or are they devoted exclusively to your Commission?—They act for the Crown and for private clients, but their principal business is that of the Crown and the Commissioners.

381. (*Mr. Lambert.*) May I interpose? How many holdings have you altogether; how many farms?—3,000 over 2 acres.

382. How many under?—2,674 allotment tenants.

Rental and acreage in 1880 and 1892 compared.

383. (*Chairman.*) I thought we would come to the question of allotments later. What is the rental of the estates?—The rental from the last accounts made up for the year ending 31st October 1892 is 311,238*l*.

384. (*Lord Cobham.*) Is that purely agricultural?—These are purely agricultural estates.

Mr. A. de Bock Porter. 10 Nov. 1893.

385. (*Chairman.*) Can you state what the rental was in 1879?—I have got the return for the year 1880; we had then 189,000 acres in possession and the rental was 318,000*l.*

386. Since then the acreage has been increased up to what?—Up to nearly 100,000 more.

387. And the rent has gone back how much?—7,000*l.*

388. (*Lord Cobham.*) The acreage has increased by 30 per cent.?—Almost more than that; it has increased from 189,000 to 278,000 acres.

Reduction of rent.

389. (*Chairman.*) Very nearly 50 per cent. Can you state in respect of the land that there was in hand in 1880 what has been the actual per-centage of the reduction of rent?—I have made an estimate of what we ought to have received this year. Assuming the rents to have been based upon the 1880 average, we ought to have had an income of 417,000*l.* as against 311,000*l.* There is about 25 per cent. reduction on the whole.

390. Has there been a great difference in this respect in different parts of the country?—Yes, very much. I have a return of the allowances. I could not get it out for each year, but I have the aggregate of allowances from 1878 to 1892.

391. Before we come to that I would ask you a question with reference to the difference in different parts of the country?—The counties most affected are Huntingdon and Nottingham in relation to the acreage that we have there.

In Huntingdonshire.

392. (*Mr. Chaplin.*) Is Huntingdon the worst of all; are you giving them to us in that order?—On a rental of 6,300*l.* per annum we have made allowances in the 14 years to the extent of 15,000*l.* in Huntingdonshire.

393. (*Chairman.*) Were those allowances in reduction of rent?—They were allowances in reduction of rent. You asked me which counties were most affected in that way.

394. Are those permanent reductions or merely abatements?—These were abatements, but many of them have settled down to permanent reductions.

395. (*Lord Cobham.*) What is the present rental?—The present rental in Huntingdonshire, including the permanent estate of the See of Peterborough, which has a large estate there, is about 6,300*l.* a year.

396. (*Chairman.*) I think you said the rental was 6,300*l.* in 1880?—If you take 6,200 acres, which is the Commissioners' own estate, leaving out that of the Bishop of Peterborough, the present rental is 4,620*l.*; the present rental of the Huntingdonshire estate as a whole is 6,300*l.*

397. I suppose there has been some addition to it?—There has been some addition.

398. I understand you are giving the difference between 1880 and 1892?—No, I cannot give you the amount of the rental, but I have got a summary of all the allowances, showing where the largest allowances have been made; I have not got each county reckoned up on the acreage of 1880, but on the present acreage. I have the rent at the present time.

399. On what basis do you state that Huntingdonshire is the worst county as far as you are aware?—Because the aggregate allowances in the 14 years ending 1892, viz., 15,000*l.* were on a rental of only 6300*l.*

In Nottinghamshire.

400. What was the next county that you mentioned, Nottinghamshire?—Nottinghamshire. There the allowances were 15,500*l.* with a rental of 9,500*l.*

401. (*Mr. Little.*) Do you mean that the 9,500*l.* is the present rent?—Yes, the present rent.

In Somerset and Lincolnshire.

402. (*Chairman.*) And what counties come next?—Somerset, where the allowances amount to 24,000*l.* on a rental of 19,900*l.* at the present time; and Lincoln, 44,000*l.* with a rental of 24,000*l.* at the present time.

403. (*Mr. Lambert.*) I suppose that in the 44,000*l.* you include the reductions of rent that have been made during the last 14 years?—No, only the abatements during the last 14 years.

Reduction of rent generally.

404. (*Mr. Chaplin.*) Could you say what the rental was 14 years ago?—No, I cannot, and it would not perhaps be fair to say, because the acreage is changed every year. The Commissioners have not a fixed estate of so many acres. The acreage is constantly changing.

405. (*Chairman.*) That, of course, involves an element of error in the allowances?—Yes.

406. Unless you know what the area was 14 years ago you cannot form any computation as to the per-centage of allowances for the purpose of comparison with other estates?—I thought this was a rough way of showing where the greatest allowances had been made.

Mr. A. de Bock Porter. 10 Nov. 1893.

407–8. When did the first allowances begin?—1878 was the first allowance of any kind, and that was given in Nottinghamshire.

409. Have you got any figures which show the allowances made in each year?—Yes, I have those in each county.

410. So as to give us an indication of the gradual progress of the depression?—The allowances have not gone on perhaps at the same rate, because so many rents have been permanently re-adjusted and the reductions taken in another form. It is impossible to classify them exactly. I have a statement showing the allowances in each county.

411. I was rather under the impression from what you stated before that these allowances included the reductions in rent, but from your present answer I gather that the allowances are abatements made off the agreed rents. But besides that there has been a reduction of rent?—Yes. The Commissioners were very loth, of course, to reduce their permanent rents, and for many years they have gone on making allowances, but during the last one or two years the allowances have fallen off very much and the permanent rents have been reduced.

412. Therefore the amount of the allowance does not give an indication of the full depression?—Not the whole depression.

413. (*Lord Cobham.*) Do they include arrears of rent written off?—They include arrears of rent written off.

414. (*Chairman.*) Is that a paper that you can put in showing the allowances yearly?—I do not think that this paper would be any use without particulars as to the property. It is very misleading apart from the rental. The total allowances which I have given include the rent and arrears of rent written off, making 323,000*l.* from 1878 to 1892. The largest was in the year 1882 when we allowed 45,000*l.*

415. That, as you have already said, does not include the reductions in rent?—No, because many of the modern rents are permanently reduced.

416. Therefore it gives one an imperfect idea of the changes that have taken place?—It is a very favourable view.

417. The better idea is that already given in the opening statement, namely, comparing the rents of 1880 with the present time there has been a reduction of 25 per cent. in rents?—Yes, that includes everything.

418. Is this system of making allowances in lieu of permanent reductions still going on?—No, there are not so many now. We have no tenants holding under leases, or hardly any, and nearly every rent has been re-adjusted in the course of the 14 years.

419. And you have not in the last two years been compelled to make further allowances upon those reduced rents?—Not upon the reduced rents. Only in a few instances, perhaps.

420. Could you give us an idea when the last permanent settlements of new rents were made?—They are going on from week to week at every meeting of the Board.

421. They are still going on?—They are still going on.

422. But I thought mainly they had been completed?—They have, but with such an immense number of farms, re-arrangements are going on constantly. The tendency is still downward.

423. But the great move downwards occurred a few years ago?—Yes, a few years ago.

424. And up till about two years ago, I understood?—During the last two or three years the rents have been practically permanently reduced.

In Cheshire and Lancashire.

425. Have there been any parts of the country where the reductions have not taken place, or where the reductions have been small?—In Cheshire and Lancashire there have been scarcely any reductions.

Mr. A. de Bock Porter.

10 Nov. 1893.

426. And in what other counties have the reductions been small in comparison with others?—In Cumberland there has not been much reduction.

In Cumberland.

427. (*Lord Cobham.*) What about Durham, with its 52,000 acres?—The reductions have not been so very large there because a good deal of the land is held in Durham by the coal owners, who prefer keeping the farms in hand to paying damages arising from subsidence; and those tenants do not get as large reductions as the purely agricultural tenants.

In Durham.

428. (*Chairman.*) Have you any observations to make about Yorkshire, whether the reductions have been large or small as compared with others?—In parts of Yorkshire they have been very large.

In Yorkshire.

429. Then in Devonshire?—In Devonshire there has not been so much until recently. During 1887, 1888, and 1890, the rents were, to a great extent, re-adjusted, but not so much in Devonshire as in some other counties. On a rental of 16,000*l.* the aggregate allowances for the 14 years amount to 13,000*l.*

In Devonshire.

430. You cannot state what the reduction of rent has been there?—Not the permanent reduction.

Expenditure on improvements.

431. During the same period has there been a large expenditure in permanent improvements?—I have got a summary of the expenditure which has been made from the commencement of the Commission to the present time. The total sum expended on farm buildings and improvements is 1,600,000*l.*, and about 344,000*l.* in drainage.

432. Since when?—That is from 1850. Then, of course, for many years the Commission had very small estates.

433. I am specially alluding to the interval you have been speaking of since 1880. Has there been a large increase of expenditure during that period, resulting from the pressure on the tenants and the necessity of helping them in that manner?—Yes, largely helping them with new buildings, and in addition to that the Commissioners have had to defray the cost of repairs, which under ordinary circumstances would have fallen upon the tenants.

434. Can you state how much that has amounted to annually? Take the years 1878 to 1892, the expenditure upon repairs has been about 263,000*l.* Has that been a new item altogether?—No, those are estate repairs apart from the farm buildings and drainage expenditure. Beginning with 1880, the expenditure on farm buildings runs in this way:—52,000*l.*, 47,000*l.*, 46,000*l.*, 38,000*l.*, 32,000*l.*, 50,000*l.*, 45,000*l.*, 52,000*l.*, 37,000*l.*, 35,000*l.*, 40,000*l.*, 39,000*l.*, and 49,000*l.*

435. May I look at that for a moment?—There are an immense number of figures.

436. (*Mr. Chaplin.*) You have not got the total?—About 550,000*l.*, that is from 1880 to 1892.

437. (*Chairman.*) Since 1880?—Since 1880.

438. (*Sir Nigel Kingscote.*) Is that 1892 inclusive?—Yes, inclusive.

439. (*Chairman.*) Is this money expended on improvements taken out of revenue account, or have you got a capital account for it?—It is taken out of income. Formerly the Commissioners used to charge it to the common fund, which is a sort of capital account, but now it is all charged to income.

440. Is that farm account kept entirely distinct from the other accounts of the Commission, house property, and mineral accounts?—It is all in one summary, called the "Rental, &c. of Estates."

441. You do not keep the farming account entirely distinct?—No.

Net income from agricultural property.

442. Could you show us what has been the aggregate receipt of net income after taking all the out-goings, improvements, and so forth, in each year?—The figures are liable to fluctuation because mineral property comes in, and there is the house property in London. I have got the whole rental, but there is the mineral property along with it.

443. Excluding the mineral property and the house property, can you show us in each year what has been the net income paid into your general funds from the farm property. As I understand, you pay for your improvements and repairs also out of income?—Yes.

444. You have got no capital account, and, therefore, one would presume that the accounts are kept separately, and that you would be able to show what are the net receipts from the farm property in each year?—I could get it out, but in the reports to Parliament the whole of the income of the Commissioners and the whole of the out-goings are shown in one account.

Mr. A. de Bock Porter.

10 Nov. 1893.

445. Would it be possible to get it out without any labour?—Yes, I could get that out, but it will involve considerable labour.

446. And showing what the acreage for each year is. Of course the acreage is continually increasing or has been increasing?—I do not think I could promise to get out the acreage for each year. To get out the last year, 1892, has been very laborious work.

447. What the Commission would rather like to have is a statement of what has been the effect of the depression upon your large ownership of land, and unless we know in each year what the acreage is, and what the net receipts paid into the general funds are, there is not very much light thrown upon the subject?—I could do it roughly, not to a few acres. There has been a gradual increase by the lapsing of leases which could be added, but to go through each one of the rentals to get the acreage would be a very laborious work.

448. Without too minute accuracy, would it be possible to get a general idea of the acreage of each year, and the receipt of rent after paying all the outgoings, including improvements, and the money spent on repairs, and the allowances made?—Yes, I can do that. (*See* Appendix A., VII.) The Commissioners' property has charges on it rather different to those on estates of ordinary landowners, because we have a number of stipends paid to incumbents chargeable on the estate.

449. Those are permanent charges?—They are permanent charges amounting to between 12,000*l.* and 13,000*l.* a year.

450. But those would be fixed charges, and remain the same every year?—Yes.

451. Whereas I understand there has been a continual expenditure in the outgoings and on the improvements and a further increase due to the fact that you have been compelled to do the repairs?—Yes.

452. And beyond that the allowances and permanent reductions of rent. You take all these into account, and the net income paid into your general account must be very greatly reduced, far beyond what would appear from the reduction in rent?—The Commissioners are large holders of tithe rent charge, and their income has been very much affected by the reduction in the tithe averages, but taking tithe and agricultural depression, and the losses which have been made from some of the mineral property, we reckon our income is 200,000*l.* less than on the estimate of eight years ago it would be this year.

453. Do you mean that in respect of the 189,000 acres you anticipated some years ago that you would receive this year 200,000*l.* over the 311,000*l.*?—I reckoned that I should have 417,000*l.* a year from agricultural land instead of the 311,000*l.*

454. I think you told us that if the rental had been maintained, you would have received 417,000*l.* in rent instead of 311,000*l.*?—Yes, instead of 311,000*l.*

455. But now you say further, that, owing to outgoings of various kinds, you have received 200,000*l.* less than the estimate?—That is owing to the depreciation in tithes and to our losses in mineral property.

456. That is outside our inquiry. We do not want to go into the question of mineral property or the tithe. In confining yourself only to farm property the reduction has been about 100,000*l.*?—106,000*l.*

457. But then there is a further amount to be added to that, that is, the increased expenditure in improvements?—Yes, in improvements.

Leases.

458. You said just now that the tenants as a rule have not got leases?—No, out of the 3,000 odd tenants only about 80 have leases.

459. Were there leases at one time?—A great many.

460. When did they begin to fall in?—Since 1880 many of the tenants have come to us and asked us to relieve them of their leases; they wanted allowances to be made.

461. Did you do that?—Yes, in many cases.

462. Do you find that they do not take leases now?—None of them want to take leases now.

463. Are you prepared to give leases?—Yes, if they are asked for.

464. What length of leases do you offer?—21 years.

465. And you are prepared still to do this?—Yes.

466. Do the tenants have the right of shooting?—Yes.

Shooting rights.

467. In all cases?—In all cases.

Changes in tenancies.

468. Have there been many changes during the last 14 years in the tenancies?—Yes, far beyond the average. For the most part the Commissioners' property goes down from father to son or to some member of the family; but during the last 12 or 14 years there have been a good many changes.

469. Can you say what increased per-centage there has been?—No, I could not say the per-centage.

470. Have many tenants been sold up?—A great many.

Land in hand.

471. When these changes have taken place, have you found a difficulty in getting new tenants?—Sometimes we have had a good deal of land in hand. In 1880 we had in the northern district some 3,200 acres in hand; now we have about 800; but in the south we have 4,300 acres in hand at the present time.

472. Is that an increase over previous years in the south?—That is an increase in the south, but a considerable reduction in the north.

473. (*Mr. Little.*) What is the distinction between the south and the north, may I ask?—The country is divided by a line drawn from the north of Essex to the north of Cardiganshire.

Difficulty in letting farms.

474. (*Chairman.*) Then do I gather from that that depression has been less serious to the north of that line than in the south?—During the last few years there has been great difficulty in getting tenants for some of the larger farms in the south, and they have been thrown into hand. Two or three farms in Essex and one in Hampshire we have had in hand now for some years.

475. Have the farms been left in a very bad state by the previous tenants?—In some cases.

476. The difficulty arises, does it not, from that, in getting new tenants?—The condition of the farms now is very good, but the difficulty is to find anybody with sufficient capital to go into them.

(After a short adjournment.)

Large and small farms.

477. Can you draw any distinction between the case of large farms and small farms?—For the most part, the farms that we have in hand are large farms. The smaller farms are easily let as compared with the large farms.

478. Have you made larger reductions in the case of the larger farms than in the smaller ones?—We have.

479. May I take it generally that the result of your experience is that you think that the small farms have weathered the difficulties better than the large ones?—Undoubtedly.

480. What acreage would you call a large farm?—Over 400 acres.

481. But with regard to the farms of under 200 acres, could you draw any distinction between them and the larger farms?—Our difficulty has been mainly with the farms of over 350 acres.

482. (*Mr. Long.*) The question of small and large farms does not really affect some districts. I imagine that you would probably tell us that the large farms which caused the difficulty were in a district where small farms could not practically be created, is that so?—I have one case in point, perhaps. There is a farm at Ely with an acreage of 1,100 acres, that was let for 2,000*l.* a year in 1881. It has been reduced to 1,300*l.*; 1,000*l.*; 570*l.*; and at the present time it is let at 670*l.*

483. (*Chairman.*) That is to say, in the case of farms of very large size, I presume, the difficulty is in finding tenants with capital to take them up?—Yes; unless we make the concessions that are absolutely needed, there is the fear of having such a farm in hand.

Sub-division of farms.

484. (*Mr. Long.*) What I want to bring out is that these particularly large farms are not capable of reduction; you cannot cut them into two as you can in the grass country?—No.

485. Have you found it advisable in some cases to divide those large farms?—No, we have not; several of the farms that we have in hand are very large, and the surveyors do not seem to think that they can be cut up.

486. As a matter of fact, do you not divide any farms?—Very few; not more than, perhaps, 20 large farms; we may have cut up that number, but I do not think more than that.

487. You have got several large farms which you have been unable to cut up?—Yes.

488. Is that from its being found inexpedient to expend the capital on buildings upon them, or is it because they are better managed in their present condition?—There are two or three large Essex farms which have had very substantial buildings put upon them, and the Commissioners have been hoping to effect a letting, and not to forego the use of this large expenditure which has been made in good times, to make a provision which was then thought the best.

489. I take it that the larger expenditure on the larger farms would be rendered useless, because the expenditure would be suitable only to the larger farms?—That is so.

490. (*Mr. Long.*) I want to know whether it is or it is not the fact that in the case of those large farms that you have been speaking of the division into small farms offers no attraction to any new tenants at all; or does it offer an attraction?—I doubt very much whether, in the case of the two or three farms in Essex, if we were to cut them up further we should be able to let them.

491. (*Mr. Lambert.*) Has it been tried at all?—We have divided some 20 farms, but there has been no very large expenditure in new buildings which are inseparable from making any alterations.

Reductions of rent in Lincolnshire.

492. (*Chairman.*) Could you give us any other illustrations of great reductions in individual cases?—There is a farm in Lincolnshire, not very far from Lincoln, of 1,400 acres which was let at 2,300*l.* in 1880, and which is now let at 800*l.*

493. (*Mr. Chaplin.*) May I ask what parish that is in, or how far from the city?—Fiskerton. There is another farm in Lincolnshire, the acreage of which is 1,130 acres, and the rent in 1880 was 2,660*l.*, and it is now let at 900*l.*

Tithes.

494. (*Lord Cobham.*) Do you take the tithe into consideration in giving those figures?—Those are let tithe free now.

495. And they were not before?—Very many of these large farms are not tithed, having been Ecclesiastical lands the tithe has not unfrequently been in the Commissioners' hands, and practically merged. We are landowners and tithe owners, and we have always merged our tithe where practicable.

Land in hand.

496. (*Chairman.*) Are the farms in hand mostly those very large farms?—We have one very large farm in hand, in Hampshire, about 680 acres. That has been in hand for some years; and three large farms in Essex.

497. Have you any small farms in hand?—We have two or three small farms in hand, but under very exceptional circumstances. They are not likely to be in the Commissioners' hands for long.

498. You apprehend no difficulty about those?—We apprehend no difficulty.

Steps taken to find tenants.

499. (*Mr. Long.*) Could we ascertain, with regard to the large farms in hand, what steps you have taken to find tenants?—They have been well advertised, and every endeavour has been made to find tenants.

500. That bears upon a question put just now by one of the members of the Commission, whether the system of breaking up farms had been attempted. They had been advertised, in what way?—Advertised in the local papers, and the eastern and southern ones also in the north country papers. Our agents are directly interested in finding tenants for the farms as soon as possible, because their remuneration is based upon the rents received.

501. (*Chairman.*) Where there is a farm in hand, is there no per-centage of profit?—Speaking generally, none.

502. How do you manage them?—There is a bailiff under the direct control of the surveyors, who pay constant visits.

Result of farming land in hand.

503. What has been the result of farming those farms in your own hands?—Very disastrous as regards the financial result.

Mr. A. de Bock Porter.

) Nov. 1893.

504. Can you give an illustration of the losses that you have incurred in that way?—We unfortunately make a loss beyond the whole of the rent.

505. In the aggregate of any year, can you give the amount that you have lost on those farms in hand? The losses have been beyond the rent, you said?—Considerably beyond the rent.

506. When first given up, the farms are in a bad condition, but they remain in hand beyond the time when you have got them into good condition, and some of them are still in hand, although in very good condition. In those cases, have you lost money?—Yes.

507. (*Lord Cobham.*) That is charging everything to income?—Yes, everything.

508. New works?—Yes.

509. (*Chairman.*) I presume you have had some difficulty in managing those farms?—There is considerable difficulty.

510. Who are they superintended by?—By the surveyors.

511. They cannot be on the spot?—They pay constant visits to the farm, but it is not like constant supervision.

512. Have you a number of large farms to be looked after?—Yes.

513. (*Mr. Chaplin.*) I suppose the Commissioners have a good farm bailiff?—They have a bailiff at each farm.

ale of roperty y deferred ayment.

514. (*Chairman.*) Have you effected any sales of the Church property lately?—Yes; we have sold, even during the depression, by the deferred payment system. Some time since the Commissioners adopted a plan of selling farms mostly for the first part to tenants on the instalment system—15 per cent. was paid down, and the balance was spread over a term of years, the terminable annuity extinguishing the principal and interest, the rate of interest being 3·63 per cent. (*See* Appendix A., VIII.)

515. Do they offer them to all their tenants?—Only to the tenants that they were willing to sell to. When selling by auction 15 per cent. is paid down and 85 per cent. left on mortgage.

516. Are you prepared to sell any of your property?—No, the difficulty that the Commissioners would have is that if they sold very largely they would have a difficulty in re-investing.

517. Are they bound to re-invest in land?—They are not bound to do so, but in investing in the Funds or mortgages to local authorities you can only put out a certain amount of money, and it is now hardly the time to sell wholesale.

518. But I understood that you had come to a determination to offer the farms to certain tenants?—To the tenants of certain estates.

519. Were they estates which were thought desirable to sell?—There was rather a strong wish on the part of certain tenants to buy. We began in Wales, and we sold several large estates there—altogether up to the present time we have sold about 17,000 acres for 462,000*l.*

520. When did you begin this?—It is about ten years that we have been doing it; we did not sell very much to begin with.

521. Then they have all been sold since the period of depression began?—Yes, since the depression began.

522. What has been the average rate of purchase with reference to the rent?—Between 25*l.* and 30*l.* an acre.

523. About 30*l.* an acre?—Something less than that—about 27*l.*

524. (*Mr. Whitehead.*) What term of years were the payments extended over?—They were extended over 30 years.

525. Did you consider the prices to be good?—Yes; during the recent sales by auction we have been able to get a little more than our reserve price by selling on this system, and we have had no difficulty with the purchasers in the payment of instalments.

526. When you say recent sales by auction, in this case you have sold to the public and not to the tenants?—The tenants are generally given the option of buying before the property is put up.

527. And then when they have not bought you sell by auction?—Then we sell by auction.

528. What are the last sales you have effected—in what part of the country have they been sold?—In Somersetshire, I think, the last sale took place.

Mr. A. de Bock Porter.

10 Nov. 1893.

529. How recently?—In the summer of this year.

530. Did you effect the sale then?—Every lot was sold.

531. At a good price?—Yes, in excess of our reserve.

532. (*Mr. Little.*) How many years' purchase on present rental?—They varied from 27*l.* to 30*l.* per acre.

533. (*Chairman.*) What was the size of the estate that you sold?—Many of them were small pieces, and it was not a compact estate that we sold.

534. Was it mostly in small holdings?—Mostly in small pieces.

535. What size of farms were they?—Some were pieces of grass, which of course fetched a good price, and some small farms with very insufficient buildings. The Commissioners sold them in order to avoid the cost that they would have to incur in providing buildings. They thought that some of the adjoining tenants might buy and hold them with their holdings under other landowners. They ranged from 5 to 10 acres up to 60 and 80 acres.

536. They were hardly cases of small farms, then?—They were comparatively small holdings.

537. Land without buildings which could be bough by adjoining landowners?—Yes.

538. (*Mr. Chaplin.*) Was it grass land or arable?—Some of it was grass and some of it was both grass and arable.

539. (*Chairman.*) That would show that there is a market for the land even in these times?—If the purchasers can be assisted.

540. If facilities are offered to spread the operation of repayment over a term of years?—The Commissioners do not make any charge for the conveyance, and they will accept the balance of the purchase money without notice at any time.

541. And those facilities you consider are a great inducement to make people buy?—Yes.

542. Is it proposed to extend that further in order to sell more land?—We shall go on selling wherever we have a dispersed estate. As the properties fall into hand, we sell off the smaller pieces.

543. Is there anything else with reference to the inquiry before the Commission that you desire to bring before us?—I do not know whether the Commission want to go into anything about the allotments.

Allotments.

544. Have you given land pretty freely for allotments?—We have offered allotments in every district in which we have any property.

545. What has been the result?—In the north, the labourers are very keen in taking up allotments, but there is not so much demand, I think, in the south.

546. Are there gardens attached to the cottages in the south?—All the Commissioners' cottages have gardens attached.

547. (*Mr. Long.*) That is the universal practice in the south and west, is it not?—Yes. I do not know whether the Commission wish to know anything about the average price of allotments. They average about 3*d.* per pole.

548. (*Chairman.*) How much do you generally let, what sizes are the allotments?—Generally not exceeding quarter acre plots; there are some few acre plots, but from a quarter to half an acre and some smaller are the usual size.

549. Then you are prepared to let land for allotments wherever there is a demand?—Yes, we have a difficulty in some cases; the villagers want the best pieces of the farms, and there is an indisposition on the part of the tenants to give up the pieces against the road which are thought best for allotments, but we have endeavoured to make arrangements with our tenants wherever there is a real demand.

550. Speaking generally, you have not any difficulty, have you, with your tenants in that respect?—No.

551. (*Lord Cobham.*) Have the rents been well paid?—Very well paid.

552. (*Sir Nigel Kingscote.*) I suppose, in the North, where you say there is a demand, the demand is not by agricultural labourers, but from people who have got land adjoining their cottages?—Where there are small tradesmen, or people having other occupations.

Mr. A. de Bock Porter.

10 Nov. 1893.

553. I mean they are not agricultural labourers?—They are not all agricultural labourers.

554. The demand is chiefly made for garden allotments to be attached to the cottages?—Yes.

Sale of property by the Commissioners.

555. One question about the sales; I understand that you only offer land on the estates of the Commissioners, where you think you will get a sale; you do not put a large estate of some 2,000 acres into the market, but only small portions, which you think will be bought by neighbouring landowners or by the tenants?—Yes, we have been consolidating some of our estates with a view to permanent investment; those we have not offered for sale It is the straggling properties that come in that we, for the most part, sell.

556. Do you know at all the largest acreage, not in any one lot, but when you put up one estate; have you sold a couple of thousand acres in one estate, for instance?—We have sold one estate in Wales 1,200 or 1,400 acres; these were sold to the tenants.

557. Have you sold to many tenants in England?—A few; not so many as in Wales.

558. (*Mr. Whitehead.*) Do you apply the system of deferred payments to the public generally or only to the tenants?—To the tenants, if we are selling to them or to anybody who buys at auction.

559. At auction you do that?—Yes.

560. (*Chairman.*) Then it is exactly on the same terms in both cases?—On the same terms in both cases.

561. (*Mr. Whitehead.*) So that the tenants get no particular advantage; you do not offer to them a loan?—No.

Rate assessment.

562. I want to know whether it is within your knowledge that the assessments of rates have been reduced proportionately to the reduction of rents on the estates of the Commissioners?—Until the last year or so, when allowances were made, there was a great indisposition on the part of the rating authorities to make permanent reductions in rates, and that is one reason why rents have been permanently reduced, in order to assist the tenants in getting their rating reduced.

563. Have they got such reductions in rating in consequence of reductions of rents?—I think where they have had permanent reductions they have got their rating reduced.

564. (*Lord Cobham.*) And in the case of the income tax?—Yes, and in the case of the income tax.

565. (*Chairman.*) Have the assessments generally followed on reduction of rent?—I think so.

566. (*Mr. Clay.*) You have told us that small farms have been let easier than large farms?—Yes.

Large and small farms.

567. If that is the case, why have you not divided the large farms that you have in your own hand?—Because the Commissioners and their surveyors have doubted the expediency of sacrificing the large expenditure which has been made on the homestead and buildings which were considered suitable to a large farm. They would all have to be sacrificed if we cut the farm up into a number of small holdings.

568. So that it resolves itself into this, that it would not pay to build an extra steading?—It would be a serious increase in the expenditure in addition to the sacrifice of the expenditure on the large holdings.

569. You believe in small farms bringing more rent?—Generally.

570. Is that through the labour being supplied by the farmer and his family?—Yes; the farmer and his family working with their own hands.

Tithe, land-tax, and drainage rates.

571. (*Mr. Little.*) Will you tell us what is included in the rental given—whether the farms are let tithe free?—The modern rents are all let tithe free.

572. Does the landlord pay the land tax?—Yes.

573. And does he pay drainage rates?—On some farms in the Fen district the rates are divided, in others they fall solely upon the landlord.

574. And the rent is mostly a gross rent?—Yes.

575. You do the repairs?—Yes.

576. And pay the tithe rentcharge, and pay the land tax, and pay the greater part of the drainage tax?—Yes.

577. Then the per-centage of reduction shown in mere figures, viewed from the owner's point of view of what he gets, is still larger than that shown by the gross figures. If the outgoings remain very much the same, they are a larger deduction from a decreased rental than from the former rental?—That is so.

Mr. A. de Bock Porter.

10 Nov. 1893.

578. You were speaking of the facilities that you give to tenants. Do you charge the cost of conveyance?—Where we sell the tenants are given a free conveyance and free mortgage; they only pay the stamp duty.

Sale of property by the Commissioners.

579. Does it require a stamp for your mortgage?—Yes.

580. You said that there was a greater demand for allotments in the north than in the south. You were speaking of your arbitrary division into north and south?—That is so.

Allotments.

581. Is it not the fact that they are already provided to a much greater extent in the southern counties than in the north. I do not mean provided by you, but they are more common, are they not?—I think that our experience shows that we have more allotments in the north than in the south.

Expenditure on improvements.

582. The point I wanted to bring out was, that if there are more allotments provided by others, there would not be the same demand for you to provide them now. It is a matter of statistics. Then you gave us an amount of 1,600,000*l.* that had been spent in improvements on farm buildings and other improvements, and a further sum on drainage. Is it not a fact that you have had passing through your hands a number of estates that have come from the leaseholders into your hands in a very impoverished condition?—Yes; at the end of what are called the old beneficial leases, the building expenditure has been exceptionally large on that account.

583. And you were bound to hand them over to the Corporations in a good state?—Yes, but there are included the cases in which we have got back the bishops' estates, which had to be put into good order. They are practically now handed back to us, and it is only the chapter properties which have gone permanently to the chapters.

584. So that permanent expenditure includes the amount spent on various estates which are not yours now?—It does in the earlier years.

585. And which covered all the estates which came into your hands in a very bad condition, and had to be put into a good condition before the corporations were compelled to take them?—Yes.

586. Since Lord Chichester's time, 1879, have any of these life leases fallen in?—There are a few life leases still outstanding, but the bulk of the property dropped in about 10 or 15 years ago—there are still some few properties dropping in every year; there is no great bulk of property in life leases now.

587. Any account of your expenditure on permanent improvements and drainage would not be comparable with the expenditure by an ordinary landowner, on account of the exceptional circumstances under which the land comes into your hands, and the fact that you have to put it into order?—That is so.

Reduction of rent. Extreme case.

588. (*Mr. Chaplin.*) I think you told us that your average reductions in rent were something like 25 per cent., and that in Lancashire and Cheshire hardly any reductions had been made. Could you tell the Commission what is the maximum reduction you have been called upon to make in the case of any particular farm?—Yes.

589. (*Chairman.*) You gave us illustrations of two or three cases of very extreme reductions?—I think, perhaps, the case in the Fens that had to be reduced in 1889 would be an example. It was originally 2,018*l.*, and it came down to 570*l.*

590. (*Mr. Chaplin.*) That is the Ely farm?—Yes.

In Lancashire and Cheshire.

591. In the case of the Lancashire and Cheshire farms can you explain why it has been unnecessary to make any reductions there?—Because of the large populations, and the great demand for dairy and other produce.

592. In fact they have not suffered so much from the depression as other parts of the country?—There is a better market.

593. Then it is in consequence of better markets?—In consequence of better markets.

594. Are they beginning to feel the depression now?—We have made some few reductions in Lancashire,

Mr. A. de Bock Porter.

10 Nov. 1893.

and some reductions in Cheshire, but nothing like to the extent that we have in other places.

Terms of agreements.

595. I understand that your tenants do not like leases in the present day; under what agreements do the Commissioners let their farms, do they let them under the Agricultural Holdings Act?—Yes.

596. Or under agreement?—We have a simple form of agreement.

597. You have had many demands, of course, for reductions of rent; have you had at the same time any demand for changes in the form of that agreement?—We have had no complaints with respect to the stringency of the agreement; is that what you mean?

598. Yes?—We have given the tenants for the most part a free hand.

599. That is a question that I wanted to ask too, about the restrictions. You have given them a free hand?—Yes.

600. But with regard to the conditions of compensation under which they hold their farms, have you had any demand for changes in that respect?—We have had very few. We have had some cases where farms are changing hands, and the incoming tenant has not, perhaps, paid the whole of the demand to the outgoing tenant, and we have borne a part of the compensation in order to facilitate the coming in of the new man.

601. But beyond that you have not had applications for more liberal agreements?—No.

602. Or given greater advantages to the out-going tenant?—No, we have not.

603. In the case of reduction of rents, or fixing the rents in the case of new tenants, do you find on the part of the Commissioners that you are able to name your own rent, or that practically the amount of the rent rests with the tenant?—I am afraid it does to a large degree.

Competition for farms.

604. Have you any competition for farms?—In some districts even now we have competition for farms.

605. (*Chairman.*) What districts are those?—The Commissioners have the pick of the tenants because of the tenure. The tenants have the shooting rights, and people are keen to hold under the Commissioners, who ought to get the best prices and rental.

606. (*Mr. Chaplin.*) In what districts do you find the most competition?—In the great commercial centres, where there is great commercial industry in the district—for instance, in parts of Durham, close to the trading centres, the farms do not remain out of occupation for any length of time.

Reduction of rent. Extreme case.

607. In the case of this farm that you spoke of at Ely, where you have had to make that very extreme reduction, what class of farm is it? Is it arable land?—That is largely a fen farm.

608. Is it strong land?—Yes, it is strong land.

609. Is that one of the farms that have been peculiarly subject to depression?—Yes.

610. And it would be impossible to divide it with any prospect of success?—Quite so.

Agents' commission.

611. I think you said that the salary of the agents of the Ecclesiastical Commissioners was based upon the amount of the rents received?—Yes, that is so.

612. Is that not an inducement to the agents to obtain as high rents as possible?—That was our object.

613. Is that still the policy of the Ecclesiastical Commissioners?—Yes.

Sale of property.

614. With regard to the estates that you have sold, I do not know whether you explained it, if you did I did not hear it; what proportion of those estates have been sold to the tenants; are you able to tell us that?—I am afraid I have not got them distinguished here. I think out of 17,000 acres perhaps not more than 5,000 acres have been sold to tenants.

615. But you think that as much as 5,000 acres have been sold?—I think as much as 5,000 acres have been sold to tenants.

616. Have you found those tenants, as a rule, in a position to be able to pay for their farms, and at the same time to do well after they have bought them; have you any information as to the result?—We have had no defaulters in the payment of the annuity. We have had one or two applications for an extension of time, perhaps, in one or two bad years; but with the exception of giving the additional three months there has been no difficulty whatever.

Mr. A. de Bock Porter.

10 Nov. 1893.

617. Can you say what proportion of those estates that have been sold have been in Wales?—I should think that, perhaps, half the quantity that we sold to tenants has been in Wales.

618. That is to say, you sold some 2,500 acres of land in Wales to tenant farmers?—To tenant farmers.

619. Do you find the tenant farmers in Wales, as a rule, willing or ready to buy your estates?—They are rather keen.

620. Rather anxious to buy?—Rather anxious to buy.

621. And they have the means at their command to do so?—They can pay the deposit, and they pay the annuity regularly.

Sub-division of farms.

622. (*Mr. Long.*) I think you said just now, in answer to a question from Mr. Clay, upon the subject of breaking up big farms into small ones, that you were largely guided by the opinion of your surveyors on the spot?—That is so.

623. Do you mean the Commission to understand that practically the policy of division or of attaining the division of large farms is left to the surveyors?—Their advice is asked by the committee. The estates committee manage the property, and on that committee there are several members like Sir Michael Hicks Beach who have had great experience as landlords, and who are able to judge as to the advice offered.

624. Sir Michael Hicks Beach has only recently been upon it?—Yes; but in the past we have had Sir John Mowbray, Lord Stanhope, Lord Chichester, and the Duke of Richmond.

625. I understood you to say, in answer to Mr. Clay, that the policy of the division of big farms largely rested upon the reports of the local surveyors, and that there was no general principle which was adopted by the Ecclesiastical Commissioners as a body?—The Committee take the opinion of the surveyors on each case. Messrs. Clutton and Messrs. Smith, Gore & Co. have a large number of local agents, and they are well able to give advice on the matter.

626. In answer to Mr. Clay, who asked you why you do not endeavour to break up the big farms into small ones, your reply was that your surveyor had advised you that your expenditure upon buildings and houses had been so great that you would run the risk of losing that expenditure if you attempted to sub-divide the farms, and upon that you kept them in your hands rather than break them up?—That has been so in some cases.

627. What I wanted to get from you, is whether you did or did not attempt to divide those farms into two or more, as the case may be, and whether if you did so attempt, you had failed?—With regard to each one of the farms that we have in hand at the present time, we have asked the agents whether it would not be practicable to cut them up, or to devise some means to meet the case, because the loss arising from the farm being in hand is a serious matter.

628. But the question of loss is a question for the actual owner of the property; it is not a question for the agent?—That is so.

629. The owner must decide whether he will run the risk of loss or not; what I want to know is whether the determination not to break up the farm has been due to the advice of the surveyor or due to a definite opinion of your own that it was better to stand alone, you occupying it rather than get a tenant by breaking it up?—We have been largely influenced by the surveyors' reports undoubtedly; we have in a few cases divided farms, but, as I said before, not more than some 20.

630. Meanwhile you are aware that in the present state of the country the division of farms has been going on to a very large extent?—Yes.

631. And with some considerable success?—Yes.

Result of farming land in hand.

632. You told me, with reference to the question asked you by the Chairman about the result of your own farming operations, that the losses which have been incurred have exceeded the value of the rent. May I ask are those farming accounts made up from the point of view of an owner occupying his own land or an occupier occupying other people's land? Has there been a division in the expenses of the owner, and the expenses of the occupier? Have you simply taken the farm as farm "A," and where they used to pay 300*l.* a year rent, and now they get nothing, have

Mr. A. de Bock Porter. 10 Nov. 1893.

you been content with the examination of the account, or have you examined the farming account to see how much you as managing owner pay which as a tenant farmer you would not be called upon to pay?—We have looked upon it in both ways. Of course, the accounts have been kept very much treating the owner and occupier as one. We have endeavoured to write off everything in the year, and charged all expenses against the receipts of the year, and they have left a considerable deficit balance.

633. But you base your statement of loss upon one year's statement of farming account?—Not in one year because we have had some in hand for 8 or 10 years.

634. That is exactly what I want to get; is it a statement of seven years' average, or is it based upon one year?—It is based upon a seven years' average.

635. For the whole of the property?—A 10 years' average.

636. And on that basis you charged everything that you could charge to the landlord's account,—you say that the losses exceed the rent?—Very considerably.

637. After having made all legitimate charges, these properties being managed by local surveyors and by bailiffs?—Yes.

638. And, of course, including his landlord's charges?—Yes.

639. Not charging them to the farms?—No.

Allotments.

640. With reference to the allotments, I understood you to say that the Commissioners have offered allotments in every case where they have property, but that they have been taken better in the north of England than in the south of England; is it not the case that there are places where the Commissioners have property in the west of England where allotments are required and where none have been offered?—We have no knowledge of it; wherever there is a demand for allotments we consider the matter.

641. How would the demand for allotments reach the Commissioners?—They usually come by letter addressed to the Secretary of the Ecclesiastical Commission.

642. Who from?—Sometimes from the parson, and sometimes from labouring men.

643. But they must write to the Commissioners, there is no one on the spot to whom they could apply?—No.

644. Is it the practice of these surveyors to go once a month to the tenants?—They go periodically, and they hold the local audits.

645. That is for the receipt of rent?—Yes.

646. But there is nothing which answers to the agents of a private property giving weekly attendance at the estate office for the purpose of seeing tenants, and for the purpose of hearing anything the tenants may have to say, or to receive applications?—For the most part, the farms are at a distance from London, but they have the means of making it known to their sub-agents who are local men.

647. It is possible, is it not, that there may be a demand for allotments without that demand reaching you?—A circular was sent round to all the principal tenants and others, to say that the Commissioners wished it known that they were willing to let allotments wherever demanded.

648. Was that sent to all the principal tenants?—Yes, and to the clergymen and others in the district. We have told our receivers to make it as widely known as possible that we are willing to let allotments.

649. (*Mr. Dalton.*) Do you find as a whole that the breaking up of the land into allotments, entails any heavy cost on the Commissioners in the first instance?—In some cases it does. There are sometimes roads to be made, and they have to be set out, and fencing done; and there are a number of expenses at the outset.

650. Do you think as a whole that the rent for those allotments pays for that, or is there any loss?—I think it pays on the whole.

Sale of property by the Commissioners.

651. I think you said that you always allow the purchaser to leave 85 per cent—you have 15 per cent. of the purchase money paid, and an annuity of 3·63 per cent. for 30 years for the remainder?—The annuity is 5½ per cent.; the 3·63 is the interest; the sinking fund is the difference between that and the 5½ per cent.

652. Then you charge rather more than 3½ per cent. on the unpaid purchase money?—Yes, 3*l.* 12*s.* 6*d.*

653. Your rentals have fallen on an average 25 per cent. since 1879, had they fallen previous to that year?—No, they had gone up rather.

Mr. A. de Bock Porter. 10 Nov. 1893.

654. That was the maximum?—1878 and 1879 were about the highest years.

Reduction of rent.

655. How far back is it since the average rental was the same as at the present time?—That is hardly within our experience.

656. In 1850 it was not so low as now?—No.

657. What did it average then?—In 1850 the Commissioners had very few estates indeed; the bulk of their property came into possession between 1860 and 1880.

658. It is worse now than before?—It is worse now than at any time in the Commissioners' experience.

659. (*Mr. Lambert.*) Your tenants, I believe, have comparative freedom of cultivation?—Yes, that is so.

Restrictions in cultivation.

660. Are there any restrictions whatever?—No; there are clauses in the agreement which say that it shall be farmed in a proper manner, but the old restrictions which there used to be about courses, and what might and might not be done, have practically been eliminated from the modern agreements.

661. And they also have the right of shooting over the estates—the absolute right?—Yes.

662. You think that these provisions, the abolition of restrictions, and the right of shooting are of great advantage to the tenants?—Yes.

663. And the farms let more readily because of those restrictions being removed, is that so?—We think that we get the pick of the tenants on account of the freedom which they have, they are almost in the position of owners.

664. (*Lord Cobham.*) There are no restrictions as to the sale of corn and hay, are there?—They must bring back a certain amount of manure for the hay and straw, but we give them a fairly free hand. There are no reasonable requests ever refused if the tenant makes them.

Settlement of rent.

665. (*Mr. Lambert.*) You practically fix the rent, or is it let by tender?—It is not let by tender.

666. You fix the rent then?—It is by the higgling of the market.

Farms in Devonshire.

667. You spoke of Devonshire, do you get a number of applications for farms there?—If a farm is vacant in Devonshire we should be able to relet it very soon.

668. May I ask in what part you are speaking of?—Our largest estates are at Thorverton and Staverton.

Agents' commission.

669. Do you give your agents a per-centage after the deduction is made for improvements, or is that included?—It is on the rent received, not after the deductions for expenditure on improvements.

Agricultural Holdings Act.

670. Have you had any tenants quitting under the Agricultural Holdings Act?—One or two only.

671. Do you get any offers at all for the farms in hand?—We have had one or two offers, but not an offer that could be accepted.

Sub-division of farms.

672. Do you find that dividing the farms is expedient and profitable in the cases you have tried?—The few cases that we have tried have been fairly successful, but there has been a certain amount of sacrifice of capital expended upon the buildings that have been previously erected.

Rents on large and small farms.

673. How about the rent between large and small holdings: presuming the conditions are the same, the amount of land and the climate, and the markets are the same, would the rent be larger in small holdings, that is, under 100 acres, than in the holdings over that amount of acreage?—I think, perhaps, it would be.

674. So much higher upon the holdings under 100 acres?—Yes, under 100 acres.

675. Compared with, say, 20 years ago, can you say whether the rents have gone up or decreased?—They are much lower now than they have been at any time within the last 15 years.

Rates.

676. About the rates; do you think the rates have increased, say, since 1880?—There has been a large increase in the rates for school boards.

677. Do you think the general total rates—the rates that have to be paid—have increased?—Not, perhaps, in purely agricultural parishes, but where they are at all near towns they have increased very much.

Mr. A. de Bock Porter. 10 Nov. 1893.

678. Do the tenants pay the rates?—The tenants pay the rates in all cases except on the allotments.

679. Taking from, say, 1885—that would be seven years—do you think the rates in rural parishes have gone up or gone down—have they increased or decreased?—I do not know that I have looked very carefully into that. I have only noticed that we have had some very heavy rates in purely agricultural parishes where a school board has been formed. We have an increase, say, of 10*d.* or 1*s.* in the £.

Agents' commission.

680. There is one question that I did not make clear; supposing you had a farm that was producing 100*l.* a year rent, and you spent 20*l.* a year on improvements; would the agents' fees be calculated upon the 80*l.* or upon the 100*l.*?—We should hardly spend money on improvements in that way. If we were spending 100*l.* in putting up a shed, or anything of that kind, the agents' commission would not be affected by that.

681. It would not be affected by that?—No, it would not.

Allotments.

682. (*Mr. Everett.*) Are the allotments held direct from the agents or from the farmers? Who are responsible to you for paying the rent?—We have some allotments let to local authorities, but the bulk of them are let direct to the allottees.

Tenants.

683. Were most of your tenants on lease before the bad times began?—The tenants of all the larger farms held leases before 1878.

684. As a rule the farms continue in the same families, where you could keep them, generation after generation?—They went down from father to son.

685. You spoke of a large fall in the income from minerals, in what way do you receive that income, is it in royalties?—It is in royalties.

686. Does the fall arise from a fall in the prices?—No; partly from the Durham strikes of last year.

687. And circumstances of that kind?—Yes.

Mr. A. de Bock Porter. 10 Nov. 1893.

Rent and rates.

688. (*Lord Cobham.*) In the rent you charge for allotments, what increase would there be upon the purely agricultural rent of the land surrounding?—Only sufficient to compensate for the payment of rates and outgoings.

689. Could you calculate how much that, as a rule, would be?—Where allotments are close to a town they need a very much higher price, because the rates are very much higher in the urban districts, but the average is about 3*d.* a pole.

690. I suppose you mean taking the rates?—If it is let at 43*s.* an acre on the average, it would mean that the rates would be about 10*s.* of that—rates and outgoings. There is a certain amount of loss, owing to vacancies.

691. And increased cost of management?—And increased cost of management.

Lowest rent per acre.

692. What is the lowest rent that you are getting from any one farm—the rate per acre?—About 5*s.*

693. What is your policy with regard to the buildings on a farm of that sort? Do you incur any expenditure at all?—As little as possible.

694. But you do spend money—you continue spending money?—But we are trying to do it as economically as we possibly can. We must erect the necessary buildings for a man to carry on his business.

Sale of property by the Commissioners.

695. With regard to the mortgages on the land sold by you, do you consider that you get much better prices in consequence of that system?—I think so.

696. And that you get a good deal of land sold which otherwise would not be sold?—Yes.

697. You have no losses under that system at present?—None whatever.

698. I think the Chairman asked you to send in some information with regard to the net rental. If you could give the acreage, the gross rent, the maintenance and management allowances, and other outgoings and net rental for each of the last 10 years, we should be obliged?—I will try to get that out. (*See* Appendix A., VII.)

The witness withdrew.

Adjourned to Thursday next, at 12 o'clock.

Third Day.

Friday, 17th November 1893.

PRESENT:

The Right Hon. GEORGE JOHN SHAW-LEFEVRE, M.P., in the Chair.

Viscount Cobham.
The Right Hon. Henry Chaplin, M.P.
Sir Robert Nigel Fitzhardinge Kingscote, K.C.B.
Robert Giffen, Esq., C.B.
Charles Isaac Elton, Esq., Q.C.
Captain Owen Thomas.
Francis Allston Channing, Esq., M.P.
John Clay, Esq.
Cornelius Neale Dalton, Esq.
Robert Lacey Everett, Esq., M.P.
John Gilmour, Esq.
George Lambert, Esq., M.P.
William Cutlack Little, Esq.
Walter Hume Long, Esq., M.P.
Charles Whitehead, Esq., F.L.S.

Herbert Lyon, Esq., *Secretary.*

R. F. Crawford, Esq., } *Assistant*
Freeman Thomas, Esq., } *Secretaries.*

Mr. W. L. Huskinson. 17 Nov. 1893.

Mr. William Lambe Huskinson called and examined.

699. (*Chairman.*) You are a land agent and farmer in Nottinghamshire, are you not?—I am.

700. You succeeded your father in that business a few years ago?—I was in partnership with him for 20 years, and succeeded to the business on his death in 1887.

Agricultural depression before 1880.

701. Your father gave some very valuable evidence before the Duke of Richmond's Commission in 1880, and the present Commission desire to ask you to supplement that evidence with information as to the condition of the estates that you manage, and the effects of agricultural depression in the interval, so far as your experience will enable you to throw light upon the subject?—I may say generally that the evidence given by my late father in 1880 was from facts prepared by us at that time referring mainly to the red clays of Nottinghamshire; and I put in merely for reference a paper on the "Present Depression in English Agriculture: Its real and assumed causes" that I read before the Institution of Surveyors in their Session 1879–80, giving really the facts upon which my father gave evidence up to 1880 (*handing in the same*). It is merely evidence given by my late father in a more systematised form. The result of his evidence given generally and broadly at that time was that the causes of the depression were the extremely ungenial seasons that we had had preceding the inquiry of 1880. There was no very great complaint at all about the prices, but it was entirely owing, as a rule, to the extreme severity of the seasons, particularly to the rainfall, which told with very great severity on the clay lands of the country. The general effect was not exhibited at that time in the way of rent reductions, but several years afterwards, in certain cases, properties went on for seven or eight years after that

Mr. W. L. Huskinson. 17 Nov. 1893.

Commission at something like the old rents with 10 per cent. and 15 per cent. returns. But since that time I have had to go through a revision of the rents in Nottinghamshire, Lincolnshire, Derbyshire, Leicestershire, and Huntingdonshire.

Acreage.

702. What is the total acreage that you manage?—It will be something like between 50,000 and 60,000 acres; but I shall be able to give, without mentioning any names, the rent shortly of 40,000 acres, showing the recent reductions of rent, and the different reductions on the different descriptions of soil.

Reductions of rent.

703. Have you found very great variations in respect of the deductions?—Very great indeed. Dealing with the estates that I have the management of, it is something like from 14 per cent. to between 50 and 60 per cent. I may state that my evidence would run in two directions in accordance with the wish of the Commission that I should supplement my father's evidence of 1880. One, more especially referring to the farm which we farmed, of which I have the details for 30 or 40 years past; and the other with reference to the experience gained in the different counties where we have estates to manage as confirming that experience. I may say with regard to the district that I live in, the farm which we farmed is in the Keuper division of the Red Sandstone, which varies in the southern part from about 100 ft. above the level of the sea, to 200 or 350 ft., and varying from a thin clay on the hill sides to a very fair loam down in the valleys.

Description of farm.

704. What is the size of the farm?—We used then to farm about 800 acres, and I farmed about 300 acres to Lady Day, 1892.

Condition of land since 1882.

705. What has been the result of your experience?—The result has been, since the Duke of Richmond's inquiry, that whereas the seasons up to that time had told very severely upon every description of land, that has been quite altered so far as we are concerned and we are practically put in the same position as we were before. The grass has come round in quality, and, as to the arable, it was never better. Therefore so far as ungenial seasons are concerned, we have recovered at the present moment.

706. On the whole the seasons have been good since 1882?—Certainly they have, both for grass and plough. We were never in a better state, with regard to the quality of the land, than we are now. The effects of the bad seasons are entirely done away with.

707. Do your observations apply to the last year, or two years?—The Duke of Richmond's Commission was held in 1880; the years 1882 and 1883, were bad seasons, and the four or five years which succeeded, until 1887, were a great improvement, and helped us out of our difficulties and improved our grass, and it has been a progressive improvement. I do not think that the quality of the grass and plough land, naturally, was ever better than it is at the present moment.

708. (*Mr. Chaplin.*) Since what year was that?—Since 1884. 1882 and 1883 were bad years.

Description of farm.

709. (*Chairman.*) Is your farm an arable farm?—It would be two thirds arable, and one third grass.

710. Do you grow wheat on it?—All descriptions: wheat, barley and oats, and the yield of wheat upon that land has thoroughly come back again; that is to say, in 1887 we had five quarter per acre saleable, and therefore we have nothing to complain of as regards the land.

Low prices.

711. Have you suffered during the last year at all in any way?—Yes, although the seasons have put the land into proper form, since the inquiry in 1880, prices have been gradually going down.

The drought of 1893.

712. Have you suffered this last season from the drought?—Well, the hay-crop of course is a thin one, in that sense we have suffered. The barley crop has been injured with the double growth, and a double growth makes it unfit for malting purposes when otherwise it would be a good crop.

713. Can you say what the condition of agriculture is in Nottinghamshire?—I should put it broadly that, very roughly, north of the Trent, and south of the Trent—that is to say, the Nottingham Forest land which is the Bunter Division—on the light lands they have had a fairly good year, fairly good turnips and crops; but south of Grantham, and round Melton Mowbray, the drought has told severely.

714. Are you north of the Trent?—I am north of the Trent; we have not had much to complain of, saving the loss owing to the thin hay crop, and the inconvenience in certain places owing to want of water.

715. You cannot say that since 1882 you have suffered from the seasons?—We cannot say that we have suffered from the seasons. I look upon this as an exceptional season.

Mr. W. L. Huskinson. 17 Nov. 1893.

Effect of bad seasons.

716. Your farm has improved and the yield is good?—The effect of the bad seasons is entirely done away with since the last Commission sat.

717. Your father stated before the Commission of 1880 that during the previous five years two-thirds of the losses were owing to the bad seasons and one-third to the low prices. What do you say as to that?—That was so, roughly.

718. Therefore, in your opinion, the depression up to 1880 was mainly due to the bad seasons?—It was mainly due to the bad seasons and ungenial seasons.

Low prices.

719. Is it your experience that the profits of the farm have increased?—That is quite another story, though the land has got round, saving this last year of drought, the result financially has certainly not been good because every description of produce has gone down very considerably. There are hardly any exceptions except perhaps butter, and that is a special case. It is not very much made in the locality in which I live. The farmers living in the valleys having grass land and devoting themselves specially to butter have done very well and do not complain much It is a peculiar business: the ordinary farmer sends his butter to the market by the carrier, and pays 2*d.* a lb. to him to dispose of it for what he can get for it; it does not mean much profit to the farmer. But the man who devotes his attention to making butter gets a good price for it, and he has special customers and makes from 2*d.* to 4*d.* per lb. more than his neighbours do who send by the carrier.

720. That is not your business?—No, that is not my business. So far as our own farm is concerned the seasons hit us very hardly from 1875 to 1883, but the land has been thoroughly rectified during the last seven or eight years.

721. Will you give the Commission the result of your experience as regards the profits of your farm during the interval since 1880?—They have been very considerably worse really; the price of wheat has gone down very largely. I have got here the actual prices that I have sold at which will show fairly in a nutshell what has happened in that way. In 1883, which was shortly after the Commission sat, we sold all our wheat at an average of 42*s.* per quarter all round. In 1884 it averaged 39*s.* or about 2*l.* per quarter. This year 30*s.* would be a high price. It would not make that now in the market. I could give you the figures through each year if the Commission would like to have them.

722. I presume the fall in wheat is greater than in other cereals?—It is greater than barley and oats, but wheat has been very largely reduced in price. Then at the same time to go to another branch, at the time the last Commission was sitting we were selling beef to the butcher at 9*s.* 6*d.* and 10*s.* per stone, and down to the years 1883 and 1884.

723. What was the weight of that stone?—The imperial stone of 14 lbs.

724. What is the price of beef now?—The best slaughtered beef would be worth about 8*s.* per stone.

725. Is that a fair average for the last two or three years, or is it exceptionally low at the present time?—That would be a fair average for the last two years.

726. (*Mr. Giffen.*) What do you say is the price now?—The best slaughtered beef is 8*s.* per stone. But there is not the same power of getting at the price accurately for the last few years, and the reason is that they so commonly send it to auctions, and it is then an estimate of the weight of the beast for the price that is got for it. What I am quoting is what we were getting for the beast absolutely sold by the stone.

727. That is the stone of 14 lbs.?—Yes.

Cost and quality of labour.

728. (*Chairman.*) Is there any direction in which you have found reductions of expenses?—I cannot say that we have found that there have been reductions of expense. Labour increases, and that is one item, and the evidence given by my father was rather peculiar at that time, but at the same time it was perfectly accurate, and I got out the facts and figures myself, and the result was that the increase of labour at that period with the use of labour-saving machines and from one cause and another the absolute price per acre had not seriously very much increased. Supplementing that evidence now, within the last 10 years I should say

Mr. W. L. Huskinson. Nov. 1893.

the class of labour which we had then was very good, but it has died out, and the class of labour that we have to deal with now is of a secondary quality, and even if you give the same rate on the average per week you do not get the same quality of labour; and that difficulty is likely to be still further increased because, I am sorry to say, that all our young people are leaving us for the towns.

729. Are you giving the same rate of wages as you were giving 12 years ago?—To be perfectly accurate, it is best to confine myself to the parish where I live. The labour varies as we approach the colliery districts on the west, and as we get to the agricultural districts on the east. It is purely an agricultural district that I live in, but at the same time it is slightly under the influence of being too near large populations and towns. We used to give in the old days 10*s.* per week, and have paid as high as 16*s.* 6*d.*, but the result of the inquiry showed that in the use of labour-saving machines the net price per acre was not greater with a higher rate of wage than with the lower. Since then the current rate for labour is about 15*s.* per week. The highest we paid was 16*s.* 6*d.* per week.

730. I presume you keep accurate accounts?—Yes.

iminished rming erations.

731. I do not want to be inquisitive?—I am perfectly ready to give the result. The result has been that we have been obliged to give up such land as we rented from other proprietors, and we have reduced our own farming very largely.

732. You have reduced the extent of your own farming operations?—Yes; but there is another reason for that, that during the depression my time has been greatly taken up with looking after the lands that we have in hand, and, therefore, we could not give attention to the two things at one time. I farmed up to 1892.

733. Do you rent your farm?—Up to 1891 I farmed about 250 acres of my own, and I rented 50 acres of a proprietor for whom I am agent. Previous to that we had 874 acres.

ent on od land.

734. Have you made your rent on your own land?—Yes, we have made a rent, but not the rent that one would hope to get.

735. But you have made a rent?—Yes, a rent.

736. After paying interest on the capital?—Yes; but the land I own is extremely good. It is taking the kernel out of the rest of the land. It is the grass land in the valley; it is well-watered loam land, which is of excellent quality for either grass or plough. The general result has not been favourable.

737. It is interesting to know that on really good land you have made a rent?—Yes, we have made a rent, but it is so unsatisfactory that I should not care to go on with it.

738. You would not care to go on with it?—No, I should not; it may be owing to the fact that I have not had time personally to look after it, because I have been looking after my employer's estates.

Manage- ient.

739. Did you manage your land with a bailiff?—Yes, and when my bailiff died, I set about curtailing the amount of land I farmed at once, because in an experience of 30 years I have had a great many bailiffs, good and bad ones, and the trouble and difficulty of getting a good one was such that I could not again face the trouble as I had other work to attend to.

ithe.

740. Are there tithes in your parish?—We have none in our parish; they were commuted under the Inclosure Act, saving a few woodlands.

tates.

741. What about the rates and taxes?—The rates are fairly low, 1*s.* 10*d.* in the £, but I ought to say that it is an extremely favourable sample of a parish. Immediately over the stream to the west you get into an urban union where the rates are very much heavier, and I ought to say, further, that we are approaching a period when we shall have higher rates all round. In my own union the Public Health Act, so far as the sewage of the village is concerned, is a dead letter, but it is now beginning to move, and of course the rates will be heavier when it comes into operation.

742. Comparing the present time with 1880, how much higher are the rates now?—Twopence in the £. it is a very favourable union to quote, we have varied very little.

743. You have no school board rate, have you?—We have no school board rate and no sanitary rate; it is purely rural. East of Newark there are 14 schemes of sewerage actually carried out. In the Union west I hear that there is to be spent about 50,000*l.* or 60,000*l.* in sanitary arrangements, and it is perfectly certain that before long our Union will come under the same condition. At the present time in our own village we have an engineer reporting upon a scheme which will cost from 300*l.* to 400*l.*

Mr. W. L. Huskinson. 17 Nov. 1893.

744. (*Mr. Lambert.*) Is that variation in the rates that you spoke of an increase or a decrease of 2*d.* in the £?—An increase.

Cause of the depression.

745. (*Chairman.*) Have you now told us all that you desire about your own farming experience?—Well, I wish to convey in a nutshell this: that up to the last Commission it was purely bad seasons which caused the depression. Since then we have had better seasons, and it is now entirely a question of price.

Changes in cultivation.

746. Have you converted any of the arable land into grass?—Yes, we have, very considerably, partially on our farm, and also, on the land of employers, where they have the same description of land. That will help posterity in the future, but it will be no great help to the actual proprietor or farmer.

747. I am referring to your own farm. Did you lay down any grass?—Yes, we did, one field on the hillside and another in the valley, where there is good rich loam, but you can hardly tell this in six or seven years from old turf. On the hillsides some were converted nearly 20 years ago, but it is still very visible that it has been laid down, and that it is not old turf.

748. I mean in the last 12 years have you laid down any grass?—Not to a great extent on the farm, but we did seed largely. We laid down seeds temporarily and then ploughed them up again.

749. Have you more or less wheat?—You cannot do without growing some wheat, but the real reason for not growing so much wheat is on account of the low price.

Effect of the depression.

750. Turning from your farm to your experience as an agent, will you state to the Commission what that has been?—Broadly, I may say that from the time when the depression began to the present moment it has hit nearly every description of farm in turn with which I have got to deal.

751. Is that to the north or the south of the Trent?—Nottinghamshire, mainly to the north. I have some on both sides. Leicestershire and Huntingdonshire would be south of the Trent and the Lincolnshire wolds would be on the east.

Acreage.

752. Would you mind stating the acreage of the principal estates?—I will give you that to the extent of about 40,000 acres. There would be 50,000 or 60,000 acres of the whole of the estates. I have got the particulars of the rent of 40,000 acres. Up to the date of the last Commission, the arable farmer on the strong land was the man who was mainly hit, and suffer he did most terribly. Our red clays are a very fair type of the midland clays, and though not so strong they suffered very terribly from excess of water, and they were very much crippled during that period. From 1880 to 1882 Leicestershire farmers began to be hit, owing to the sheep rot, and their capital was eaten into.

Condition of agriculture.

753. Was that the result of wet seasons?—It was the result of wet seasons; they were very much crippled in that district. Of course, in the wolds of Lincolnshire the wool is a serious item; it is very much a sheep country, and is thoroughly adapted for sheep farming, and the decrease in the cereals and wool has been a very serious thing for them. And now the class of tenants that have hitherto gone on all right—the little cottagers and smaller tenants who farm the grass land in the valleys—have naturally been very hard hit by the drought, because they have no hay crop to keep the stock in winter, and they are too poor to buy artificial food, and they have been obliged to sell at great loss.

754. You are taking this last year, are you not?—This year; they are hit this year. The little people who had no arrears and who occupied good farms in the valleys are now in difficulties.

755. Up to last year they were all right?—Up to last year they got on with a small reduction, and were quite satisfied with the small reduction.

Estate in Hunting-donshire.

756. Will you state the acreage in the different parts of the country?—Yes, I will put them in this way: I have in Huntingdonshire about 2,500 acres, and for some series of years there was a good deal in hand that we could not let—that is since 1880.

Mr. W. L. Huskinson. 17 Nov. 1893. Reduction of rent.

757. What was the rent in 1880 of those 2,500 acres?—Well, I could hardly give you that for this reason, that it involves cottages and all sorts of things. I have taken simply farms which include the bulk of the farming land, and there is a reduction there. I was going to say that although those farms were in hand up to two years ago, I have succeeded in letting them all but one, and they are all now tenanted but one farm. The result has been that from the old price there has been a reduction of 42 per cent.

758. (*Mr. Lambert.*) Since what year?—It is mainly since 1880. I think a little before.

759. (*Chairman.*) Are they fen lands?—They are just above the fens; it is upland, strong clay land, a good clay of its kind.

760. (*Mr. Giffen.*) Will you state the average rent per acre?—The lowest would be 15*s.*, and the highest 18*s.* 6*d.*, but I may say that I have had notice from three tenants, which probably means a further reduction of rent.

761. (*Chairman.*) What was the rent 12 years ago?—42 per cent. more than that. I have not got it exactly per acre.

762. You said you were able to let these farms with one exception two or three years ago?—I may say generally that two years ago there seemed to be a recovery slightly, that is to say, I noticed that I began to close up all the farms, and could let everything very fairly up to this year, except large farms of from 300 to 400 acres. All the smaller ones began to close up, and at that time the amount in hand upon this particular Huntingdonshire estate was closed with the exception of one very large farm.

Large and small farms compared.

763. Do the small farmers stand the depression better than the larger ones?—I would not put it in that way. Thinking it well over I do not think that they would altogether, but there is a greater run upon the small farms.

764. Their capital would not allow them to take the larger farms?—We had four or five years ago some large farms in hand in Nottinghamshire only vacant from their size.

Sub-division of farms.

765. Did you break up the large farms into smaller farms?—Wherever they have been made large by the amalgamation of two or three, there were two or more homesteads, and we have divided them where we possibly could; but, of course, in many cases the house was made for a larger description of farm, and in that case it is impossible to divide it into smaller farms.

766. Was the breaking up attended with any expense?—Most certainly.

767. But up to two years ago, or about two years ago you found that you were able to let the farms?—No. It was about two years ago that I began to let them; previous to that, for four or five years, I had four in hand.

768. Do you find tenants with capital?—That is an extremely difficult thing to do. We make the best inquiries we can, and take every possible care; but, at the same time, I must confess we often get very much deceived. Taking this very estate I have two cases where the tenant-right is not paid at the present moment.

769. Where the incoming man has not paid the outgoing man?—Yes, and we have been obliged to let it stand over, taking a note of hand, and go on as well as we can.

Estate in Derbyshire.

770. Now, will you pass on to some other estate?—I take another of an entirely different description. The second case is one in Derbyshire, a small one but a very useful one, on the magnesian limestone, close to the borders of Nottinghamshire, about one-third grass and two-thirds plough.

771. What is the size of the estate?—It is a small estate of about 400 acres, consisting of three farms.

772. What is your experience there?—My experience there is that we have got off with a 14 per cent. reduction. It is very nice turnip and barley land, and the grass is useful; it is not first class, but it is a useful country and easy land to cultivate.

773. Is it mainly arable?—It is two-thirds arable—all the farms are.

774. What does it grow; does it grow wheat?—Anything; wheat and barley—an excellent quality of barley; and good turnips, and you can feed sheep upon them.

775. And there the reduction has been what?—About 14 per cent.

Mr. W. L. Huskinson. 17 Nov. 1893. Reduction in rent.

776. (*Lord Cobham.*) Have you got good access to the markets there?—Very good access to the markets.

777. (*Sir Nigel Kingscote.*) And access to the railway?—Yes.

778. (*Chairman.*) And the farmers are doing fairly well with the reduction, are they?—I cannot speak very hopefully altogether even there; we have changes, and I do not think they are quite satisfactory.

779. When did you make the reduction?—The reductions would take place, I should think, about 1882 and 1883.

780. There has been no reduction since?—None since. I might say, perhaps, to finish that property, that I have had notice from one of the tenants, but we have agreed to go on with a reduction of 10 per cent., but that is temporary because it is an extremely bad year; it is 10 per cent. for the year, and we are both to see how it goes on.

Reduction of rent and rates.

781. Have these been reductions or abatements?—In 99 cases out of 100 the whole of the returns of the old days have been converted into permanent reductions of rent; the reason of that was, and the tenants pressed it very strongly, that the rating authorities rated them upon their full rent, which we did not get; this was so, and a farmer would say, "Why "should I be rated on a rent which you do not get, "and I do not pay, and yet I am assessed at the full "amount."

782. That is an argument against temporary reductions, that the assessment authorities do not take into account the abatements, but only reduce the rates where there has been a permanent reduction on the old rent?—Yes, and that was pressed very strongly upon us, they thought it was a good way to get out of paying the rates. As we gained, and the tenant gained, we made them permanent reductions, and in 99 cases out of 100 they have been made into permanent reductions, and what they have got now are permanent reductions of rent.

783. Has there been any outlay of capital on this estate?—Yes; but I will mention that more especially when I come to the next.

784. (*Mr. Giffen.*) What is the average rent per acre?—30*s.*; and 27*s.* would be the lowest.

Condition of agriculture in Derbyshire.

785. (*Chairman.*) You cannot say that this special district has suffered, can you?—No. It has not suffered; it will grow either stock or cereals. It is rather a special case. The next case I would mention would be one in Lincolnshire, an estate on the wolds of Lincolnshire of about 2,700 acres. It is divided into seven farms. Matters continued there steadily up to about the date of my father's death in 1887, and the reason was that they are all men of substance and capital, and they bore the loss for some considerable period without troubling the proprietor.

Estate in Lincolnshire.

786. Do they pay the old rent?—They paid the old rent.

Reduction of rent.

787. What were the rents?—They would average 30*s.* per acre probably in the old days.

788. Did they get through the bad period up to 1882?—There were temporary returns made according to circumstances up to 1887, then there was a permanent reduction of rent all round, and since then it has been rather a serious case all through.

Expenditure on improvements.

789. What per-centage of reductions?—On the wolds of Lincolnshire the per-centage of reduction has been 40 per cent., and we have got off fairly well, better than our neighbours around. It is an old family estate, and the best relations exist between the tenants and the proprietors. The tenants are all men of substance, but in addition to the permanent reduction of 40 per cent., we have had since then a very considerable expenditure to make in the way of additional accommodation for the tenants. So great was this expenditure that I suggested to the proprietor that it was too much for him to fairly and equitably bear, and I suggested that he should apply to the trustees of the settlement under the Settled Land Act of 1882. He had put up new buildings and new cottages, and those were distinguished from common repairs, and I suggested that he should go to the trustees of the settlement to recoup himself for the outlay.

790. Did he succeed?—It is now before the courts.

r. W. L. skinson. Nov. 1893.

791. With a view of throwing it off the life interest?—That is so; which we can do readily now where it is a fair case.

792. Would the reduction of rent in your view enable you to keep the tenants?—Yes, they are all there, and we should be sorry indeed to lose them, because they are all good men. But I have had in one case a further reduction there. We shall have to expend in any case 400*l.* or 500*l.*, one has hope of getting it from the trustees under the Act of 1882, and I shall be obliged to reduce the rent in that case a couple of shillings per acre. The tenant stands now at 20*s.*, and he will stand, probably, at 18*s.*

793. What is the nature of the farm?—The whole of the estate is high-lying, or 300 to 400 feet above the sea, on the chalk formation. It alternates with clay and loam, and there is some very nice sheep and turnip land, and beautiful barley land, and it also grows wheat. The only drawback to it is that the wolds of Lincolnshire are very often swept with a storm of hail-stones in July and August, against which they insure.

794. What has been the outlay in improvements upon that property?—When it is completed, if I might speak with regard to the application now before the court, the expenditure would be 2,000*l.* since 1887.

795. Is it 2,000*l.* on the whole estate or on that one farm only?—It would be mainly on three farms.

796. That is the aggregate of the whole estate?—Yes.

797. That is about one year's rent reduced?—Yes.

798. (*Mr. Long.*) What is the acreage of that farm where you have spent 500*l.* and reduced the rent 2*s.* per acre?—It is 502 acres.

799. (*Chairman.*) What is the nature of the improvements?—The nature of the improvements is, first of all, in cottages for labourers; secondly, in extra sheds for the protection of the cattle in the yards; thirdly, for improved stables, the old ones being condemned by the veterinary surgeon of the sanitary authority; and, fourthly, an additional cart shed, and a granary (which has never been on that farm in a fit form), and also drainage.

800. And that expenditure has been for the purpose of keeping the tenants?—Entirely for the purpose of keeping the tenants.

801. Have they suffered severely during the last year?—No. I do not think that the wolds of Lincolnshire have suffered very severely.

802. What do you speak of; is it mainly the reduction of prices?—Mainly the reduction of prices.

ainage m hail-nes.

803. The average return during the last few years?—Precisely so; one farm has suffered very severely, because of the hailstones in August. In this case the tenant was uninsured.

804. That is an exceptional case?—The others suffered too, but they were insured; they insure for 6*d.* per acre, I think it is, which helps to repair the damage. It is a special thing, and it is a very terrible thing to witness. I have seen a barley field of 90 acres—a most beautiful sight to a farmer's eyes—in the morning, and in the evening I have seen it as though a regiment of cavalry had been careering all over it.

805. But that can be insured against?—Yes, in nine cases out of 10 that is so. The next case would be also on the wolds of Lincolnshire, some distance away.

806. (*Mr. Chaplin.*) May I ask on what part of the wolds this farm you have been speaking about is?—It would be north of Louth.

eduction rent.

807. (*Chairman.*) Before we pass from that, do you apprehend, with the exception of that farm of 500 acres which you have just mentioned, any further reductions or not?—We stand just now at the parting of the ways; we do not know whether the prices we are suffering from are really to be permanent.

808. Has wheat formed an important part of the produce?—Wheat has formed an important part of the produce, but wool, also, forms a very important part.

ystem of ultivation.

809. Have they put down very much land into grass?—Not there; but they do, as a matter of custom, seed in courses; they lay down for a couple of years and then plough it again.

ize of farm.

810. (*Mr. Whitehead.*) You said some small tenants on these farms in Lincolnshire suffered equally with the larger farmers?—It is not a case where we have any number of small tenants, it is mainly a district of large farms, it being admirably suited for them. The only cases of small tenants are really the village workmen; that is to say, the blacksmith and the carpenter, and, therefore, it is hardly worth while speaking of. There are only two. We have made a considerable return also to them, and we have rebuilt the carpenter's shop for him.

Mr. W. L. Huskinson. 17 Nov. 1893.

811. (*Chairman.*) But the farms are large?—The farms are large. I may say that one is 440 acres, the next is 800 acres, and the next is 472 acres. The one specially referred to is 502 acres; the next one is 427 acres, and, with the carpenter's and the blacksmith's holdings, that makes the estate.

812. Will you go on to the next estate, please?—The next estate would be 10 or 12 miles nearer Caistor, that is, an estate of 894 acres occupied in two farms, one of 714 acres, and the other 135 acres. There the reduction has been very much greater than upon the one I have previously referred to.

Other farms in Lincolnshire.

813. What is the reduction there?—59 per cent. on the old prices.

Reduction of rent.

814. What was the rent to start with?—The whole estate was 1,465*l.*, and now it is 600*l.*, if it were paid. I might say on the last estate I mentioned on the wolds we have no arrears whatever. We never know such a thing as arrears.

815. Even now?—Not even now.

816. And on this estate?—On this estate I would distinguish the 135 acres as at a very low rent. It is moorland, it drips away from the slopes, and there is a good deal of sand and moor in it. That is without arrear; but the larger farm is largely in arrear. It is a peculiar case in the sense that the man got into difficulties, and we have not wished to be harsh with him or to part with him, as that 714 acres would be difficult to let. Therefore, to some extent we have larger arrears going on.

817. When did the reductions begin in that case?—It would be in about 1887 or 1888.

818. The rent would be a high one?—But previous to that he was getting into arrears.

819. The rent in that case approaching 2*l.* an acre?—Yes, it is a high rent. Of course it has hit high rents more severely. It is a very good wold farm and grows excellent cereals and nice grass.

820. And it is now under 1*l.* an acre?—It is 15*s.* per acre.

821. Has there been an outlay upon that?—No, the buildings and the houses have been in good order, there is nothing special but ordinary common repairs.

822. (*Mr. Elton.*) What is the present rent?—The present rent is 600*l.*; the large farm is 16*s.* per acre, and that is the bulk of it.

823. (*Chairman.*) On the large farm there are peculiar difficulties?—That is so.

824. And you have made an exceptionally large reduction in order to suit it?—We have.

825. Do you think you have succeeded?—I may say that with the low rent he pays we have arrears even on that lower scale; we are not in a very hopeful state about it.

826. Is it an arable farm?—It is mainly arable land, two-thirds of it. It is not land that would go to grass, the wold part of it; it is very nice land for growing cereals, turnips, wheat and sheep.

827. Does it grow wheat?—Yes, it grows wheat.

828. What is the next case?—The next case is grass land mainly, grass within five miles of Leicester.

Estate in Leicestershire.

829. What size is it?—The estate is 1,600 acres, and our reduction there is 20 per cent. I may say that it is all let.

Reduction of rent.

830. When did the reduction begin there?—It began there about 1886 or 1888.

831. Was there no reduction?—There were temporary returns previously, but no change in the rent till that period.

832. Did they suffer much in the period spoken of by your father or not?—Yes, they did, certainly. It is not a district that grows wheat; their arable land is entirely subordinate to their grass, but they had suffered very much by their grass largely deteriorating. They had also suffered from the sheep-rot of 1881 and 1882, I think it was.

Mr. W. L. Huskinson. 7 Nov. 1893.

833. Has the land recovered?—It has perfectly recovered, but I am afraid the tenants have not recovered their financial condition yet.

834. What is the rental of this estate of 1,600 acres?—The lowest farm would be 20*s.* and the highest 32*s.* 6*d.* per acre.

835. The average would be about 25*s.*?—Something of that sort, and we have got off with a return of 20 per cent., and I do not think we have anything particularly unsound there.

836. Has that reduction been sufficient?—I think we shall have an awkward rent audit; it has been extremely dry, and there has been no grass and no hay.

837. But this would be an exceptional year, with the drought?—Yes, otherwise I have no reason to fear the sound condition of that property at all. I should say it is about two-thirds grass and one-third plough; the plough is quite subordinate to the grass.

Size of farms.

838. What size do the farms run there?—They would run from 150 acres to 300 acres.

839. Then they are not large farms?—No, they are not large farms; they are grazing farms. It is in higher lands of Leicestershire—it is not in the valley at all—it is 400 or 500 feet above the sea.

840. Do the farmers make money?—It is not all absolutely farming, although they do attend to it thoroughly. One of them is a well-known horse dealer; they buy and sell horses and make money in that way.

841. Have you had any outlay there?—Yes.

842. Considerable?—Not considerable, because it has been kept in good order.

Other farms in Leicestershire.

843. Will you now go on to another estate?—The next estate I would take is also in Leicestershire, but on lower ground. I could give the particulars of the five farms there, which run from a small farm of 80 acres up to a farm of 300 acres. We do not often get much above 300 acres in Leicestershire. Two-thirds of it is grass and one-third plough, the plough being subordinate to the grass. There is some very good grazing land indeed, but there is also some poorish land.

844. What is the acreage there?—The whole estate is 1,848 acres, but I gave the particulars of five of the principal farms, making 888 acres.

Reduction of rent.

845. What was the rent some years ago?—The rent of these particular farms, which I got as being typical (and which is the best evidence I can give in the short notice that I have had), in 1877 it was 1,790*l.*, and it is now 1,306*l.* That is 27 per cent. reduction.

846. When did the reductions begin there?—We began in 1886 and 1888.

847. Were those temporary returns?—Yes; they would be very confusing and very difficult, but they were averaged from year to year as the circumstances demanded.

848. Is there an all-round reduction?—Twenty-seven per cent. is an all round reduction, each farm varying greatly.

Tithe.

849. (*Lord Cobham.*) Are you including tithes in talking of those amendments?—You ask me about tithes; many of those estates that I have hitherto referred to have no tithes. They were commuted under the Inclosure Act. I will mention them when I come to them.

850. (*Chairman.*) Has there been outlay here?—Yes, money has been spent freely in the sense of ordinary repairs, but nothing very special.

851. There has been no special outlay?—There has been nothing very special.

852. With that reduction of rent, have you satisfied the tenants?—Up to the present we have, but this, of course, will be a very bad year for them.

Condition of tenants.

853. Of course, it is necessary to treat this last year exceptionally?—Treating that as exceptional I may say that we have. It is all let now. For a few years we had two farms in hand, but these are all let. The condition of one or two of the tenants is extremely unsound, mainly owing to the great loss of sheep in 1882 and 1883.

854. They have hardly got out of the succession of bad seasons from 1878 to 1882?—That is generally the case with tenant farmers.

855. It was due to bad seasons?—And also that since the bad seasons the prices have not improved.

856. But the land has improved?—The quality of the land has come back again quite. There is no trace of the bad seasons so far as the quality of the land is concerned.

Mr. W. L. Huskinson. 17 Nov. 1893.

857. Will you go on with another estate?—The next case will be the parish in which I live myself.

Farms in Nottinghamshire.

858. What is the state of affairs there?—Taking the whole of the farming tenants there, I give the particulars of 766 acres, running from 69 acres up to 200 acres.

Description.

859. They are mostly small farms?—They are mainly small farms all round, and the result there has been a reduction of 40 per cent.

860. Is that in the same parish that you farm yourself?—That is in the same parish.

861. Does that tally with the other farms?—Four of them are hill farms, farming on clay hills 350 and 300 feet above the sea. It is thin clay when you get on the top of the hills, and particularly on the slopes. On the level we have very nice mould. Then on the steep slopes of the hills it gets thin, and if you get to the top of the hills, where it is flat, we have nice land, but on the ridge it is poor soil, it is poor store ground, strongish clay and thin soil.

862. And these are arable farms?—Two-thirds, I think, would be arable.

863. But they grow wheat?—Yes, wheat. In the old days it would be considered wheat and bean land of very excellent quality.

Reduction of rent.

864. There is a reduction of 40 per cent. there, is there not?—There is a reduction of 40 per cent.

865. Has that been sufficient to keep the tenants?—Yes, it is all let.

866. Where farms have fallen in, have you found it possible to keep the tenants?—As a rule, the old tenants are kept. With regard to the hill farms it is no use letting the tenants go. We have had a sample of that from a neighbouring proprietor in our own county who had hill farmers born and bred there, and no outsider will look at such farms. The effect on the whole district has been very sharply to divide good land from bad, and on the hill land there, away from the village, every inconvenience comes in to people who have not been accustomed to it. It is not only the carriage but the difficulty of getting manure. There is also the difficulty of finding schools for the children, and people now-a-days will not live in isolated places when they can get farms in the valleys. The policy has been to keep the hill men and satisfy them, because if those farms were once open it would be very difficult to persuade an ordinary tenant to take them.

867. You have made large reductions in order to keep the tenants?—Yes.

868. (*Mr. Giffen.*) What is the present average rate per acre in this case?—You may run them from about 12*s.* up to 20*s.*; about that.

869. (*Chairman.*) Do you mean present rents?—Present rents.

Farms on the red clay.

870. Will you go on to the next place, please?—The next case is an estate upon the red clays of Nottinghamshire, which was particularly hit by the bad seasons from 1875 to 1883. The whole estate has something like 3,700 acres, but I give particulars, for accuracy, of seven farms, ranging from 42 acres up to 207 acres.

871. They are not large farms, are they?—No, because those are not let. I am quoting what are let and the rents, but I may say of the largest farm on that property, in hand at the present moment, that there is nothing whatever against it. The house is good and the buildings are good, and the land is better than the average of land, and is within a mile of the station. There are about 520 acres of it, and I cannot find anyone with the requisite capital to take it.

Reduction of rent.

872. And in the case of those farms let, what is the reduction of rent?—46 per cent.

873. What would be their average now?—They would run from 9*s.* 6*d.* up to 34*s.* per acre.

874. It is very difficult to average them, is it not?—It is very difficult to average them.

875. With these reductions have you been able to keep the tenants?—Yes, but their financial condition is not satisfactory; that is to say, there are a large amount of arrears.

System of cultivation.

876. Are these arable farms?—Yes, they are arable farms; two-thirds plough and one-third grass. On the red marls of Nottinghamshire it has been precisely

Mr. W. L. Huskinson.
17 Nov. 1893.

reversed in the century, but I will come to that in another estate. They are now two-thirds plough and one-third grass, with the exception of a good deal laid down permanently during the last ten years.

Difficulty in letting.

877. You said the large farm of 500 acres is well placed, and yet you cannot find a tenant?—It is well placed, and I cannot find a tenant.

878. It is a difficult thing to find a tenant with capital now, I suppose?—I am quite sure that Nottingham is depleted with people of capital.

Sub-division of farms.

879. Would it be more easy to find tenants if the farm were divided?—Yes, if it could be divided; but it has an excellent house and buildings, and everything laid out for the 500 acres.

880. And it would not be desirable to divide it up?—If it could be made into two farms of course it would be easier to let. In all such cases it is naturally easier to let a small farm than a large one.

Land in hand.

881. How long has that farm been in hand?—10 years or more.

882. Have you farmed it?—Yes, and we are farming it now.

883. What has been your experience of farming it?—Not a very happy one.

884. Have you lost by it?—Yes; we do not get much out of it. You see it is principally a wheat farm and cereals. Although not quite so strong as the rest of the estate, it is not land where you can with advantage put sheep on to turnips.

Farms in the forest land.

885. Will you go on with the next estate?—I will take four farms as representing the forest land of Nottinghamshire, which is light sand. The farms range from 100 acres to 400 acres, and the result has been that we have had to make a reduction of 16 per cent. absolute, and that is the one exception where we continue to make returns each year, varying them according to the circumstances of the case, and very liberal returns, as a rule, are made. I have taken it as typical of the 600 acres.

Reduction of rent.

886. And the reduction is 16 per cent. in that case?—Yes, and each year it is dependent upon the circumstances as to the special return we make.

887. (*Mr. Giffen.*) What is the average rent per acre?—Well, on this forest land it would run from 25*s.* to 32*s.* I have not put the clay part of the estate in, because it is quite on all fours with the other clay lands.

888. (*Chairman.*) What are the temporary abatements on the average?—At least 15 per cent., sometimes more, and never less, I think.

889. When was this reduction of 16 per cent. made?—It would have been made about 1880, and since then we have had returns given every rent audit.

890. Would you mention something about the importance of permanent reductions as compared with abatements. It will be necessary to make them permanently, will it not?—I do not think it will. The actual reductions were made and fixed, and the proprietor has a feeling that he can vary the rent with the seasons, and his treatment of the tenants is good. There has been no change on the part of the tenants, and they are all in a good, sound position and going on well.

Farm on the red clay.

891. Now go on to another estate?—The next is a case on the red clays of Nottinghamshire, in the centre of the county, rather high lying, that is land between 250 and 300 feet above the sea, which is a very considerable factor. The area of the whole estate is 3,000 acres, and I give the particulars of 1,000 acres which happen to be let. I may say that there we have a great deal in hand—a good 1,000 acres in hand at least.

Land in hand.

892. Speaking of the farms which are let, what do you say?—Those are typical of the estate, this 1,000, and the 37 farms run in sizes from 100 acres to 300 acres.

Reduction of rent.

893. And the permanent reduction is what?—50 per cent.

894. (*Mr. Channing.*) Since when?—The reductions have been made at various stages, but probably they run from 1882 or 1883, the bulk of them.

895. (*Chairman.*) And at that reduction have you kept the tenants?—We have kept them, but I cannot say that the condition of land or tenants is anything like satisfactory. It is clay land and runs rather high.

Description.

896. Are they exceptionally bad?—It is not a good estate, the bulk of it. It would be high lying land, and about two thirds of it plough; that is a particular case. I have had shown me the schedule of 100 years ago, and then it was two thirds grass and one third plough, and all in small farms. Now we have got just the reverse, and that is the difficulty; we have two thirds plough and it is a wheat-growing land, and wheat has thoroughly gone down. The late proprietor built houses and buildings and made roads, and did everything that he possibly could in the good times to pull the thing together. The larger farms I have still on hand.

Mr. W. L. Huskinson.
17 Nov. 1893.

897. Would it be possible to revert to small farms?—Not under a generation at least, because this is an estate on which we have seeded down a great deal of land, feeling that we ought to work back to grass if possible and seed it in every way. The owner has taken a very particular interest in laying it down, I cannot say with success. It will be be all right in a generation, but it is no help to the present tenant or proprietor.

898. It takes a long time I suppose?—It does. I quite admit that in a generation it will come back to very fair store land. I know that because part of the existing park was laid down by my father as a young man at the time, and that is very fair store land, but it will take a good generation to do it.

899. (*Mr. Elton.*) Since when did this period of 100 years begin?—From 1780 to 1880.

Difficulty in letting.

900. (*Chairman.*) How many farms are there?—They would be divided into three farms. It is the same difficulty again with the larger farm; we find a difficulty in getting tenants with the necessary capital, because of the depression. The man who used to farm 400 acres or so, is not strong enough to supply sufficient capital now-a-days.

901. (*Sir Nigel Kingscote.*) May we have the rent?—I could give the rent of all the farms.

Rent.

902. Give us the rent of one farm?—I do not know whether I dare give you one farm, but the lowest is 8*s.* at the present time, and then we run up to 20*s.*

Tithe.

903. (*Chairman.*) How long has the land been in your hands?—I should think since 1879. That year was one of the most miserably wet years that we ever experienced. I might, before passing on to the next estate, refer to the question of tithes. On all those clay-land farms the owner pays the tithe, which has hitherto been paid by the tenants. Since the alteration of the law, by which the proprietor has to pay the tithe, I feel quite sure that we shall have to reduce the rent in proportion to that tithe charge. We shall never get it back from the tenants; you cannot ask for a small sum from the tenant; he simply says, "I shall not pay "it," and we have to pay it.

Another estate in Nottinghamshire.

904. It is a reduction of rent then?—Yes; he says, "I cannot, and do not intend to pay it," and we do not intend to quarrel with a tenant of 200 acres for a small sum. It would be imprudent to do so. The whole of that estate is reduced 50 per cent. The next case is also in Nottinghamshire, and there it is nice loamy land, the bulk of it. There is some moor land lying down below, and the moor part of it is exceptional in the quality of the land, exceptional in the quality of the tenants, and exceptional rather as being near a large town, that is, within four or five miles of a large town. The tenants are perfectly unrestricted, and they can sell what they like, provided they bring back compensation. The permanent reduction there has been 20 per cent.

905. What is the acreage?—The acreage would be about 1,500 acres.

906. How many farms are there?—We have a great many small farms. I have taken out 500 acres as typical of the rest, and they are all small, from 36 acres up to 100 acres, averaging about 70.

907. Is it grass land?—No, the grass land there is good, but it is not a large proportion; it is most beautiful loamy land.

Rent.

908. What is about the rent of that?—All these six farms which I am quoting run from 40*s.* to 55*s.* per acre.

909. (*Mr. Channing.*) Is this market land?—In no sense. A large part of the farms was a portion of the estate of Mr. Paget, who was formerly M.P. for Nottingham, and he cultivated it to the highest extent.

910. (*Chairman.*) Would that reduction of the rents have kept the tenants?—Yes, they are all there. There of them send milk to Nottingham, and they continue

Mr. W. L. Huskinson.
17 Nov. 1893.

the old trade. There is no restriction absolutely, and the land is the same as under Mr. Paget. The tenants could sell what they liked so long as they brought the compensation back. The next estate is also in Nottinghamshire; it is half hill-land clay and half forest land, which would be a very good sample of that part of Nottinghamshire as embracing both descriptions of soil. That is about 5,000 acres; but I have typical farms of about 1,300 acres, and the reduction is 42 per cent.

Another estate in Nottinghamshire.

Rents.

911. What is the average rent?—The average rent would be on that estate 12*s.* 6*d.*, that I have got here, and we run up to 20*s.* We have a great many small occupiers of land, but we have had to make a similar reduction to them in many cases. They are not near a market, and are four miles from a station; the land has, therefore, got on fairly well until this year; but still large reductions have had to be made in proportion to the others.

Reduction of rent.

912. With the reductions have you kept the tenants?—Yes, the whole of them, with the exception of one farm, and that is 500 acres, there. I am hoping to let that farm, it used to be in two farms.

913. Are there tithes?—Yes, but we pay them, and always have done so.

914. In such a case as this, do you suppose that the tenants have had the benefit of the reduction in rent in the rates?—Yes; that is why the returns fell through altogether, we had been at a great deal of trouble in Nottinghamshire, with that we began by making a certain reduction on the plough land. We made a special return on the plough land as well as a return on the grass land. That did not answer; then we made a general average per-centage return, and they did not get the rates off; the assessment committee did not admit the temporary reduction, and we put them on a general reduction in order to get a reduction in their rates.

915. The reduction of rent in that case has been 42 per cent. I see?—Yes.

916. This is a purely rural parish, I believe?—Purely rural.

917. Have the rates remained about the same?—They have gone up about 2*d.* in the pound. They have varied very little.

918. And the tenants have had the benefit of the reduction in their rates of the 42 per cent.?—That is so; the very first thing in making a reduction is for the tenant to ask for a letter to the Assessment Committee to certify the reduction.

919. And the landlord had the benefit of the reduction of the tithe?—Yes.

920. You said the landlord paid the tithe in this case?—That is true.

Tithe.

921. Therefore the landlord has had a reduction of 25 per cent.?—There are two tithes—the rectorial and the vicarial—I cannot say.

922. But the general average of the tithe has been reduced nearly 30 per cent.?—Yes, it has. We stand now at 25 per cent. I think it is.

923. 25 per cent under the 100?—Yes.

924. It was above the 100?—It is less than 75.

925. It was about 110?—It got up to 112.

926. And it is now 75?—That is a reduction of 25 per cent.

927. It is not necessary to go into it minutely?—It is 72 to 75 per cent.

928. Whoever pays the tithe has had a considerable reduction?—Yes.

929. (*Mr. Giffen.*) What proportion of the rent would the tithe be?—It varies very much indeed. I have experience of small tithes and very heavy tithes. I know a parish immediately adjoining where I have an agency. I have not mentioned it because it is hill clay land on the forest farm, and there the tithes are something like 5*s.* per acre—very heavy indeed.

930. But that is exceptional, is it not?—It is exceptional for our rural districts; we have tithes up to 6*s.* and 7*s.* nearer to Nottingham.

931. (*Chairman.*) Will you go on to another estate?—That is the whole, and I have given a summary of those estates I have mentioned. I have given the particulars as to portions of the estates mentioned of about an area of 15,000 acres.

932. Those are given as samples of the whole 40,000 acres?—That is so.

Mr. W. L. Huskinson.
17 Nov. 1893.

933. We may gather from the facts that you have stated that the extreme reduction has been from 40 to 50 per cent., and that on the very bad clay land, the very stiff clay land?—Yes; 59 per cent. in one case.

Reductions of rent.

934. On good land the reduction has been from 15 to 20 per cent.?—But taking the whole 15,000 acres which I have given you as a sample of the 40,000 or 50,000 acres, the total average deduction has been 33 per cent.

935. You have given a considerable number of illustrations, and the net result has been an average reduction of rent of 33 per cent.?—Yes.

936. With this reduction you have been enabled to keep the tenancies together, have you not?—Yes.

Successful tenants.

937. Have there been many cases in which tenants have done well?—I could mention several cases. I may mention three or four brothers on one farm of each estate, all doing well, and one was even a competitor for the purchase of a small property against a neighbouring proprietor. But he was a very clever, sharp, shrewd man, and a very clever judge of stock. It is difficult to say what are his real farming gains, it is owing to his own shrewdness, I think, that he is doing well.

938. Quite apart from an exceptional case, have there been men who, by applying themselves thoroughly to their own business of farming, have done well?—Certainly, when they are thoroughly skilled and devoting themselves to their business, I know many cases where they are doing well.

939. How do you account for it?—It is a general rule that there are men slightly above the average and there are average men, and those below the average, and there are men of fair strength and intelligence who apply themselves to a special department or some special line of farming that they thoroughly understand, and I know many of these men are doing well and are quite satisfied. I had a conversation with a man closely adjoining me the other day, and I said to him I was coming to this Commission, what is your remedy? and his reply was: "I am doing fairly well; I have nothing much to complain about." That was the case of a man farming two-thirds grass and one-third plough, on a fair quality of land, and he supplies milk to Nottingham.

Dairy-farming.

940. Have they struck out new lines?—In certain cases they have. My experience is this, that where the average farmer sends his butter with the ordinary carrier he charges him 2*d.* a pound for taking the butter to the market, and does not care whether he makes much or little per pound, that man does not make much owing to his want of skill, but I know four or five men who are thoroughly skilled, and their wives devote themselves to the butter making and they take their butter into the town themselves and they get 3*d.* and 4*d.* and 5*d.* above the market price all the year round. I made an observation to a man who has a hill farm two thirds grass, and I said, "I am sorry to say "that the price of butter in the markets has gone "down." He said, "It does not matter in the least to "me," and he showed me eight private customers in the town of Nottingham to whom he took the butter himself, and he never got less than 1*s.* 6*d.* a pound.

941. That is by paying great attention to the quality of the butter?—He and his wife are thoroughly skilled, and they look after it themselves.

942. Has there been any increase in the price of butter?—I do not think so, but there has been a great increase in the supply of milk sent into the towns. I know two farmers who have gone into the milking business who had not previously devoted their attention to it; before this they made butter and cheese. Now, from mere laziness, they are sending the milk into the towns. There has been a great increase in that, and there are great facilities given for it now which there were not years ago, when the last Commission was sitting. About that time they began to give facilities for the transmission of milk to London, and now out of my own parish the milk goes to London all the winter.

943. Even at the present prices you are not without hope that the tenants may do well?—Yes, because you see that at the present prices they have been met so considerably in their rents, and if a man can make the interest on his capital it does not matter whether the rent is 15*s.* or 30*s.*

Mr. W. L. Huskinson. 17 Nov. 1893.

944. In the reduction of rent and the reduction of rates owing to the lowering of the assessment due to that lowering of rent, have they had considerable advantage?—There are a certain number who are doing fairly well.

945. They have benefited by the lower prices of the articles they have had to buy?—Yes, both for manure and artificial food they have been below the average. The men who were very hardly hit during the bad seasons have never recovered.

Effect of bad seasons.

946. Being hit very badly preceding 1882, I suppose?—Take the Nottinghamshire and hill farms growing mainly wheat, they were hit by the wet, and the Leicestershire people who lost their sheep during the rot were also hit by it.

947. They have never recovered from the effect of the succession of bad seasons?—Quite so.

948. The lower prices may have been made up for by reductions of rent and other reductions that they have had, but still they feel the loss due to the previous years?—I think so; as where I let a certain number of farms I have a greater difficulty in getting the tenant-right paid. I have also a larger per-centage of arrears.

949. Though there have been better seasons since then, there has been a greater fall of prices, and therefore they have not benefited by the better seasons so as to recoup themselves for the loss of previous years?—That is precisely it.

Yearly tenancies.

950. Taking the general average of your tenants, do they hold the tenancies from year to year?—They hold the tenancies from year to year, and, I believe, they all prefer it. I remember when the Agricultural Holdings Act was passed one proprietor said to me, "Let "the tenants have their farms on the year's holding or "subject to six months' notice, but I should like them "to be all alike and let them meet and settle it."

951. The landlords for whom you are agent are prepared to give leases, I suppose?—I do not know that there are tenants to take them.

952. You mean they will not take them?—They are not accustomed to them, neither in Nottinghamshire nor in Lincolnshire.

953. Has it never been the custom to take farms on leases there?—No, I have had to deal with leases, but it has never been the custom in those two counties.

The Agricultural Holdings Act.

954. Have you had any complaints under the Agricultural Holdings Act?—No, because it has never taken effect in Lincolnshire or Nottinghamshire; our system of compensation for all things is such that the Act has made very little difference to us.

955. Do they still claim under the custom?—I do not think I have had a single claim under the Act—it is always under the custom.

Reduction of rent.

956. Is it rather more favourable than the Act?—Yes, in certain cases it is. I may say that they are all now under the six months' notice. I do not object to a year if we can get a fair rent, if a man is sound and capable it would make me more safe of having a tenant.

957. Then the landlords have suffered severely by reductions in rent?—There is no doubt about that.

958. Does your memory go back before the rise in rent?—Yes, in 1859 one particular fact I remember well. My father wrote to the tenants of two Leicestershire estates of about 4,000 or 5,000 acres showing that the state of things was so generally favourable for agriculture that it was only fair and equitable that the proprietor should participate in it, and the matter had been considered—I forget the expression—but the idea was that the rent for the future would be on the farm such a price, and I may mention that none of the tenants left, neither was there any difficulty with them, and the change was acceded to. That was in 1859.

959. Do you know from the books of the estate whether the reductions of rent now have gone beyond what they were in 1859?—I could say, but my preparation for this evidence has been so short that I am not prepared to give the statistics.

960. You will supplement your evidence, perhaps?—I could do that with pleasure. *The witness subsequently wrote:—*

"The estate in Leicestershire referred to, and which had the rents raised within my recollection, was raised in 1857, and the increase which then took place was over a part of the property an average increase of 15 per cent. on preceding rents, and over the bulk of the estate an average increase of 10 per cent. The average reductions from these altered rents is 27 per cent., at which it now stands. The estate is about two-thirds grass and one-third plough, fairly situated as to railway and markets. There is therefore a net loss of 12 per cent. over a part, and 17 per cent. over the bulk of the property."

Mr. W. L. Huskinson. 17 Nov. 1893.

Quality of labour.

961. With regard to the wages of labour, you gave your opinion as to the greater inefficiency of labour in your parish?—I think that the general result in Nottinghamshire with reference to labour is that it is not so efficient as it was. The generation who were skilled men have died out, leaving a certain number of labourers; the young men who would have taken their places have gone into the towns, to the police stations, or to the railway station, and to other employments. Certainly the quality of labour in my opinion in my neighbourhood is not so good as it used to be, quite apart from the price paid per week, they are not so skilled, and it will be worse in the future. I have myself been instrumental in sending 10 or 15 young men into situations in towns.

Rural depopulation.

962. Do you hear that that is a general complaint?—That is so, and the quality of labour as a rule, though it affects us more than purely rural districts where they have not the same temptations to go into the towns, has also depreciated.

963. It is, I suppose, largely a question of wages?—It is not only wages. I do not think that equal or even superior wages would stop the tendency to go into the towns.

964. On account of the attractions of the town, I suppose?—The attractions of the town and the greater amount of incident and life that they see will always tell in favour of the town. I know that, because of each young fellow who wants to go into the towns I ask the reason, and I have ascertained as far as I could what was the object of the emigration.

Reduced employment.

965. Taking the farms that you mentioned, is there a reduced employment of labour?—Certainly, and the result of the extreme wet seasons is to turn down plough land to grass, and that in itself has caused a gradually decreased demand for labour. The 400 acres that we gave up in 1878 and 1879 we had previously farmed for 30 years; the condition of that is that one-half which was plough is now grass, and there are now only one man and a lad, and we formerly had six or eight labourers during the winter.

966. What is the reduction in that respect with regard to labour?—As to the prices per week?

967. As to the number of labourers employed?—I could accurately give it for my parish in which I live, and, to a certain extent, I could with the estates with which I have to deal.

968. You can, perhaps, supplement that part of your evidence?—I shall be glad to do so. *The following statement was subsequently received:—*

"As to the reduction in the labourers employed on land, I have a case of a farm of 416 acres, of which three-quarters would be plough land, and which forms a very fair sample of a useful Notts farm on the Kemper division of the New Red Sandstone. There is good grass well watered in the valley, and the plough land part clay on the hill slopes, and partly table land about 200 to 250 feet above sea level. This was farmed, and farmed profitably to 1878.

"As the result of the depression about 150 acres have been seeded down to grass, two freehold purchasers are not very successfully trying some market gardening on 50 acres; 30 acres are running waste, and the grass land is occupied. Making a careful calculation of the money that would represent the labour of those employed now, and the regular staff of labourers formerly employed, it would not amount to more than half the amount at the present time compared with the past. The labour now, too, is done by the people who occupy the land, and no regular labourer working for wages is employed, excepting occasionally.

"The amount paid in wages used to be 500*l.* per annum and upwards, and now 150 acres is grassed down, this land being formerly all plough would account at least for 250*l.* a year which represents in itself an equivalent of five men throughout the year at 1*l.* per week thrown out of employment, and the grass which replaces it would not represent the equivalent of one man."

Expenditure on improvements.

969. (*Lord Cobham.*) You do not appear to have made any very large outlay in permanent improvements?—I may say that the reason of that is that a great many

Mr. W. L. Huskinson. 17 Nov. 1893.

estates were held by improving landlords during the good times, and the amount that they expended would certainly astonish the public. With regard to four or five, the amount of money expended in permanent improvements during the good times when the rents were good, which expenditure has saved me the outlay in the bad times, is something very great. That is the reason I have not had so much to expend during my period.

970. Do you think more would have been expended if facilities for finding the money had been afforded, in the way of Government advances, for instance?—Yes, I think, perhaps, there would have been—in case of drainage, no doubt—but I may say, generally, that the amount expended during 20 years preceding the depression on some estates would stagger the public—the amount in roads and buildings, and making everything good—that, for the period ever since my father died, and a period five or six years previously, it left nothing but ordinary repairs, because the expenditure had been so great in previous years, otherwise it would have been terrible.

Sale by dead-weight.

971. I gather that you do not sell the meat on your farm by dead weight?—Not now.

972. Do you think it beneficial?—Yes, anything that would let people know accurately what they were doing, is good. I have sold by auction of late, owing to the pressure of times not allowing me more time to sell my own; but previously to that I always sold by weight or by measure.

973. The farmers do not like it, do they?—I think that they are wrong. I do not think that there is anything gained by not doing it. I am sure when they put the judgment of a butcher, who is constantly in the market, against the judgment of a farmer who is only occasionally at the market, the butcher will always get the best of it. I always strongly advocate the weighing of sheep and measuring of beasts.

General condition of estates under his management.

974. (*Sir Nigel Kingscote.*) You told us you attributed the great improvement both on the grass land and arable land to the better climate of the last five or six years?—That is so.

975. You have given us evidence of estates, I may say of rather a small circle, in Lincolnshire and Leicestershire, and Nottinghamshire and Huntingdonshire?—Yes.

976. From your experience does that improvement extend further south?—I should not like, and would not speak as a man of business, of anything further south than Huntingdonshire.

977. You speak only of those estates in those counties?—Yes, those Midland counties with which I am best familiar. I have no experience south of Huntingdon.

978. You have no case of late years of land being so badly cultivated that it has really tumbled down into grass?—Yes, there is plenty of that land in the Midlands; it twitches itself down, as we call it.

979. Have you to treat with any such land?—Yes; that farm which now is let at 8*s*., a hill farm in the centre of Nottingham, a portion of that has twitched itself down.

980. Could you get an enterprising tenant to put it into condition?—I have made an arrangement with a person to take up a couple of fields a year. There are so many farms falling in hand that I cannot and I will not deal with many more, and that must take its chance.

981. It is not only the loss from the reduction of rent, but there is expenditure in other ways, in keeping the land in the best cultivation?—Certainly.

Cost of labour.

982. (*Mr. Whitehead.*) You spoke about the increase in the expense of labour during the last few years, how much per acre would that be?—I could tell you that when I supplement my evidence afterwards. I went to the year 1880, and back for 20 years previously, when the wages of the labourer were 10*s*. per week—that is the ordinary agricultural labourer's wage. When I found it was 16*s*. 6*d*. I expected an enormous increase in the price per acre, and I was staggered when I found we were paying very little more per acre than we did previously. The only explanation of that is that we are using so many labour-saving machines and implements; but that so astonished me at the time that I wrote to the most intelligent tenants to ask them if their experience corresponded with mine, because it was so contrary to our expectations.

983. So that the expense of labour had not increased materially?—It had not at that time. Wages have gone down since that time, when they were from 15*s*. 6*d*. to 16*s*. per week.

Mr. W. L. Huskinson 17 Nov. 1893.

984. If that is held as a cause of depression it is not an accurate statement?—No, I do not think so. I was very much staggered by it, but I do not think that it is. I think that the extra price per week for labour was saved by the use of labour-saving machines, and that is the only explanation; the fact was undoubted.

Rates.

985. You spoke of the Assessment Committee as not being bound to reduce the rate owing to the reduced rentals?—Whenever we reduce the rent we get a letter from the tenant saying will you give us a letter to show the Assessment Committee?

Tithe.

986. The tithe was deducted?—The tithe differs from that. The proprietor has sometimes paid, and in other cases the tenant has paid. Now of late, the proprietor pays the whole, and in such cases where the tenant had to pay it would practically amount to a reduction of the rent, for we could not get it back. The tithe is assessed in the Union in which I live in this way. It is first of all deducted from the farm on which it is charged, and it is charged in the bulk to the vicar.

987. The tenant gets the benefit of the reduction of the tithe?—Where he pays he gets the difference between the 100 and 72 per cent.

Rates.

988. In the case of the assessment being made equivalent to the reduction of the rent as the rate increased?—I take it in this way, supposing the expense of the Union ran on the same where the allowance is made to the agricultural tenant, the rating must be proportionately higher on some property in the Union—no doubt it must.

989. Is not the tenant in the same position as regards rate paying after having received the reduction in his assessment? He has to pay an increased rating, I take it, so that he gets no benefit from the reduction of the assessment?—As you put it that would be so, but it also is increased on other properties, house and tithe throughout the Union as well.

990. I was thinking of the rural tenant where the conditions would be the same?—Take the Union where our rates have not been increased, or take the case that I have just mentioned about 2*d*. increase on the land.

991. Is that in reduction of assessment?—That is so?

Value of wool.

992. You spoke of the decrease in the value of wool. When was that decrease?—I could give it to you in periods. It is a very serious item really. I am now taking not the general average with the country, but a special farm which we occupied, and I may say that the sheep were Leicesters crossed with Lincolns, and latterly with Hampshire downs. The prices from 1850 to 1860 were averaged at 33*s*. 10*d*. per tod; from 1860 to 1870 the average was 51*s*., that would include the American War prices: from 1870 to 1879 the average was 45*s*.; and from 1880 to 1891 it was 24*s*. I could supplement those by the prices for each year. All those are averages.

Reduction of rates.

993. (*Mr. Giffen.*) Would the reduction in that sum you hand over to the owner of property for which you are agent correspond with the reductions in the rentals you have given us?—No, because there has been an increase of expenditure as well.

994. So that as far as the owner is concerned the reduction of the rental which you have given us is less in proportion than the reduction in his net income?—Yes, certainly, and would have been much more if I had not succeeded to improving landlords in the past, who had spent a great deal of money upon the estates.

Restrictions in selling.

995. (*Mr. Gilmour.*) You were speaking of giving a free hand and selling everything on the farm?—I was speaking especially of this estate, which is close to a large town where facilities are given to them for bringing back manure. It would be imprudent to prevent it. They have a perfectly free hand, the only condition being that they shall bring back manure as an equivalent.

996. And what basis do you lay down for obtaining that equivalent?—It would amount to about 1*l*. or 30*s*. per acre. It was laid down by the late Mr. Paget.

997. The value of what they take off they must bring back in manure?—Yes, in manure.

Shooting rights.

998. Are the shootings on this estate let, or are they in the hands of the proprietors?—In all cases but one they are in the hands of the proprietors.

Cause of depression.

999. (*Mr. Long.*) May we take it, as the general result of the evidence you have given, that your experience

is that the real cause of agricultural depression has been the fall in prices?—Yes; the net result of the whole thing is that up to 1880 it was seasons, and since 1880 my idea is that it is prices, and prices alone.

1000. Have you found that alterations in your system of letting, or variations in the size of your farms—that circumstances like these have either increased or decreased the pressure of the times?—I may say, of course, we have tried in every way in which we could to meet the times; that is to say, by dividing the farms where it is feasible, and particularly being lenient with the tenants in arrear, and by, in certain cases, allowing the tenant right, or a portion of it, under stipulations to stand over.

1001. Would you mind explaining that phrase, "Where it is feasible." I am anxious that what you mean when you say that you have divided farms where it has been feasible should appear on the notes?—I mean this, that in many cases there were farms existing in the old days that had been converted from two or three farms and thrown together. In these cases there were three centres, and it would be easy to separate those farms again by expenditure. Of course it would cost a great deal of money, but still it is feasible. Where you have a farm of 500 acres which has been laid out with fields and roads and good buildings, it is hardly practicable in the present financial condition of land to admit of separating those up.

1002. How long do you estimate that it would take a property to recover the outlay necessary in order to break it up into small farms, say making a good-sized farm into two?—The difficulty would be this: what are you to do with a large house and the large buildings already in the centre? They would be wasted and thrown away if they were attached to 250 or 300 acres.

1003. Does the difficulty begin and end with the big house and big buildings? Is there no difficulty with regard to the distribution of the land?—Yes, there would be, because each farm has a certain proportion of grass and plough, and it may happen that the grass is all round the large house and the large buildings. There may be great difficulties there.

1004. Would I be misinterpreting what you say if I were to put it to you that you would have no difficulty in turning a large farm into three farms, so far as two-thirds of it was concerned, but that you would have some difficulty in disposing of the remnant, the worse, or more distant land?—It would hardly be that. Take the 500 acres where there is no house and building, there would be no difficulty in putting it into three farms, and we should then form three homesteads.

1005. You are thinking of one particular case. I want your general experience. You are now applying the experience of one particular farm generally to the whole of that property, but I want you to do exactly the reverse?—I was simply referring to that as one typical instance which gives the idea.

1006. But I am afraid I do not make it clear? Take such a case as this: It may be possible to divide a farm into three. You might find three farmers to take the three, where there would not be the difficulty of great expense on buildings. Would such a farm, having regard to the distribution of land, get tenants?—If you have a farm with 600 acres divided, I think I could let it more easily.

1007. Could you let 600 acres more easily by putting them into farms of 200 acres, putting aside the expenditure?—Yes, certainly.

1008. It is only with regard to the distribution of land from a farming point of view?—We could not do that.

1009. The difficulty does not consist alone in the capital expenditure for the buildings?—It is a very large factor, but it is not the only difficulty.

1010. There is a practical one?—That is so—the distribution of the land.

1011. With reference to the assessment question, you told us that there had been considerable pressure on the part of certain occupiers to have the temporary reductions turned into permanent reductions in order to get a reduction in the rates?—That was so, in Nottinghamshire especially. We began very early to make returns. The returns varied, and that went on for a year or two, and then the difficulty arose that the Assessment Committee would not recognise those returns as reductions, and charged the farm upon the full rent, and the tenant came and said, "I must ask "you to make it a permanent reduction, so as to get "my relief from the Assessment Committee. You do "not get the money." It seems so natural that as he did not get relief from the old returns, we should ease the tenant in that respect by making it a permanent reduction.

1012. That leads to the conclusion that those rents should be reduced in order that the tenants should get the additional benefit of the rate, but ought it not to lead to a different conclusion, namely, that the system is not a fitting and proper one, and is it not an unfair thing that this should be an indirect relief of the proprietors at the expense of the other ratepayers in the district?—Yes; to a certain extent.

1013. In your opinion is the rent the proper basis on which the Assessment Committee should go in fixing the assessment of the farm? Does the rent always represent the value in the market?—No, it does not; I may say, that in the Union I lived in in the past 30 years, that has been the case, and in other Unions in the county, and it is so now.

1014. What is the basis of rent?—The Schedule A of the Income Tax and the gross rental of the Rate Book, are now the same thing; that represents the rent as a rule over a very large area, over all our areas. It is not quite fair, but it is perhaps the best they can get.

1015. Is it a fair system of arriving at the rateable value of land?—It is the safest practically, because an owner gets as much as he can.

1016. Does it take into consideration the different circumstances which govern certain lettings?—It does not.

1017. It does not represent the market value?—It is not quite equity, but you must have a choice of evils, and if you have not the rent, it is somebody's opinion. That opinion may be right or wrong, and may give satisfaction or dissatisfaction.

1018. Are you familiar with the practice which exists in Scotland with reference to assessments?—No, I am not.

1019. You are aware that it is proposed that a Government official should be introduced into the local assessment in order to produce uniformity; would you have anything to say to a suggestion of that kind?—I think of the two evils, probably taking the rents would be the least.

1020. You are rather afraid of the Government official?—I am very much afraid of the multiplication of our officials all over the country.

1021. That fear is generally shared in the agricultural districts, is it not?—There is a great deal of fear of the multiplication of the number of inspectors and officials.

1022. Does that proceed from the belief that it is exceptionally hard to get the general public to understand agricultural questions and agricultural problems?—We are generally told that we do not understand agricultural affairs or our own business.

1023. Is it not a grievance that you have got too many teachers?—With the best intentions, that is so, no doubt, very decidedly.

1024. (*Mr. Dalton.*) Do you find that the rate in the pound of the rural rate varies very much in the different unions?—Yes.

1025. To what extent does the variation take place?—It would vary in the different parishes in the same Union in this sense; take our own, which is too favourable a sample, but still take it, it is 1*s.* 10*d.* in the pound. That would be the general charge in the Union. But there are certain parishes which have certain sanitary rates. We have 20*l.* for extra police protection, and 15*l.* for sanitary purposes, and the neighbouring Union would pay the police rate, but not the sanitary one. It varies very much between different Unions.

1026. Do you consider that 1*s.* 10*d.* is the minimum rate in the parishes you know?—I think it is.

1027. What would be the maximum?—That would be difficult to say.

1028. Do you take the rates at all into account when you fix the rent?—Certainly.

1029. Cannot you say what the maximum is in any parish that you know of those properties?—Yes; I know cases of 4*s.* and 5*s.*

1030. That is a case where there would be a school board?—There would be a school board. In the union

Mr. W. L. Huskinson. 17 Nov. 1883.

I first was speaking of we have no school board, and no special sanitary rates. That would be in an urban district.

1031. When you have got agricultural land in an urban district?—If I may explain myself, take this to be a stream (*pointing*); I live on this side, the eastern side, which is a purely rural union. On that side, with quite as much country, it happens to be next to a district which is urban, and there the rates are very much heavier.

1032. If you are in an urban district, where the rates are 4*s.* or 5*s.* the agricultural land does not pay the whole of that, it is rated at one-fourth to the sanitary rates?—That is so.

1033. What, practically, does the agricultural land pay?—It pays one-fourth.

1034. What does the rate in the pound come to; taking that into account you take it as 4*s.* or 5*s.*?—I must think of the worst case. It would in Nottinghamshire; I think it would be 3*s.* or 3*s.* 3*d.*

1035. After making that allowance?—Yes, after making that allowance.

1036. How do you account for the fact that the rate in the pound has not gone up more in your parish although the assessment has gone down, I understand, 40 per cent.; is it the Government subventions that have helped you?—That is asking a question that I have not given time to consider, and, in fact, I can only speak to the two facts. I see the point—that is so.

1037. You know that the rate in the £ has only gone up 2*d.*?—In the particular parish 40 per cent. on the agricultural land, and taking the houses, &c. 18 per cent. grass land and low land.

1038. Therefore, it is either from Government subventions or something else?—I do not know of any other thing than Government subventions; the expenses are not less.

1039. The poor rates are not less?—The poor rates are not less. We seem to spend a great deal of money, but the poor do not get it.

1040. And the Government subventions have assisted you?—They have assisted us; they must have done, because of these two facts.

1041. You always take the rates into account in the rent?—Yes; that is raised by anyone who takes the farm.

Condition of the farmer since 1882.

1042. You think that not much capital has been lost, speaking as a whole, by the farmer since the bad seasons?—Yes, he has lost a considerable amount of capital since the bad seasons began. His position has been very much weakened on the whole.

1043. I thought it was your idea that the good seasons had not recovered him sufficiently?—Do you mean that he had lost capital since the date of the last Commission?

1044. Yes?—That would depend upon the sort of farming. Take the case of the wheat farmer. He suffered during the wet seasons; and take the case of the Leicestershire farmers, they suffered with the sheep rot; then take the case of the Lincolnshire farmers, they suffered from the fall in the price of wool.

1045. How long ago is that?—It is practically since the last Commission, that has gone from 45*s.*, on the average, to 24*s.*

Rates.

1046. (*Mr. Lambert.*) In your own parish has there been any increase in the rateable value, are there any towns in the union?—None whatever; no town whatever; the centre of the union is a cathedral city, but it has only 2,000 or 3,000 people, and there is no large town in the centre.

1047. Has the rateable value of that town increased?—I should say not. Our own, I may say, has got down from 4,000 to 3,000 roughly.

1048. Why do not you think that the rent would not represent the value for assessment purposes?—I think I stated that that was the readiest and best way. There is always a choice of evils, but perhaps taking the rent is the safest way, and gives rise to less dissatisfaction.

1049. Do you expect to increase the rates in the near future?—I do.

1050. What would it be expended on?—I take it in this way; the Public Health Act of 1875 is in our union not a dead letter, because we have many notices under it, but there are no great sanitary schemes as to the village sewage and water supply; and that is upon us in the near future.

Mr. W. Huskins

17 Nov. 18

1051. When these works are carried out it would improve the property?—It will improve the village property, but it will do nothing for farm lands. That is a point that we have a difficulty about in my own parish at the present moment. The village sewer was discharged in a small cesspool close to the road. That was condemned between 1885 and 1893, and there is a scheme now of sewerage to remedy that. But there is a great divergence of opinion. It will improve the villages, but all the farmers will gain will be that they will have to pay their contributions and they will get nothing out of it.

1052. But would it not improve the rateable value of these cottages?—As those cottages are mainly occupied by farm labourers it would not benefit the farmer.

1053. Do you think it is fair that the tenant should have to pay an increased rate after he has taken his farm?—If that rate troubles him very much we should soon hear of it. I have a case where a man comes this year and says, "I was perfectly satisfied up to last year, "but my rates have been very much increased, I must "have a reduction of the rent in proportion." I am engaged in satisfying myself that it is the proper reduction.

1054. Supposing there is an increase of 2*l.* or 3*l.* per year, you would not hear of that so quickly?—No.

1055. The tenant would go on paying?—Yes.

Fall in prices.

1056. Could you tell me the per-centage of decrease on all farm produce?—Well, the tithe measures all cereals exactly, because the tithe is divided into three parts, wheat, barley, and oats, and it is, as you know, measured by the seven years preceding, so that that measures cereals exactly.

1057. Could you give me a rough estimate of the amount that agricultural produce has decreased?—From what period?

1058. Since 1882, I should think?—Well, it has gone very near. I have not prepared myself for that. I had proposed doing so by a chart, but I have not had time. I am speaking quite off hand, but I think it would be from 25 to 30 per cent., that would be the minimum because cereals have gone down 25 per cent., and wool has gone down nearly 50 per cent. within the last 10 years, and beef has gone down certainly 20 per cent. It was selling at 10*s.* and 9*s.* 6*d.*, and now it is 8*s.* per stone. I think 30 per cent. is a rough shot. *The witness subsequently further supplemented his answer as follows:*—

"The rough estimate of the amount that agricultural produce has depreciated would not be the average depreciation of the several products, but would vary according to the main products of each farm. For the farm above referred to, and taking an average of its production for a series of years, and deducting from each kind as fair a depreciation as my experience gives, I find on the whole it is at least a depreciation of 30 per cent. on its receipts."

1059. As to the loss of capital which do you estimate is the greater in proportion to the capital, the farmers' loss or the landlords'?—That is a very difficult question to answer. The result of the 15 years' depression in seasons and prices together has been certainly to shove on to the landlord the bulk of the losses now, and so far as income is concerned——

1060. But hitherto the farmer has borne the loss?—He would suffer by the destruction of part of his capital.

1061. Do you think that the farmers have lost an appreciable amount of their capital?—I believe so.

1062. You could not give an estimate?—No, but certainly they have.

Large and small farm compared.

1063. Which are most prosperous—the large or the small occupiers of land?—I have given that subject a very great deal of consideration, and I read a paper before the Surveyors' Institution about it. There is no district or size of farms which one could say would be more prosperous than others; in certain cases large farms prosper, and in others small ones. I am not in the least degree against small farms—on the contrary.

Expenditure on improvements.

1064. You spoke of the cost under the Settled Estates Act just now, does the very fact of having to apply for money to carry out permanent improvements interpose any obstacle in the way of carrying out those improvements?—I should like to correct my reply of this morning to this extent: the case of going to the courts I think is a peculiar case, and

not common or usual in this sense. I have applied not only for prospective expenditure which I am going to make, but a certain amount which I have spent for the life tenant, and that the trustees should bear it. I think that they are going to the court on the past expenditure. Where the proposal is made previous to commencing work, and we act under the Board of Agriculture the life tenant makes an application to the trustees. They go to the Board of Agriculture to appoint a surveyor.

1065. It does not make any obstacle then?—No, I do not think it does. In the case I have mentioned it is a question of past expenditure.

1066. You said there were a good many farmers in arrears?—That is so.

1067. Are they good farmers?—The worse the farmer is the more he gets into difficulties.

1068. Are there some good farmers?—As a rule the good farmers are not in arrear.

1069. Do those men in arrear pay sufficient rent?—In several cases I do believe that we have made reductions very handsomely, but, as a rule, we have hit the mark as well as we can.

1070. Do you think that it is owing to a man having unthrifty and unbusiness-like habits?—I think it is in a great measure.

1071. In some cases it is not so?—In some cases it is not so; but it is that combined with less amount of capital than he ought to have had when he came to the farm, and it is quite impossible for him if he does that to pay his way. The best class of farmers are not the people who are in arrears.

1072. You were speaking just now of the letting of small farms and large farms, which are the easier to let?—It depends upon the neighbourhood and description of farm, but near to a town I should easily let a small farm.

1073. Because there would be greater facilities in the disposal of farm produce, I suppose?—Yes.

1074. There have been great improvements effected in that respect of late, have there not?—I think there have. We are engaged now in endeavouring to get a dairy factory in the village where I live, in order to get the butter to a more even quality, and to assist the farmers in this way.

1075. Do you think that the railway rates have handicapped farmers?—Yes, I do. I have no very special experience about them, and they are very fair with their milk rates to London, and the higher rates at the beginning of the year have been taken off again. But there have been one or two cases I could mention. One was the case of a farmer on the wolds of Lincolnshire, who finding that mutton was making a fair price in the London market, he wished to send his sheep. His natural station was Louth, but he found it more prudent to send them from Louth to Grimsby to get the preferential rate, so that he was sending them 20 miles further quite unnecessarily.

1076. So that there is a very great difference between through rates from Grimsby as compared with Louth?—Clearly from that. I know another case of corn coming from Liverpool to Nottingham, and I think that because it was not according to sample or some cause or other, it was sent back. But it was charged considerably more for going back than coming from Liverpool to Nottingham. In the one case it was English corn going to Liverpool, and in the other it was supposed to be foreign corn coming to Nottingham.

1077. And there is an undue preference given to the foreign corn in that respect?—Yes. If we were equidistant from some centre that we should like to supply, it would perhaps come in cheaper from the foreign market than the English corn would go the same distance.

1078. Does the landlord keep the shooting in all cases?—In all cases but one.

1079. Now about the ground game—hares and rabbits?—I cannot say that I have had any special difficulty about that.

1080. Have the tenants the right of killing ground game as they please?—They do when they feel themselves hurt. As a rule I ask them to forego the right, and see that they are not injured. The killing of rabbits is about the worst habit a man can have. If his son is always hanging about the farm with a gun, he will do no good to the farm.

1081. That is true. Do you think that you suffer from any excess of rabbits?—Not much.

1082. Do you know of any case?—Where it is so, it is almost inevitably between two large woods, for instance; do as you will, there will be always more there than there will be on a farm which is further off. I cannot say that I have any difficulty.

1083. Do you think there would be any inducement for a tenant to take a farm if he had the whole of the shooting rights?—Over a certain per-centage of farms it might be so. I do not think that over the bulk of the farms it would be so at all.

Restriction in selling.

1084. What is your system of tenure; have you any restrictions?—Yes, we have as a rule. They do not sell off in all cases except where they are near a large town; but if circumstances do arise they do it, and unless they do it unfairly and it is continued too long, we do not interfere.

1085. You allow freedom of cultivation, then?—Within reasonable limits.

1086. As long as they do not impoverish the farm, I suppose?—Yes.

The Agricultural Holdings Act.

1087. Have you any cases under the Agricultural Holdings Act?—I do not think so.

1088. Do you consider that your farmers get more compensation under custom than under the Agricultural Holdings Act?—Yes, we think that the Lincolnshire and Nottinghamshire custom is better than the Agricultural Holdings Act. It is quite expansive, and it has gradually grown.

1089. Do you believe that where landlords have carried out a large amount of improvements prior to 1880 there would have been such a large amount of expenditure now?—Certainly not, and that is the reason I have got off so easily.

Expenditure on improvements.

1090. Those landlords who have carried out a large amount of improvements since 1880 would, I presume, have neglected their estates previous to that time?—I do not know of more than two cases. In the good days, the farmers being well-to-do and men of capital, would often say, "I want a pair of cottages; I will give so much if you will do the remainder." When the bad times came they said: "We cannot afford to do "anything of that sort, and we must have the cottages "built entirely, and as things go we shall not do the "leading, and you must arrange for it to be lead for "us."

Land in hand.

1091. (*Mr. Channing.*) You farm 250 acres, I believe?—Yes, but up to 1881 we farmed 800 acres.

1092. You said that you have made in these times, including last year, a rent of some kind or another?—Not very high.

1093. I understand that you do not put in your own account?—No, I do not. I am quite willing to supplement my evidence by anything the Commission would like to have.

1094. The question I wanted to ask is this: In making an estimate of your profit what allowance have you made for these rents on your own land some years ago and what allowance you are making now?—I shall be glad to supplement that with any information that I can get.

1095. You could not answer that particular question now?—Certainly not every year, that is to say, a fair rent.

1096. Do you attribute your getting along tolerably well to having your own land very well fitted with improvements, or to your way of cultivating?—I put it in this way: we got rid of the large arable farm in 1878, and what remained then was the valley land, that is very good grass and very useful plough, so that we had the kernel of the nut left when the plough farm was given up in 1878.

1097. My question is pretty much this: have you made up your account at a fair rent, supposing you were to let so as to enable a farmer to live?—I let it last Lady Day. I will supplement that part of my evidence.

Condition of agriculture.

1098. You spoke of the condition of the land in these various estates, and I suppose generally they have come back to a fair condition throughout?—I think so, so far as quality is concerned, both the grass and the plough.

1099. Do you attribute it altogether to the good seasons?—To the good seasons. I would qualify that in this way: Nature has done everything that it can. I

Mr. W. L. Huskinson. 17 Nov. 1893.

do not say that taking the country all round it is in the same state of fertility, and that there is the same expenditure of manures as there was.

1100. Has there not been an immense variety of treatment by the farmers holding under you?—Certainly, every farm varies, and generally they have entirely recovered from the effect of the wet seasons, both plough land and grass land.

1101. It is no longer water-logged, I suppose?—No, it is not; and the grasses have come back again to the old quality.

Reductions of rent.

1102. You spoke of those reductions which are very various all through the estates. The rents were also various, I suppose, as regards their proportion to the productive value of the land? In some of those estates the rents were very full rack-rented and others comparatively low?—I should not put it in that way. I do not think there is any case of that sort.

1103. Do you think throughout that the rents in which these reductions were made were what you might call fair average rents?—I think they are very fair average rents, for they had run for years unaltered and uncomplained of. They varied, of course, according to the value of the land and the circumstances.

1104. Where have the greatest reductions been made; is it in the land found to be in the worst condition?—The greatest reductions have been made where they suffered most on the hill clay lands.

1105. Land which would command least in the market?—That is so.

1106. Farms which have been well looked after by their tenants, and where a man has spent more than the average in fertilisers and in labour, and in various small improvements of his own, they would command a higher price than the neighbouring land?—No, we have had a very curious experience in the wet seasons. Those who have spent more in fertilisers have not come off so well as those who have not. I am sorry to say that in our own parish, comparing two fields, from one with a good loam and well cultivated for 20 years, during one year we had less return than on a hill clay farm, which had sold everything off in the 20 years previously, the inferior field there had a steep slope where the water got off, and the other one which lay low got water-logged; and where it was manured and artificially manured we had a less return than we had on the hill farm.

1107. In making reductions you have not taken into consideration the outlay of the tenants in improving the farm or keeping up its fertility?—I am sorry to say that they have not been in a position to make improvements, nor do we wish them to do so. I think that permanent improvement, everything belonging to the fabric, is the landlord's duty; and it is his business, and it has always been accepted so with us.

1108. You said that some of this land was five-quarter land, that is land well looked after by the tenant, I suppose?—That is so; that is my own I was referring to.

1109. With regard to those five Lincolnshire farms on the wolds with 2,700 acres, I notice that the reduction in rent came as late as 1887?—That was so.

1110. Those men would, therefore, be paying rent for several years out of their own capital?—No. We made temporary returns, and they were more hard hit by the drop in wool; they had not suffered from the wet seasons as the lower lands of Nottinghamshire and Leicestershire have done. They came upon us when they began to feel the pinch.

Scarcity of labourers.

1111. (*Mr. Thomas.*) Is there any scarcity of farm labour?—There is beginning to be felt a scarcity.

Uncultivated land.

1112. Is there any land out of cultivation?—No, I do not think there is.

Quality of cultivation.

1113. Are the farms, in your opinion, sufficiently cultivated now?—I think, taking the average, no doubt they could be very much improved in cultivation; but, of course, I may say now, after such a year as this, that for the estates with which I have to deal, it has been a beautiful fallowing year, and the land is clean—they vary—some are as clean as a garden, and some not so good; but on the whole the cultivation has certainly improved, and naturally so from the more favourable seasons for cleaning.

1114. Comparing things with 20 years ago, is the fertility of the land now equal to what it was then?—Where it is properly farmed; I had a proof of it, in a certain sense, in 1887; we did make just the same amount of wheat as in 1868, which was also a favourable year for wheat.

1115. Has there been any change in your district in the mode of cultivation with respect to grass or wheat?—There has been a certain quantity of plough land laid down to grass, perhaps, over a largish area, and also a greater development in the supply of milk to towns with the greater facilities given, and that is increasing very much.

Mr. W. L. Huskinson. 17 Nov. 1893.

Changes in cultivation.

1116. At whose expense has the land been laid down in grass, the landlords or the tenants?—Always by the landlord. We have taken it in hand, and laid it down in fallow for a certain time, and found the seeds for it. We have practically laid it down ourselves, and in certain cases, where any hardship has been suffered, an allowance has been made to the tenant for the loss which would take place in putting down the plough land to grass.

Fall in prices.

1117. (*Mr. Everett.*) Should you say that the farmers were doing better for themselves in the times before the rents went down; that is to say, when rents were high and were tending upwards than they are doing at the present time?—I think at all times when prices are rising everybody does better; that is to say, their financial condition was sounder in 1874 a great deal than it is now.

1118. They could make a little money and pay a high rent better than with the low rents?—Yes; in all respects their condition was better then than it is now.

1119. Taking the whole county and all classes in it, do you look upon this falling in prices as a calamity or as a blessing?—As a great calamity.

1120. What do you think will happen to the land if the fall in price still goes on?—I am hoping that we are touching the bottom. We are open to the competition of the whole world, but I hope we shall pull through.

1121. But if it does go on what is the probable future?—I am afraid I must not prophesy on circumstances that are hypothetical.

1122. Have you any idea of what has caused this fall in price?—I have a theory; we all have theories.

1123. What is yours?—There is a general feeling, and a growing feeling too, amongst agriculturists that it is the depreciation in common with trade and everything else that prices are going down in western Europe.

1124. And that is due to what?—I do not speak specially on such subjects, but the feeling is that it is due to the financial changes in Europe in the last 15 or 20 years.

1125. To the alteration in the value of money?—Yes.

Dairy-farming.

1126. (*Mr. Elton.*) When you were speaking about the dairy farming in the Midlands, I understood you to say that the farmers do the dairy work themselves; therefore, I presume you have not got the system by which they sub-let to a dairy man and his wife?—No, we have not. In those cases where I said they were successful, both the farmer and his wife do the dairy work themselves. I do not think there is any case of sub-letting. We are trying to establish dairy factories now.

Rural depopulation.

1127. When you spoke about the young men going to the towns and about their reasons for going I did not gather whether you meant to include those who went to the collieries in your neighbourhood?—The class that go away from us consists of two sorts—first of all the most intelligent young fellows who do not care to take to agricultural work, get better places and prefer a town life, those who are near the collieries who are born in the district very often become banksmen, but they are the ne'er-do-wells. The best men do not go to the collieries, but those who do drift on to a colliery bank and become banksmen.

1128. Do you find that they come back again?—They tend to come back again, and they are no use to us.

Sub-division of farms.

1129. That was what I expected you to say. Now about the breaking up of farms; you explained the subject to Mr. Long. What I want to ask is this: Where farms have been consolidated out of small farms the special difficulty would not arise that you mention?—That is so, because the cottages and farm buildings remain.

1130. And there is the nucleus of distribution?—That is precisely so.

1131. So that you could part it up again?—That is so.

1132. Of course, in small places sometimes you find that the homestead could be divided for two small farms?—Yes.

Mr. W. L. Huskinson. Nov. 1893.

1133. That is back to back?—We have absolutely done that—dividing the same homestead between two farmers.

1134. I am only speaking, of course, of practical instances in my own knowledge?—That is so; I have done that.

1135. I gathered that the falling is, in average cases, where farmers are touched by depression; in the main bulk of the cases the depression has been met by a falling in the rent?—That is so.

1136. And the farmers have not felt it so much, having that to fall back upon?—They have not.

sult of e depression.

1137. And I gather this, and I am going to ask you this point: but, of course, as one would expect the depression has caused a tendency for the margin of cultivation to recede, especially in the case of the hill farms—poor hill farms—because I think you told me, did you not, that the hill farms must take more care, because, if you let a hill farmer leave his land you will not get a successor?—That is a difficulty.

1138. Notwithstanding that the farmers as a class had been much helped by the reduction in rent; the lowest class of farm land has the tendency to go out of cultivation, or rather, I would say, to lie vacant?—We have not a case of its being out of cultivation; but lying vacant we have certainly, it is the human element which comes in; it is very easy to get a hill farmer to a village near a station, but is very difficult for him to go back to the hills at some distance from it. Of course, a person bred and born on the hills does not care for society, and he is content to remain. He has not got infected with town ideas which would prevent him going back to the hill farm.

1139. Have you got a case of hill farms where you have not only bad land and wet seasons, but also the sheep rot. Have you met with any of those cases?—No, the sheep-rot does not prevail on the hill farms of Lincolnshire, but on the grass lands of Leicestershire.

1140. That is the worst case, where you have got a combination of those circumstances?—That is so.

1141. That is what I wanted to bring about, that one result of the depression is that you hit the landlords extremely heavily?—It is so.

1142. Another, and perhaps a subsidiary point is that it makes it more difficult to fill up any vacant farm on the lowest margin of cultivation?—That is so.

ause of epression.

1143. (*Mr. Little.*) I think the general effect of your evidence is that this depression, as distinguished from that of 1880, is due to prices, whereas the former depression was in a great part due to seasons?—That is it in a nutshell.

1144. And that all classes of farmers and all classes of farms have suffered more or less?—Precisely so.

1145. Not equally, nor all at the same period, but all have suffered more or less?—Quite so.

1146. You said that the effect had been to draw a sharp dividing line between good and bad land?—Yes.

acilities for arketing.

1147. Would not you consider that situation was a most important element; that the situation is much more important than it was formerly?—Yes.

1148. Proximity to markets?—Precisely.

1149. And railways?—I included that in the good and bad land.

1150. You do not mean natural fertility, but situation?—That combined with situation.

1151. I think that the least reduction you mentioned was on land near to Nottingham; that is an illustration of the effect of situation in proximity to markets?—That is so.

Restrictions n selling.

1152. They sell everything there, bringing back an equivalent?—That is so.

1153. What equivalent do you ask for?—In effect under the old agreement I think it is 1*l.* to 30*s.* an acre.

1154. One pound for each acre, from which the produce is removed?—Yes.

1155. It does not depend upon the value of the article; the price that the produce makes?—No, it is not done in this case.

1156. It is not unusual in an agreement to stipulate for one-third or a certain proportion of the sum made by selling?—That is the more general form and that is the one we prefer.

1157. Do you consider it fairest?—I prefer the equivalent on that, we should get a fixed price per acre which the tenant has arranged with myself, he having farmed that land perhaps for 20 or 30 years.

Mr. W. L. Huskinson. 17 Nov. 1893.

1158. I thought you generally preferred the other system?—No, Mr. Paget's plan.

1159. The system which calls upon the farmer to bring back one-third part of the value of the thing sold is not a satisfactory one; it is not a fair one, is it?—I would not put it in that way. It would vary according to the farm, the land, and the sort of produce that went to the market. I think Mr. Paget fixed his with regard to what was likely to go to Nottingham from his particular farm, but it might not be the case to the north of Nottingham.

1160. Speaking from your experience is not the price of hay at the present 6*l.* per ton?—It is more than that.

1161. Take it at 6*l.* on the farm. He would have to return 2*l.* per acre as a consequence of selling that hay, and is not that rather a severe demand from the farmer, it is more than the manurial value of the hay?—Yes, it would be.

1162. When hay is 3*l.* a ton the return would be 1*l.*?—Yes, it would; one-third.

1163. And if that represented fairly the manurial value is there any reason why the tenant should be called upon to pay 2*l.* because he sells at 6*l.*, whereas he only pays 1*l.* when he sells at 3*l.* per ton?—I do not think there is; I think the one I refer to is the only one where that clause is in the agreement, but the effect is that if the tenant sells a particular thing—he very often does—and if we can satisfy ourselves that he is not robbing the land we do not mind, but if he is doing that persistently and is ruining the land, the valuer on whom it depends in the case of a man leaving a farm has a very strong feeling against allowing compensation for more than one year. They say, "If you "were dissatisfied you should have given notice to the "tenant."

1164. But stipulations of that kind might lead to claims when men are quitting farms?—Yes.

1165. A rigid agreement demands a certain return?—Where there is a specific clause; but it is only in one case out of the whole.

Restrictions in cultivation.

1166. And your covenants as to cultivation, are they stringent?—They are not stringent; they may not have two crops in succession but they often take them, and unless they do so unfairly we do not interfere.

1167. You are satisfied with the stipulation, good husbandry?—That is so.

1168. That is sufficient?—Yes, and satisfactory.

Reduction of rents.

1169. You have been obliged to make very large reductions notwithstanding that the estates you have been concerned with were well equipped and that a large expenditure had been previously made?—That is so.

1170. You would describe them as well started and with rents fairly adjusted?—Yes.

1171. The reductions which you have been obliged to make are reductions ranging from 45 per cent. to 14 or 15 or 16 per cent.?—That is so for estates of that character.

1172. Would you say that a tenant with capital coming in now at those reduced rents and under such improved conditions as have become a necessity in bad times could live and thrive?—Yes, because the rents are reduced greatly.

1173. The condition must be that he has sufficient capital, it must not be a tenant who has lost his capital?—That is where the mistake is, in a tenant farmer taking a farm too large for his capital.

1174. He must take it at the market value and under different conditions than those which obtained 20 years ago. He must have greater freedom of action?—He practically has in pretty nearly all our districts.

1175. He is allowed, but is not given the right by express agreement?—I do not say that it is given by express agreement. We do put a clause in the agreement that they may not put two crops of wheat corn in succession; if it is done once in a way it is overlooked, but if it is repeated constantly we interfere.

1176. You know that there is a great difference between doing a thing on sufferance and doing it by right?—I do.

Mr. W. L. Huskinson. 17 Nov. 1893.

1177. A tenant coming in on an estate such as you manage, for instance, upon entirely new conditions, should you say to him, we cannot alter the agreement in your case?—If a tenant came with plenty of money who understood his business, I would be ready to discuss anything in reason, and any proprietor would accord with that.

1178. And that is one of the effects of depression that a tenant can now treat on equal terms with his landlord?—Certainly; he has the best of the bargain nearly always now-a-days.

The Agricultural Holdings Act.

1179. You said that the compensation in your case was not under the Agricultural Holdings Act, but by custom?—That is so.

1180. Your custom was an exceedingly good one and much older than the Agricultural Holdings Act?—Yes, as long as I remember anything.

1181. And it is satisfactory to landlords and tenants?—Yes, the only objection was that there was a tendency to get a little too high, because if it was satisfactory to an out-going tenant it would be satisfactory to the in-coming tenant, and where there was a tendency to strain that we found a difficulty.

1182. Would you tell me whether you make your custom a substituted agreement or whether you simply disregard the Act. Do you provide in your agreement that compensation should be by the custom of the country?—We do not touch that in the agreement for this reason, that the custom varies slightly in different parts of the country. It is liberal in all parts both in Nottinghamshire and Lincolnshire and is the fairest. I leave them to tenant-right valuation.

1183. Are you not distinctly acting in contravention of the Agricultural Holdings Act?—Not that we know of, we consider that our proceedings are more liberal.

1184. I am not complaining of them, I know that they are satisfactory to those who are interested, but does not the Agricultural Holdings Act provide that compensation shall not be by custom for anything provided for by the Agricultural Holdings Act?—But a great deal is not provided for.

1185. Take manures, which include feeding stuffs?—This, I may say, that we have never had a case under the Act.

1186. The valuers' opinion and public opinion are strong enough to enable them to entirely ignore the provisions of the Act?—I may say so.

1187. And the procedure?—The proceduro is never used in my case. I was appointed by the Board of Agriculture as one of the umpires in case of difference. I receive 20 notices in different terms, and none of them ever came to a hearing. The mere fact that it applied to a third party settled the case.

1188. You have not had any experience of the Agricultural Holdings Act?—I have not.

1189. You could not tell us whether there is anything in the procedure under that Act that induces the valuers and the farmers to prefer custom to the Act? Is the procedure more simple with you than under the Act?—I do not know that.

1190. You do not have to give notice of claim under custom?—It would be simpler, there is no notice.

1191. And you do not provoke a counter-claim by the landlord?—There is no notice. A farm is vacated and they appoint two valuers, and an umpire settles the case between them.

1192. And the incoming tenant pays the valuation upon entry?—He does upon entry?

Expenditure on improvements.

1193. You spoke of having spent money under the Settled Land Act; the effect of that is to relieve the tenant for life, is it not?—Certainly.

1194. It is better for him than under the Lands Improvement Acts?—Yes, because where there is money in the family they can invest it in their own estate.

1195. But it is sunk?—Sunk entirely.

1196. Under the old Improvement Acts the landlord replaces the capital by instalments?—In 30 years, about.

1197. But in this case it is entirely sunk, and in the other the tenant for life is paying instalments of capital for 30 years?—That is so.

Quality of labour.

1198. With regard to labour, you said that the efficiency of the labourer had decreased; would you say that that was generally the case with all classes of labourers, or is it confined to merely the ordinary labourer?—I think it is more specially confined to the ordinary labourer, and that it varies in different districts and different counties. Certainly I think it has on the whole deteriorated in quality.

Mr. W. L. Huskinson. 17 Nov. 1893.

1199. You are, perhaps, aware that that has been the complaint whenever there has been an inquiry of this kind?—I am aware of it.

1200. In 1880 that was so?—I am going on personal knowledge for 50 years in the same village.

1201. It must have been very good a hundred years ago if it has been declining ever since?—I can speak from my own personal knowledge. I remember that we had six labourers in constant employ, and they were first-class men who could mow, sow, stack, drain, hedge, and do everything; we have not a single man of that description in the parish now. Men who are now farm labourers would not in the old days have been classed as second-class men, and I do not see who is going to replace them.

Cost of labour.

1202. You said you were very much surprised to find that notwithstanding the increased wages the total cost of your labour had not increased per acre?—That is so.

1203. But your expenditure has increased, the expenditure has been transferred from manual labour to machinery?—What I meant was that the cost of manual labour had not increased per acre; there would be expenditure for those machines to be taken into consideration.

1204. If the wages had risen from 10*s.* to 15*s.* per week the cost of labour would be much more unless you substituted machinery for the men?—No doubt.

1205. Then you have diminished the cost of labour per acre by changes in your system of farming?—To a certain extent we must have done. Take the case of hay, I remember as a boy pretty nearly every operation was done by hand, you mowed, you tedded, and you raked without machines, but without the help of machinery we should not have got on with the decline of labour.

Prices of wheat.

1206. If it would not be too much trouble, I should like to have the prices which wheat realised for the years you have omitted; it would be interesting to compare them with the Gazette prices?—In 1883 wheat was 42*s.* per quarter; in 1884, it was 39*s.*; in 1885, it was 33*s.*; in 1886, it was 31*s.*; in 1887, it was 33*s.*; in 1888, it was 31*s.* 6*d.*; in 1889, 31*s.*; in 1890, 31*s.*; and in 1891, it rose to 36*s.* per quarter.

Tithe.

1207. The effect of the recent Tithe Act where tenants had engaged to pay the tithe is that the landlord now pays it without an equivalent?—I have acted for estates under two conditions, in one case where it was always paid by the proprietor and the other case where the tenants paid it. In the case where the tenants have to pay it by the Act, the owner has to pay it; it is perfectly in vain for me to say we want to raise the rent by the amount of that tithe; the tenant simply says, "I "cannot under the present circumstances pay it." It is but a small proportion and we cannot disturb a good tenant for that amount.

1208. It transfers the payment to the landlord?—It is practically a reduction of rent.

1209. You said that much of your land had been freed from tithe by giving land in lieu of it?—Tithe free under the Inclosure Act, that is to say, if an allotment the land is given in lieu of it.

1210. (*Mr. Chaplin.*) I will only ask you one or two questions. Can you give us any reason for this falling off in the quality of labour which I understand is one of your difficulties? I think you said that the men were all leaving for the towns?—All the young men.

Rural depopulation

1211. What is the reason of that?—They prefer the life of a town; if a man goes as a porter at a railway station, or to be a policeman, or to be a carter in one of the larger towns, all that has an attraction, and an equal rate of wages would not keep him. I have got them to give their own explanations, and I invariably ask a man what his reason is for going, and that is the common reply.

1212. Can you think of anything to induce the better kind of labourer to stay in the country, has anything occurred to you?—I have thought it over very often indeed. It cannot be from want of gardens, because there is no estate that I have anything to do with that has not an abundance of gardens and allotments, and there is no difficulty but the greatest readiness to pro-

Mr. W. L. Huskinson. 7 Nov. 1893.

vide gardens. It is not that, nor is it the cottages, for landlords are all in favour of having good cottages. I do not see that there is any remedy, but I see that it is a serious item.

Changes of tenancy and reduction of rent.

1213. In your various estates you have had changes with the farmers, changes of tenancy?—That is so.

1214. When you have had a change of tenancy, you have had to reduce the rent, have you not?—Very often.

1215. The tenant would not take it without, perhaps?—He would not.

1216. He makes his own terms?—And very good terms for himself, too.

Customs of tenure.

1217. At the same time that he makes a demand for a reduction in the rent, have you been confronted with any requests for changes in the agreement or custom under which they hold?—I have, and in all cases have acceded to them where it was reasonable.

1218. So that when they have asked for changes in that respect they have been able to get them?—They have.

1219. When you speak of "custom" you refer to the various customs that prevail in the different counties with which you are acquainted?—Yes, Lincolnshire, Nottinghamshire, Leicestershire and Huntingdonshire.

Mr. W. L. Huskinson. 17 Nov. 1893.

1220. Which is the highest?—We are inclined to think the north part of Nottinghamshire is higher than Lincolnshire.

1221. Can you say per acre what is the average, roughly speaking?—It would run often between 30*s.* and 40*s.* per acre, and in some cases higher in Nottinghamshire.

1222. The tenants you have had to deal with prefer custom to any other arrangement?—They do. I have never had a single case put under the Act.

1223. In that case does the custom work well?—Yes.

1224. Without any trouble whatever?—Yes, without any trouble whatever.

Tenants' capital.

1225. (*Lord Cobham.*) Referring to the question of farming with capital, do you think the incoming tenants bring now-a-days as much capital per acre for the cultivation of a farm as they did formerly?—No, they do not.

1226. There is less capital?—Yes.

1227. Is less required?—No, I do not think so. It is a very general case that many of them are short of capital.

The witness withdrew.

Adjourned to Thursday next at 12 o'clock.

Fourth Day.

Thursday, 23rd November 1893.

PRESENT:

The Right Hon. GEORGE JOHN SHAW-LEFEVRE, M.P., in the Chair.

Viscount Cobham.
The Right Hon. Baron Vernon.
The Right Hon. Henry Chaplin, M.P.
Sir Robert Nigel Fitzhardinge Kingscote, K.C.B.
Robert Giffen, Esq., C.B.
Charles Isaac Elton, Esq., Q.C.
Captain Owen Thomas.
Francis Allston Channing, Esq., M.P.
John Clay, Esq.
Cornelius Neale Dalton, Esq.
Robert Lacey Everett, Esq., M.P.
John Gilmour, Esq.
George Lambert, Esq., M.P.
William Cutlack Little, Esq.
Walter Hume Long, Esq., M.P.
Charles Whitehead, Esq., F.L.S.

Herbert Lyon, Esq., *Secretary.*
R. F. Crawford, Esq., Freeman Thomas, Esq., } *Assistant Secretaries.*

Mr. William Harrison called and examined.

Mr. W. Harrison. 23 Nov. 1893.

1228. (*Chairman.*) You are a tenant farmer, residing at Hutton's Ambo in Yorkshire?—Yes.

1229. And you are also a valuer of tenant right?—Yes.

1230. And with your brother you farm 900 acres of land in that district?—That is so.

1231. And you are also President of the Malton Agricultural Club, and Honorary Secretary of the Yorkshire Union of Agricultural Clubs and Chambers of Agriculture?—Yes.

1232. That Union comprises 22 local clubs and chambers and has a membership of about 2,000?—That is so.

1233. Have you been nominated by the Yorkshire Union to come before this Commission for the purpose of expressing their views?—I have. I might say that it is rather my own views—the Union have not as yet expressed any views upon the subject.

1234. Have they asked you to come here to state your own views?—Yes.

1235. They have had no discussion?—There has been no discussion.

Mr. W. Harrison. 23 Nov. 1893.

1236. Nor any delegation to you to represent their views?—Not at all.

1237. But still they have asked you to come here?—That is so.

Cause of depression.

1238. Will you state what is your view of the present condition of agriculture in your district?—It is in a low, depressed state, and that depression is due to the low prices occasioned, I contend, by foreign competition and bad seasons.

1239. How long has it been in this condition?—For 10 or 15 years.

Reductions of rent.

1240. Has there been a considerable reduction of rents?—Yes, there have been reductions of rent to the extent of 30 per cent., and in some cases 50 per cent.

1241. Who do you hold under yourself?—Mr. Henry Darley, of Buttercrambe, Sir James Walker, of Sandhutton, Mr. A. W. M. Bosville, of Budlington, and Captain Starkie, of Hutton's Ambo.

Mr. W. Harrison. 23 Nov. 1893.

1242. What have been the reductions in your own case?—In my case, the rent of the land under Sir James Walker has been reduced in 20 years 50 per cent. The farm has changed hands in that time. 30 years ago there was 21,000*l.* paid for it, and there has been about 10,000*l.* expended on it in the way of buildings and draining. It was sold for 12,500*l.* about three months ago.

1243. What is the acreage?—439 acres.

1244. What has the actual rent been reduced from?—The actual rent has been reduced from 850*l.* to 470*l.*

1245. (*Mr. Channing.*) How long ago is it since the 850*l.* was charged?—21 years ago.

1246. (*Chairman.*) And when was the reduction made?—The reduction has been since that time, at least, we had it on lease for 21 years, but the lease runs out on April the 6th, 1894. During that time, about 15 years ago, when the depression commenced, and after it had continued for a year or two, we had it reduced 200*l.* a year.

1247. How long is that ago?—That is about 10 years ago.

1248. It was taken by you on lease for 21 years at 850*l.*, was it?—That was including tithe, the tithe is 100*l.*

1249. The rent was 750*l.*, and you paid 100*l.* for tithe?—Yes.

1250. It was taken for 21 years?—21 years.

1251. And 10 years ago the rent was reduced by 200*l.*?—Ten years ago.

1252. What year was the rent taken in?—1873, I think.

1253. And a further reduction was made when?—50*l.* a year from the late owner, and now it is leased for a further seven years, dating from April 6th, 1894, at 470*l.* a year, clear of tithe.

1254. Then in the interval since 15 years ago and the present, was there any further reduction or not?—No.

1255. You have paid 550*l.* up to the present time?—No, there was 50*l.* taken off; it is reduced to 500*l.* at the present time.

1256. 500*l.* a year up to the present time?—Yes, and it will be to April 6th, 1894.

1257. Now you have got a further lease for seven years to run from 1894 at 470*l.*?—That is so.

Expenditure on improvements.

1258. During that time has the landlord expended any money in improvements?—Yes, the landlord and ourselves have spent on the draining and additional buildings in the way of covered yards and Dutch barns, to the extent of about 10,000*l.* I would here state that the 10,000*l.* includes cost of improvements since the time it was purchased, seven years before we entered on the 21 years lease, during that time, viz., seven years, the owner's son occupied it.

1259. During this 21 years?—28 years.

1260. And quite recently it has been sold, subject to the lease to you for seven years?—Yes, for 12,500*l.*

Reduction of rent.

1261. And you will be paying the landlord 470*l.* a year in future for rent, and the landlord will have to pay the tithe?—The landlord will have to pay the tithe.

1262. How much is that?—About 70*l.* a year.

1263. Therefore it is practically 400*l.* a year?—Yes, that is so.

1264. As compared with 750*l.*, 21 years ago?—Yes.

Effect of reduction.

1265. What has been your experience during that period as regards profit or loss?—My own experience is that with the reduction of rent we have been able to make the farm remunerative.

1266. With the reduction of the rent to 470*l.* a year you have been able to make it pay?—Yes.

1267. I presume you would not have taken a new lease for 470*l.* a year if you had not found it pay?—No, we should not have done so.

1268. Therefore the main loser has been the landlord in this case?—Yes, he has; he reduced the rent to meet the times.

Freedom of cropping and sale.

1269. But you have not realised serious losses yourself, and you have taken a new lease?—That is so. I may state that the farm is held under a lease with freedom of cropping and freedom of sale of produce, and the land would not have been in as good a condition if we had not been allowed to sell as we thought best in the best markets.

Mr. W. Harrison. 23 Nov. 1893.

1270. What is the proportion of arable to grass land on this farm?—On this Bossall farm which was held under Sir James Walker there are 130 acres of grass and the remainder is arable.

1271. What does it grow mainly—wheat?—Wheat and barley, and oats, beans, potatoes, and turnips.

Reductions of rent.

1272. You have told us your experience with regard to one farm, now what is your experience as to the other?—The rent has been reduced correspondingly to this; not quite so much as this. The rent 15 years ago was 428*l.*; it is 314*l.* to-day.

1273. What is the acreage?—It is 243 acres; that was held under Mr. A. W. M. Bosville.

1274. Did you take it without a lease?—It is a yearly tenancy; it is reduced to 314*l.*

1275. When was that reduction made?—That has been similar to the other farm. In the first instance we received 10 per cent. back and then we got 20 per cent., and finally a permanent reduction was made about eight years ago.

1276. Has it continued at that?—It is so now.

1277. Have you the same remark to make that you made with regard to the other, that you are not losing by it?—We are not losing by it. It is held under an agreement prohibiting the sale of produce, but still we do sell off without the interference of the landlord. He does not put his agreement in force as regards the sale of produce.

1278. You have had a relaxation in fact of any condition in that respect?—Yes.

1279. Have you another farm?—We have got another under Mr. Darley; it is all grass. That is 124 acres, at 160*l.* a year rent.

1280. Has there been a reduction?—No. That was taken about 10 years ago at that rent, and it remains at that still.

1281. Do I understand you to say that that is all pasture?—Yes.

1282. Do you hold that from year to year?—Yes, it is a yearly tenancy. The other farm, No. 4, held under Captain Starkie, is only a small farm of 70 acres at a rent of 94*l.*, and that I only took last year.

1283. What is that, pasture or what?—Sixty acres of it is arable, and the rest of it is pasture.

1284. (*Mr. Chaplin.*) How much is the whole farm?—Seventy acres, and there will be 60 acres of it arable.

1285. (*Chairman.*) You took that farm last year at that rent?—Yes, 94*l.* a year.

1286. In the case of the farms that you have yourself, with the reductions of rent, have you met the depression?—That is so. I may not be able to make a fair remuneration out of them. I do not say that it is as much as we made previous to the fall in prices.

1287. But still you have done fairly well?—Yes, fairly satisfactorily.

1288. Is that the experience of the other farmers in your district?—I am afraid not.

Freedom of sale.

1289. Have they not had the benefit of the same reductions of rent?—Well, I think they have, but I do not think that they have had freedom of sale of produce, and in some cases where they have had freedom of sale of produce they have not taken advantage of it, and I attribute to that free sale of produce very largely our farms paying better than those of our neighbours.

1290. Do you attach very great importance to freedom in that respect?—I do.

1291. And that has been the reason that you have been able to do better than your neighbours?—It is one of the primary reasons.

1292. It has enabled you to get through the bad times?—Yes.

1293. Have you sold straw from the farm?—Yes.

Price of straw.

1294. Has the price of straw increased in the interval?—It fluctuates. Twenty years ago it was 4*l.* per ton, and I believe to-day in large towns it is 4*l.* It has in

Mr. W. Harrison.

23 Nov. 1893.

different years fluctuated down to as low as 30*s.* per ton and up to 4*l.*

1295. Is it 4*l.* now?—It is 4*l.* now.

1296-7. Have you got a good market for the straw?—Yes. York is the principal market.

1298. What is the distance?—Ten miles.

1299. Could you get manure from York?—We make up the equivalent in the straw sold, by artificial manures, we only sell the surplus straw; I do not mean that we sell all the straw.

1300. But still that has been an important consideration?—It has been rather an important consideration in the way of wheat straw especially.

1301. It has to some extent made up for the low prices of the wheat?—Yes, it has helped to make up for the low prices of the wheat.

1302. Not wholly for the low prices of the wheat?—Not wholly, but to some extent?—in fact we keep growing wheat on account of getting a good sale for the straw.

Freedom of sale.

1303. But for that freedom of contract, and the power of selling the straw you would not grow the wheat?—We should discontinue growing more than is necessary for home use.

1304. You would not have grown it to the same extent?—No.

1305. (*Mr. Chaplin.*) By that I understand you mean the straw?—Yes, the straw.

1306. (*Chairman.*) You have considered, therefore, the freedom from conditions to have been of great importance in your case, and I think you said that some of your neighbours have not had that freedom?—They might have taken advantage in some cases but have not done so.

1307. And it is to some extent owing to that that they have not weathered the storm as well as you have?—I think so.

Remedy for depression.

1308. Will you go on to state what in your opinion are the remedies for the existing state of things?—I think the rent is the first; that might be a partial remedy.

1309. Have there been many changes of tenancy in your neighbourhood?—Yes.

Changes of tenancy.

1310. Have a considerable number of farmers left their holdings on account of the depression?—Yes, there have been changes.

1311. And other tenants have come in have they?—Other tenants have come in. I think that every man thinks that another man has a better farm than himself and when he gets there he finds it to be about the same.

Farms in hand.

1312. Then fresh tenants come in. Is there any land not in cultivation?—Not very much. There are some of the very high wold farms which are not out of cultivation but they are in the hands of the owners.

1313. But not much?—Not very much.

1314. (*Mr. Chaplin.*) Are the owners cultivating them?—Yes, the owners are cultivating them.

1315. (*Chairman.*) Speaking generally in your district is it possible to find tenants for the farms?—Yes.

1316. At a rent?—Yes, at a rent.

1317. What in your opinion is the remedy for such evils as exist?—I have mentioned rent as a partial remedy but some people expect to meet their case from rent, which is an utter impossibility. I have taken an example of a farm to show that we cannot expect to get the remedy altogether by way of reduced rent.

Average reduction of rent.

1318. Before you come to that, what should you say is the average reduction of rent in the neighbourhood?—I should say 33 per cent.

1319. What would you say was the average rent per acre before the depression began—would it be 30*s.* per acre, or what is about the average?—I could not state what would be the average rent per acre. It varied from 3*l.* down to 1*l.*

1320. Taking your own farms, it was something over 30*s.* per acre?—Bossall Farm was 2*l.* per acre when we rented it first, and it is now 21*s.* 9*d.*

1321. Is that farm a fair illustration of the farms of the district?—I should think so.

1322. If that is so the average rent is somewhere over 1*l.* an acre, the landlord paying the tithe?—That is so.

Mr. W. Harrison.

23 Nov. 1893.

1323. Therefore that has to be taken into account in making a comparison?—Yes.

1324. You were going on to say that the mere reduction of the rent would not be sufficient?—That is so.

Reduction of rent on a hypothetical farm in the district.

1325. What is your illustration?—I will take a farm, for example, of 300 acres of mixed land, say one third grass and two thirds arable.

1326. Is that a hypothetical farm?—I am taking this farm as a farm of fair quality to show that we cannot expect to have the remedy entirely from the reduction of rent.

1327. Whose farm is it?—I am only just supposing one.

1328. That is what I meant to ask you?—It is nobody's farm.

1329. I only want to know what the facts are, I was not quite certain whether it was an actual farm or a supposed farm that you were going to give as an illustration?—It is a supposed farm. I am taking it as land of a fair quality (because you asked for an average) and the reason I do that is that there are some lands on the high wolds which during those very bad wet seasons have suffered more than they would under more favourable circumstances having a better climate where they could get their harvest in somewhat better time. I have seen a few months ago corn stacked in the fields, and it is practically hardly worth threshing, so that those farms, I contend, have suffered more than other farms that are in a more favourable position. And on the other hand, if you come down to the very wet, cold, clay lands, those have suffered more than land of a fair quality.

1330. That farm that you are taking as an illustration, you suppose to be in the wolds?—I take it as land of a fair quality.

1331. (*Mr. Lambert.*) At what rental would it be?—I put it at 30*s.* per acre; that is what I call fair quality for a medium farm 20 years ago.

1332. (*Lord Vernon.*) Is that free of tithe and taxes?—The poor rates and highway rates come on that. I take that as the actual rent that the landlord would receive for it. I am giving the prices of stock and the produce of 20 years ago, what I suppose this farm would keep. I am assuming, in the first instance, that it would keep 100 ewes which would be fed, and that would produce 150 lambs. Those at a year old, fed up, should weigh properly treated, 72 lbs. each sheep.

1333. (*Chairman.*) I do not know whether you could go further in this direction of treating an imaginary farm?—I can give you what I consider the prices of the produce of that farm would have been 20 years ago in a few words if you like to have them.

1334. (*Mr. Channing.*) I understand that you are giving your general impression of the results of the farming of a farm of a general type in your neighbourhood 20 years ago and now?—That is so.

1335. (*Chairman.*) Will you state it briefly in your own way?—I take first as I said before, 150 lambs, and this year they would be 72 lbs. each, and taking it at 9d. per lb. the price 20 years ago, it would amount to 405*l.* At the present time, the same flock would realize 315*l.*, or 7*d.* per lb. It was 9*d.* per lb. 20 years ago, and it is 7*d.* per lb. now. Taking the wool from the 150 sheep at 9 lbs. per head, and that at 1*s.* 9*d.* per lb. which was the price 20 years ago, I make 118*l.* 2*s.* 6*d.* as against 59*l.* 1*s.* 3*d.* to-day, the price to-day being 10½*d.* per lb. Then the wool from the 100 ewes I put at 61*l.* 5*s.* 20 years ago, and at the present price 30*l.* 12*s.* 6*d.* I estimate that 50 beasts could be kept on the farm, and out of this herd 12 could be sold annually, and estimating each animal at 50 stones weight, that would be 600 stones of beef, which if sold off at that time at 10*s.* per stone would have given 300*l.*, the price to-day being 210*l.* as 7*s.* per stone. I will only trouble you with another item and that is wheat. 30 acres of wheat would be grown also, and putting this at 4 quarters per acre, at 60*s.* per quarter, the price 20 years ago would make 360*l.*; and the present price of wheat putting it at 30*s.* per quarter would make 180*l.* Therefore taking the beef and mutton, the wool and the wheat, 20 years ago they would have produced 1,244*l.* 7*s.* 6*d.*; and in the present year they

Mr. W. Harrison. 23 Nov. 1893.

would produce 794*l.* 13*s.* 9*d.*, that shows a difference of 449*l.* 13*s.* 9*d.*, and I take it, therefore, that that land has been reduced by 10*s.* an acre at the present time.

1336. Then according to that calculation this hypothetical farm would be unable to pay any rent at all?—Yes.

1337. No rent at all?—According to that calculation, I contend that the rent is not able to meet it.

1338. In your estimate of the wool are you taking the very highest or the very lowest weight?—That weight of wool, anybody knows, from Leicester sheep is very easily produced. I know plenty of sheep that have 10 and 11 lbs. of wool, and it is not an uncommon thing if you go into Yorkshire they will say very readily that that statement is a low one instead of being a high one.

1339. I may take it generally that taking this hypothetical farm in your neighbourhood you have taken the prices of 20 years ago and compared them with the present?—Yes.

1340. And that the difference is such that you do not see how any rent at all could be paid?—You will find it is correct.

1341. Is that the conclusion you wish to arrive at, that the difference in price between 20 years ago and the present is such that you do not see how any rent could be paid?—Not how any rent could be paid at all; I say that that rent has been reduced by 10*s.* an acre, and I am not saying for one minute what profit was made out of that land 20 years ago. Those are open questions.

1342. There might have been a large profit then?—There might have been.

1343. Therefore it would not be a fair comparison to take a year of very high profit and compare that with the present year of very low profit?—No. I cannot say what profit would be made, and I do not say what profit might be made out of the present prices. I am not here to state that.

1344. At all events, the conclusion you draw is that a reduction of rent alone would not be sufficient to meet the difficulty in this hypothetical farm?—That is why I took this out as an example.

Agricultural Holdings Act.

1345. What do you suggest as a further remedy beyond a reduction in rent?—I suggest an amendment of the Agricultural Holdings Act of 1883.

1346. Will you state what that is?—The first, is considering the low price of wheat, on clay lands—this is more especially directed to clay lands—where the wheat growing is dying out; it cannot be any longer produced at a profit. That land has to be turned into something else, and I think it is agreed that the only thing that can be done with it is to lay it down to permanent grass. The Agricultural Holdings Act provides for a tenant laying that down as permanent grass if he has the consent of the owner, which will be found in the first part of the first schedule of the Act. There is very often some difficulty, and in my experience I have only known two or three cases where a landlord would give the tenant permission to lay land down to grass. If the tenant did it he did it at his own risk. I would suggest, there as an amendment in the Act that the laying down to permanent grass be transferred from part 1 of the first schedule to part 3 of that schedule where a tenant can go and execute that improvement, and he would get compensation at the end of the tenancy on giving two months' notice.

Laying down permanent grass.

1347. In other words, that he should be allowed to do that without the consent of the landlord?—That is so.

1348. And on the expiration of his tenancy he would get the compensation whether his landlord approved of the procedure or no?—That is so if it is transferred to part 3, and ranks with cake and other things where a tenant can go and execute an improvement two months before the expiration of the tenancy and it can be settled by the valuer.

1349. As a land valuer between incoming and outgoing tenants has your experience shown you that that is a case where it might often occur where the tenants have not obtained compensation?—That is so; the tenants in several instances have laid land down to grass and have never got any compensation whatever.

1350. Cases have occurred within your own experience have they?—Several of them.

1351. Where the land has been improved in value by laying it down to grass?—Yes.

Mr. Harri. 23 Nov.

1352. And in consequence of the tenant not having got the consent of the landlord in writing he has failed to get compensation on the expiration of his tenancy?—That is so.

1353. Could you give us any particular instances of that?—I do not like to bring those cases out. I do not like to state them.

1354. You do not like to state the actual cases?—No, I think it would not be fair.

1355. Without mentioning names, could you give us an illustration of what the tenant has lost owing to the state of the law?—If I had brought my book here of the notes of valuing I could have taken those out. I cannot fall back upon that at the present time, but it is a question that is arising constantly as to tenants who have laid land down to pasture and the landlord has refused to give them compensation.

Notice t quit.

1356. (*Lord Vernon.*) Have you known many such cases?—Yes, many cases. A tenant under a six months' notice to quit, after he gets this six months' notice cannot do anything with that land. It is true that a tenant does not deteriorate the value of the land by laying it to grass, but if he chose before leaving it to plough that grass up the landlord could not prohibit him and he could get some advantage. But it is in the interests of the community for that land to be kept in grass, and if it is ploughed out the public will suffer by that being done, in my opinion.

1357. (*Chairman.*) I understand that the tenant could to some extent recover part of the loss in that way which he would otherwise sustain?—If he had 12 months he could, but under the six months' notice he could not.

1358. If he had 12 months' notice he could avoid the loss by ploughing up the land?—Yes.

1359. But it is in the interests of the community that the land should not be ploughed up when once laid down to grass?—If the land is in plough and is not yielding food sufficient it is in the interests of the community that it should be laid down to grass to make it remunerative and to produce beef and mutton for the public.

1360. Have there been cases in your experience where tenants have suffered seriously from want of compensation in this respect?—I would not say seriously, but what I state is this, more especially I believe that there is a good deal of land that wants laying down to grass, and tenants would freely do it if they could be compensated for it. That goes rather to show a serious loss in the past.

Drainage.

1361. Is there any other point which occurs to you arising upon the Agricultural Holdings' Act?—I think drainage should be transferred from part 2 to part 3 of the first schedule, the same as laying down land to permanent grass. It is true that the tenant can go to the landlord as to land that wants draining, and if the landlord does not feel disposed to do it, the tenant can do it according to the Act within two months of giving notice he can step in and do it and charge 5 per cent. upon it. I have seen cases where land has been drained by the Government where it has been dreadfully badly done, hundreds of acres have been done without any benefit at all to the tenant. It is true it has not been properly drained, it has been drained perhaps too deep. A practical man who overlooks the farm is more likely to know that the land wants draining than those coming perhaps out of town.

1362. Do I understand you to say that it would be better if it were left entirely to the tenant if he wishes to effect the drainage?—Yes.

1363. Subject to compensation on leaving his holding under the third part of the Agricultural Holdings Act?—That is so.

1364. It is the case that both according to the Yorkshire custom and according to the custom of the county of Lincoln drainage can be executed without any notice, and that the tenant gets compensation?—Not in Yorkshire; I never came across such a case.

Buildings.

1365. Is there anything else in the Agricultural Holdings Act that you would wish to speak about?—There is nothing further there that I would recommend, only an addition to it with reference to the accommodation of stock. I know several instances where there is not sufficient accommodation on the farms for the stock

Mr. W. Harrison. 23 Nov. 1893.

in order to enable the tenant to make the best of the land. The landlord very likely in some instances is not in a position to spend any money upon the property and the tenant has not got any capital either, and the thing is wasting for want of capital and proper buildings being put on the farm. I would suggest in a case similar to this that the Board of Agriculture should be applied to, and that they should send a practical man over to speak as to what buildings are required, and that the Board of Agriculture should advance a loan to make the necessary buildings and charge as low interest as possible, and that it should be made a charge upon the land.

1366. And that it should be the first charge on the land?—Yes.

1367. Taking precedence of mortgages and so forth?—I do not know; that would be rather difficult to settle where there was a mortgage already existing on the land.

1368. (*Lord Vernon.*) But the Lands Improvement Company do make a charge on everything?—I do not know in the case of an existing mortgage how that could be made a first charge.

ate loans.

1369. (*Chairman.*) The essence of your proposal is that the money should be provided by the Government under the Agricultural Holdings Act?—Yes.

1370. And presumably on better terms than are given by voluntary societies that lend money for drainage; is that your idea?—Yes.

1371. Is it your suggestion that the money should be paid off within a term of years?—I do not know; if the landlord is not in a position to do so, I think that he should be in a position to pay it off.

1372. What is your proposal; I only want to know?—I would not venture to say.

1373. But at all events the money should be lent by the Government?—Yes.

1374. And the terms should be better than those where the money is lent by the drainage societies; is that so? I understood you to say that the drainage is to be effected in this manner without the landlord's consent?—Well, if you put that, this is more applicable to buildings—I am not applying this to drainage—this is with reference to buildings.

1375. Am I to understand from you that the expenditure in this case on buildings is to be on the application of the tenant, with the consent of the Agricultural Department, but without necessarily the consent of the landlord?—No, there should be the consent of the landlord as well.

1376. I did not understand you so. The landlord has to consent. The motive to the landlord would be that the money would be lent on better terms than he could raise ordinarily by mortgage?—That is so.

1377. (*Mr. Chaplin.*) Then it amounts to this, that the only change in the present position would be, as the Chairman has put it, the advancing of the money by the Government at a cheaper rate than it is now obtained from the ordinary land companies?—That is so.

1378. (*Chairman.*) You do not commit yourself to the term, if any, over which the repayment is to be spread. Is there anything else you wish to refer to in the Agricultural Holdings Act?—I think that is all.

ocal axation.

1379. Turning to the next question—that of rates; what have you to say?—That is as to local taxation. I am of opinion that the land has to bear an unfair proportion of the rates, and that the land is paying more than the towns to the relief of the poor. I take my own neighbourhood in the Malton district, a shopkeeper is rated at 50*l.* a year to the poor and I will take, for instance, my own farm where I am rated at 350*l.* a year; and 1*s.* in the £ is the general run of the poor rates. I will assume that I pay 17*l.* 10*s.* a year and the shopkeeper is paying 2*l.* 10*s.* I am quite sure that his shop is as remunerative and he can make as much out of the shop at 50*l.* a year as a farmer can out of his farm at 350*l.* a year. I am paying 17*l.* 10*s.* and he is only paying 2*l.* 10*s.* Further, the population of the United Kingdom has increased 36 per cent. since 1855, and that increased population is residing in the large towns and cities. It is very clear to all of us that the population of the rural districts is decreasing. I think it is unfair that the land should pay to keep the increased poor in the towns. Further, remembering that we have only got produce in this country to feed about seven millions and that we are having 30 millions of food imported, I think that the land in this country should not pay more poor rates, or be saddled with more poor rates than actually represent the value of its produce. I have suggested that the other part after that proportion should be paid out of the National Exchequer.

Mr. W. Harrison. 23 Nov. 1893.

Poor rate.

1380. You stated that your poor rates are 1*s.* in the £?—Yes.

1381. Has that been about the rate during the last 20 years?—That has been so. It has not varied much in Yorkshire—not in our part of Yorkshire. I do not know what it may have been elsewhere.

1382. Has it varied in your parish?—No.

1383. Taking your first farm on which you paid 750*l.* and a tithe of 100*l.* 20 years ago, would the poor rates then have been 1*s.* in the £?—Yes.

1384. And are they 1*s.* in the £ now?—They are the same yet. I wish to add here that the poor rate would be more than 1*s.* in the £ now if we did not get the contribution from Government.

1385. Then you have got the advantage of the difference between the 1*s.* in the £ upon 750*l.* of rent 20 years ago, and 470*l.* rent at the present time?—That is so, we have got that advantage.

1386. Is that generally the case in your district that the tenants have got the full advantage of the reduction of rent, in the reduction of the aggregate payments that they are making to the poor law?—They have got the same rate. The rent is the basis for the rateable value.

Income tax.

1387. And I presume you have had the same benefit in the reduction of the payment of income tax?—Much the same benefit from the income tax.

1388. Have you paid generally upon the rent?—Upon the rent.

1389. You have not paid upon the Chancellor of the Exchequer's plan, on the actual profits?—No.

1390. I presume you are aware that the Chancellor of the Exchequer has allowed you to pay upon your actual profits?—I am.

1391. I presume that the profits, therefore, are more than half of the rent; is that so?—In that particular case I would not say.

1392. You have not taken advantage of that option to pay on the actual profits?—No.

1393. And you are perfectly aware of it?—Yes.

Highway rate.

1394. What is your next proposal?—The same remark applies to the highways. We should not pay more for the maintenance of the roads in proportion to our production. Food is imported from foreign countries to feed the people, and our roads are used for its conveyance without paying anything towards the maintenance of the highways. The same principle should apply to the roads as I suggest with regard to the poor rates.

1395. What has been the change in respect to the highways; has the rate been about the same during the last 20 years?—Well, the roads have cost about the same to keep up.

1396. Has your highway rate been about the same proportion in the £?—The rateable value has been reduced about 20 per cent. The rates vary. They are not uniform. They vary from 4*d.* in the £ according to the years. Of course, in bad seasons, the roads get cut up.

1397. What is the highway rate now?—At the present time it is 8*d.*

1398. (*Mr. Lambert.*) What was it 20 years ago?—I am not prepared to say.

1399. (*Chairman.*) Then you have got the benefit of the reduction of rent in that respect?—Well, the roads have still to be kept up; the rates have still to be paid. If the rateable value is lower in the union we have got to pay more in the £ to meet that difference.

Freedom of cropping.

1400. I think you consider that there should be greater freedom of cropping allowed?—Yes.

1401. You were going to say something about a beer tax, were you not?—I think that all beer should be brewed from barley, malt, and hops, and that on all foreign barley a duty should be put. It cannot be said that it is food; it is a luxury or beverage, whatever you like to term it, and it is not a necessary of life. Of

Mr. W. Harrison. 23 Nov. 1893.

course I think it would do more to help agriculture, the compulsory brewing from barley, malt, and hops, and a tax or duty on foreign barley, than anything else I can suggest.

Duty on foreign barley.

1402. It would rather increase the price of barley?—We expect it would do a bit.

1403. Then it would be a considerable advantage to the land that grows barley?—Yes, to any land; it would be an advantage to grow that instead of wheat.

1404. It would be a partial remedy, because it would only assist certain lands?—I daresay it would assist most lands. It would not assist grass land, but all arable land it would assist.

Income tax.

1405. Then go on to the next proposal, with regard to the income-tax?—I would simply put this: This is one of the things that the Yorkshire Union passed a resolution upon a short time ago:—"That the basis of "taxation under Schedule B. should be reduced to not "more than one-third of the rent, and that the basis "should be uniform for the three kingdoms." They considered when that resolution was passed that the profits of the farmers generally would not exceed one-third of the rent.

1406. Am I to understand that in all cases it should be assessed on one-third of the rent irrespective of whether the profits were higher or lower?—Yes.

1407. Then in the event of the farmer not making a profit of one third of the rent, should he still pay the income tax on the one third?—Yes.

1408. Then with regard to freedom of cropping?—I have stated that before.

1409. You have stated your opinion?—I do not know more.

1410. I should like to know how that would be effected?—There should be certainly a return where there is freedom to sell. There should be some restriction as to what a tenant should bring back to the farm—the manurial value of the products sold off.

Freedom of cropping and sale.

1411. But do you think that this should be effected by the law—the freedom of cropping—or is it a matter of opinion that it is desirable?—If it be an advantage to have freedom of sale of produce, and it is prohibited by an agreement, the tenant simply is fixed and he cannot do it.

1412. All that I want to gather from you is whether you think that this greater freedom of cropping and of sale of produce should be effected by the Legislature?—Yes, I think that should be put in the Agricultural Holdings Act.

1413. And in what form would you effect that? Is it by prohibition of agreement between landlords and tenants to that effect?—It should be put in the Act that a tenant can be free to sell provided he brings back to the land the manurial value of the produce sold off. If he can sell the produce and can use the proceeds to better advantage on the farm I think he ought to have a right to do it. For instance, if he could sell hay at an exorbitant price, the manurial value of hay is only about 15*s.* per ton, and if he can sell the hay at 5*l.* surely it is better to sell that hay and bring the 15*s.* worth of manure back on to the farm.

1414. I want to ascertain how it should be effected, in what manner the proposal would take any concrete form?—By a clause in the Agricultural Holdings Act giving liberty for a tenant to sell off the produce provided that he brings back to the land the manurial value which he has removed from it.

1415. I understand that you desire that the Agricultural Holdings Act should contain a clause to that effect?—Yes.

1416. Then with regard to cropping?—I take it in Yorkshire that one very large estate on the Yorkshire wolds—one of the largest estates—I do not care to give names, is strictly tied down to the four-course system, and the land is practically played out in growing seeds and turnips. Cropping is taken by the landlord every year, and the tenants on that estate are not allowed by any means to deviate from that course of cropping. If the tenant does deviate he will very likely get a notice to quit at the end of the year.

1417. (*Mr. Lambert.*) Could you give the size of the estate?—I do not know quite. There are thousands of acres of it. It is one of the largest estates on the wolds. I should be safe in saying that it is about 15,000 or 20,000 acres.

1418. (*Chairman.*) Have you got any examples of agreements?—I have not got examples of agreements for that particular estate. I have got other examples of agreements which would bear out to some extent what I said before about freedom of sale, on Lord Wenlock's estate. That is a very large estate. *Mr. W. Harrison.* 23 Nov. 1893.

1419. Will you give us a sample?—Yes. You mean to see the copy of the agreement.

1420. Just read the clause?—This is with reference to the crop. It says that "Not less than one-sixth of "the arable land shall be sown with seeds, with or without a corn crop following fallow, during the last year "of the tenancy. The original cost of clover, hay, and "grass seeds so sown shall be valued to the outgoing "tenant on production of proper vouchers, provided "such seeds have not been eaten or damaged by cattle, "horses, or sheep, and have been sown with the first "crop after a fallow. That not more than two white "straw crops shall be taken in succession, nor more "than three white straw crops be taken without the "intervention of a summer turnip or rape fallow." That is taking two white straw crops in succession, and not more than three white straw crops without a fallow.

Land court.

1421. Have you formed any opinion as to the expediency of a land court?—I do not care about a land court. I think it would create discord very likely betwixt landlord and tenant, and I do not see any use of a land court. It is not our opinion in Yorkshire at the present moment that there should be one.

1422. Are you able to say that it is not the opinion of the societies that you represent?—That is not the opinion of the societies I represent at any rate.

1423. They are not favourable to a land court?—I do not think they are favourable at the present time.

Freedom of cropping and sale.

1424. Do they think that the amendments that you suggested in the Agricultural Holdings Act would be sufficient?—Yes; freedom to sell the produce, and more freedom of cropping; those are the things.

1425. Have you had discussions in your societies on these questions?—For years we have been discussing the freedom of cropping and sale, more especially freedom of cropping. There are a good many estates in Yorkshire where they are tied down to the four-course system and the landlords do not allow them to depart from that agreement. Although it is vetoed in Lord Wenlock's agreements he allows his tenants to sell the produce.

1426. Has there not been considerable relaxation of those conditions in consequence of the depression?—I believe there has.

1427. The difficulty is not so great as it was?—The tenants are breaking through the agreements.

1428. Owing to the exigencies of the times?—Yes, and the sooner the better.

1429. (*Mr. Channing.*) Would you say that that relaxation is by a specific agreement, or is it merely by the verbal consent of the landlord at the time?—There is a relaxation in the agreements. Still the agreements hold the tenants to some line of cropping, but they are not so stringent as they were. A good many landlords now when a tenant asks permission to sell off certain produce allow him to do it.

1430. (*Chairman.*) Is there any other point you desire to mention?—I believe that is the whole.

Co-operation.

1431. (*Mr. Lambert.*) Have you anything to say with regard to co-operation?—Yes, there is the question of co-operation.

1432. (*Chairman.*) You do not think there is much to be gained by co-operation, I see?—That has been discussed several times in our clubs and we have not seen it favourably. I think it stifles competition and practically it tends to form syndicates, and when syndicates are formed they fix their own prices.

Expenditure on improvements.

1433. (*Lord Vernon.*) You said that 10,000*l.* had been spent in improvements on that farm that you mentioned of 439 acres?—I have given it in round numbers.

1434. Do you consider that that improvement was essential—it was not a fancy improvement?—I must say this, that they are the best buildings I have seen in Yorkshire.

1435. Are they rather fancy buildings?—They are not fancy buildings; they are useful buildings. For instance, the stackyard is covered in, and covered-in yards for stock.

Mr. W. Harrison.

3 Nov. 1893.

Rate of interest on owners and tenants capital.

1436. What do you consider a fair rate of interest on the capital invested in farming?—Do you mean for a tenant farmer to receive?

1437. Yes, for a tenant farmer to receive?—It would depend upon the capital invested.

1438. What I mean is what would be a fair rate of interest on the capital invested?—I think he should have 10 per cent.

1439. Then on the 430-acre farm what capital per acre do you consider it proper to put on?—We put 6,000*l.* on it.

1440. (*Chairman.*) On that one farm?—On that one farm at Bossall. Perhaps you will think that is a large amount but we keep a good many horses. I think in breeding horses at the present time we have 2,000*l.* invested.

1441. Is that a high class of horse?—Yes, they are hackney horses.

1442. (*Lord Vernon.*) I assume from what you have told the Chairman that you have made over the rent of 470*l.* a year in profit?—I did not say that.

1443. It is a natural assumption from your evidence?—I do not think that I should state it before this Commission what I did make.

1444. I was trying to compare the rate of interest that you considered fair for the farmer to make, with the rate of interest that the landowner would make; because the land was bought for 21,000*l.*, and there has been 10,000*l.* laid down and he gets 470*l.* a year, which would be about 1 per cent.; and according to your statement of evidence you have given here, you have not paid more than the rent of 470*l.*, and that, on the capital, would be about 12 or 14 per cent?—But the landlord is making more than 1 per cent.

1445. (*Chairman.*) I do not understand that the witness has made a profit equal to the rent?—No.

1446. (*Lord Vernon.*) It is a natural assumption that he would pay on the lower rate?—I do not think it is fair to take that as what would be done generally because the profits that were got from the horses would be separate from the farming. That comes out of the man's head and not out of the land.

1447. But yours is hardly a typical case?—No.

1448. It is not a typical case of farming?—I think it is a typical case of farming. All those horses are kept and their food is entirely brought on the farm, and this farm is improved in consequence of those horses being kept.

1449. (*Chairman.*) The profits came out of the head rather than the land?—That is so.

1450. It is an illustration of brains being applied to farming?—That is it.

1451. (*Lord Vernon.*) But what I mean is that this case where 10,000*l.* is spent on the 439-acre farm where a capital of 21,000*l.* was invested is hardly a typical case of average farming?—It is not, because I contend that the case would be where a man, as I showed in the first instance, produces all the stock and fattens it up on the farm; that would be a true test of a farm paying.

1452. (*Mr. Elton.*) When you were speaking about those suggested amendments in the Agricultural Holdings Act you said that the landlord's consent had to be obtained and that he had to give it at his own risk. I did not quite catch what you meant by "at his own risk." That landlord's consent is needed for putting land into permanent pasture to be obtained as at present?—It has to be given to recover compensation.

1453. And you said something about its being at the landlord's risk?—No, I did not say that; I said the tenant's risk.

1454. That explains it. I did not catch what you said?—That is what I said.

State loans.

1455. It would have made that answer intelligible, and I only wish to make it plain. Then you suggested that the Board of Agriculture should be able to advance money for the purposes of accommodation buildings?—Yes, where they are not sufficient.

1456. And you mentioned the case where mortgages would not be convenient?—I did not really go into the question of the land where it was mortgaged; I was assuming for the time that there was no mortgage upon the land and that that would be a charge upon it.

1457. (*Chairman.*) I think that it was practically a loan by the Government?—Yes.

Mr. W. Harrison.

23 Nov. 1893.

1458. (*Mr. Elton.*) You did not intend to go into the details as to the way in which the landlords would get the money?—No.

1459. (*Mr. Everett.*) I think you said that the fall of prices has been the principal cause of the state of agriculture now and 20 years ago?—That is so.

Fall in prices.

1460. And, in your opinion, were farmers as well as landlords better off out of the higher prices than they are now?—Yes, they were decidedly better off than now.

1461. Looking at those things, on the whole of Yorkshire, has the great fall in prices been a blessing or a curse?—It has been a curse to the tenant farmers and landlords.

1462. Do you think that it has been of a corresponding benefit to the industrial classes of the towns?—They have got their food cheaper; it is better for them.

1463. Have their industries been flourishing during those last few years?—I am not able to state what industries have been flourishing.

1464. You do not know whether there has been depression rather than prosperity?—I do not know.

1465. Either among the town classes or otherwise?—I do not look upon that as affecting agriculture.

Cause of fall in prices.

1466. What, in your view, is the cause of this great fall in prices?—The import of foreign food, and its supply exceeding the demand; that has brought down the prices.

1467. Are you aware that for more than a quarter of a century after free trade came in prices did not fall. When we had had 26 years of free trade the average of those past 26 years, I may tell you, was quite as high as it had been in the 30 years of protection?—That is very likely, but more countries are sending food than they did years ago.

1468. The only other question is this: you have spoken of certain things which might ameliorate the condition of the farmer, but in your view would not a rise in prices be a more thorough recovery of his past prosperous condition than any of those remedies?—Yes, higher prices would meet it.

1469. (*Captain Thomas.*) Have rents been regularly paid in your district?—I think so.

Distraints for rent.

1470. Have there been any distraints for rent?—Very few.

Changes of tenancy.

1471. Have the changes in tenancy exceeded the average of previous years?—I think not. There have not been so many during the last three or four years as there were six years ago.

Tenant's capital.

1472. What is the capital per acre that you consider necessary for a farm in your district?—From 7*l.* to 10*l.*; it depends upon the farm.

Railway rates.

1473. Do farmers complain of the railway rates being excessive?—There is not any complaint, I mean in particular, only we think they are high.

1474. Do they apply much artificial manure in your district?—Yes.

Co-operation.

1475. What is your reason against co-operation?—I simply say that it cuts off competition and puts the sale into the hands of large companies which I call syndicates and they dictate their own prices. Wherever there is competition there is lower prices.

1476. (*Mr. Channing.*) May I ask whether that is based on your experience in Yorkshire of any particular syndicate for providing manures and so on?—There are none in Yorkshire.

1477. There is a somewhat powerful organisation of that kind in the East Riding, a farmers' syndicate, for providing manures, is there not?—I have not heard of one.

Reductions in rent.

1478. Have the reductions in your district been much greater in the case of changes of tenancy than in the case of the old tenants applying for a reduction?—I do not think there has been any greater reduction when the changes have taken place. There are a great many cases where they have been given up for a reduction of rent in which the landlords have met the tenants and they have settled down again.

1479. But you do not think there is much difference?—I do not think there is. In the case of a few very backward farms in high situations where there is land

Mr. W. Harrison. 23 Nov. 1893.

that only some people will take, of course they are very difficult to let.

1480. Now about your own farms. May I ask whether they are as productive on the whole as they were twenty years ago?—We produce more.

1481. You have carried out freedom of cultivation very largely in your farms during that time?—The whole of them we have.

1482. And yet you find that the fertility has not been diminished?—It is very much higher than it was 20 years ago.

1483. You said that a tenant ought to have the compulsory right of laying down permanent pasture?—Yes.

Laying down permanent grass.

1484. I suppose by giving notice to the landlord?—No, he cannot give notice, there must be a consent.

1485. I know, you want to do away with the consent?—I want the landlord to lay it down.

1486. Is the only protection that you would give to the tenant who has laid down permanent pasture a recourse to the Agricultural Holdings Act?—Yes, I think that is enough; that would meet the case.

1487. Do you think that he would be able with the present machinery of the Agricultural Holdings Act to obtain compensation for laying down permanent pasture?—That would be fair compensation according to the Agricultural Holdings Act.

1488. But you are aware as to the inadequate compensation under the Act?—Well there are great complaints, but I think if the people would read the Act they would not complain so much about it.

Claims under the Agricultural Holdings Act.

1489. Are not you familiar with the complaints made in other parts of the country that, where claims presumably reasonable, are made by the farmers under the Agricultural Holdings Act, they are met by immense counter claims, damages for dilapidations, and so on; and farmers urge, I will not say whether rightly or wrongly, that they are elbowed out of their compensation?—I believe there is something there. I believe that is a very objectionable thing, and when a tenant makes a claim I do not think that the landlords receive it very favourably. They are more in favour of having some sort of compensation in their contracts or agreements and they do not receive it very favourably. I am not speaking of all, and they make very large counterclaims, ridiculous counterclaims, but in some cases they act as a terror to the tenant farmer. I believe there are some farmers who do not make their claims under the Agricultural Holdings Act in consequence of the landlord not receiving it in a proper manner. I would like further to say that I do not think the tenant farmers look upon these counterclaims as they did, because there have been instances where counterclaims for 800*l.* have been reduced to 100*l.* or 150*l.*, or where they have been 400*l.* they have been reduced to 60*l.*

1490. Were they reduced in court?—No, they were reduced when they came before the tenant-right valuers.

1491. Are you aware that a great many farmers are frightened to go into court?—The reference is to the valuer.

1492. Are the tenants not frightened by the fact of those counter-claims being used as a threat against them?—They were; I believe it is dying out.

Laying down permanent grass.

1493. This laying down of permanent pasture is a very costly improvement?—Yes, rather.

1494. Do you think a man would be a prudent and sensible man under the present condition of tenure, if he went to such a cost as that without some form of security of tenure either in the form of long leases or some other form of tenure?—I think so. My brother and I have laid two fields on the Bossall Farm to grass, and it has paid turning it from growing wheat to growing grass. Of course, we have had to do it very well with artificial manures, and it is paying us very much better than in arable.

1495. Of course it pays if you are allowed to go on and enjoy the advantages whether those are produced under a yearly tenancy or a lease?—It is fair to be compensated at the end of the tenancy.

Buildings.

1496. Do I understand you to say that you would give a compulsory right for the tenant to compel the landlord to erect the necessary buildings as well as drainage?—Yes. The tenant is suffering, he is under a very great disadvantage where he would like to keep stock, and has not convenience for that stock.

Mr. W. Harrison. 23 Nov. 1893.

1497. You are aware that a proposal has been made before Parliament, I believe, in a Welsh Bill, that the tenant should have a right to serve a notice on the landlord that certain buildings are requisite, and if the landlord challenges that, he would have the recourse under the Agricultural Holdings Act, of challenging the claim of the tenant to the buildings; and if the challenge is unsuccessful, the tenant is to get the buildings. You approve of that, I understand?—Yes.

1498. (*Chairman.*) I thought the witness had said in answer to me that it was only to be with the consent of the landlord?—I think it must be. But there might be a provision where the landlord was so obstinate, that is hardly my experience, I believe landlords generally are anxious to meet their tenants as far as they can, and where a landlord cannot meet his tenant I do not think he would have any objection to going to the tenant to get that loan from the Government.

1499. (*Mr. Channing.*) You would have the Board of Agriculture to settle whether the building was desirable or not?—Yes.

1500. You would not allow the tenant to impose a perfectly useless building on the landlord?—That is the difficulty. The Government should have some practical man in the first instance to see whether that building was necessary beforehand. If he was to go and put up a useless building, and more buildings than were required for the land, of course that would be objectionable. For instance, I take it that on our own farms we have almost twice as many buildings as would be requisite to the land farming under a different system, and if horses were not kept; very likely if we were to give the farms up there would be half of those buildings standing empty.

Agricultural Holdings Act.

1501. You referred to the Agricultural Holdings Act and the desirability of amending it. Is it practically much used in Yorkshire?—Yes, and it is coming more and more into use. There are a very great many estates in which they do the same thing as is done in Lord Wenlock's agreement where a tenant who wants compensation has to make out his claim under the Agricultural Holdings Act; this intimation is printed at the top of Lord Wenlock's agreement; and there are a great many similar agreements to that now on other estates.

Notice to quit.

1502. With regard to the notice required under the Agricultural Holdings Act. What do you say about that?—I think that could be dispensed with; I do not see what use that would be on the third part of the schedule. The claim is made and vouchers are produced to prove his claim, I think that is sufficient. The two months' notice in my opinion is a very useless clause in the Agricultural Holdings Act.

1503. As to the food used for horses, would you include the food consumed by the horses in the claim for compensation?—We do not allow it on horse corn. I do not think that that comes within the Act. I do think that might come in. I think that these horses which are fed that are on the farm, and are not going upon the roads, might fairly be compensated for the food consumed by them.

1504. (*Mr. Lambert.*) Would you include feeding stuff that is produced on the farm, in the category of unexhausted improvements?—No, I do not think so.

Condition of landlords and tenants compared.

1505. Who do you think have lost the most during the depressed state of agriculture in proportion to their capital, the tenants or the landlords?—I should think they have lost about equally. Of course, if a tenant loses his capital he is done, and the landlord has still his land left.

1506. You think the tenants have suffered really in proportion to their capital more than the landlords?—If a tenant has lost his capital he cannot go on, and the landlord has still his land.

1507. And a good many have lost their capital, have they not?—A good many.

1508. Do you think that tenants have paid their rents out of their capital?—Yes, for the last 20 years.

1509. Have they paid a large amount of rent out of their capital?—Yes.

1510. Are there many arrears of rent?—I could not speak of that; they are kept private. I know of a few which I would not care to speak about.

Mr. W. arrison. Nov. 1893.

1511. Would you attribute those arrears to the rent being fixed too high?—No, as I said before, I attribute it to lower prices and foreign competition. Low prices really. The rent has been reduced as I said before.

1512. Not enough?—I do not think it could be. Some other remedy was necessary, for the rent would not meet it.

1513. Are most of the farms in your neighbourhood let by tender?—Very few; it is an exception where there is one let by tender.

1514. Would you accept this as a definition of rent; the profit that is made after the farmer has been able to live and to pay the outgoings on the farm. Is that a fair definition of rent?—Yes; it depends how he does live.

1515. I mean live fairly?—There are some people who live on 1,000*l.* a year and some on 100*l.*

1516. I mean live in a fair way. Have rents been too high according to that standard?—In some instances the rent might be reduced, but I think all farmers will bear me out that the landlords generally, in Yorkshire, have met their tenants fairly.

1517. But not enough to meet the foreign competition?—Not enough, and I do not think they could do it.

tice to it.

1518. You said there were some tenants who had to leave on six months' notice?—Yes.

1519. I thought the Agricultural Holdings Act provided that they should have 12 months?—No, it never touches on contract at all.

1520. The law wants amending in that respect, then?—It has been amended. It was half a year, and now it is a year's notice, and that is by law. Supposing there were no contract, and the landlord wanted to get rid of the tenant, he would have to give a year's notice. They can now contract and agree upon any time, a month, or two, or three, or six months.

1521. Is that often done?—Yes.

1522. So tenants practically have to leave their farms?—There are many tenants in favour of six months' notice.

1523. My point is this: Have tenants to quit their farms at six months?—They have, if they consent to a six months' notice.

1524. Because the agreement is evaded under the Agricultural Holdings Act?—I do not say that it is evaded.

1525. It is ousted or set aside?—I do not think so. The Agricultural Holdings Act says that where a half year's notice is necessary to determine a year's tenancy, a year's notice is now given.

1526. If they make an agreement contrary to that six months' notice they evade the Act?—The tenant can do as he chooses; it is open to him to make what arrangement he likes.

nd courts.

1527. You said that you were not in favour of land courts?—No, I am not at present, however.

1528. Do you think there has been a movement in that direction?—Not in Yorkshire; there has been, I know, in other counties.

1529. Do you think that such an authority as this: the county court judge, with two practical men as assessors, would fulfil the functions that you are talking of under the Board of Agriculture?—Yes, I think so.

1530. Do you think that would be a good court of appeal?—They would determine what I was speaking about, so far as the buildings are concerned. They would determine what was the proper thing.

1531. Do not you think that such a tribunal is very necessary for the settlement of disputes between landlords and tenants?—Well I would rather let them settle themselves for my own choice. I have three or four landlords, and I would rather settle with my landlord than let other people settle the matter for me.

1532. But all farmers are not in such a flourishing condition as you are. Do you think that some farmers might settle?—I believe there are some cases where it would be quite right.

1533. You think the land court would be quite right in some instances?—Yes, in some instances. I would not dispute that for a minute, but I think it is the last thing to resort to as Englishmen.

1534. Is not the expense attached to the arbitration connected with the Agricultural Holdings Act one of the chief drawbacks to its being used?—Not the expense. I do not think that it is any more expensive. I have made upwards of 90 valuations this year and I do not think that the charges have been more than they are under an ordinary contract of tenancy.

Mr. W. Harrison. 23 Nov. 1893. Agricultural Holdings Act.

1535. Do you think this would be a fair thing, provided that a tenant came into his farm and whatever improvements added to the lettable value of that farm to another tenant that the landlord should be compelled to compensate that tenant to that extent?—You mean that at present the improvements which are made are paid for by the incoming to the outgoing tenant?

Compensation for improvements.

1536. No, I mean this; supposing that a tenant put up buildings and laid down permanent pasture or did anything which would permanently improve the farm, and increase the lettable value of the farm, do you not think that it is right that the landlord should be compelled to compensate the tenant?—Yes, he should be compelled.

1537. To pay the tenant for everything that adds to the lettable value of the land?—Yes.

1538. (*Chairman.*) Is that independent of whether the landlord gives his consent to the building or not?—I brought that out to show that the tenants had not capital to expend on it. Now you are coming upon another class of man who has the capital. If you came to that class of man who has the capital to expend there you would have to be cautious not to erect buildings more than necessary for the farm. Section 34 of the Act is, that in cases where a tenant can erect buildings at the end of a tenancy he has to give notice to the landlord that he is going to remove those buildings, and the landlord in that case, if it is necessary for his farm, can take them at a valuation, and if not the tenant can remove the buildings away from the farm.

1539. But would not that entail great loss to the tenant?—I think that is fair. That is another point altogether that I brought out. This is a case where the landlord had not got capital and the tenant had not got capital, and you are letting a tenant erect buildings on another estate, perhaps, which may be possibly for his own use, and quite worthless when he is gone.

1540. But I said improvements that would add to the lettable value of the estate?—That would have to be determined. That is a very fine point to determine. I do not know how you would treat the land.

1541. You would leave it to practical men?—Sometimes it is with difficulty the tenant gets his compensation.

1542. You think under the present law tenants do not get paid a fair compensation?—I have not seen it in buildings. I think he does get fair compensation. I have not come across many farms where the tenant has erected any buildings. In the case of where a tenant has erected buildings and is in a good condition he has generally got the landlord to erect all the buildings.

1543. Supposing he does not?—According to the Act he could erect buildings without the consent of the landlord.

Rates.

1544. (*Mr. Dalton.*) On the whole, the rural rates have not gone up in your district, have they?—They have not gone up.

1545. I think you said that the land pays to keep increased poor in the towns?—Yes, I did say that.

1546. Do you mean to say that the land in your district pays for the poor in any part excepting your own union?—Well, only in the towns.

1547. In the particular towns of your union?—In the Malton Union.

1548. Then your complaint is merely as between your own land and that particular town?—I am not making any complaint. I am bringing that out as an instance where the tenant farmer is paying more than the shopkeeper.

1549. In that particular union?—In that particular union. But my point was this, that our population has increased, and that population is fed by foreign produce, and that we are not only paying rates for our own produce but paying for the poor that are fed by the foreign produce imported.

Mr. W. Harrison. 23 Nov. 1893.

1550. But I understand that this poor rate has not gone up at all, although your rateable value has gone down. You pay just the same poor rate as previously?—Just about the same.

1551. And you have already got a very large contribution from the Government towards that?—You would not look upon a small place like Malton, which is practically a small town in an agricultural district, where the poor rate has not increased as it has increased in larger towns.

1552. But in large towns the town pays for it itself—for its own poor?—Not always. York is a fair city.

1553. You say that rates have not gone up?—Not much.

Restrictions on sale.

1554. (*Mr. Chaplin.*) You said, I think, that even in cases where the prohibition of restrictions for the sale of produce had been removed that some of your neighbours did not avail themselves of it?—Not all of them. I did not say they had been removed; they are still under the same agreement; but the landlords have given that permission.

1555. But you have got the permission, or they had the permission, and yet they do not use it?—They do not avail themselves of it.

1556. Why is that?—I do not think they have got to see the benefit of it.

1557. They thought that the present system was the best?—I believe the tenant farmers years ago were as much against selling produce from the farm as the landlord. Some of them see it in a different light at the present time.

1558. Some of them are changing their opinions?—The landlords, too, are changing their opinions; they are coming down more to it.

1559. But still you know instances where, although they could have done it, they have not thought fit to do it?—They have not done it, however.

1560. You said that if it was to be done by legislation you would suggest a clause in the Agricultural Holdings Act prohibiting restrictions on the sale of produce provided that material of equivalent manurial value was brought back in its place?—I think there should be an equivalent for what is taken away.

1561. How would you give effect to that? What would be your safeguards for the landlord that the material would be brought back?—We should produce vouchers.

1562. Would they be in all cases sufficient?—I think quite sufficient.

1563. That is what you should rely upon?—I should rely upon them.

1564. Would you make the system universal or should there be exceptions?—I would make it universal. It is not deteriorating the land when the manurial value is returned. That is my point.

1565–6. But great relaxations have already been made, and you said that the system of relaxations was generally breaking through the agreement; if that continues would that do away with any necessity for legislation?—I cannot vouch for what is going to be. Practically I am only stating what has been done in the past.

1567. But now in view of the great relaxations that you say have already begun do you think that legislation is both necessary and desirable?—In my opinion, in some instances, if farming were to become more profitable the landlord would again put the restrictions on. It is only a question, in a good many instances, of getting the rent from the tenant that they allow him to send the produce off.

1568. Have you known instances where relaxations have been asked for by a good man and have been refused?—No, I do not. On some estates the tenant never attempts to sell the produce and he never goes and asks the landlord for such a thing; they never dare to do it.

Laying down of permanent grass.

1569. With regard to the laying down of permanent grass, what should you estimate the cost of that per acre?—3*l.* per acre if the tenant has got the first crop after laying it down.

1570. (*Chairman.*) Is that the first cost or the ultimate cost?—I contend that land wants fallowing in the first instance, and after the fallowing you sow the land down. The tenant could sow it with a crop, and after getting the value of the crop it would leave about 3*l.* per acre.

Mr. W. Harrison. 23 Nov. 18

1571. (*Sir Nigel Kingscote.*) Would it be a wheat crop?—Or it could be barley, which you like. I think it preferable to sow with a spring crop.

1572. (*Mr. Chaplin.*) How many years do you estimate that it would take before the grass reached its full value?—I think it goes on increasing for 40 years. It just depends on the different lands. I have seen some land laid to permanent grass where they have got very good and thick in the course of six or seven years. On other lands they have been quite thin; and then, again, it is essential where land is laid down into grass that it should be well manured, and that makes a wide difference again. It all depends upon how it is dressed for the years it would be left to get into permanent good grass.

1573. On what principle would you recommend that compensation should be given?—That should be determined by valuers.

Agricultur Holdings Act.

1574. On the tenant's outlay?—What is not on the outlay is due to the capabilities of the soil, I think outlay must be the basis.

Counter-claims.

1575. I think you said that the fear of counterclaims under the Agricultural Holdings Act was dying out?—Well, the fear of them is dying out.

1576. Where the Act has failed in giving compensation in consequence of those counterclaims has it not been alleged that it is very often the fault of the valuers rather than the fault of the provisions of this Act?—No, I could not say that it is the fault of the valuers. It is the outgoing tenant who first must make the claim, and the valuer acts upon the claim made. I do not think that any valuer with good common sense would recommend a tenant to forego his claim for compensation.

1577. Are you aware of instances yourself where the counterclaims for damages have exceeded the legitimate claims for tenant right?—Yes, in dozens of cases.

1578. Where it has been unfairly made?—Yes, it has been reduced; I had one last year where there was an umpire provided by the Board of Agriculture, where the counterclaim was for about 500*l.*, and 60*l.* was awarded.

1579. (*Chairman.*) What was the claim for, was it for leaving the land in a bad condition?—It was for so-called cross cropping, and dilapidation of fences, ditches, roads, and other things.

1580. Is bad farming one of the claims made for leaving the farm in a bad condition?—Yes.

1581. (*Mr. Chaplin.*) Are you of opinion that where a landlord has let on that condition some counterclaims are fair and legitimate?—Yes.

1582. But there have been counterclaims upon which damages have been awarded in excess of the claim for tenant right which you think would be unfair?—I have not seen that more has been allowed for the counterclaim than should be allowed.

1583. But you have seen counterclaims where the award has been to a greater extent than fair?—No, the award has not been—I do not think so.

1584. What is the fault of the Act if the fear of the counterclaim is dying out? If the awards are fair and legitimate I do not quite follow how the Act fails?—I do not say that it does fail. I never said that for a minute. I said it was a fear. The claims were made in fear of a big counterclaim, it was ignorance really. It was not attributable to the Act. It was not the fault of the Act, but the ignorance of the people.

1585. Where the claims under the Act which would have given compensation have not been met, it is owing to the ignorance of the people?—I think so.

Duty on foreign barley.

1586. As to your proposals with regard to beer, I understand that you propose that the duties should be put upon foreign barley?—Yes.

1587. Have you ever considered to what extent?—No, I have not.

1588. Do I understand you to say that there would be an advantage to most lands?—To all lands I would say.

1589. To all lands?—To all lands.

1590. I wanted to ask you one question about your own farm in regard to which you seem to have been

Mr. W. Harrison. 23 Nov. 1893.

particularly fortunate, the land is in very good heart, and very productive, I suppose?—It is in good heart. It is not first class land.

1591. But it is very much owing to the quality of stock you have upon it?—And the manure that is put on it, and the cake consumed upon it.

1592. And among those there are a great number of horses?—I call them extra stock on the farm.

1593. Might I ask you how many you have?—We have 107.

1594. And do a good business, I suppose?—Yes.

1595. That probably has helped you to some extent?—It has helped the farm somewhat.

Agricultural Holdings Act.

1596. You were asked a question about horse corn as compensation; I did not quite catch your answer. Do you think that it ought to be given for horses?—I think so, although the Agricultural Holdings Act says cattle, sheep, and pigs, and does not include horses. There is a fight in valuations sometimes as to oats and other corn that have been used to feed horses. Where horses that are kept upon the farm and not removed for months I do not see why compensation should not be given.

1597. Would not it be very difficult to draw the distinction for the horse used for the purpose you describe and the horse used for other purposes?—I do not think so.

1598. Is not it a very common objection by the principal valuers that that it would lead to abuse?—It tends to it.

1599. It tends to it?—It might. The question for our valuers to determine is what oats are consumed by the horses on the farm, and what by horses going on the road.

1600. You were asked whether you approved of certain provisions in a Welsh Bill which was introduced this session into Parliament. Are you acquainted with that Bill?—No.

1601. Then you would not pledge yourself to approve of any of its provisions?—No, I would not.

1602. (*Mr. Gilmour.*) Would you as a practical man consider it at all possible to fix rents on the basis that before the tenant should live he should pay the expenses of his farm before paying his rent?—The accounts would have to be kept of what was made. That is a new idea altogether to me.

Horse breeding.

1603. What class of horses do you use?—Hackneys principally.

1604. Do you sell at all to Army remount buyers?—No, I do not.

Mr. W. Harrison. 23 Nov. 1893.

1605. Do they come into your district?—I do not follow you.

1606. Do the Army remount buyers agree to buy from farmers direct?—I do not think so.

1607. Would it help them if that was carried out in the horse-breeding district?—I cannot tell what price they would give. If you would tell me the difference between the prices paid and what they would pay I might determine that.

1608. The top price allowed is 45*l.* for a horse between three and four years old?—I have not considered that.

Freedom of cropping and sale.

1609. (*Sir Nigel Kingscote.*) You have advocated that the farmers should have in their agreement more freedom of cropping and also more freedom of sale?—Yes.

1610. I suppose, as a practical farmer, you acknowledge the great value of farmyard manures as against artificial manures?—As against?

1611. If you farm with nothing but artificial manures, then you would have the farm run out?—I think it would take me a long time to go into that particular, but I could only say that I had a very bad field 14 years ago; I have been trying the experiment and no farmyard manure has been put on to that; it was completely artificially manured, and it has produced the best crops of any field I have, of the same quality of land; it has improved more than any other up to date.

1612. Do you tell the Commission that you think artificial manures are as good to produce crops as farmyard manures?—I think that artificial manure is a great help on the farm. I go so far as to tell the Commission that that can be done.

1613. Do you think you could farm without farmyard manure?—Yes, I think I could.

1614. To a profit?—To a profit.

1615. And leave the land in a productive state?—I would not say. I do not think it would be practicable for every farmer to sell everything off his land and only use artificial manures to keep the fertility up. It would not be at all practicable to do it.

Wages.

1616. (*Chairman.*) As regards wages, are you paying the same rate of wages as you did a few years ago?—How far would you go back?

1617. Ten years, say?—I do not think there is very much difference.

The witness withdrew.

Mr. E. H. Lushington. 23 Nov. 1893.

Mr. Edward Harbord Lushington called and examined.

1618. (*Chairman.*) You are treasurer of Guy's Hospital, are you not?—Yes.

1619. You were examined before the Duke of Richmond's Commission in 1880 with reference to the landed property which belongs to Guy's Hospital, which practically you manage?—That is so.

1620. I think you then stated that you have three considerable estates belonging to Guy's Hospital, in Herefordshire, Essex, and Lincolnshire?—Yes.

Rental before and since 1879.

1621. Would you state what was the rental before 1879—the years of depression?—Yes. Would you like to have each estate separately?

Herefordshire estates.

1622. Will you state the acreage and rent on those estates before 1879?—The acreage, beginning with Herefordshire, is 8,353, and the rent is 11,056*l.*

1623. Was that before 1879?—It was before 1879.

1624. What is the rental now?—7,741*l.*

Essex estate.

1625. And what is the acreage and rent of the Essex estate?—The acreage is 8,106; the rental in 1879 was 11,760*l.*, and it is now 6,206*l.*

Lincolnshire estate.

1626. And what is the Lincolnshire estate?—The acreage is 6,146; the rental in 1879 was 13,189*l.*, and it is now 8,704*l.*

Tithe.

1627. Was the tithe paid in 1879 by the tenants?—The tithe was paid by the tenants in 1879.

1628. And is now paid by the hospital?—The tenants still pay the tithes on the Herefordshire estate.

1629. But in the other two estates do they pay tithes?—It is paid by the governors in the other two estates.

Mr. E. H. Lushington. 23 Nov. 1893.

1630. In comparing the two estates that ought to be deducted?—That ought to be deducted.

Management.

1631. How are those estates managed?—On each estate we have a resident agent. In Herefordshire we have Mr. Heywood. He does not live on our estate now, but he is a man of very great experience and knowledge, and has had charge of our estates for the last five or six years. In Lincolnshire we have Mr. Thorold, who has been upwards of 20 years our agent in Lincolnshire; and on the Essex estates we have Mr. Strutt, a brother of Lord Rayleigh, and he also manages Lord Rayleigh's estate. Part of these properties and Lord Rayleigh's properties march together—they are contiguous to each other.

Expenditure in improvements.

1632. Has there been a considerable expenditure during the last 12 years in improvements?—There has been considerable expenditure, but only half as much as there used to be. In my previous evidence before the Duke of Richmond's Commission I think I stated that the governors generally spent £2,000 a year on each of their estates. Since the great drop in our rents the governors now only spend £1,000 a year, or aim to keep it at that figure as closely as possible.

1633. Then you have not found it necessary to increase your expenditure owing to the depression, but rather the reverse?—Quite the reverse.

Mr. E. H. Lushington. 23 Nov. 1893.

1634. When did these reductions of rent begin?—These reductions of rent have been gradually going on since 1880. Perhaps I might state at the present date what the total amount of reductions is per cent. if it would be agreeable.

Reductions of rent.

1635. Please let us have it?—On the Herefordshire estate there is a reduction of 30 per cent.; but the tithe is paid as usual, as I have already said, by the tenants. In the Lincolnshire estate there is a reduction of 38 per cent., and the tithe makes a still further reduction of 8 per cent., making a total reduction altogether of 46 per cent. In the Essex estate there is a total reduction of 47 per cent., the tithes now being paid by the landlord, and that makes a further reduction of 13 per cent., making a total altogether of 60 per cent. to the loss of the governors. I may state that this very large reduction does not at the present moment represent what the governors have just been doing. The governors have just been compelled to sanction a temporary reduction on the Essex estate of very nearly one-sixth of the remaining portion of the rent left in their hands.

Abatements.

1636. Have there been during the period considerable abatements of rent from time to time besides the permanent reductions similar to that which you are making now with respect to Essex?—There is a temporary reduction of one-sixth per cent. of the remainder that is now paid to the governors.

1637. That is an abatement due to the special year?—Due to the special year.

1638. Have there been similar abatements from year to year in the Essex estate other than the permanent reductions?—To a moderate extent only. I could not tell you how much.

1639. (*Mr. Giffen.*) Could you give the average amount per acre as compared with what it was formerly in each case?—I have not worked it out, but I shall be happy to give it.

1640. I should like to see it in that form?—And what it comes to per acre?

1641. Yes.

Arrears of rent.

1642. (*Chairman.*) Have the arrears of rent increased?—The arrears of rent have not increased. They have increased since 1879 because we had no arrears. In 1878 and 1876 we had no arrears—every sixpence was paid up to the day; but arrears have occurred constantly since, which we have either to forego or take something less, and we have to deal with the cases as the circumstances seem to demand.

1643. (*Mr. Everett.*) Up to which year was it that you had no arrears?—We had no arrears down to 1878. We did not know what such a thing as an arrear was.

1644. (*Chairman.*) Can you state the amount of arrears now?—I should have to find that out. I could not quite say with any certainty unless it is in that printed statement of ours. We have got the rent roll so that I can tell you in two minutes. The Herefordshire arrears on Lady Day were 769*l.*; the Lincolnshire arrears were 2,688*l.*; and the Essex arrears were 858*l.* That was on Lady Day last. These have been collected, a good portion of them; they are not the arrears of this moment.

Reductions of rent.

1645. When did those solid reductions of rent—those permanent reductions of rent begin?—In 1881 and 1882; they began at that time; but at first the governors were disposed to give only temporary reductions, but we soon found out that that did not meet the circumstances of the case.

1646. When did you see that the permanent reductions were completed—they began in 1881 and 1882?—They were completed in the course of the next three or four years.

1647. Then I gather from the figures you have laid before me that the rent of the Herefordshire estate was very little under 1*l.* an acre; in the case of the Lincolnshire estate it is rather over 1*l.* an acre—in fact nearly 30*s.*; in the case of the Essex estate it is considerably under 1*l.* per acre—about 16*s.*?—It is 15*s.* or 16*s.*, that is so.

Changes of tenancy.

1648. Have you had many changes of tenancy during that time?—Not many; we have done our best to maintain our old tenants. We have met them in every way we possibly could, and in some cases, in Essex especially, when our old tenants left we had to take the land in hand ourselves.

1649. Had you many changes there, did many of the farmers give up?—Many of them gave up.

Mr. E. H. Lushington. 23 Nov. 1893.

1650. And have you the land in hand?—We have now, at this moment, about 1,500 acres in hand in Essex.

Land in hand in Essex.

1651. (*Lord Vernon.*) Under what head is the land in hand?—I shall have to tell you the names of the farms.

1652. (*Mr. Lambert.*) Is the land in hand included in the rental?—We have a small rental upon it. Perhaps I might explain that. Mr. Strutt agreed to take the management of the farms for which we could find no tenants, and he was to receive no remuneration at all for such beyond his actual out-of-pocket expenses such as horse allowance and so forth, and he was to go on those terms until the land had made a small rent, and any sum in excess of that small rent, any profit, was to be divided between himself and the governors. For the first three or four years that he was in charge of those farms he received absolutely nothing, the land was in such a bad state after being given up by our old tenants that it was as much as he could do to bring the land round. Two or three years ago he received, I think, for two years a small sum, 200*l.*, 100*l.*, and 150*l.* on another occasion. Last year again he tells me, that is, the year 1892, there will be no margin of profit to be divided between himself and the governors. The accounts for those estates which are in hand are made out very carefully. We take the interest for the money advanced for the purchase of both dead stock and live stock, and this is valued every year. So much is written off the dead stock; and as to live stock a careful valuation is made of its probable worth. Then a small sum is charged against each of those farms for rent, and if any balance is over as I have just described it is divided between the governors and our agent.

1653. Is the rent charged near to the rents of the other farms?—It is considerably below, I think you will see.

1654. (*Lord Vernon.*) It is about the same?—It is a little below; we have lowered the other farms so much.

1655. (*Chairman.*) From this statement there appears to be five farms in hand in Essex at this moment with an acreage of 1,700?—About that.

1656. Has there ever been a larger amount of land in hand?—No, we are now at the highest amount we have ever had in hand.

1657. How long have these farms been in hand?—They have not all been in hand at the same time. They have been taken in hand as the tenants gave them up. We began first with two and then with three.

1658. When did the first two begin?—About six years ago.

1659. The condition has been improved I presume with the better farming of the agent?—Yes.

1660. But you have not been able to let them?—We have not been able to let them.

1661. Have you land in hand on the other two estates?—We have no land in hand on the other estates.

Reduction of rent.

1662. Is the effect of your reductions that you have been able to save the tenants, at all events, on those other two estates?—I think so; certainly so, we have been able to save them.

Changes of tenancy.

1663. Have there been any changes in the ordinary course not caused by failure of land?—A few, some because they were old tenants who died, and one or two others, because they said the farm would not pay, and we have been able to let them.

1664. At the same rent?—There have been further reductions, and there are very often temporary considerations. I think if you turn to one of our estates, I should mention the Herefordshire estate—Aconbury Court—I think you will see that is a farm which has changed hands more than any other.

1665. (*Lord Vernon.*) That must be very bad land?—It is not very good land. The fact is that part of the farm is on the slope of the hill and it is rather difficult to plough, and it involves a larger number of horses than one would have on a level farm so to speak. It is not good land and there is a good bit of wood upon it.

1666. (*Chairman.*) You said that that farm has changed hands often?—More often than any other.

Mr. E. H. Lushington. 3 Nov. 1893.

1667. But you would not be able to let it?—No. We have helped the man to get some dairy produce off the farm which he could not do, and we have gone to some expense in fitting up cowsheds and bringing water into the farm yard.

Agreements.

1668. Do you give leases? — They are all yearly agreements.

1669. Have you been ready to give leases?—Well; the governors have no wish to give a lease. For some years past those who had leases were allowed to run out, and if they wished to renew their tenancy they renewed it on a yearly agreement.

1670. What was the reason of that?—The governors thought it a more preferable arrangement.

1671. Did the tenants wish to have leases or not?—I do not think that the tenants wished to have leases, but the real fact is, if I may say so, our tenants have always considered themselves as next door to permanent occupiers of the soil. Many of them have been there, and their fathers and grandfathers have been tenants before them. Old Mr. Phillpotts in Herefordshire has been our tenant, he and his family for over 100 years.

Sporting rights.

1672. Do they have the game? — They have the game.

1673. Do they generally let the game themselves, or do they keep it?—They keep it in their own hands.

Essex estate.

1674. Of the three estates the Essex is far the worst?—Incomparably so.

1675. The reductions have been heavier?—Yes.

1676. A considerable portion is in hand and you find it difficult to get fresh tenants?—We find it quite impossible.

1677. What is the condition of that land, what kind of land is it?—Very heavy clay. It is good wheat land as a general rule, but fit for very little else.

1678. Then the low price of wheat as compared with other produce—the very low price has told exceptionally upon that land?—Certainly.

Lincolnshire estate.

1679. Then with regard to the Lincolnshire estate, what about that?—That is a wheat country generally. I think I might explain that our three estates are composed greatly of wheat land, and I attribute it to the circumstance that when these estates were purchased by the governors, 150 years ago, or rather more, I think they thought it was advisable to buy land which grew wheat. Everybody wanted bread and corn, so that they invested their property in wheat-growing land.

1680. Were they bound to invest their property in land?—They were, in land under the Act of their incorporation.

Price of wheat.

1681. And at that time the price of wheat was high and very likely to continue?—Yes.

1682. (*Mr. Everett.*) It was not high then?—Was it not?

1683. (*Mr. Giffen.*) What was the price of wheat 150 years ago, not much higher than it is now, was it?—It would represent far more money.

1684. In some respects, but as an actual question of money I should doubt whether it was much higher than it is now?—Quite so.

1685. (*Chairman.*) Have you any figures in your office for a longer period before the rise took place?—Certainly.

1686. Can you state the figures?—I do not think that we have brought any figures, but we have the rentals from the foundation of the hospital.

1687. I think it would be very interesting to have those?—I shall be very happy to give them. (*See* Appendix A., IX. 1, IX. 2, and IX. 3.)

1688. The properties have remained the same?—There has been some little interchange here and there; and we have added on to the estate from time to time, but the nucleus of the estates is the same.

1689. And you probably could tell us how much per acre the land was for the last 50 years?—Certainly.

Expenditure on improvements.

1690. (*Mr. Giffen.*) Would you add a statement of the expenditure on improvements at the same time, and the reductions compared with improvements?—We shall be happy to do that. With regard to the improvements I should like to mention this: I said just now that in former days we spent 2,000*l.* a year on each estate. That was made up of expenditure which the governors sanctioned, and thought absolutely necessary for the benefit of the farming, and it also included any expenditure that a tenant particularly wished should be done for his benefit, and for which he was prepared to pay 5 per cent. additional rent.

Mr. E. H. Lushington. 23 Nov. 1893.

1691. And now the expenditure is less?—Now the expenditure is reduced to 1,000*l.*, but of course if we could act within that limit we should be happy to give any tenant any improvement that he desired on his property on the same conditions as we have hitherto done, namely, that we would find the money, provided that we had the money to do so, and he would pay 5 per cent. on the outlay.

1692. The point is whether you could find the net sum the hospital receives from each estate as distinguished from the gross rent?—Exactly, we shall have no difficulty in showing that.

1693. (*Chairman.*) Looking generally through the list of farms, they occur to me to be rather large farms?—Yes, they are.

Size of farms.

1694. And there are comparatively few small farm holdings?—There are very few farms of less than 100 acres.

Large and small farms.

1695. Have you found any difference between the large farms and the small ones. You have greater reductions in the large than in the small ones. Can you form any idea?—In Essex we have had to give greater reductions in the small farms, I think you will see if you look at the Essex estate, that on the Beaumont estate there is a large farm there of 733 acres. We used to receive 1,128*l.* We have only had to reduce that by about 250*l.*

1696. (*Chairman.*) It is now 850*l.* a year?—Yes.

1697. The reduction there is not so large as in many of the others?—That is what I wish to bring forward as an instance; it is the largest farm.

1698. (*Mr. Lambert.*) But probably it is the best land?—It is fairly good land. The whole of the Beaumont estate is better than Leigh's Priory estate, and the other two estates in Essex.

1699. (*Chairman.*) Then take the Herefordshire and Lincolnshire, do you find that the smaller farms have done better than the larger ones?—No, certainly not, I should think.

Sub-division of farms.

1700. You have not tried to break up any of the large farms?—We felt that we should be involved in such an expenditure in building cow sheds and barns and homesteads, that we did not attempt it.

Reduction of rent.

1701. What do you consider the prospects of the immediate future? Take the two estates Herefordshire and Lincolnshire, do you consider that the reductions have been such that the rent may now be maintained at present prices?—I should be afraid not. I think you have a daily increasing importation of foreign produce, and I believe that this year there is a larger quantity of wheat coming from Russia than has ever come before.

1702. But I am assuming that the present prices are maintained?—If present prices are maintained, then I hope we shall be able to go on.

1703. Then in the case of Essex, you have not got to the end of your difficulties?—I think so. I do not anticipate that we shall have to make those present large temporary reductions permanent.

1704. Exactly, but you doubt whether you would be compelled to make that temporary reduction a permanent one?—I do not think that we should have to make it permanent in an ordinary year, but I look upon last year just over—1892—as a most disastrous year for farmers for the yield was so bad.

1705. That is to say, the 1892 year?—The 1879 and 1892 were two very bad years indeed.

1706. Has not 1893 been equally bad almost for wheat?—Yes, it has been very bad for wheat, but not so very bad altogether in other things.

Price of wheat.

1707. But the prices and quantity of wheat, and the grain per acre, has been very low?—Very low indeed. We take our year from March to March, and I was including 1892 and 1893; our accounts have not been made out to the present time.

1708. But the harvest of 1893 has been bad, has it not?—The harvest of 1893 has been very bad indeed.

1709. Therefore you have had two very bad years in succession?—Yes.

Mr. E. H. Lushington. 23 Nov. 1893.

1710. But assuming that the produce goes back to the average before 1892, and the present prices are maintained, should you estimate having to make further reductions?—I certainly think we should not have to make further reductions, but should be able to hold our own.

Large and small farms.

1711. (*Mr. Whitehead.*) I notice on the Herefordshire estate you have some small holdings; could you say whether the smaller have done better than the larger?—I think they have done worse. We have had more difficulties with our poorer tenants than with our richer tenants with larger holdings.

1712. Are any of your tenants in Herefordshire hop growers?—Yes, I can give you an account.

Hop growers.

1713. Have they been better off than other farmers?—The total quantity of hop growers is represented by 90 acres only. It is quite a small sum, but I think on the whole I should not say that they had been very successful.

Fruit farmers.

1714. Would the same apply to orchards?—No, orchards as a general rule are a more steady crop every year than the hops are.

1715. The tenants of orchards have done better than other tenants?—Almost all our tenants have got some little holding in orchards.

1716. That is a small help to them?—Yes.

Market gardens.

1717. In Essex have you any market gardens?—None at all. I should like to mention in reference to that question of market garden land that our land is very inconveniently situated for the conveyance of produce to either of the large towns or to the capital.

1718. Therefore it is not suitable for market gardening?—It is not suitable for market gardening.

Freedom of cultivation.

1719. Do your tenants have freedom of cultivation; may they cultivate exactly as they like?—Our agreements contain the old rule of a four-course system. If any tenant wishes to set that aside, and gives our agent reasonable ground for so doing, we do not attempt to bind him down to it.

1720. Does the same apply to selling their hay and straw from the farm?—Yes, we have constantly allowed a certain quantity of hay and straw to be sold off, provided its place was supplied with artificial manure.

Import of wheat.

1721. (*Mr. Giffen.*) With reference to the large importation of wheat from Russia lately, can you tell us whether the trade in wheat is considered in Russia to be remunerative to the agriculturist, or whether it is not the case that the Government have to take special measures to support agriculture?—I am afraid I could not answer that question.

1722. Of course importation of wheat fluctuates very much from place to place annually, and it is not always Russia which sends its surplus?—It is not. But on that point I should like to say that I know something about India, and I expect that for many years to come we shall have enormous supplies of wheat from India, because at present we have only land in cultivation adjoining the main channels of communication by railways, and year by year, as we shall have added lateral communications to those railways, they will bring more and more wheat down to the great export towns like Bombay.

1723. But you cannot speak as to what the position of Russia was?—No, I cannot.

1724. About the position of the United States, can you speak of that?—Not with any reliable information. I have heard something about it, but personally I know nothing about it.

1725. The point is how far the depression of agriculture is general, how far the competitors are much in the same boat as the English agriculturists themselves. Can you give us any information about that fact?—I can scarcely say. I have no information that will be worthy of your acceptance.

Rural depopulation.

1726. Can you tell us whether the number of agricultural labourers on your estate has been diminished in the last 10 or 15 years?—There is a slight diminution of the agricultural population.

1727. But you could not say how much precisely?—No.

1728. Can you say whether wages have been increasing or diminishing during the last 10 years?—They have diminished in Essex certainly.

Mr. E. H. Lushington. 23 Nov. 18

1729. How much?—They have diminished to from 10*s.* to 12*s.* per week in many parts.

Wages.

1730. (*Mr. Clay.*) Has your able-bodied man no more than 10*s.* a week to live upon?—Well, they have certain advantages you know in a cottage found for them, and milk and vegetables and things of that kind.

1731. What do you put that at per week?—I suppose it is worth 3*s.* or 4*s.* per week more.

1732. Would you say what is the cause of wages diminishing, is it the bad trade that has created less demand for the labourers?—The farmers say that they cannot afford to pay the old rate of wages; they do not make profit enough, and naturally enough they try to cut down their labourers to a minimum.

1733. Is that a sound policy?—I should say so far it is a sound policy, if they could get the same work for 10*s.* that they could get for 14*s.*

1734. Do they get the same work as they did out of the labourer?—I do not hear of any alteration of the hours of labour or amount of labour performed by a man in the present day.

1735. Would it not be of more advantage to let down the rents, and allow the farmers to pay the labourers better?—I think if you look at the figures you will see that the Governors have gone as far as they could well go.

1736. Still they might go a little further because this 10*s.* per week is a miserable wage?—Could we be sure that the money would go to the labourers? I am afraid not.

1737. Where would it go?—I should say it would stay in the farmers' pockets.

Agricultu Holdings Act.

1738. Are your tenants under the Agricultural Holdings Act?—Yes, they are under the Act.

1739. And do you pay any compensation under the Agricultural Holdings Act?—Whenever there is a question of a tenant leaving we always have arranged when the question of compensation arose, to settle it without any trouble at all. We have never had any differences, and never had any occasion to call the law in.

1740. I think, in answer to a question put by Mr. Howard on the Duke of Richmond's Commission, you said that you had some difficulty under the Agricultural Holdings Act?—That was before the change in the Agricultural Holdings Act. They all hold their farms under that Act since then. We have been forced into the Act; I think I am right in saying that.

1741. Then I also see in your evidence before the Duke of Richmond's Commission you talked about a farm in Sutton Bridge being a very fine farm and being in a very bad state. How is that now?—I do not think that is quite right. I think I mentioned that there was some land in the neighbourhood of Sutton Bridge which we had been enclosing some years ago, and we hoped that it would turn out very productive; but, unfortunately, the sea found its way inside and destroyed the land. I think that was, perhaps, the point you were referring to in connexion with Sutton Bridge.

1742. Is your land's fertility increasing or decreasing; I mean, is it going out of condition?—In Lincolnshire generally, do you mean?

1743. Yes?—I think that it is in very good condition; I do not think it has gone out of fertility.

Freedom o sale.

1744. (*Mr. Gilmour.*) What equivalent do you insist upon the tenants returning who sell the produce off their holdings? Is it upon a money basis or upon a manurial value basis?—I am not quite sure that I could tell you that. That is a matter that is generally left in the hands of the agent to settle with each individual farmer, but I believe I am correct in saying that it is on a manurial basis.

Imports of wheat.

1745. (*Mr. Chaplin.*) Do I understand you rightly to say that you attribute a great part of the falling price of wheat to the large quantity of wheat which is imported from India?—Yes.

1746. And you anticipate still larger exports in the future?—Yes, for the reasons I stated.

1747. I am afraid I did not follow them?—The reasons were that several new lateral communications are being yearly made, bringing parts of the country into immediate communication with the great lines of railway, and so bringing down wheat to the ports to which heretofore it could not be brought down.

Mr. E. H. Lushington. — Nov. 1893.

1748. Have you given any attention to the question of the effect of the fall in the price of silver upon the gold prices of wheat in this country?—I have not followed it very closely, but I have no doubt, I may say, that the fall in the price of silver will affect, if it continues, the exportation of wheat from India.

ffect of ll in price silver.

1749. You have not studied the question?—No; but that is my opinion.

eduction rents on rge and mall farms.

1750. (*Mr. Dalton.*) Can you account at all for the fact that there has been a greater fall in the rents of smaller farms than of the larger ones?—I think I can to this extent. I think that previous to the commencement of the depression farms were in great demand. These men were ready to take them almost at any price. The smaller tenants were pushed to find payment when the bad seasons in 1879 set in, and they were spending more than they got, and they went to the banks and they borrowed money for a little time; but, of course, the banks pressed them for the money, and they became bankrupt, and left their farms and went away.

ixing of nts.

1751. (*Mr. Lambert.*) How are your rents fixed?—The agent used to recommend to the treasurer for the time being what he thought was the proper rent to ask for such a farm, and the treasurer considered the matter, and if he thought the agent had produced good reasons for demanding a larger rent, it was raised.

1752. Were the rents fixed by you or practically by open competition?—They were not fixed by me, it was before my time, 20 years ago, but there was a great deal of competition at that time. Whenever a farm became vacant there probably were three or four farmers who would come down from Essex to the country house and wait to have their chance of bidding something more than somebody else.

ixity of enure.

1753. That was done often?—That was done often.

1754. Do you attach great importance to fixity or practical fixity of tenure?—I do certainly.

reedom of ultivation.

1755. And to the practical freedom of cultivation?—Yes.

hooting ights.

1756. And have your tenants all the shooting rights?—They have the shooting rights.

gents.

1757. (*Captain Thomas.*) Are the agents you employ practical agriculturists?—They are practical agriculturists, I should say, certainly; at least two out of three, and I should say the third is also a practical agriculturist. Mr. Strutt has farmed himself and has had great experience. He was brought up as a farmer. Mr. Thorold in Lincolnshire has certainly been engaged in agriculture for nearly all his life; and Mr. Heywood is well known in the West of England as one of the most experienced men connected with farming interests, although I do not think he farms himself—at least I know he has none of our farms.

Mr. E. H. Lushington. — 23 Nov. 1893.

Labourers' cottages.

1758. Are there any labourers' cottages on these estates?—Yes, there are, and from time to time we have added to them.

1759. Do the labourers rent them from you or from the farmers?—The farmers, I think, as a general rule, rent them from us.

1760. The farmer rents them from you and re-lets them to the labourers?—It is necessary to do so because he puts people in the cottages who are connected with the farms.

1761. Is any land attached to those cottages?—A little bit; I could not say how much.

1762. Sufficient to keep a cow?—Certainly not; but sufficient to give the tenants a few vegetables and that sort of thing.

Indian wheat.

1763. (*Mr. Everett.*) You were speaking of the importation of wheat from India, Are you aware that the difference in the exchangeable value of silver and gold enables them to lay down their wheat here at a much lower price than they used to, while receiving the same price in their own money?—I cannot say.

1764. (*Chairman.*) Do you know anything about the question?—It is not a question that I know anything about.

Agents.

1765. (*Lord Vernon.*) How are your agents paid; are they given a commission?—I think I have described how Mr. Strutt was paid, the Essex agent; he gets half when there is anything to divide.

1766. That is what you said about the farms in hand, but the other agents, are they paid on commission?—No, Mr. Throld has 500*l.* a year and a house, and Mr. Heywood has 350*l.* a year.

1767. I only wanted to know the way in which they were paid, not the amount?—That is how they are paid.

Conditions of agreements.

1768. (*Chairman.*) Have the conditions been relaxed?—The conditions are relaxed.

1769. Only pending this depression or generally?—We should not have refused any further relaxation of the conditions before the depression set in, if there seemed reasonable grounds for it.

1770. The agreements still contain the conditions?—The agreements still contain the conditions. I shall furnish those papers that I have been asked for.

The witness withdrew.

Mr. J. Cocks.

Mr. JOHN COCKS called and examined.

Mr. J. Cocks.

1771. (*Chairman.*) You are a farmer residing at Ernsettle, King's Tamerton, Plymouth, are you not?—Yes.

1772. How far are you from Plymouth?—About five miles.

1773. And you represent the Devon and Cornwall Chamber of Agriculture?—I do.

1774. Have you been nominated by them to come and give evidence?—I have.

1775. You and your two sons farm from 900 to 1,000 acres, do you not?—We do.

1776. Are they more than one farm?—We have three farms; I have one and my sons have one each.

1777. Whom do you hold under?—One of my sons is under Mr. Cory, of Langdon Court, in Wembury parish, and the other is under Mr. Marshall, of Liskeard.

1778. How long have you held those farms?—One has been held for three or four years, and the other about eight years.

1779. And the third farm?—I happen to be the unfortunate owner of the third.

Size of farm.

1780. What is the size of that farm?—About 200 acres, hardly 200 acres.

1781. (*Mr. Chaplin.*) What is the size of the other farms?—One is 350 acres and the other 340 acres.

1782. And one is your own farm?—The one I occupy is my own.

1783. And that is how much?—About 180 acres, nearly 200 acres. Then I rent under two landlords besides that, occupying a small portion of land.

1784. (*Chairman.*) Are these additions to the farm?—Yes, grass pieces.

1785. One of your sons came in about three years ago?—About three or four years ago, and the other son about eight years ago.

1786. They have come in since the depression?—It had begun before that a little.

Rent.

1787. What is the rent that they pay for those two farms?—One pays 330*l.* a year for 340 acres, and the other pays 575*l.* a year for 350 acres with 10 per cent. reduction the last two years.

1788. (*Mr. Lambert.*) What is your own farm?—My own farm is between 170 and 180.

1789. (*Chairman.*) What is the 575*l.* a year for?—The 575*l.* a year is for the 350 acres.

1790. Is that the one for eight years?—No, for four years.

1791. (*Mr. Chaplin.*) What is the rent of the 350-acre farm?—It is 575*l.* a year.

1792. (*Chairman.*) Are they near where you reside?—No, they are not. I am about five miles to the north

Mr. J. Cocks.
23 Nov. 1893.

of Plymouth, and my sons are about five miles to the south of Plymouth; Plymouth is about midway between us.

1793. Is the rent of the farm that is 575*l.* a year a high one?—It is a high one.

1794. Is it a valuable farm?—A very useful farm.

1795. And your son took it four years ago?—Yes, about four years ago.

1796. (*Lord Vernon.*) You get a 10 per cent. reduction?—Yes.

Characteristics of farms.

1797. When was that made?—Two years ago, I think.

1798. Will you describe the condition of those three farms?—Yes, they are mixed farms, both corn and cattle. I have taken the 340-acre farm as being the largest that was taken 8 or 10 years ago, to show the depreciation in value since it was taken, up to this moment if it would interest you.

Price of wool.

1799. Yes?—It is a mixed farm keeping about 150 ewes, and it grows about 20 pack of wool in the year. When I took it about eight or nine years ago—I cannot tell the exact price—but I should think wool was 9*d.* or 10*d.* per lb.; but on my farm that I have been farming myself nearly 30 years I know the average of the wool would be 1*s.* all the time, and I have been farming up to eight years ago.

1800. (*Mr. Lambert.*) It is unwashed wool, is it not?—It is unwashed wool. Now at this present moment wool with us is worth 6½*d.* per lb. I have put down 20 pack of wool for each year at 5*d.* per lb. minus, in the returns of the farm—that I think will amount to about 100*l.* on my son's wool.

1801. (*Chairman.*) Is that a reduction from 9*d.* or 10*d.* to 6½*d.* per lb.?—No, I do not put it at 1*s.*; it is put down at 11*d.*—I put it at 5*d.* and 11*d.*—in 6½*d.* and 5*d.* I think I have allowed a fair margin. That would be 5*d.* per lb. loss to what it was formerly and it should be a living price.

1802. What was the price of wool on the 350-acre farm?—About 9*d.* or 10*d.* per lb. I am not quite sure to a penny per lb., but, as I have said, mine has never averaged less than 1*s.*, but then I have made as much as 14*d.* and 16*d.* per lb.

1803. In the case of sheep what do you say?—My son has 150 sheep and 150 ewes, that would mean something like 400 sheep on the farm; but I consider that this is a fair average, if a person can get as many lambs as he has got ewes therefore he would have 150 sheep to sell every year.

Price of sheep.

1804. (*Mr. Everett.*) What breed are they?—What we call the South Hants long wool sheep. They would be depreciated in value in these eight years. I have put it down at 12*s.* per head; but that does not cover it.

1805. Then you take the present prices as compared with what they were a few years ago?—I think the depreciation is 12*s.* per head from what it was within the eight years.

1806. What do you put the price at now?—About 30*s.* per head. If you put the figures together you would make it rather a strong stock for the number of acres; therefore he does not sell them as fed sheep but as breeding ewes. I have put it down at 12*s.* per head, and then at 3*2s.* a piece or something like that that would amount to 90*l.* Then, again, he kept about 60 or 70 beasts—he rears them all, and he keeps about 20 beasts, perhaps, or perhaps two or three more. Of course there is always a loss, and if he sells sows 20*l.* a year that is as much as he can expect to sell, and then I consider for them the depreciation is something like 4*l.* each from eight years ago up to the present time.

1807. When did that depreciation begin?—About three years they have been going back—three or four years—something like that.

Price of wheat.

1808. Then with regard to wheat, what do you say?—He grows about 20 acres a year; it is a fair wheat, corn-growing farm, and I calculate that he gets 30 bushels—or 15 of our bags—15 bags an acre.

1809. (*Mr. Lambert.*) That is 62 lbs. each?—62 lbs. each. I am not quite sure but about eight or nine years ago I fancy that wheat was 11*s.* per bag. I am not quite sure whether it was or not. But I am well aware of this, that wheat cannot be grown for less. It is now sold for 7*s.* per bag, and I consider that there is 4*s.* a bag depreciation there and that would amount to 60*l.*

1810. The bag is two bushels?—Yes, 62 lbs. is the bushel in Devonshire. I have said nothing about barley, because I do not think that barley should be treated as it is. Barley seems to be the best grain that is selling. I have added all these figures together and I have found that all the rent is gone, and the 330*l.* I think you will find if you add them together, will be the rent of the farm.

Mr. J. Cocks.
23 Nov. 18

1811. (*Chairman.*) Does your son hold under lease?—He holds under a lease, which I shall further on say something about.

Reduction of rent.

1812. (*Mr. Lambert.*) What is the total reduction?—What we say in our neighbourhood is that you should hear the evidence which is to be brought before you. I do not think that we have anything at all like an average of 10 per cent. reduction in rent, not taking the average. We have two or three very good gentlemen about us. We have the Duke of Bedford, for instance; I believe he has allowed 25 per cent. or something like that. We have other good men—Lord Morley, I believe, allows 15 per cent.; then we have the Earl of Mount-Edgcumbe, he allows 10 per cent. I am told. Lord St. German's allows from 10 to 15 per cent.

1813. (*Chairman.*) When you speak of allowances, do you mean that abatements have been made during the current year or are they permanent reductions?—I do not think they are permanent reductions, they are only temporary.

1814. Just for the present year or for each year?—I think it has been for two or three years. I am not a tenant, but I am speaking of what I hear from our neighbours.

1815. It has not yet assumed a permanent form?—I do not think so. I do not think that has taken place in our neighbourhood.

1816. (*Mr. Chaplin.*) But on this farm of your own of which you are speaking, has there been any return?—There has.

1817. (*Chairman.*) You are now dealing with the tenancies, are you not?—I am dealing with the rented farms.

1818. When was that reduction first made?—Three years ago.

1819. And not since?—No extra per-centage since.

1820. And that is made on a farm held under lease?—Yes, on a farm held under lease.

1821. What is the length of the lease?—21 years. I had very great faith seven or eight years ago that we were going to see better times.

1822. And you advised your son to take advantage of it?—I did. I am sorry to say that I have to pay the rent of it.

1823. (*Mr. Lambert.*) What was the date of your son taking the farm?—About eight years since. I am not sure to a year, but from seven to nine years.

1824. (*Chairman.*) Had there been a considerable reduction in the rent of that farm as compared with previous years?—I think it is about 50*l.* a year less than it was before.

1825. Not a very considerable reduction?—No, 50*l.*

1826. (*Mr. Chaplin.*) You made a bargain at the time?—Yes.

1827. And you thought it was a fair rent at the time?—I did.

1828. (*Chairman.*) Were prices low then?—Not so very low then. I do not think they were eight or nine years ago. I am not prepared to say what they were. I am quite sure that sheep and bullocks were a good price.

1829. Has your son applied for a reduction?—He has, I think, applied.

1830. I suppose that the answer that he gets is, "You hold under a lease"?—That is all. I have also asked him to let me relinquish and give it up, but to no purpose.

1831. Is your son ready to give it up?—It is I who would be most ready to give it up. You cannot have a shirt off a naked man, and you would not like to see your son go down.

1832. It is practically your farm then?—That is just about it; still he has a very good landlord. He is a very nice fellow to meet, and all that sort of thing.

Mr. J. Cocks. 3 Nov. 1893.

1833. (*Mr. Lambert.*) Except that he does not stump up the cash?—He is a very nice jovial fellow. I am inclined to think that he would be better but for the others about him—I mean his neighbours. We have got many worse cases than this.

1834. (*Chairman.*) Before we go further into that matter, will you state what your other son farms; does he hold under a lease?—No; he is a yearly tenant.

1835. Has he found the same difficulties, or not?—He got 10 per cent. back.

1836. He came in only four years ago?—Only four years ago.

1837. Had prices been much lowered then as compared with previous prices?—They were lowering four years ago, and things looked very dark; but still it has got worse since.

1838. But in spite of it he took this farm of 350 acres at 57*l.* a year?—He did.

1839. That seems rather a high rent?—Yes.

1840. Is there anything special about that farm which accounts for the rent?—He takes advantage of the town; he has a good bit of grass land and takes rather an advantage of the town.

haracteris- s of farms.

1841. (*Lord Vernon.*) Of these two farms one is five miles south of Plymouth; where is the other one?—It would be ten miles from Plymouth, St. Stephen's, Saltash.

1842. It is because the farm is nearer the town that it is a higher rent?—Yes, and it is a good bit better land.

1843. (*Chairman.*) What is the character of this farm?—It is a good sheep and beast farm also.

1844. (*Mr. Everett.*) What proportion of grass is there?—I think about 150 acres of grass out of those 350 acres.

1845. How was the other farm in that respect, the 340-acre farm?—I do not think it is worth mentioning, perhaps 10 acres of grass.

ages.

1846. (*Chairman.*) With regard to wages, what has happened to them?—Our wages are very high with us, they have increased.

1847. Since when?—They have been gradually going up the last two or three years, that is to get anything like an efficient man.

1848. Is there a difficulty in getting efficient men?—There is a difficulty in getting efficient men; we can get plenty of labourers, but in getting efficient men there is great difficulty.

1849. (*Mr. Everett.*) What is the rate of wages?—We pay 15*s.* per week with a cottage and garden.

1850. You mean besides the 15*s*?—Yes, and milk for the family.

1851. (*Chairman.*) I think you said your son on the 330*l.* a year farm would be willing to give up his lease, or rather that you would be willing to give up for him?—I would.

1852. In the case of the other farm of 350 acres which lets for 570*l.* it is held on a yearly tenancy, is it not?—Yes.

1853. And your son is not able to hold it?—He is holding it hoping that the times will be better; but I do not see much hopes of that, and more than that he has a specially good landlord who is always doing everything that he asks for.

1854. Has he asked for a large reduction of rent?—He does not seem to see that, though.

1855. Then I suppose your son has asked for it?—No doubt about it.

racteris- of farm.

1856. He has not yet thought it expedient to give it up?—No, he has to do something for his living in order to live.

1857. Now let us come to your own farm. I think you said you were the unfortunate owner?—That is so.

1858. What is your experience there?—I suppose my farm is rather in a better position than many others; it is chiefly grass.

1859. (*Mr. Chaplin.*) And near a market?—About 4½ miles from a market, but I keep a dairy on it.

1860. (*Chairman.*) Do you supply Plymouth with milk?—Devonport rather.

1861. Is that your main return?—It is the main return. I do not grow wheat, and the corn that I grow is consumed on the farm. I consume all that I grow.

Mr. J. Cocks. 23 Nov. 1893.

1862. What has been your experience of prices there in the milk produce?—I do not think that it has gone up in price, it remains just stationary. There is a very much larger consumption, but it is this way: when people get a little poverty-stricken they then begin to get a few cows and consequently the supply is greater. The consumption is greater as well as the supply being greater. I do not think there has been very much change in prices for two or three years.

Price of milk.

1863. You are comparing it somewhat with a farther time back?—There was a great scarcity, but I do not think there is a great deal of difference in the price of milk for the last seven years.

1864. In what respect have you been unfortunate on this farm?—Well, there is the labour question, labour costing more than it used to do.

Cost of labour.

1865. But apart from that the conditions are not worse than they were?—I do not think very much.

1866. Then labour has gone up?—Yes, and our rates and taxes have gone up also.

Rates and taxes.

1867. Are you in an urban district?—Yes, and a rural district.

1868. Do you pay a larger amount in the pound than you did?—We do.

1869. What has it risen to?—We are paying now, I do not know whether it is 3*s.* but it is 2*s.* 8*d.* in the pound. I do not think it is quite 3*s.* in the pound.

1870. What was it three years ago?—I remember when it was about half that, many years ago.

1871. I mean comparing it with eight years ago?—I think about 1*s.* in the pound.

1872. What is that due to?—It is due to the sanitary matters. We have got all that put on us; and our roads cost us more than they formerly did. I do not think that that is any waste of money, because I think a good road is a paying matter, but sanitary matters are becoming a very great consideration in our neighbourhood, and the school board also.

1873. Has your assessment been maintained at the full amount?—Yes.

1874. Has there been no reduction?—No, none. When I say "none" I should say not generally. There are a few exceptions. Our union consists of 22 parishes, perhaps some of the outlying parishes have had some reduction, and when that is made known to the Assessment Committee they have been reduced, but not as a general rule.

1875. Where the rent has been reduced the assessment has been reduced?—Yes, it has.

1876. Has there been a general reduction of rents in the neighbourhood?—Not very great.

1877. But still there has been some reduction?—Not generally. There are many gentlemen I could name. I rent some land under a gentleman at a very high rent. When I spoke to his steward about a reduction, he said, "I suppose you are really joking; you do not "want really any reduction. I suppose they have set "you first on the list and the rest to follow." I said to him, "Would you take the land off my hands?" but he said, "No."

Rents.

1878. That is your own farm?—It is not a farm, but it is some over land which I have been renting for some time.

1879. In respect of the farm of which you are the owner, the assessment has been maintained?—Yes.

1880. For your own farm, what you have had to complain of is, first, the increase in the rate of wages, and secondly, the increase in the rates?—Yes.

Wages and rates.

1881. At all events, you are in a better position, I presume, than your poor sons?—If I was not it would be a bad job for them.

1882. I mean as regards your own farm; it is not subject to the same difficulties as they are?—No.

1883. What remedies do you suggest?—I think that our landlords ought to meet us more fairly. I think when these figures (and I am inclined to think that they cannot be disputed) are shown to a landlord, he should meet us something, and particularly when he knows the rent is not coming from his farm, I think he ought to meet us something.

Remedies.

Mr. J. Cocks. 23 Nov. 1893.

1884. Were the losses proportionately the same on the same under lease?—No; I think the unfairness only comes in to the tenant, if he is anything like a farmer, when a landlord says to him, I shall not let you go. I do not think there is any great piece of unfairness about it, in the case of that son of mine, who rents his farm under a yearly tenancy. I do not think he has any right to say to his landlord, "I shall give up." I say that he has to give 12 months' notice, and I do not think it is a fair case, except under a lease.

1885. (*Mr. Chaplin.*) You were kind enough to give some very striking figures showing the loss in the first farm, which pays 330*l.* a year; you have given no corresponding figures for the farm for which 575*l.* a year is paid, and which is held on a yearly tenure; could you give us the figures?—I will tell you why I could not. He is in a better position, and lives in a more marketable place, and can reach Plymouth, and he keeps many cows. His reduction would not be to such an extent as the other farms, because he rears cattle, but not to such an extent as the other does. He simply buys a sheep and sells lambs. It is better land, and better adapted for that as a marketable article.

1886. Your chief complaint, as far as I understand at present, is with regard to the farm which is held on lease?—Yes; and then when I am speaking, I want to speak also of my neighbouring farmers. Some of the members of the Chamber of Agriculture wish me to make their position known as well.

1887. (*Chairman.*) But for the present we shall confine ourselves to your own experience. I understood you to say that as regards the second farm your son holds only under a yearly tenancy, you have not got the same complaint about that farm?—I do not see how I can.

Reduction of rent and termination of leases.

1888. What is your main complaint in respect to the first farm?—That the landlord with such figures as can be shown to him and cannot be disputed, I say that it is only fair that he should meet the tenants or let them off; meet them with a reduction of 10 per cent. My son went in on that farm with a capital of 3,000*l.*, and I say that he is entitled to some remuneration for that, but instead of that he does not get a penny in the way of reduction of rent, and I think that is a hard case.

1889. Of course, the condition you entered upon was a lease of 21 years?—Yes.

1890. You thought that things were at their worst?—I did.

1891. And you made an unfortunate speculation?—Yes, I did.

1892. And you now think that the landlord in view of that ought either to forgive you the rent or to break the lease?—That is what I think he should do. I think that these are unforeseen times this past year. I do not put it so much to the seasons, because we are subject to all that. I know there is a great deal in it, but I am not sure that that is a thing that should be taken into consideration. We cannot have any hold upon our landlords for that.

1893. I suppose we may put it that the fall in prices has been unprecedented altogether, such as nobody could have expected?—We never could have expected it.

1894. Not when your lease was entered upon?—No.

1895. And apart from the law on the subject you think that the landlords should, in consideration of that, reduce the rent, or allow you to give up the lease?—That is my grievance.

Land courts.

1896. If he refused to do so you think there should be a law to compel the landlord in such a case?—As there are so many good landlords going I cannot say that I am in favour of a land court, for instance, to make them do it; I cannot say that I am.

Termination of leases.

1897. That question of a land court is another matter. That would only apply when the farm is vacant, but I was speaking of the case of a lease?—I think it is a very great pity in both of these cases; I think it is a very great pity that there is not some power to prevent a man holding on so that the landlord should take every shilling from him. I do not think that it is fair to do it. 10 years ago it was thought desirable to have leases.

Mr. J. Cocks. 23 Nov. 189

1898. But your present position is that where such unexpected things have happened the law should not insist upon the lease being maintained?—That is all that I can complain of.

1899. That is to put it in its mildest form?—Yes.

1900. Now as to the farmers in the neighbourhood; you have given us your experience, and now you want to tell us something about the tenants in the neighbourhood?—I think that such cases that I speak of, where they are under a lease, they should have an opportunity of giving their farms up.

1901. Are there many cases of leases in the neighbourhood?—I think there are, several.

1902. Have you heard general complaints of the same kind?—I have heard some complaints, but I do not think that all the landlords would be like the one I have mentioned.

1903. You think where tenants have held under leases from a certain date, where they were entered before the depression came on, the law should allow them to give up their leases?—Yes, that is my idea.

Yearly tenancies.

1904. Then in the case of holdings which are not held under lease, but are held under a yearly tenancy, what have you to say with regard to them?—My idea would be that it would be only fair for the tenant to give notice to quit and be allowed to leave the farm. If the landlord will not meet you I do not see what control there is there, but I think that those landlords being so usurping, and who will not give anything back, ought to meet the grievance in arrears.

1905. Are you in favour of intervention between landlord and tenant?—I do not think we have got to that pass.

1906. Has not it been mooted at the Chamber of Agriculture?—It has.

1907. What was the result?—There were more in favour of its not being held, because we have many good landlords as well as bad landlords. We only want to make laws for the bad ones. That is the difficulty we have got; the good landlords are all right. But such landlords as Lord St. Leven will not throw back 1 per cent.

1908. (*Mr. Chaplin.*) Are the farms held on lease?—Those he calls accommodation land. He farms in west Cornwall. I do not know anything about them, but he calls them accommodation lands in Stoke Damerel.

Agricultural Holdings Act.

1909. (*Chairman.*) Are you of opinion that any alteration should be allowed in the Agricultural Holdings Act?—I thought there were one or two little matters. For instance, I think improvements cannot be carried out for drainage without the consent of the landlord. Is not that so?

Drainage.

1910. There are certain classes of improvements that cannot be made without the consent of the landlord. In the case of drainage, there is a saving provision with regard to that, that if the landlord does not give consent, the tenant may do the drainage without his consent. The landlord has the opportunity of doing the drainage himself, but if he refuses to do it, then the tenant can do it without him?—Could not he make a claim for it?

1911. Yes?—But by going to the Government they would do it, would they not?

1912. No, no?—Could he do it himself?

1913. Yes?—Against the owner's will?

1914. He is bound to ask the owner to do it; then the tenant can do the drainage?—I was not aware that that could be done.

1915. What alteration do you think should be made?—What I thought was, that if a tenant thought fit to make these improvements, and if his landlord says no—because some men want to know if you are going to improve yourself considerably, and them too; they would not allow any amount of capital upon it—but I certainly do think that the landlord should be protected as well, not to get a harum scarum tenant to lay out what he likes. He ought to prove that at the expiration of the time it would benefit the farm, and then he ought to be paid for what he has done. I was not aware that that could be done at present.

1916. It is only in the case of drainage?—I am not so strong as to buildings.

1917. You speak mainly of drainage?—I speak of drainage and permanent pasture.

Mr. J. Cocks.
23 Nov. 1893.

1918. You mean laying down permanent pasture?—Yes. I should say that unless a man thought he was going to have a very long life and his children after him, he should not lay out permanent pasture himself.

Laying down permanent pasture.

1919. (*Mr. Lambert.*) You mean without adequate compensation?—Yes.

1920. (*Chairman.*) In the case of permanent pasture, when a tenant lays it down, you think that should be included in the ordinary improvements made by the landlord?—I think if the tenant is going to do it he ought to be well paid, and I think that a tenant must be very unwise to do it. For three or four years that land is never worth much after it has been laid down to grass, and it wants to be cultivated at a very great expense, and it takes away all the manure from your farm to put over that portion of the land laid down to grass.

1921. And you think that the tenant who undertakes that should be well compensated?—I do.

1922. And that he should have the power of laying down land to grass without the consent of the landlord?—No, I do not. I think that he would be very unwise to do it at all unless the landlord would give him very liberal terms. That is what I think. It might be the landlord's wish to have it done, but I do not think it is the tenant's interest to lay down permanent pasture.

1923. Is there any other matter under the Agricultural Holdings Act that you desire to see altered?—I do not know anything more.

Taxes on land.

1924. You have already said that the land is too heavily taxed as compared with other property?—I can hardly say as compared with other property. I think that it is taxed with a greater burden than it can bear. I think these taxes have grown upon it the last few years very considerably.

Beer.

1925. Then with regard to beer, what do you say?—That is a matter I have always thought of very great importance. It seems to me that you apply an Adulteration Act in many matters, and very properly so, too, I have no doubt. But why should not beer, the best beer that can be made from malt and hops—why should it not be made from malt and hops? They say it is made from mangold wurzel and sugar now. I do not know on what sort of principle that is allowed. Those who like that kind of beer let them drink it, but let them know that they are drinking it. Why should not beer be made of barley? It is one of our own commodities. I believe no country can grow it so well as England, in many districts. That seems a commodity that should be looked after.

1926. Do you grow barley yourself?—Not very much.

1927. How is that?—Mine is not a barley soil. We require oats for my cattle, and straw of oats is very much more valuable.

1928. However important this may be it would not help you much?—No.

1929. And how would it affect your two sons?—It would help them very considerably.

1930. Is there anything else you would like to suggest?—I do not know of anything special.

1931. (*Mr. Whitehead.*) Upon those 350 acres you are under a one year's lease?—Yes.

1932. Have you any restrictions as to the cultivation?—No objectionable restrictions.

1933. Have you two straw crops following each other?—My son may have two crops following each other.

Sale of hay and straw.

1934. And may you sell hay and straw upon the farm?—Yes, I can.

1935. Are you obliged to give back an equivalent either in money or manurial value?—I should have to do it at the end of the lease, but I do not attach so much importance to that as many people do. My reason is this: I think if you are any very long distance from your market, if you take into consideration the expense of taking it there and returning the manurial value, I do not think that it would give so much profit as many people think it would. But there are times when it is a benefit. For instance, this last three or four years previous to this year hay has been selling in our markets at an average of 3*l.* per ton and no more. Now this month it is making from 5*l.* to 6*l.* I think if a man had reserved a rick or two of old hay—I know one man who has sold out 200 tons—it would be a very great hardship to be prevented from taking advantage of that. But it would not pay him to do it at 3*l.* per ton.

Mr. J. Cocks.
23 Nov. 1893.

1936. But you could do that?—I could.

1937. Does that generally hold in that neighbourhood?—I do not think it does. I do not think that very many have the advantage that I have in that farm.

1938. Have you the right of shooting?—No, I have not.

1939. Is that generally withheld in your district?—Generally, I should think.

Price of milk.

1940. (*Mr. Gilmour.*) What are you getting per gallon for your milk?—10*d.* per gallon.

1941. Is there any move of the tenants of that district to go into co-operative works such as creameries and cheese factories?—I think not.

1942. They prefer selling the milk?—Yes.

1943. (*Mr. Chaplin.*) With regard to the farm of 340 acres, is your landlord a well-to-do man, if I may ask that question?—He is a jolly fellow.

1944. I mean in pocket?—He is a very jolly fellow.

1945. (*Mr. Lambert.*) Is he a rich man?—I am not sure that he is a rich man.

1946. (*Mr. Chaplin.*) You do not think so?—He keeps a pack of hounds.

Leases.

1947. With his subscription, I suppose. With regard to your lease which appears to be at the foundation of most of your troubles; do you think that a lease ought to be broken if times are bad, as they are at present, and that the tenant should be released from it?—Yes.

1948. Supposing the converse were the case, that the times were very good, do you think that the landlord should be released from the agreement?—I think I may go a little way to answer that. If it came to a bad season and I went to my landlord to ask him, I think that it would be very unfair; but if we had a year or two—which we have had many years of now, eight years, ever since I took the farm—and it went down and down; it would be very unfair to go to him for the first two or three years, but I think that it is only fair, in such an unforeseen matter as this, to go to him now after eight years.

1949. Should you hold it to be fair, supposing there had been six or seven years of greatly increased prosperity, that the principle should apply in that case?—I suppose you could hardly say that that would be quite fair.

1950. Then you would not apply the same sauce to the goose as to the gander?—I quite understand your saying so, but what I mean is this: seeing that times, I am inclined to think, are going to be worse than what they are now, because they are sending cattle in such quantities, and our markets are choke full, we must not buoy up our minds that we shall have them better. I fancy that after these times it will be only fair to the landlord if times really improved, and wheat at 12*s.* or 6*s.* per bushel, and your beef gets as such a price, it is only fair that such a provision should be inserted in the lease.

1951. I am in full sympathy with the position that you describe, but I imagine that it rather points to this, that it is very disadvantageous to make a lease at all under the present circumstances?—That was not my idea years ago.

1952. Your views have changed upon that point?—Yes.

1953. But for this unfortunate lease you would not have felt any special difficulty?—I do not think that I could have a fair case. I should have a fair bargain.

1954. Do you agree that there should be a fixed impost upon foreign barley?—I do not.

Beer.

1955. You limit your proposals to making it compulsory on brewers to make their beer out of barley, malt, and hops only?—Not all their beer, but let us have beer of that kind, and let us know it, and let them label the foreign meat to know what we are about.

1956. You want a Pure Beer Bill?—Something like that.

1957. Do you think that would improve the position of the barley growers?—I think that it would; I fancy so.

1958. Is a tax on foreign barley generally favoured in your district or not?—I should think not, because it

Mr. J. Cocks.

23 Nov. 1893.

is of an inferior quality generally, and I fancy it comes over more for feeding stuff, than for malting purposes.

1959. In fact, I think that the general drift of your evidence comes to this; that the real remedy for the present difficulties, is a rise in the price of agricultural produce?—It is. It is a pity that farms should be let for even as low as they are, but still I hold that the farmers cannot pay it. I should like to see a rise but I do not know how it is to come about.

Sanitary rates.

1960. (*Mr. Dalton.*) You have a very high sanitary rate in your parish?—We have.

1961. Do you know how much it is?—I do not know.

1962. Have you had any sanitary work there?—Yes; we made an application for the sum of 1,000*l.* to be borrowed, and another application to have 500*l.* more borrowed for another parish, and so all that means money. That is only the thin edge of the wedge, because I see that there is going to be a very great amount to follow.

1963. The land is rated at a fourth to that rate?—That is the proportion.

1964. Have you got a school board?—We have not in our parish; we have got a voluntary school.

1965. When you speak of the rates having gone up at the present time to 2*s.* 8*d.*, what rate do you mean?—I think that they have all gone up of late.

1966. On account, perhaps, of the value of land diminishing?—I do not think that our valuation is less than ever it was.

1967. What is your parish?—St. Budeaux.

1968. And what is your union?—It is Plympton St. Mary.

1969. (*Mr. Lambert.*) Your son has been in occupation of his farm for eight years?—Yes.

1970. And his rent is 330*l.* a year?—Yes.

Reduction of rent.

1971. If he had a reduction of rent of what is prevalent in some places—33 per cent.—that would mean 110*l.* a year?—Yes.

1972. Do you think that 33 per cent. would be a fair reduction?—I think it would be as much as he could fairly expect. I think then that he might be able to pay; but I do not think he should go to the landlord for all. If the landlord would give him a certain portion, a per-centage, or even little or nothing, he should bear the burden as well as the landlord.

1973. But if your son had 33 per cent. reduction do you think he would be able to go on?—I think he would.

Rent paid out of capital.

1974. He is in reality paying the 110*l.* out of his capital for the eight years?—I do not think so for eight years. I do not think that the price of sheep has gone back all that time, but only about three years the price of sheep has gone back and wool is continually going back ½*d.* and 1*d.* per lb.

1975. So that he is now paying his rent out of his capital?—He is, and not only my son, but my idea is that farmers are getting poor and do not know it. I am only giving his deficiency in cash, but if I give you what his stock is worth so much less to what it was two or three years ago, it would be considerable now.

1976. Do you think a large number of farmers in Devonshire are paying their rent out of their capital?—I do.

1977. In the case of these leases do you think it would be desirable to have a simple form of procedure with respect to a fair rent that should be fixed?—I am not so far advanced. I am rather against that. I think that these few cases should not rule the many. If we went to market with our cattle and we could get 18*l.* a head I do not think that we should like to sell at 16*l.* a head.

Land court.

1978. Why do you object to an outside court?—Because I think it would make a disturbance between the landlord and tenant, and I think that they would never sit down quietly.

1979. Are your son and his landlord sitting down pretty quietly, your son having paid 110*l.* more than he ought to have paid?—Very.

1980. There you are bearing it?—I am in hopes that we shall see better times as he gets on.

1981. You are living in hopes?—Yes, the landlord is a capital fellow.

1982. But in what way is he a capital man?—Because he is a very jolly fellow.

Mr. J. Cocks.

23 Nov. 1893.

1983. Does jollity enable your son to live?—He would rather live with a comfortable man than with an uncomfortable man.

1984. Would a kind and good sort of landlord be very likely to get a higher rent than a man who is rather irascible?—I am sure he would; some tenants would be better satisfied with a reduction of 50*l.* from such a landlord than 100*l.* from another landlord.

1985. Do you think there is a feeling growing in favour of a land court?—No, I do not think there is.

1986. If times get worse do you think that there would be a feeling in favour of it?—It must be so unless the leases can be abolished. If leases are abolished there will be no need for a land court.

1987. You mean for 21 years? Do you think that fixity of tenure was beneficial during the past years of tenancy?—Well, I thought we were at the bottom of the hill. I had been waiting for a long time and thought we had come there.

1988. Do you think that a good landlord who had made a fair reduction of rent would be affected by a land court?—I think it is a bit rough to step in between a good landlord and a tenant.

1989. Do you think they would step in in that case?—I am not so sure whether they would or not.

1990. There would be no reason to step in if you had a good landlord?—No, there would not.

1991. But then would not you think it desirable to step in between a tenant and a bad landlord?—I do.

1992. There you are in favour of a land court—I will not say a land court; an outside authority, a conciliation court, if you please to call it so—in the case of landlords who do not deal fairly with their tenants?—I do not think that should be held over the heads of good landlords.

1993. I am talking now about bad landlords?—I am not so far advanced as to vote for a land court up to this time.

1994. Supposing that your son, the one who is paying 575*l.* rent offered a fair rent for his farm and the landlord did not choose to accept that rent, do you think that it is fair that that son should be compelled to go to the expense of changing his farm and to incur the loss which must accrue to a man who has to go into a fresh neighbourhood?—I do not see why. Of the two evils let us have the least; losing 200*l.* a year and only 50*l.* for the change.

1995. Would the landlord let the land go out of cultivation?—He would not. Some landlords, I am sorry to say, have stewards, and they try to make the landlords think that it is worth the money; they say if you do not pay it another will.

1996. Do you think that reductions have been made in a greater degree to new tenants than to sitting tenants?—I do.

Farms let by tender.

1997. How are farms let in your neighbourhood?—By tender.

1998. And the man who offers the most money usually gets the farm?—Such a man as I may name, the Duke of Bedford, the Earl of Morley, the Earl of St. Germains, and Lord Mount-Edgcumbe, would not take the highest bidder.

1999. Those are the good landlords; of course we do not make laws for good people, but only for bad people. Do you think the landlords are what you would place under the category of bad landlords who would accept the highest tender?—I almost think some of them would take half-a-crown extra.

Ground Game Act.

2000. Do the farmers suffer in your parts from the ravages of game?—Not very considerably.

2001. But they do suffer?—There are some that do. We have the power now to destroy rabbits.

2001. Do you think that power should be made that they should destroy rabbits exactly as they please?—I do.

2003. And do you favour an alteration in the Ground Game Act in that respect?—Yes.

2004. You should favour it?—I should.

2005. What do you consider as being in your part of the world the average general reduction of rent?—You must not take me over Devon and Cornwall.

Mr. J. Cocks. 23 Nov. 1893.

2006. I mean your own neighbourhood, where you can speak authoritively?—Not 7 per cent. certainly.

2007. Yet for all that the price of the agricultural produce which they have to sell has gone down more than 50 per cent.?—It has.

2008. (*Lord Vernon.*) What are they allowed to do with rabbits?—They are allowed to trap them in their holes. They must not be out of their holes.

Agricultural Holdings Act.

2009. (*Mr. Lambert.*) You would favour an alteration in the Agricultural Holdings Act which would give to the tenant compensation for all the improvements that added to the lettable value of the holding?—That is as far as I would go.

Compensation.

2010. And you would advocate a cheap, easy method of assessing this compensation?—I think that is a matter of great importance. I meant to have said something about that. I heard some evidence given by Mr. Harrison that they have a very great dread of it, and that it is a very great expense that is brought upon the ratepayers, and they hit up those who get very little out of it.

2011. Would such a tribunal as this meet the case: where two practical men and a county court judge could be appointed to assess a dispute between a landlord and tenant at a fixed reasonable rate—would you favour such a tribunal?—I would.

2012. (*Mr. Chaplin.*) Disputes about what?—About compensation.

2013. (Mr. *Lambert.*) I said disputes about compensation; I was not referring to land then. (*To the witness.*) Do you suffer from railway rates in your part of the world?—I do not think so.

2014. Because you are near a market town?—We are near a market town. There are certain few things but not much to complain of.

2015. (*Lord Vernon.*) I have referred to the Act and I find that it is as I thought that the occupier himself may shoot the rabbits?—I thought not.

Ground Game Act.

2016. "The occupier himself and one other person "authorised in writing by such occupier, shall be the "only persons entitled under this Act to kill ground "game with fire-arms"?—That is not saying very much.

2017. (*Mr. Lambert.*) To be really of any use in killing rabbits you must have two or more guns?—Yes. You cannot kill them otherwise. You might ask a few friends, but your particular fellow will not have it.

2018. (*Captain Thomas.*) Do the tenants generally avail themselves of the protection of the Ground Game Act? Do they shoot or does the landlord allow them to shoot?—You see there is nothing to prevent them. I just named to you where my son is farming. I suppose game would be as plentiful under the acreage there as it would be almost in any place, because it is not a very large place. The gentleman who owns it, Mr. Cory, Langdon Court—the Duke of Edinburgh was there on Monday, and the Duke was there yesterday, and shot with five others over 1,600 head in one day, and that would be a large thing for one day's work. But I do not think he would like to see his tenant running about with his gun. I do not think he would say—being such a good common sense man—that you shall not do it.

2019. He has not made an agreement that his tenant is not to do so?—I do not think that he would say so, but still he would rather not.

2020. Do any of the landlords agree with their tenants not to use a gun or preserve the rabbits for them?—I am not aware.

2021. Is there much damage done to crops by game?—I dare say there is a good bit in some places.

2022. Are farmers compensated?—No, I do not think they are much compensated.

2023. You say that the farmers pay their rents out of capital. Have they much capital?—Just like myself. A few years ago I had money but the longer I live the poorer I am.

2024. Are they borrowing?—They are much poorer than they were a few years ago.

2025. What I asked was if the farmers are borrowing money at the present time to pay their rents?—I doubt whether they are doing much of that. Bankers generally are pretty sharp, and I fancy that they think that lending to a farmer is lending to a bad customer.

2026. What is the general condition of the labourer now compared with previous years, is it better or worse?—I think that we are better at this moment, but I am afraid the time is coming when they will get their share, for I have seen them so plentiful, such as they are.

Mr. J. Cocks. 23 Nov. 1893. Labourers.

2027. Are they generally members of some friendly society or sick club or something of that kind?—Not many of them.

2028. Have they all got cottages?—The ones I am alluding to have got cottages.

2029. Have they got any land?—They have as much garden as they can cultivate.

2030. Do they pay rent?—No; they get that with their wages; it is part of their wages.

2031. What is the usual mode of hiring? Is it by the year, month or week?—By giving a month's notice, it is by the week.

Hours of labour.

2032. What are the hours of labour?—They vary very much; it depends upon the occupation that they have.

2033. Take a carter in the summer time?—A carter would be at his work at 6.30, and then he would get half an hour for breakfast and an hour for dinner, and leave off work at half-past five.

2034. What would be his hours in the winter?—In the winter it is just the same, very little difference. He is not wanted so much in the winter as in the summer.

Quality of labour.

2035. Is the quality of labour as good as in times past?—It is very different.

2036. How do you account for it?—It is easily accounted for, very easily I think, because take the school boys before they come away to work. I have had the honour of being a member of the Board of Guardians where I am now, for many years on different boards. You see the law is this if a man has got five or six children, and they are at home half starving, if they do not pass the standard, or unless they are over 13 years of age they are not allowed to go to work. They might be put out part of the time, I think. It is a very great pity that it is not allowed, and I think these restrictions are carried to too great an extent.

2037. Has the supply of labourers decreased; have you a sufficient number in the neighbourhood?—We have plenty, such as they are, but they are not efficient men; they are not brought up to farm-work; that is to say, we get so many of the unemployed. Then the children do not go to work until they are 13 or 14, and they are not fit for anything, and then they come to the towns and you have only got the unemployed labourer to do your work.

Agents.

2038. You said something about the agents. Are they practical men as a rule in your district?—Some of them.

2039. Are solicitors sometimes engaged as agents?—At some places they are.

2040. And are they without any personal knowledge of agriculture?—Some of them are at some places.

Fixity of tenure.

2041. (*Mr. Everett.*) On the question of fixity of tenure. You have to do with land on three different terms of tenure; that is, a holding by the year for one son, and another son farming under a lease of 21 years, and one farm you own yourself?—Yes.

2042. I gather from your evidence that the more fixity of tenure you have the worse trouble you are in—that you like your farm best where you have not got fixity of tenure?—I do in such times as these.

2043. When prices were going up you liked fixity of tenure?—Yes.

2044. When they came down you do not like it?—That is so.

2045. (*Mr. Lambert.*) If you had a fair rent would you like fixity of tenure?—I do not know.

2046. (*Mr. Everett.*) I meant fixity of tenure at a fixed price?—Really I do not know about a fixed price; I do not think that it would be wise for any tenant to have a lease at this moment; I do not think that we know what is going to happen.

Fall in prices.

2047. I understood that your principal grievance, as compared with the past, has been the fall in prices?—Everything has gone down. I can assure you that the figures I have given are rather under the mark than over. I am sure that they are under the mark. We were in a better position to pay the rent eight years ago than at present, if we had it for nothing. We want to press upon our landlords to meet us, and I

Mr. J. Cocks. 23 Nov. 1893.

think it only wise to do so, but they hold on to the last and get rid of their tenants, and by-and-bye they will have to do it.

2048. You told us when you took this farm a few years ago you expected that prices were not likely to remain so low?—That is so.

2049. Were not you aware that at that time some of the leading economists of the country predicted that we had entered upon a period of falling prices? Perhaps you were not aware of the fact at the time?—If I had I do not think that I should have taken much notice of it, because I have generally an idea and try to carry it out. I was wrong this time.

Agricultural Holdings Act. Compensation.

2050. (*Lord Vernon.*) Do you suppose that most of the farmers have been satisfied with the compensation under the Agricultural Holdings Act?—I think it has been too expensive a machinery to work out. I do not think that it has given satisfaction. It certainly is a benefit, there is no doubt about that. It is a very great benefit, because before this was in existence, good gracious! a farmer might go to any expense and no matter what expense he ran to he would not be compensated. I remember a farmer in our neighbourhood that went on a farm and took it for 14 years, and the year before the lease was out he went to the landlord and asked to be released, and the landlord said, "What "are you in such a hurry for? Why not let it stand "over? You know we should not part." But when it came to the day the landlord said, "I do know not what "is the value of your farm." That farmer made out that he had spent 30 per cent., and 25 per cent. of that belonged to the tenant, and a year before the landlord said we should not think of parting. That is the sort of landlord to put into the land courts.

Mr. J. Cocks. 23 Nov. 1893

2051. But you talk in a most casual way about how easy it is for a man under a yearly tenancy to leave his farm, and that consequently you do not think there ought to be any difficulty as regards a man in that position. But surely unless the compensation is full a man is nearly in as bad a position under a yearly tenancy as under a lease?—I do not see any hardship in that; but I say there is very great hardship in leaving a farm with one year's notice, but of the two evils I should prefer the least. It is better to let him lose 100*l.* or 200*l.* than to lose the whole lot.

2052. As a practical man you think that the settlement under the Agricultural Holdings Act ought to be simplified?—I fancy it is; it is a great improvement to have it, because we generally see that it makes bad landlords shake; they do not like it, and it does them a lot of good.

The witness withdrew.

Adjourned to to-morrow at 12 o'clock.

Fifth Day.

Friday, 24th November 1893.

PRESENT:

The Right Hon. GEORGE JOHN SHAW-LEFEVRE, M.P., in the Chair.

Viscount Cobham.
The Right Hon. Baron Vernon.
The Right Hon. Henry Chaplin, M.P.
Sir Robert Nigel Fitzhardinge Kingscote, K.C.B.
Robert Giffen, Esq., C.B.
Captain Owen Thomas.
Francis Allston Channing, Esq., M.P.
John Clay, Esq.
Cornelius Neale Dalton, Esq.
Robert Lacey Everett, Esq., M.P.
John Gilmour, Esq., M.P.
George Lambert, Esq., M.P.
William Cutlack Little, Esq.
Walter Hume Long, Esq., M.P.
Charles Whitehead, Esq., F.L.S.

Herbert Lyon, Esq., *Secretary.*
R. F. Crawford, Esq., } *Assistant*
Freeman Thomas, Esq., } *Secretaries.*

Mr. John Watson called and examined.

Mr. J. Watson. 24 Nov. 1893.

2053. (*Chairman.*) You are land agent to Lord Macclesfield, are you not?—Yes.

2054. And you manage estates in Buckinghamshire, Dorsetshire, Oxfordshire, and Essex?—I have had none in Essex lately.

2055. How much have you in the other counties?—In Dorsetshire we have a small lot, only about 500 or 600 acres.

2056. How much in Oxfordshire?—About 6,000 acres.

2057. And in Buckinghamshire?—About 1,500.

2058. You gave evidence before the Duke of Richmond's Commission in 1880, I believe?—Yes.

2059. Do you still manage Lord Macclesfield's Home Farm as you did in 1880?—Yes, the same farm and the same place.

2060. How many acres are there?—600.

Fall in prices.

2061. Will you state to the Commission what is the present state of the land which you now manage?—I have noted down a few facts about the state of things. In 1881—that was the time of the former Commission—I was then in hopes that the depression would shortly pass over. I had no thought of the price of corn coming down so very much as it did. I thought the bad seasons that we had then for about two years would pass over and we should get on better; but instead of that, the prices have come very much down indeed. There was then a reduction of from 10 to 15 per cent. returned to the tenants, and since then the reduction has increased very much, something from 15 to 20 per cent. more in many cases.

Mr. J. Watson. 24 Nov. 1893.

2062. I understand that in 1880 the land which you managed had already suffered largely from depression mainly due to the seasons?—I thought so then.

Reduction of rents.

2063. And there had been temporary abatements of rent, or were they then permanent reductions of rent?—We have been obliged instead of having temporary abatements to make them permanent, and they have increased them very much.

2064. They were only temporary abatements of rent up to then?—That was so.

Mr. J. Watson.
Nov. 1893.

2065. But since then you have made these abatements permanent, and have been obliged to increase them from 10 to 15 per cent. by 10 or 20 per cent. more, is that so?—Yes.

2066. What is the total reduction of rent upon the land that you managed as compared with 12 years' ago. I mean the permanent reductions?—It would amount to about from 25 to 35 per cent. on the ordinary good lands.

2067. And on bad lands is it more than that?—It is 30 per cent., but a good many of them are 33 per cent., most of them have lost one-third.

2068. You said on the good lands?—Yes.

2069. Is it greater upon the inferior lands?—The loss on the inferior lands is much greater.

2070. What is it on the inferior lands?—The inferior lands that used to be let at about 20*s.* to 25*s.* per acre are now let at 12*s.* 6*d.* and under.

2071. That is with the 50 per cent. reduction?—It is; on the thin lands on the Chiltern Hills.

2072. Are those arable farms?—They are all arable farms.

2073. When you speak of the good land where the reduction has been less, is that arable land or grass land?—They are mostly mixed on the lower farms, in some cases one-third would be pasture, and in other cases half would be arable and half pasture.

nd laid
wn in
rmanent
ass.

2074. Has there been much land laid down in grass?—Not a very large quantity of land has been laid down to permanent grass. I think on the hills that the best way of getting over the difficulty is to lay down to grass for about two or three years and then break it up again. It does not take kindly to grass in a general way, and it does very well for about two or three years.

2075. (*Lord Cobham.*) Are you speaking of the land on the chalk or on the oolite?—I am speaking of land over the chalks.

2076. (*Chairman.*) You say, that you found it well to lay down the grass for two or three years, and then plough it again?—I think they work it cheaper in that way than in other ways. It recuperates and the land gets better, and it produces more. When they try to lay down to permanent grass after the first three or four years, it takes much time before it grazes to have any value.

anges of
ancy.

2077. With these reductions of rent, have you been able to keep the tenants?—Mostly. We have not had many changes even since 1881. But I am afraid there seem more signs of change now. Even at the low rent, although they do not ask for further reductions, the persons who are wealthy, and can do without it, are giving them up.

2078. Those who are well off and can do without it. But the others who are not so well off, do they hold to their farms?—There is one farm this year that a person has given up, that he has held all the time through which he has had his reductions with the others, but he has given it up this year, because he says that it does not pay enough. The poor ones stick to them, but they have great indulgences from the landlord, or else they could not. It is a very bad state of things. If the landlord had insisted upon his rights, half the farms would have been tenantless.

ears of
it.

2079. Are there large arrears on the properties you mention?—In 1881 there were scarcely any arrears. They did not begin until 1879, but since then they have increased very much.

2080. What do they amount to now?—In 1881 from 10 to 15 per cent. abatements were made, and I can mention cases that had to be made into permanent reductions of from 10 to 15 per cent. more, making the rents of good land, from 25 to 30 per cent.; and in some cases 33 per cent. was taken off.

2081. But about the arrears, have the arrears accumulated?—The arrears have accumulated within these few years considerably. The arrears are nearly double what they were, in 1881 even although considerable sums have been written off. The position of many of the tenants is worse in every way within the last few years.

2082. Has any land gone out of cultivation?—None; the land is pretty good that I have had to do with.

nd in
id.

2083. What is your experience with regard to the farm which you have in hand, and manage yourself?—The income has gone sadly down on the land in hand even with the greatest care. I should say that it is now quite a rent less gross income than it was in 1878 when things were pretty straight.

Mr. J. Watson.
24 Nov. 1893.

Results of farming since 1878.

2084. How many years have you managed it?—About 38 years.

2085. Did you generally work it at a profit until 1878?—It worked very well up to 1878. It was meant to be worked for a profit. It was never meant as a mere fancy thing.

2086. The owner wished to make the best of it?—Yes.

2087. And up to 1878 you did well?—We did very well up to 1878. It paid its rent and made a fair little sum besides, but since then it has gone on getting a great deal worse. We have had two years' bad crops as well as low prices.

2088. I suppose the two years were 1878 and 1879?—1878 and 1879. And 1879 and 1880 were worse with us than 1878.

2089. Then you had after that a series of good years?—We had a few good years, but the prices got very much down. The wheat has fallen since then from 12*s.* to 17*s.* per quarter, and the barley has gone down from about 8*s.* to 10*s.* per quarter lower than it was then. I think as to the price of wheat perhaps the reduction is owing to the very cheap means of conveyance that brings foreign wheat in so cheaply; and the malting barley has lost a good deal of its price from the circumstances of their putting the duty on beer instead of malt.

2090. Taking the last 10 years, but omitting the years 1878, 1879 and 1880, can you say what the general financial result on the farm has been?—It has been mostly bad ever since.

2091. Have you made a rent upon it or not?—No.

2092. No rent at all?—It has made a certain amount of rent, but it has not paid its rent or anything like it for some years.

2093. Nor the interest on the capital?—No, not one bit; and these two or three years very little rent.

2094. But still you grow wheat on it?—We still grow wheat. It is good land for wheat and we still grow wheat upon it; but the wheat does not pay much, and particularly these last few years; the wheat, has been, in fact, cheaper to feed with than any other grain almost.

2095. Do you sell the straw at all?—No.

Freedom of sales.

2096. In case of the tenants, have you relaxed conditions of that kind?—Yes, a good deal. The tenants have been allowed to sell some wheat straw and clover hay, and have mostly taken advantage of that.

Price of straw.

2097. Has the price of straw improved?—The price of straw is very high just now, but it is a very scarce article this year. I do not think we have one fourth of the usual quantity of straw.

2098. But take other years, the last three or four years, have they made much by the sale of straw?—It does not amount to much; when the prices are about 2*l.* per ton it does not come to much, but when the price comes to 3*l.* and 3*l.* 10*s.* it is worth selling.

Wages.

2099. As regards wages, has there been any fall in wages?—The wages are much about the same as they were in 1881.

Quality of labour.

2100. What do you say as to the quality of the labour?—I think it is much about the same. I think the labour is quite as good as it was. I think the labourers are more contented and more willing to stick to their work than they were when there was so much change and agitation among them, and that seems to have ceased very much; and they seem a good deal more contented. We seem to get on very well with them.

Annual cost of labour.

The gross amount of the cost of labour in 1881 was 1,255*l.* 19*s.* 2*d.*, and it goes down to the present time as follows:—In 1882, 1,170*l.*; in 1883, 1,108*l.*; in 1884, 1,242*l.*; in 1885, 1,157*l.*; in 1886, 1,174*l.*; in 1887, 1,016*l.*; and in 1888, 1,022*l.*

2100*a*. That is your outlay upon the labour of each year?—Yes, the outlay over 600 acres. And then it goes on: in 1889, 1,050*l.*; in 1890, 1,048*l.*; in 1891, 1,192*l.*; in 1892, 1,200*l.*; and in 1893, ending Michaelmas 1893, it is 1,136*l.*, so that there is not much difference.

2100*b*. In 1880, before the Duke of Richmond's Commission, you said that there had been a rise of wages

Mr. J. Watson.
24 Nov. 1893.

for the labourers up to 1878, and then that there was a fall between 1877 and 1881?—Yes, there was a little.

2100*c*. And since 1881 they have remained about stationary?—About stationary; there is very little difference over the whole farm since 1891, and the wages are just about the same as they were, 12*s*. in the winter and 13*s*. in the summer for ordinary labour, and 13*s*. and 14*s*. for the hands that are tending cattle. They have large advantages, and cottage-rent free, and 3*l*. as wages at Michaelmas which counts more than another 2*s*. for them.

Selling price of wheat.

2101. In 1881 you stated that you could only grow wheat profitably at the price of 44*s*. and 45*s*. per quarter?—I thought so and people thought that was low then, but they would be glad to grow it now if they could get that for it. 1*s*. on the quarter of wheat makes about 1*s*. an acre difference on the value of all your arable land. If you grow four quarters to the acre, and one fourth of that arable land being wheat you have 10*s*. to 17*s*. per acre, that would really reduce the value of the land something like from 10*s*. to 17*s*. an acre over the whole of the arable land.

2102. What do you say—is that from 1*s*.?—From 1*s*. per quarter of wheat if you grow the four quarters of wheat on the one fourth of the land would run to 1*s*. all round the arable land.

2103. So that a fall of 10*s*. per quarter in the wheat means a fall of 10*s*. per acre in rent?—And the reductions of rent have been more than that on good land.

Rates.

2104. Have you anything to suggest with regard to the future?—One hardly knows what would improve us. There is one thing we have a little advantage in. We get cheaper manures. The manures are a moderate price and we have a little advantage in the lower prices of feeding stuffs. But I can see no means of helping the cultivators of the land otherwise than by trying to relieve the land of some rates. I do not think it would be any good to halve the rates between the tenant and the landlord, because, of course, the value of the land would rise and fall at once as between the two unless the land could be relieved altogether of some of its burdens.

2105. How have the rates been during the last ten years, have they remained about the same?—They have not been heavy; they are not so heavy as they were a good many years ago, but still the rates are too heavy. It is hardly fair that road rates should all come on the land. I think that the people who use them—brewers and others who make a good deal of money by using them—ought to help to keep them up. I do not know how it would be managed.

2106. Have the tenants had the advantage of lower assessments?—Yes, every one has taken advantage of that. Since the rent has been lowered they have had their assessments lowered too.

2107. They have got some benefit in that way?—Yes, but it produces less money. You are obliged to pay more per pound.

2108. Have the rates risen in the pound? I thought you said they were about the same?—I think they are about the same.

2109. Then the tenants have had the advantage of the lower assessment?—They have.

2110. Then you have nothing to suggest except greater relief in the direction of taxation?—I think that is the only thing that could be done for them. I think so.

Farmers' capital.

2111. (*Lord Cobham.*) Do you think that it would be an advantage if more capital were applied to the land?—Yes, there is no doubt about it. There are many farmers, who have skill to manage the land very well, who are very short of capital. I think that bankers used to advance money to them years ago when things were prosperous, and now they hold their hands very much. I also think that the farmers took on rather too much land and were in the hands partly of dealers. That was also withdrawn, so that a good deal of pressure might be relieved if they could have money at a cheap rate. The skilful farmer that is solvent and is able to go on if he had capital at a cheap rate just to stock his land properly, would be better. Those who do not have any stock at all now have dreadful losses on account of the lower price of grain. They lose by every turn, those who have plenty of stock do better.

Loans.

2112. Do you suggest that the Government should advance money to tenant farmers?—I am not sure how far it can be done, but there are many farmers that really go and farm their land in a way, if they had the means could do well, who cannot go on well now.

Mr. J. Watson.
24 Nov. 1893.

Outlay of landlords' capital.

2113. Do you think that the outlay of landlords' capital is unduly restricted of late years?—Very much indeed. Then it is not needed so much. We drained all this land when I first came to Lord Macclesfield's; every bit of the land that was in need of draining was drained within the first 10 or 12 years, and those drains have gone on, and nothing has been required since. If any field was found to be wet it would be drained for them now. But there is not much that the landlord could do for them more.

2114. In the case of your own farm, you have ample capital, I suppose?—Yes, abundance of capital and abundance of stock.

2115. And yet you quite fail to make it pay?—Yes.

2116. It is a dead loss?—It does lose.

Quality of labour.

2117. As to the quality of the labourer, is that much the same?—I think so. I think that the labourers are much the same with us. I find them quite as willing to do a day's work as they ever were. They are certainly a little better paid than they were, and their comforts are more looked after than they were years and years ago.

Expenditure on improvements.

2118. (*Sir Nigel Kingscote.*) Have you had to lay out much money in building on the farms under your control during the last 10 years?—There has been a great deal of money laid out in buildings and keeping in repair. The tenants will do nothing for themselves, and those who are able, demand more than they used to do, and we must do it. It is obliged to be done. It really digs very much into the rents, the outlays on repairs, and improvements on the buildings.

2119. According to the agreements, were the tenants to repair their buildings or not?—They were in our case mostly to pay half the labour on the repairs, and we found all the material.

2120. But now as a matter of fact you have been finding the whole?—We are obliged to find the whole.

Deterioration in cultivation.

2121. Has the land generally deteriorated in cultivation by the tenant farmers in the last 10 years?—Well, I think perhaps, half of it has deteriorated.

2122. And in condition too?—Yes, I think so. It is want of means; they have not the spirit, and have not the means to keep up their cultivation, and keep it in the order that it should be in. There are a great many of them very discouraged.

Rental.

2123. (*Mr. Whitehead.*) Would you tell me what the actual rent per acre is of your Oxfordshire property?—It runs from 23*s*. to 25*s*.

2124. And in Buckinghamshire?—In Bucks the rents were about 25*s*. and they are now reduced to 12*s*. 6*d*.

2125. And in Dorset?—In Dorset the reductions have not been so great, but these few years have pressed very badly upon them. The reductions in Dorset were only from 10 to 15 per cent.

Depression in Dorset.

2126. And there has been more depression in Dorset, I think you say, than in the other counties?—Yes, through the seasons only these two years. Before that they seemed to get on very well; there were no arrears until two years ago.

2127. And yet the reductions have been less in Dorset?—The reductions have been less. It is all grass that I have had to do with mostly there, and it is mostly dairy, the farmer and his family doing the work.

2128. Are the farms let on leases or are they yearly holdings?—Yearly holdings.

Rent on land in hand.

2129. May I ask you what rent you put on your own farm that you have in hand?—30*s*. per acre.

2130. Have you any small tenants on your estate?—About 100 acres is among the smallest.

Large and small holdings.

2131. Do you think they have done better in this time of depression than the rest?—I think they have done worse.

2132. What do you say about the largest holders of land?—Our largest holders have done rather better than the others. The largest holders of the land have from 400 to 500 acres—we have none larger than that.

2133. Would you call a 400-acre farm a large farm?—A 400-acre farm is among the largest. We have about half-a-dozen of 500 acres let.

2134. How is it distributed; what would be the cultivation, the division of the crops?—The 500-acre farm.

2135. Is it mostly a fair proportion of grass?—I should think about half grass.

2136. In Oxfordshire you are speaking of?—I am talking of Oxfordshire; taking the county as a whole I think it would be half-and-half.

ll in ices.

2137. (*Mr. Long.*) You told us just now in answer to the Chairman that the prices of produce have been the real cause of the trouble and is the real cause now?—Yes.

2138. Have you formed any opinion at all how far the price of produce is affected in the opposite direction by the diminished cost of production, that is to say, have you been able to form an opinion as to the extent and use of machinery?—I think you should put that against the other and try to think out the advantages we have, and it seems to me that there is a saving on account of having cheaper labour and cheaper manures.

2139. By cheaper labour you mean machine labour instead of hand labour?—You get your harvest in rather quicker and that is the point rather than real cheapness. We find that we are saving about 5*s.* an acre.

2140. Did you take that into consideration when you quoted your figure just now of a falling off of 12*s.* to 17*s.* in fall of prices?—That is gross on one side.

2141. Are you taking anything into consideration in the shape of cheapened production?—We do save something of that in cheaper food for horses and cattle.

2142. Is not there a little saved by the system of bringing the stock to earlier maturity; the practice which I imagine exists in Oxfordshire of selling out the lambs earlier than they used to do?—We have always sold sheep at a year old, and our cattle at two and three years old.

eep- eeding.

2143. Have the sheep farmers at all attempted the more modern system of forcing out the lambs much younger?—They are going from 8 to 12 months old. Most of those who keep Hampshire Downs, and Oxfordshire Downs, the lambs dropped in March get off the land in November and December. They begin in November and get them off in December and onward, until they are a year old.

2144. Have they tried the crossing of Hampshire or Oxfordshire Downs with the Cotswold or Scotch sheep with the view of getting the winter lambs?—No. I have not seen that.

tes.

2145. With reference to the assessment you told us that the farmers had derived the full benefit of the reduced assessment consequent on the reduced rent?—They have.

2146. You also told us that notwithstanding the fact that the assessment had been reduced, the rates had not increased?—I do not think they have.

2147. Does not that point to one inevitable conclusion, that these burdens have been shifted from the agricultural shoulders to some other class of property?—Most probably; the cheap bread and cheap farming produce would tell in making cheaper keep for poor people.

2148. You mistake me. That has nothing to do with the rates?—It will have everything to do with them. If a union contract for bread at 3½*d.* per lb., it would not cost them so much as if they had to pay 9*d.*

2149. In that case the rates would have fallen. As I understand they have not been raised?—The reason why they have not been raised is that the assessments have fallen, and the cheaper bread, I fancy, has kept down the expenditure.

2150. Do you think that the cheaper bread consumed in the workhouse would in any way make up for the reduced assessment?—I think that we have had a good deal of help for the rates from the Government for the last two years. That has helped us out.

2151. That is the point. I wanted to ascertain whether in your opinion the fact that, although the assessments have been reduced while the rates have remained the same is not due very largely to the system of what is called, for want of a better term, grants in aid, which have ceased to be grants in aid, but are now contributions from the Imperial exchequer?—They have. When you have very cheap bread you do not have so many people falling on the rates.

2152. Is that the case—that pauperism has decreased?—I think so considerably.

2153. Then I presume that you attribute the maintenance of the rates at the same level very largely to the effect of the grants in aid, or contributions from the Imperial exchequer?—The grants in aid and the cheap food helping to keep poor people from falling on the rates.

Rent on land in hand

2154. (*Mr. Dalton.*) You reckon that that home farm should produce 30*s.* per acre. Is that the rent you put upon it?—Yes.

2155. What has it produced in the last 10 years? You say you make something by it. Are you able to say how much an acre it has made?—I do not think I have the particulars with me, but it has produced about from 30*s.* to 2*l.* an acre less in the gross—than it did in better times.

2156. But you do not know what it produces now on an average in the shape of rent?—I do not think that we have had any rent for the last two years.

2157. (*Chairman.*) But the eight years before that?—Before that it did produce a little.

2158. How much?—The rent was 950*l.* or something of that sort and it produced from 500*l.* to 700*l.*

2159. On the average of these eight years?—In most of the other years.

2160. And in the last two years nothing?—In the three years 1879 to 1881 it did nothing.

2161. But then from 1881 to two years ago it produced from 500*l.* to 700*l.* a year?—From 500*l.* to 700*l.* a year.

2162. And the last two years nothing?—Nothing.

2163. Of course the last two years have been very bad seasons for wheat?—Very bad seasons.

2164. And the prices combined?—Yes, and very little produce.

2165. But you made something more than half your rent?—Yes, on the average of the other years.

2166. Therefore your experience very much tallies with the experience of farmers, namely, that all round the rent has been reduced from 30 to 50 per cent.?—Yes, I think so.

Rates.

2167. (*Mr. Lambert.*) In your suggested remedies your principal suggestion was to relieve the land of rates. Can you give any statement as to the amount of rates per acre upon your land, or upon the land you have in charge?—It would be about 4*s.* or a little over.

2168. You have included poor rates and highway rates?—Yes, the poor rates and the highway rates.

2169. And the school rates?—We have no school rates in our district, because we have no board school; we have a private school.

Farmers' capital.

2170. You said just now that many farmers were short of capital. Were they short of capital prior to 1880?—I think myself that they had perhaps rather more land than their capital would take, but they have had help from the banks and other sources that are now dried up.

2171. Do you think that farmers' capital has diminished since 1880?—Very much; and a good many were farmers that had saved something and who have simply given it up from 1879. In fact, from 1874 to 1884, these 10 years, a good many old farmers gave up farming, and the farms went into younger hands, and the younger men came in short of capital, and I think in that way it has helped the depression.

2172. But my point is this: has the farmers' capital diminished since 1880?—It has, no doubt.

2173. Are your farms let by tender?—No.

2174. Do you practically fix the rent?—Yes, mostly Of course it is open to a man to make an offer if you fix the rent.

Sporting rights.

2175. Have your tenants the right of killing ground game?—Yes.

2176. That is the extended right not permitted under the Ground Game Act?—Only under the Act at home, close to home; but all the tenants that lie wide have the full shooting.

Deterioration in cultivation.

2177. Is the land well farmed in your district?—Yes, I think it is mostly pretty fairly farmed over the district I have to do with.

Mr. J. Watson. 4 Nov. 1893.

2178. Because in the evidence before the Royal Commission on Labour you said, or you are reported to have said, "I do not know a parish where the land is well farmed?"—I do not know a parish where the whole land is well farmed now. I certainly could not say that the land over a parish is anything like farmed so well as it might be.

2179. Is it generally well farmed?—I can hardly say that it is generally, because if you were going over a place you would see only one farm here and there that was really well done.

2180. What is the reason, in your opinion, that it is not well farmed?—It is difficult to trace; in some cases it is that the people really have not the skill as well as the capital to do it.

Arrears.

2181. You said just now that your arrears had increased to double the amount they were in 1880?—Yes.

2182. Could you give us any amount, in proportion to the net rent, of the arrears?—I think I could.

2183. (*Chairman.*) Do the arrears amount to one year's rent on the estate, or half a year?—No, they would not be a year's rent.

2184. Something between half and three-fourths?—About a half year's rent, taking the estate as a whole.

2185. Have you written off a good many arrears?—A good many arrears. The farmers have paid their rent well up to 1879. Then they had great losses by losing all their sheep and some cattle, and there were two years then, I am speaking of individuals that I have in my mind, who were unable to pay, and those arrears were in a great part written off.

2186. Those were losses due to bad seasons?—The losses were due then to bad seasons, but these two years they were able to pay reduced rents without getting further into arrear, so that they are getting on.

Rents before 1879.

2187. (*Mr. Lambert.*) So that really the reason they are keeping their farms is because they were paying too much rent before?—Well, for 20 years or 25 years they paid the rent very well and they never complained that it was too much, and so we were bound to believe that it was fair and right up to the year 1879. Disastrous years came and they lost their cattle, and the crops were bad as well, and of course it proved disastrous to them. One does not know if the rents had been lower all through whether they would have saved anything to tide them over or not, or whether they would have spent the money as they went on and would not have been any better off. I do not know that. But the rents were supposed to be fair.

2188. (*Mr. Channing.*) I think you said if the owner wished to make improvements he could do so?—Yes.

2189. I suppose the rents from which those reductions were made were full rents, the rents before 1878?—It was the farm in my own hands that I said we had made the most of.

2190. The whole estate I understood you to say. Would you say that the rents from which these reductions have been made were full market rents or low rents?—They were fair market rents before that disastrous year of 1879; they were just fair rents. The land was not cheap, but it was quite fair and satisfactory, I mean.

Reduction of rent.

2191. I do not think you stated to the Chairman from what year the reductions were increased and made permanent. You said that the reductions were increased by 10 to 20 per cent. in addition to the 10 or 15 per cent. before, and I should like to know from what year the permanent reductions were made?—They were made permanent, in fact there were two reductions made about 1884 and another about 1886 or 1887, I mean 1888 or thereabouts. As we went on things did not mend, and they asked for their rents to be fixed so that they might get the rates down, and so it was done.

2192. That was after the tenants had been subjected to the full force of the depression for about six years?—Yes; but they were getting returns before that.

2193. Of 10 to 15 per cent.?—Yes, and then they were made fixtures, because the tenant wished to get his rates down. It was not fair for a man that had a fixed low rent to get a lower rate to pay because it threw a heavier rate on others. The rents had to be fixed to adjust the rates.

2194. In the case of the Dorset reductions which looked much smaller than the others, why did they only receive 10 to 15 per cent., what is the special reason for that?—There seemed a demand for land, and they seemed satisfied with that reduction. It is all grass land and the tenants did their own work.

Mr. J Watso 24 Nov. 18

Loans to farmers.

2195. You spoke of loans to farmers; for what purpose do you wish loans to tenant farmers?—It would be for buying stock if a man could have a loan, but I do not know whether it would be any good to them or not. I fancy that a sort of permanent loan, one that would extend over a considerable time and at a small rate of interest, would be of benefit to them.

2196. Do you think a farmer could get a loan of that kind if he were on a yearly tenancy, and practically living on the goodwill of his landlord?—I do not think that he could get it without the security of the landlord.

2197. Would you have a landlord become a joint security?—The landlord would have to give security, or someone would have to give security. I do not think he could ask for it without, but I know that more capital in the hands of a good many of our farmers would improve their position.

The law distress.

2198. Would not farmers have more access to capital for working their farms if the law of distress were abolished?—I do not think it. I think that a tenant now has the advantage of having his rent to stand over for a good many months after it is due. It sometimes is allowed to stand over even six or twelve months, and he pays no interest for it. If there was no law of distress we should be obliged to insist upon the punctual payment at the day, and I think that would be against the tenant rather than in his favour.

2199. Has not the law of distress operated to bring tenants with too small an amount of capital on the land?—I do not think so.

Large a small fa

2200. You spoke about the very large farms doing better than the small ones. Could you give us what the character of thoses farms was and is, and what the relative rent is?—Yes, the farms that I speak of, the large farms with good land, high-rented farms, half grass, were rented at 44*s.* and 45*s.* per acre in the good times.

2201. What was the small holding?—And the small holding was rented, a bit of good land but all arable, at about 45*s.* per acre rent.

2202. Were the same reductions made in both cases?—About the same.

Positior tenants.

2203. (*Captain Thomas.*) Do you consider the majority of your tenants to be solvent?—Yes, I do consider the majority are solvent, but they are short of capital. I do believe that if they were to sell out in these very low prices, they would have very little to go out with, because the value of their stock has so much depreciated these last two years.

2204. Do you consider that they are able to make their rents—the reduced rents I mean, out of their holdings?—Yes, I have no doubt about the ones that pay are making it out of their holdings.

2205. (*Mr. Everett*) You have been questioned about the time when your tenants paid high rents; in your opinion were your tenants doing better when they were paying the high rents than now, when paying the low ones?—Very much better.

2206. The higher prices benefitted the tenant as well as the landlord?—Yes, certainly.

Land l down t grass.

2207. You spoke of their laying down land for three years to grass, and then breaking it up again. Do not you find that that fills it full of twitch and root weeds, and makes it very foul?—I do not think so. I only spoke of land on the hill.

2208. Heavy land?—Light land on the chalk. I think it would be better farmed in that way. I have had a farm of that sort, myself, or under my care at least, for something like 15 years, and it is perfectly clean.

2209. That is the difference in the soil. It would not be so in Suffolk?—It was quite clean.

Wages

2210. Are the wages that you spoke of, paying about the rate that your neighbours pay too, or are they exceptional the per 12*s.* week at the present time to the ordinary labourer?—The neighbours pay mostly 1*s.* less than we do.

2211. Have wages gone down in the last year?—About 1*s.*; and they said that they would be down a good deal this winter, but I have not heard of much reduction beyond 1*s.*

Mr. J. Watson.
24 Nov. 1893.

2212. Have you many men out of work?—Not many just now.

Duty on barley.

2213. You spoke in referring to the fall in the price of barley, of the change when the duty was transferred from the malt to the beer, which as you know was a change that farmers very much desired to have made. I want to know why you attribute the fall in barley to that, when you have the fact that wheat has fallen a good deal more than barley?—It has done, but what I meant was, the best malting barley in old times would fetch 10*s.* more than a poor sample, and now that is done away with because they will not give a very high price now. When they paid duty upon the barley, it paid them to pay for the better article at a high price. I remember saying to Mr. Read when he was advocating the change, that it would spoil the price of their best barley, and he said, "Oh, yes, but it will help our "Norfolk barley, our second quality barley would be "worth more." It might do that because the duty on barley was heavy, and when they got a real good strong barley that pleased them, they gave a very high price for it, because it produced more beer than the lesser barley.

2214. What struck me is this. We have the fact, I believe, that taking all the products of the farm, barley is the one which has suffered least by the fall in prices?—It has.

2215. And it seemed very strange that when you are in the presence of a universal fall you attribute the fall in that article which has fallen the least, to the change which Mr. Gladstone made when he transferred the malt tax?—We have also another reason for its keeping up. The imported barley does not answer the purposes of the brewer like our own growth.

2216. But still as a fact of all the leading products—wool, wheat, and barley—barley is the one which has fallen the least?—Yes, that is true.

2217. Would not you consider that the fall in barley is part of the fall which has come to all other products rather than singling out that and attributing a special cause to it?—Yes. I was only thinking of the very best quality of barley. You do not get very much more for the very best than for the medium as we used to do.

Uncultivated land.

2218. We do in our county as a matter of fact. If prices continue to fall in the next 12 months as they have done since you gave evidence before the Duke of Richmond's Commission, do you think that very much of the land of England can be kept in cultivation?—I do not think so. Only spots here and there could be cultivated at all, unless you get very much cheaper labour and many other things to help to qualify it.

2219. (*Lord Vernon.*) Am I not right in saying that all tenants pay their rents three months after it is due; they all have three months?—That is the case on some estates; on others for over 30 years the custom was six months' notice.

Law of distress.

2220. If the law of distress was abolished the tenant would have to pay on the day?—They would have to pay on the day or very near it. Where a man gets six months he is 12 months on his farm before any rent is asked from him, and, if he had to pay it on the day it might be awkward for him, supposing there were 300 acres and 300*l.* to pay he would be much poorer for the half of the year up to Michaelmas than he is now under the present conditions.

2221. So that in some ways the abolition of the law of distress would be a disadvantage to the tenants?—It would be a disadvantage to the tenants.

2222. When you spoke of the tenants whom you think owe a good deal of money to banks, or did, have you any idea what sort of rate of interest they paid for advances on their stock?—I think it mostly runs to about 5 per cent.

Mortgages on land.

2223. Do you have anything to do with the mortgages on the land itself. I mean do you pay the interest of any mortgages on land that you have the management of?—I have nothing to do with it, but I have some experience of it in this way. A tenant thought he would better his position by buying 500 acres of land adjoining his farm, and he bought it and mortgaged it for about two-thirds of the price that he paid for it, and these bad times came and ruined him.

Mr. J. Watson.
24 Nov. 1893.

2224. Because, I suppose, being over mortgaged he could not pay the rate of interest?—He was obliged to pay 4 per cent. He could go to the landlord for a reduction, but he could not go to the mortgagee for a reduction, so that the land became too dear.

2225. (*Chairman.*) You have known a case of that kind?—Yes.

2226. More than one?—Only one case.

2227. (*Lord Vernon.*) Are the larger estates that you have to manage mortgaged much?—None of them.

2228. You have no experience of that at all?—Not one bit.

2229. Have you borrowed much money from the Lands Improvement Companies for works and buildings and things of that kind?—When I was agent for Sir Harry Verney I borrowed a little for drainage, but not much. They had done a great deal of that before I went there, and I thought it was over burdened, and it was better not to go deeper into it. But that has been paid off, and he has lived to see it cleared.

2230. If the landlords you have had to do with had insisted upon their rights many farms would have been tenantless?—Certainly, because there are no tenants coming in at a very low rent. You cannot get men in business, they will not venture on the land now. They used to be pressing up if there was any vacant, and you would always get offers from such people, but there are not any now, and the farmers themselves have not the money to cultivate all the land if a good many were to go out at once.

2231. As a matter of fact, if the land of the employer you have to do with had been mortgaged the landlord would not have been able to reduce the rent, but would have had to insist upon his rights?—Or else something would happen; he could not keep up a heavy mortgage. One person that I was agent for was obliged to give up his land to trustees and the management entirely removed it from his hand as well as mine. The burdens were more than it could bear.

2232. Do not you think that a great deal of the difficulties of agriculture arise from the mortgaging of land for more than its value?—Yes, perhaps it is. I know a landlord with a heavy mortgage would be in a bad position to deal with his tenants these bad times.

Position of tenants in Dorset.

2233. (*Chairman.*) You said that the Dorset tenants had done well until two years ago?—Yes.

2234. And there was a demand for farms there?—There was a very good demand.

2235. Then the two last years have told upon them very much?—Yes they had no hay in 1892 at all, or very little, and they had a little old hay which helped them up. One man told me that if he had made a present to somebody of all his cows in the winter he would have been richer in the spring.

2236. They have suffered mainly from the bad seasons?—Yes; and this one has come upon them very heavily.

2237. But apart from these last two years they have not been badly treated by the seasons?—No, they did not complain of the prices.

2238. Besides that, you said they work themselves?—They do.

2239. What do you mean by that?—I have found the wife milking and the daughter milking the cows, and the man away mowing his hay.

Farmers in Oxfordshire.

2240. And that is not the case with your own farmers in Oxfordshire?—No.

2241. They are a different class of farmers?—Yes.

2242. They have been merely managers and do not work themselves?—Mostly.

2243. Among the Oxfordshire farmers, are there some who have done better than others during the last few years?—Yes, and you can hardly tell the reason; it does not appear in the difference of the land, or in the difference of the capabilities of the land.

2244. There are some who have done well?—Some have been able to keep their own. They all complain.

2245. Some have done better than others?—Yes.

Mr. J. Watson. 24 Nov. 1893.

2246. And you cannot assign any reason for it?—You can say that a man who had plenty of capital could take advantage of the markets when things are cheap; he can buy animals that pay a good bit of money, and makes up for other losses.

2247. And men with capital, therefore, have done better?—Yes, and we have had a great advantage in having very little disease among our stock: for the last few years things have gone very well with us for them.

Mr. J. Watson. 24 Nov. 1893.

The witness withdrew.

Adjourned till Thursday next at 12 o'clock.

Sixth Day.

Thursday, 30th November 1893.

PRESENT:

The Right Hon. GEORGE JOHN SHAW-LEFEVRE, M.P., in the Chair.

Viscount Cobham.
The Right Hon. Baron Vernon.
The Right Hon. Henry Chaplin, M.P.
Sir Robert Nigel Fitzhardinge Kingscote, K.C.B.
Robert Giffen, Esq., C.B.
Charles Isaac Elton, Esq., Q.C.
Captain Owen Thomas.
Francis Allston Channing, Esq., M.P.
John Clay, Esq.
Cornelius Neale Dalton, Esq.
Robert Lacey Everett, Esq., M.P.
John Gilmour, Esq.
George Lambert, Esq., M.P.
William Cutlack Little, Esq.
Charles Whitehead, Esq., F.L.S.

Herbert Lyon, Esq., *Secretary.*
R. F. Crawford, Esq., } *Assistant*
Freeman Thomas, Esq., } *Secretaries.*

Mr. Christopher Middleton called and examined.

Mr. C. Middleton. 30 Nov. 1893.

2248. (*Chairman.*) You come here on behalf of the Cleveland Chamber of Agriculture?—Yes.

2249. And at the invitation of the Central Chamber of Agriculture?—Yes.

2250. Is the Cleveland Chamber of Agriculture an important body?—It covers a wide district of Yorkshire, it has perhaps 160 members at the present time.

System of agriculture in the district.

2251. What is the agriculture of the district, is it mainly grass?—No, it varies, I should say two-thirds arable would be about the proportion.

2252. What is it generally?—Strong clay mostly, varying to strong loam.

2253. Is there much wheat grown in the district?—Not nearly so much as there was; 30 years ago wheat was the principal cereal grown; now, I do not suppose that half so much is grown.

2254. Has the land been laid down in grass or is it devoted to other cereals?—Some of it is laid down to grass, but that is a small proportion; another proportion is left in temporary grass. Barley has taken its place to a great extent, and oats are grown.

2255. What has been the experience of the district during the last 12 years?—As to what?

Profits and products.

2256. As to the profits of farming?—As a rule I should say profits have vanished, and during the last two or three years crops have been rather better on account of better seasons, though they did fall off very much during the bad seasons that we experienced for about a decade.

Bad seasons.

2257. When were the bad seasons that you speak of?—I do not think that we really began to experience the very bad seasons so early as they did in the south. 1879 was the worst year when the bad seasons really set in so far as climatic considerations took effect.

2258. How long did the bad seasons last?—Up to about three or four years ago when we had rather better seasons so far as the crops are concerned.

2259. Then in the last two years you have not suffered as the farmers in the south have done, from the drought?—Not to the same extent, we have suffered this year considerably, but not to the extent that they have in the south.

2260. What is the opinion of the Cleveland farmers on the agricultural depression?—They consider that it is principally owing to the low prices for everything almost that they produce.

Low prices and foreign competition.

2261. And to what do they attribute that?—Mostly to foreign competition, and to a certain extent to bad trade. I might preface what I am saying, by the statement that we are in the midst of a large iron-producing district where we do from time to time feel the fluctuations of the iron trade very considerably.

2262. Then you have suffered locally from the bad trade of the district?—Yes, that has something to do with it.

2263. And aggravated during the last year by the drought, I suppose?—That is so.

Local rates.

2264. What other subjects of complaint have you?—I think most of our members in the Chamber believe that the question of rates has a very considerable bearing upon the question; they feel that they press very unduly on land.

2265. Will you express their opinion on that subject?—They consider that a great many of the burdens on land, ought to come on the whole property of the kingdom, that what are local burdens, should be made Imperial charges; they consider that the Poor Rate, the maintenance of highways, and the police and the administration of the Education and Sanitary Acts, should be borne by every description of property in the country. They consider also, that most of those changes are not for the benefit of real property alone, and that they are not created by the owners of real property; further they consider that a good many of those imposts on land, were established when land had certain privileges which it has not now. The produce of the land at that time was protected, and was better able to bear a great many of those burdens. Seeing that these exemptions have disappeared, we consider that there ought to be a re-adjustment of the whole question of local taxation.

Adulteration.

2266. Then what other matters have you to complain of?—With reference to the question of adulteration, agriculture has suffered, no doubt to a great extent by the adulteration of manures and feeding stuffs. The dairy industry suffers to a great extent by the sale of

Mr. C. Middleton. Nov. 1893.

margarine as butter; farming also suffers by foreign meat being sold as English. We also complain that various substitutes for malt, barley, and hops, are used in brewing, and that the beer is sold as beer without any distinction. We also consider that in the past, we have suffered very much from imported diseases amongst our cattle, our flocks and herds.

Importation of live stock.

2267. You say you have suffered "in the past" from imported diseases; may we assume, therefore, that you do not mean at the present moment?—Not to the same extent. We consider that at present, there is a danger of suffering again; the danger is always present with us.

2268. (*Mr. Chaplin.*) What is the danger?—The danger is that of importing cattle disease.

2269. (*Chairman.*) Then do you think that the importation of live stock should be prohibited?—Personally, I am in favour of its being prohibited altogether.

2270. You say "personally"; is that your own view, or is it generally the view of your club?—Some of those whom I represent, do not go quite so far as that. They say that all live cattle should be slaughtered at the port of landing, while I personally would go absolutely for prohibition of the import of live cattle, for even with slaughter at the port of landing, I think there is a certain amount of danger.

2271. You are in favour of prohibiting all import of live cattle?—That is it.

2272. You would allow the import, I presume, of dead meat?—Yes. In my opinion we could not prevent that, we do not ask for it.

2273. With regard to the suggested remedies, what have you to say?—There is one other point in my proof relating to the causes of the depression, in fact two. In some branches of farming I say that the producer does not receive his fair proportion of what the consumer pays; in other words the middlemen get an undue proportion. That only refers to some branches.

2274. To what branches does that refer?—To fruit and vegetable growing principally and to the dairy industry to a certain extent, but nothing like the extent that it does to the others.

2275. It is mainly in fruit and vegetables, is it?—Yes, and produce of that kind.

2276. Where the markets are somewhat limited, or where the markets are close?—Where the bulk of the business is done through commission agents or through middlemen.

Railway rates.

2277. With regard to railway rates and charges, what do you say?—Many of us believe that we are still handicapped by the charges made on farmers; we say that up till now, and to a certain extent even now, the charges and the services rendered are in favour of our foreign rivals.

Reduction of rent.

2278. Will you go on to the suggested remedies?—The first remedy which would naturally occur to every one would be a reduction of rent to meet the altered circumstances of farming where that has not already taken place. In many cases, I am happy to say, the landowners have met their tenants fairly, and in other cases they have not yet done so.

2279. When you say that that is a remedy how do you propose that it should be enforced?—I cannot suggest any way of enforcing it; it can only be left to public opinion and the sense of fairness, and the necessity of the case, which must in a very short time enforce reductions, tenants not being able to pay the rent they have paid in the past. I may at once say that I do not in any way advocate any tribunal for fixing rents.

2280. Has that question been discussed in your Chamber of Agriculture?—It has, and the feeling against any such tribunal has been most emphatic.

2281. When did the reduction of rents begin in your district?—I should say early in the eighties.

2282. By early in the eighties do you mean shortly after 1879?—Yes, that was the year that the depression began to be most acutely felt. Of course it has been aggravated since then, and in some cases soon after that permanent reductions were made, and in other cases temporary abatements were allowed and are still allowed and in some cases those abatements and reductions have been increased very materially.

2283. Can you give any idea of the average reduction of rents in your district?—I do not think, taking North Yorkshire, that the average may amount to 18 per cent., certainly not to 20 per cent. I have no figures to prove that.

Mr. C. Middleton. 30 Nov. 1893.

2284. What is the size of your farm?—320 acres.

2285. And have you had your holding for some years?—Rather more than 20 years.

2286. What reduction in rent has been effected there?—10 per cent.

2287. Only 10 per cent?—Only 10 per cent., and I say that one half of that reduction is discounted by the increase in rates, fully half of that. I may say that considerable sums have been expended on the farm in buildings and other improvements which I partly look upon as equivalent to a reduction in rent.

Rent per acre.

2288. What does the rent average per acre now?—36*s.* an acre.

2289. Is that an arable farm?—It is two-thirds arable.

2290. Whereabouts is it?—Within three miles of Middlesbrough, a large town.

2291. I presume the rent is high owing to the nearness to a large town?—There is no doubt that has something to do with it. It would not be worth the rent if it were 20 miles further from the town.

2292. Do I gather that you have no complaint in respect of your rent?—I am not altogether satisfied with it, I must say.

2293. But I think you said there was a reduction, and that there were others less favourably situated in that respect?—I say for the last few years I have not been satisfied; with prices lowering ever year it is getting more impossible to make ends meet.

Abatements.

2294. Have there been temporary abatements in addition to a reduction of rent in your case?—None whatever.

Tithe.

2295. Do you pay the tithe?—A small tithe; it only practically amounts to from 1*s.* to 2*s.*; a little more than 1*s.* an acre.

2296. After the tithe was commuted did the landlord take the tithe?—Yes; I still pay it, but directly to the landlord instead of to the vicar.

2297. And that has been enforced?—I never tried to get rid of it. I should look upon getting rid of it in that way as a refusal to pay part of the rent, and in fairness I could not ask for it.

Reduction of rent.

2298. Then you do not think there is any mode of enforcing reductions of rent?—I cannot suggest any.

2299. The feeling of your Chamber of Commerce is against any legislation on the subject?—Almost unanimously.

Rates.

2300. What do they suggest with regard to the rates?—In the first place the question has been many times before our Chamber and in every case the Chamber has carried a resolution that all rates should be divided between the owner and occupier.

2301. That was the opinion of the Chamber?—Yes, of the majority in the Chamber. Shall I give any reasons for that.

2302. Yes?—We naturally look upon rates to a certain extent as rent, and when a farm is taken no doubt the amount of rates is considered in the rent which a tenant would offer; but we all know that from time to time rates do increase; there is a tendency always for rates to increase. From time to time fresh rates are imposed upon a farm, and they come on so imperceptibly that the tenant does not every time have his rent re-adjusted to meet it. In my own case I should say that the increase in the rates amounts to an increase of rent of really 2*s.* an acre. It has been done a little at a time, bit by bit, and I have never felt myself quite in a position in regard to any particular rate to ask to have the rent re-adjusted to that amount.

2303. What is the total of the rates in the pound now in your parish?—I have only worked it out for the last eight years in my own case. It amounts to 4*s.* 1½*d.* per acre or 2*s.* 7½*d.* in the pound.

2304. (*Mr. Everett.*) What are you assessed at per acre?—The net assessment I pay on is 504*l.*, that is rather less than the rent.

2305. (*Chairman.*) I thought I understood you that the rates had increased 2*s.* in the pound?—About 2*s.*

Mr. C. Middleton. 30 Nov. 1893.

per acre. I may say by way of explanation that at the time I took the farm I was in a purely rural union where they had a very low assessment and where the rates were very low indeed. Some years ago a new union was formed for Middlesborough to which my township was added and the rates increased enormously.

2306. Did it become an urban district?—No. We are outside the borough of Middlesborough. We are in a rural sanitary district still, but it is a much more expensive union than the union I was in.

2307. It has been transferred from a purely rural union to a partly urban union?—Yes.

2308. And in consequence the rates have been increased?—Very considerably.

2309. Before then the rates were really low?—Very moderate.

2310. 2*s.* an acre you said, that would be 1*s.* 3½*d.* in the pound?—That is somewhere about the amount. Since that time a sanitary rate has been imposed which was not the case in the old union.

2311. Do you derive no benefit from the subventions of the State in aid of local rates?—To a certain extent, but only to a small amount.

2312. Not much?—Not very much. I have not worked it out; but it does not work out to very much.

2313. Speaking of the district generally, have they the benefit of low rates in consequence of being in the rural district or not?—Several of the unions adjoining are very high. There is a very large iron stone mining population, and the rates are high—there are so many accidents occurring at the works, that men with large families are thrown upon the rates, and the poor-rates are always high in several of the unions in the country districts. There are one or two purely agricultural unions where they are still moderate comparatively speaking.

3214. Then you think the rates should be divided equally between the owners and occupiers?—Yes, for one reason that we consider that it is only fair that the owner should bear his proportion of that increase. Another reason is that in many cases the owner would take a livelier interest in local affairs; and seeing that most of the rates are imposed by landowners as a class, rather than by occupiers, they would perhaps be more careful in imposing fresh burdens upon the land.

2315. How are they imposed more by owners than by occupiers?—Very few occupiers are members of Parliament; a good many owners are.

2316. You mean through the influence of Parliament?—Yes; the occupier has no option in the matter, but the owner has in many cases.

2317. I understood you to admit that in the long run the rates are a matter of adjustment in the rent?—At the commencement of the tenancy.

2318. But that there is a difficulty in re-adjusting the rates from time to time?—That is the principal reason.

Local taxation.

2319. What is your next proposal?—We consider that the whole question of local taxation should be considered in a comprehensive manner with the object, if possible, of legislating so that land should bear only a fair proportion of the burdens. We consider that so many of the charges that come on real property are so essentially Imperial charges that it seems almost incredible that they should be levied on one description of property alone. I believe, as an instance, that shipping bears almost no portion of the expense.

2320. I presume from what you have already said that from the commencement of the tenancy the adjustment does not take place, and therefore that it would be the landlord who would gain the benefit?—To a great extent. At the same time I think if there were fewer burdens upon land many owners would feel more able to meet their tenants in the matter of rent. If what I suggested ever becomes law I still think and hope that the tenants would receive some of the benefit from it.

2321. At all events the tenants who are in possession of continuing tenancies would receive the benefit?—Certainly they would.

2322. Then in times of falling rent you think that there the tenant would derive some benefit because the landlord would be in a better position to make reductions?—Decidedly so.

Mr. C. Middleton. 30 Nov. 1893.

Agricultural Holdings Act.

2323. Then with regard to the Agricultural Holdings Act, what have you to say?—There is a sort of general feeling in the Chamber which I represent that the Act has to some extent been a failure; that it has not had altogether the effect that was hoped and intended that it should have.

2324. In what respect has it failed?—It is the opinion of the majority of the Chamber, and it is most strongly my own opinion, that the failure has been more in the carrying out of the Act than in the Act itself. At the same time there are two or three points in which I think that the Act might be improved.

2325. Before we come to those, as regards the carrying out of the Act rather than the principle of the Act, am I to understand from you that the main principle on which the Act was founded is the right one?—Mainly, it meets with my approval.

Arbitration under the Act.

2326. With regard to the expense of valuations what do you say?—That is one great objection, the great expense of an arbitration or a reference under the Act.

2327. What do you suggest might be the remedy for that?—It is difficult to say, except that there should be a provision in the Act that it should be simpler. It seems to me in many cases that a single arbitrator appointed at once would meet the case. It generally results in that at the finish. It is very rarely that the two arbitrators agree, and an umpire has to be appointed. In many cases the present procedure is very unnecessary. Lawyers are called in, and a great many witnesses examined who might be dispensed with; and I think in many cases a single arbitrator might settle the case much more simply without calling so many witnesses.

2328. How should that arbitrator be appointed?—He must be appointed by mutual agreement, I suppose.

2329. Really they are left to appoint an arbitrator as they like?—They are. I do not see how the fault is to be remedied. It is, no doubt, the way the Act is carried out; but still, at the same time, I cannot quite see how it is to be remedied.

2330. Do you wish to see arbitrators nominated by an external authority?—I do not think, as a tenant farmer, I should like to advocate that. I should like to have a voice in the appointment myself.

Compensation for high farming.

2331. What are the points which you suggest as amendments to the principle of the Act?—As to one point there seems to be no provision in the Act for awarding extra compensation for continuous high and good farming. It is a fact that a tenant who has been only three years in occupation of his farm, and using a large quantity of cake or imported manures, would receive as much compensation as a man who had been farming highly for 23 years. A farmer who had been in occupation for that length of time, and using cake continually on his pasture, must by that time have materially increased the letting value of that land. It is a permanent improvement, and yet according to the way the Act is administered, he would not receive a penny for that outlay more than a man who had been only three years in occupation. I, as an incoming tenant, would much rather pay compensation to a man who had been farming high for 20 years, than to a man who had been farming for only three years. I should consider that I should have better value for the amount I paid in compensation.

2332. Have you any specific proposal on that point?—My objection has been met, by saying the Act provides that tenants should be compensated for anything which adds to the letting value of the farm. There is no doubt that improvement of grass land by long consumption of cake, must add to the letting value of the land; but I scarcely know a case where any arbitrator has awarded more really than a sum proportionate to the consumption of cake for the last two years. I have one case in point, it was not a very large case, where the arbitrator did make a special award of a small sum for long continued consumption of cake. At the same time he told me that he expected it would be appealed against, and if it had been appealed against that his award would have been reversed by the county court judge, but it has so happened that no appeal was made. It is the only case I know of in which any increased compensation has been given for that long consumption of cake.

Arbitration under the Act.

2333. Is it your opinion that under the Act the arbitrators have no real power to award anything for the long continued consumption of cake on the farm?

Mr. C. Middleton. ov. 1893.

—I do not know whether they are absolutely precluded by the Act, but they always seem only to take the last two or three years' consumption into account.

2334. Have you had a legal opinion upon that point, because it is an extremely important one?—No, I have not.

2335. But if it be the law the arbitrators do not take advantage of it, as I understand?—No, or to a very small extent.

2336. You know only one case?—Only one case.

2337. Can you suggest the actual amendment of the Act that is required in this respect, it is very important to know what the recommendation is?—I should like the Commission to emphasise more particularly that any act of husbandry that adds to the letting value of the farm should be considered on its own merit. One member of our Chamber has made a suggestion year by year. I do not know whether it is quite practicable, I am afraid it may not be on account of the expense which it would entail. He maintains that there ought to be a body of inspectors appointed who should periodically from time to time make a report on the condition of every farm; that they should make periodical inspection at three or five years' intervals and keep a record. His contention is that that would enable the arbitrators to know what the incoming tenant would have to pay to the outgoing tenant.

inal ers.

2338. (*Mr. Chaplin.*) Whom will the inspectors be appointed by and to whom will they report?—They would have to be appointed by the Board of Agriculture. I do not put it forward as my own opinion, but merely as the opinion of a member of our Chamber.

2339. (*Chairman.*) Do you consider it a practical proposal or not in your own opinion?—I am afraid the expense would almost make it impracticable.

2340. The idea being that at so many years' interval those inspectors should go about and record their opinion?—Yes, there would be a record kept of their opinion; and the contention of this gentleman is that an arbitrator would have some data to go upon as to how far the farm had been improved.

2341. But you do not put forward that proposal on your own behalf?—No.

2342. You feel a difficulty as to the expense?—I have always felt that difficulty.

pensa- for e grown

2343. Are there any other points arising out of the Agricultural Holdings Act?—There is another point as to whether compensation should be allowed for home grown corn consumed on the occupation. That question has been before our Chamber more than once, but I think the majority have been against the proposal. It was felt that it would add very greatly to the difficulty of assessing the compensation, and that it might open the door to misstatement.

2344. Then you do not recommend that yourself?—I scarcely press that.

prove- nts by ants.

2345. Is there any other point on the Act you wish to speak of?—There is another point, and that is with regard to the first part of the first Schedule in the Act, as to improvements which can only be made with the consent of the owner. There are cases in which an owner is quite unable to make those improvements himself, and at the same time he might not allow his tenants to make them. I do not, and we do not, at all wish to say that a tenant should be allowed to make any improvements of that sort without his landlord's consent, but I do think that there should be some tribunal (or a reference in the way provided under the Act), by which it might be considered whether those improvements, such as buildings, which are really necessary to have, would add to the letting value, and whether they should be allowed for if executed by the tenant. I certainly think where the owner is not willing or not able to make those improvements such as buildings, or laying down land to grass, at his own expense, and refuses his tenant consent, there should be some means by which a tenant might have an opportunity of doing that at his own expense, and receiving compensation. I think it ought to be embodied in the Act that a reference should be held as provided under the Act for ascertaining whether the tenant ought to be allowed to make those improvements.

2346. What class of improvements should that apply to?—The first part of the first Schedule.

2347. To all of them?—More or less; buildings is the principal thing, then road making, water supply and laying down land to permanent pasture.

Mr. C. Middleton. 30 Nov. 1893.

2348. Do I understand you that these improvements should be brought about on the same principle as drainage in the second part of the Act?—No, I would not go so far as that, because drainage you can do by only giving notice. I do not consider that it would be fair to the owner that those improvements should come under the second part of the Act; but there should be provision made that where the owner would not make them, the question should be fought out as to whether it was reasonable that they should be made, and in that case the arbitrator would give his consent to the tenant doing them as under Part 2, he does with respect to the drainage.

2349. Under Part 2 in the case of drainage the tenant has power to give notice to the landlord of his intention to drain?—Yes.

2350. And if the landlord does not execute the tenant may do it himself and get compensation?—Yes.

2351. There is no intervention of any third party to say whether the drainage is expedient or not. I understand that you would apply the same principle to improvements under Part 1, with this addition that some officer of the State, or some arbitrator, would say whether the intended improvement is a benefit or not?—Yes, in the case of a particular tenant the particular way in which he carries on his business might require buildings which would be quite useless for a future tenant. I think it would be very unfair that an owner should be saddled with the cost of those buildings. But what I say is if they are reasonably required for the cultivation of the farm there should be some means of getting them.

2352. And that would be determined at the time by some independent authority?—Yes.

2353. By an officer of the Board of Agriculture or by an arbitrator to be jointly appointed?—Yes. I want to press for a provision in the Act for that being done.

2354. And if that independent authority were to say that the intended improvement would add to the value of the farm then the tenant should be permitted to make it and to claim compensation for it on the termination of his tenancy?—That is so.

2355. But you would not extend that to the case of buildings which, although necessary for the particular business of the farmer, might not be valuable to the landlord himself, or to any future tenant?—Decidedly not. The arbitrator would take that into consideration and say whether it was or not.

Counter claims.

2356. Is there any other point under the Act that you wish to speak about?—The question has arisen from time to time as to whether the items of a counter-claim should be scheduled or not. My own Chamber has not expressed a very decided opinion on that point, and I am not prepared to press that point.

2357. Is there any point on which you have made up your mind?—These two points that I have mentioned are the main amendments I would suggest to-day.

Margarine Act.

2358. On other matters, what further remedies have you to suggest?—In the first place I think that the Margarine Act should be strengthened and its provisions strongly enforced. It is probably well known there has been a Margarine Committee appointed by the Central Chamber of Agriculture, which has consulted from time to time with various members of Parliament with the object of bringing in a Bill to meet that. I am a member of that committee, and we most of us feel that the present Margarine Act is almost entirely a dead letter. The Act is weak in itself, and it is very imperfectly carried out; its provisions are in many cases not carried out at all. By the report issued recently by the Board of Trade we still find that there are a great many counties and boroughs that have never enforced any Adulteration Act at all. The list is not quite so long as last year's, but there is still very great room for improvement. We consider that it requires a much more stringent Act than the present one. I feel that it is necessary that it should be enforced by a central authority.

2359. (*Mr. Giffen.*) You said the Board of Trade just now; what do you mean by that?—I referred to the returns published by the Board of Trade, as to the enforcement of these Acts, the Margarine Act and the Food and Drugs Act. In many localities no analyses of articles of food have been made during the year.

Mr. C. Middleton.

30 Nov. 1893.

Railway rates.

2360. I do not think that that is Board of Trade business?—The Board of Trade publish those returns.

2361. (*Chairman.*) Then you desire some cheap tribunal for settling disputes between farmers and railway companies?—Yes, we are not satisfied with the rates charged and the services rendered. It is quite impossible for a single farmer, or even bodies of farmers, to take any case before the Railway Commissioners at present. We consider that there should be some cheap tribunal to which any farmer or any trader who had a grievance, or who considered he was not fairly treated, should be able to go at a very moderate expense.

2362. Are you referring to the increased rates made by the railway companies during the past year?—Partly to that. I may say that we are not altogether satisfied that English farmers are quite on a par with foreigners.

2363. Your complaints have reference to the undue preference?—To a certain extent.

2364. The undue preference shown by railway companies to foreign imports?—We have not specific cases, but in the case of many large cattle dealers and others they think that there is a system of rebates allowed in many cases to foreigners.

2365. Have you any specific case?—We know also—I think it came out in the evidence that was taken before the Railway Committee—that while as a rule 5 per cent. increase has been put on English grain, the 5 per cent. increase has not been enforced in any case from any seaport town.

2366. That is an increased rate since the beginning of the year?—Yes.

2367. But I was asking with reference to other complaints than those referring to the action of the railway companies during the present year?—It refers to the present year. There is the case of the railway companies withdrawing the drover's pass; that adds about 4 per cent. to the rate at which the cattle are carried.

2368. I was anxious to know with reference to complaints, other than those within the present year?—We have not specific complaints, except that we have always felt that foreign produce was treated better than our own, both in the facilities given to the foreigners, and also in the lower rates.

2369. That is a question where undue preference is shown to certain trades?—We felt that. Now we are expecting that that will be remedied by the recent Act, but we are not satisfied that we are on a par.

2370. That you have got full satisfaction in that respect?—Yes.

2371. (*Lord Cobham.*) If you can prove it you can succeed?—The difficulty is to prove it. It would be almost impossible to prove it. I do not think that any man who gets a rebate, if he does, would come forward and say so.

State loans.

2372. (*Chairman.*) Then with regard to the loans by the State to landowners, for the purpose of effecting improvements on their estates, what have you to suggest?—The question has been before my Chamber from time to time. It was felt, seeing that the State was empowered to lend money at a very low rate of interest for the purpose of small holdings, that it was not unreasonable that the State should advance money on the same terms for the purpose of larger holdings. It is pretty generally known of late years that many owners are absolutely unable to make the necessary improvements on their estates. There is an enormous acreage of land that requires drainage, and where the buildings are quite inadequate to the requirements of the farmer. Owing to the reduced rents which many owners get—they practically have no income left—it is quite impossible that they should carry out those improvements. We feel that in a case of that sort the State should be allowed to advance money at a low rate of interest to the landowners, specifying that the tenants should not have to pay a higher rate of interest than the landowners. In many cases it would add to the letting value of the land quite as much as would pay the rate of interest that would be necessary.

2373. Taking your own district, the Cleveland district, should you say that the landlords have been unable to effect improvements largely?—Not many of them. A great many of them have valuable ironstone under their property which has enormously increased the value of their property. But still there are landowners in Cleveland who are not able to spend any money on their estates.

Mr. C. Middleton.

30 Nov. 1893.

2374. Is there a large amount of land in that district which is capable of being drained, and which ought to be drained?—There is some; not so much as in some other districts of Yorkshire.

2375. Are there farms where money might be advantageously expended in buildings?—Yes, not so many in Cleveland, but there are in parts of Yorkshire. In my own case I am willing to pay the interest on money that might be profitably expended, but I cannot get it done.

2376. Is your landlord unable to spend the money?—At the present time he is. Up to a short time ago he was able, and did spend a considerable amount in improvements, but at the present time the trustees are not able to do that, and improvements have come to a standstill. I was having drainage done for which I paid a reasonable interest, but it had to come to a standstill.

2377. You pay the full amount which was required, but you cannot get on with the improvements which have been commenced owing to the want of capital?—Yes, the amount of interest which I was charged was a private arrangement.

2378. Then you think that there is a good deal to be done in that direction both for landowners and for farmers?—It was felt so by most of the members of our Chamber and the question was considered more than once. We pressed the question to be taken up by the Central Chamber of Agriculture, and a resolution in favour of it was adopted—I cannot say that it was fully considered—but still a resolution was adopted by the Central Chamber of Agriculture.

2379. Do you think that the State money should be lent at a low rate of interest; I presume 3 per cent.?—Yes.

2380. Do you think that there will be a considerable demand for it?—I think in some districts there would be.

2381. In your district, would there?—Not so much as in others, because most of the owners are able to make these improvements themselves and do make them. It is to meet the circumstances of those who have not the money.

Reductions and abatements of rent.

2382. The reduction of rent has not been very heavy in your district and therefore the landowners have not suffered so much as in other districts?—There have been some very liberal landlords, not so much in the way of reductions, but temporary abatements; they have been very liberal in many cases.

2383. But those abatements have not been permanent?—In many cases there have been permanent reductions too, but I think that in the preponderance of cases there have been abatements.

2384. The 15 per cent. you said was the average?—I intended that to cover both permanent reductions and abatements.

2385. To cover both?—Yes, except special abatements this year.

Uncultivated land.

2386. Is there any land out of cultivation?—I do not know of any farm.

Land in hand.

2387. Has much land been taken in hand by the owners?—Yes, but most of it might have found tenants at a reasonable rent. I know very few farms which could not find tenants at a reasonable rent.

Demand for farms.

2388. Is there a demand for farms in your district at a reasonable rent?—Yes; I believe the last year or two land agents have had less difficulty in letting their farms than they had a few years ago.

2389. By reasonable rent do you mean with considerable reductions from the average rent of the district or not?—In some cases there would be considerable reductions.

2390. Is that on the ground that the farms are in bad order?—Partly so. As a rule what I am saying refers to farms which are not very advantageously situated or where from some cause or other there is not the same competition for them that there is for others.

Wages.

2391. What have been the wages in your district; have they risen or fallen?—They have been about stationary for the last four or five years. There is a slight tendency to reduce them at the present time. I do not hear of any man asking his old servants to take

less, but where there has been a change the wages have been slightly lowered.

2392. But before the period you speak of what was the tendency then?—Wages have fluctuated several times during the last 20 years. About 1875 they got to the highest pitch and they remained at a high level for two or three years, and then they were gradually reduced. About 1886 they began to rise again. I may say that our wages are not altogether ruled by the condition of agriculture, but by the state of the outside labour market. A great many of our men in good times—when trade is good—go to the ironstone mines or other public works and when trade is slack they drift back to farm work again.

2393. In 1876 you said wages reached the highest point?—In 1875 or 1876.

2394. Then they fell again after that?—Yes, for some years.

2395. Till 1882 and 1883 and then they rose again?—Yes; perhaps in 1885 and 1886 they began to rise again.

2396. Did they reach the highest point in 1875?—No, some shillings a week short of that. I may say that they are still high in comparison with most districts in England.

2397. Then I understand from you that the depression began in your district in 1879?—Yes, it began then to be severe.

2398. And that since then it has been due partly to bad produce and partly to low prices?—Mainly to the low prices.

2399. And that the rents have decreased on the average about 15 per cent?—Yes.

2400. Looking further back do you recollect before that, that there had been a rise of rents?—About 1873, so far as I remember, or about that time, the rents were the highest—in 1873, 1874, and 1875 rents had increased.

2401. How much did they increase?—I am not prepared to say what the increase was, or to what extent.

2402. Had rents gone down to the lowest point before that increase?—Scarcely.

2403. (*Lord Cobham.*) What is the character of the land on your farm?—A very strong clay—to strong loam.

2404. Is it good useful land or cold land?—A good deal of it is cold clay, with mostly a cold subsoil.

2405. And the rent is 36*s.* per acre?—Yes.

2406. Do you agree with me in thinking that that is considerably higher than a similar farm could possibly command in the South or Midland part of England?—I am certain that in some districts in England it would not command more than 20*s.*

2407. And you pay a higher rate of wages?—A higher rate per week. I do not say that it amounts to a higher rate per acre.

2408. How do you account for the rents ruling so high as you get towards the North of England as compared with the South and the Midlands?—One reason is that it is nearer the centres of population.

2409. But I have in my mind similar districts in the Midlands where there is a very large population close by, and there is nothing like the same rents to be had. Could you give any other explanation?—It is rather difficult to say.

2410. And at the same time you have a lesser amount of reduction of rent?—I think one reason may be that in the district I am speaking of the tenants are allowed more to cultivate as they like. They have facilities for selling produce which numbers of farmers in the Midlands have not.

2411. Are you allowed to take your straw and hay into Middlesborough?—Practically I sell what I like and farm as I like.

2412. Notwithstanding any covenants there may be; or are there no covenants against such a practice?—By my agreement I am allowed a considerable latitude in this respect and practically I enjoy a still wider one, for when I took my farm 20 years ago I gave a higher offer on that account; because of being allowed to dispose of the produce. At that time I may say it was not so common as it is now. To some extent I might say that I had then a partial monopoly for the sale of produce and was able to get a higher price and now through bad seasons, and other farmers having been allowed to do the same—I do not say that they have been allowed by agreement, but they have been allowed to sell their produce—it makes the concession to me not worth so much as it was. Now in many cases a man paying the ordinary rent is allowed to sell what he likes.

2413. Do you find the sale of straw very advantageous?—At one time it was.

2414. What sort of price do you get for straw one year with another at Middlesborough?—It varies considerably. A year or two ago it could not be sold at 30*s.*, now wheat straw is worth 70*s.*

2415. (*Mr. Little.*) By the load?—Per ton.

2416. (*Lord Cobham.*) With regard to the Agricultural Holdings Act your suggestion would rather tend to increase the amount that incoming tenants would have to pay in future?—It would.

Agricultural Holdings Act.

2417. Are you of opinion that incoming tenants in the North are perfectly able and willing to pay heavy sums on taking over their farms?—There are not so many farms I am afraid where there could be much claim for compensation. It is on comparatively few farms where there would be any large amount of compensation to pay. I think the tenants for those farms would be willing to pay the compensation.

2418. You think that they could bear the burden?—On those farms where the claims could be enforced I think they would be.

2419. And it would not hinder the letting of the farms?—I do not see why it should. I personally would rather pay a moderate compensation to a man who had expended a large amount on his farm than follow a man who had not expended anything. I should be in pocket by paying a moderate amount.

2420. Would you let the arbitrator decide the question of the improved letting value?—Yes, it would give him more latitude than he would have at present.

2421. Of course, you are aware that in many parts of England there are considerable improvements in the condition of land on farms taking place, and yet they stand at a reduced letting value?—But the reduction in the letting value would be much greater if those improvements had not been made.

2422. The fall would not have been so great?—The fall would have been greater.

2423. Notwithstanding the diminished letting value the landlord would still have to make full compensation?—Yes; the fall would have been greater still if it had not been for those improvements.

2424. (*Sir Nigel Kingscote.*) How do you sell the stock on your farm?—The system of auction marts is spreading very much, and there are fewer sold in the open market and more at the auction mart.

Sale of stock

2425. Do you consider that a good system or a bad one?—I do not send my own stock to the auction marts.

2426. Do you sell it privately?—I always like to make part of my own bargain.

2427. Are cattle sold by weight?—No, except in one or two cases. Do you mean live weight?

by live weight.

2428. Yes?—I only know one case where it has been largely done.

2429. Have you tried that yourself?—In one or two cases.

2430. Do you think it well to adopt it generally?—I am sorry to say in one or two cases I have lost by it.

2431. You cannot speak generally of the system?—I am not in a position to speak generally of it.

2432. (*Mr. Whitehead.*) You spoke of the adulteration of margarine and feeding stuffs as being a factor in the agricultural depression. Has that been so to any serious extent?—I believe the smaller class of farmers who have not been able to protect themselves have been victims to a great extent.

Adulteration of margarine and feeding stuffs.

2433. Do you think that if these Adulteration Acts were applied to manures and feeding stuffs that they would be a remedy?—To a great extent. I must say in some respects it does not go so far as I advocate. I gave evidence before the Departmental Committee, and on some points I should have liked them to have gone a little further, but on the whole I think their recommendations, if adopted, will put a stop to it.

Mr. C. Middleton. 30 Nov. 1893.

Beer.

2434. You spoke of the adulteration of beer; how do you propose to remedy that?—That any brewer who uses any substitute for barley, malt, and hops, should declare it. I would have it printed on the cask.

2435. Would not that have the effect of making beer much dearer?—I do not think so.

2436. You are aware that enormous quantities of sugar are used in the beer?—The price has not been reduced, whatever the price of malt and hops is.

2437. If the marking of beer has any effect it would make the beer that was brewed with sugar and other things dearer?—I would say it would make it cheaper. The substitutes for malt and hops must be cheaper or they would not be used, and consequently the beer would be sold at a lower price, or should be.

Distribution of produce.

2438. With regard to the distribution of fruit and vegetables, what do you say?—In the district to which I belong we do not go in for that sort of farming. It does not affect our district to any extent.

Low prices.

2439. (*Mr. Giffen.*) You said that the low prices of your produce were due partly to bad trade. I presume, to some extent, it is due to the state of the local markets?—That is so. The price of straw and hay varies a great deal according to the state of the local markets.

2440. Does it affect any other articles?—When the state of trade is bad, milk is worse to sell.

2441. And there is a distinct difference according as trade is good or bad?—That is so. Some winters if the trade is very bad, we are not able to raise the price of milk from its summer level. If the trade is good there is no difficulty in doing it.

2442. Does that apply to meat?—To a certain extent, it does.

2443. But you cannot trace the effect of the local market as distinct from that of foreign competition?—Not very well, because if markets at a distance were higher, of course the cattle would be sent there.

Margarine Act.

2444. I did not quite catch from you how you thought the Margarine Act should be amended. Should it be strengthened or more strictly enforced?—Both, decidedly it should be amended and strengthened.

2445. In what way?—I have not the recommendation of the committee by me, but I think one of the provisions was that it should not be allowed to be of the same colour as butter. That is one of the points that we wish embodied in the Bill.

2446. That it should be discoloured on purpose, so as to show what it is?—It should be shown with its natural colour. We do not ask for any extraneous colour, but to show it at its own colour.

2447. Is there much difference in the natural colour?—Pure margarine is a very pale straw colour.

2448. Would butter be sold of its natural colour?—I should have no objection to that.

Reduction of rent.

2449. As regards the remedies you propose for the depression, I presume you consider that the greatest would be a reduction of rent?—We would get more relief in that way than in any other way.

2450. Is it not possible, as far as the tenant farmer is concerned, that he might get all the relief that he requires in a reduction of rent?—I do not know. I see statements made that in some cases if a man had his land for nothing and paid no rent at all still he would not get a living out of it.

2451. Would you say that with regard to your own farm?—If I had my land rent free I should still make a good living.

2452. You would make a good living, but there is some difference between the rent free and the rent you actually pay?—I think I could get on at a reasonable reduction.

2453. Does not it come to this, that of the different remedies you propose, the reduction of rent is of a different kind from the others?—I see no means of enforcing the reduction of rent except by a bargain between a man who has land to let and a man who wants it. The other points should be enforced.

2454. My difficulty about the other points is that if they were enforced, the effect would be rather to increase the rent and that the tenant would be in much the same position as he is now?—Certainly they would not increase rent to the sitting tenant. They might in a fresh tenancy increase the rent.

2455. Assuming that tenants are willing to take the farms at present rents if all the improvements were introduced and the business improved in the way you suggest, the tenants would be asked and would in many cases give a higher rent and they would be in no better position?—I think the tenant would get part of the benefit.

Mr. C. Middleton. 30 Nov. 1893.

2456. You think that the tenant would get the benefit of the improvement of the business generally?—I think he would.

2457. As far as the tenant is concerned the main question is one of rent?—Yes, mainly.

Wages.

2458. You did not mention what the average rate of wages is now and in 1873 and 1875. Could you give us the figures not merely the per-centage of reduction, but the figures?—At the present time the lowest paid labour I employ are casual Irishmen and they get 15*s.* a week and some little perquisites as well; the ordinary horsemen and cattle men have much higher wages, ranging from 17*s.* and 18*s.* to 1*l.*, and in some cases higher.

2459. And in 1875 these wages were what?—The highest wages then would be relatively 18*s.* for the lower-priced labour, and perhaps 22*s.* for the higher-priced labour.

2460. So that the reduction is from 3*s.* to 4*s.* as compared with what it was?—Yes, taking the highest level that the wages reached.

Agricultural Holdings Act.

2461. (*Mr. Clay.*) Do you consider the Agricultural Holdings Act has done a good deal for the outgoing tenant, or has the working of the Act damaged him?—Well, there is a feeling against the Act. I may say I attribute the bad repute of the Act to a few of the earlier cases that were tried under it. There is no doubt in the earlier stages of the operation of the Act many tenants made claims which they had very little chance of substantiating, and which if they had been better advised they would not have made. These claims were met by very absurd and extravagant counter claims, and the way the Act was enforced and the expenses of the arbitration upon those claims were so high that the Act came into bad repute at first. Many tenants were afraid of making claims. In the vast majority of cases when the tenancies cease the tenant is not entitled to make a claim at all, but I do believe there are tenants who are entitled to a moderate amount of compensation who are afraid of making a claim under the Act. They would rather go out without making a claim than be subject to the counter claims that probably would be raised and the great expense of assessing the amount.

Counter-claims.

2462. And the outcome of that was that the tenants at the end of their leases would rather dispense with the expense of the Agricultural Holdings Act, and they were inclined not to make claims but would rather let the farms go down?—There are no leases.

2463. Without leases there was a tendency not to lay out money?—That is my objection to leases, that the tendency was in the last few years for the farmer not to keep his farm up to the mark.

Arbitrators under the Act.

2464. Your remedy is to save the expense of law and witnesses and to have an official arbitrator appointed?—No, I do not go so far as that.

2465. (*Chairman.*) You rather repudiated the official arbitrator?—As a farmer I prefer to have some voice in the appointment of the arbitrator.

2466. (*Mr. Clay.*) Would you object to have a man in each county appointed who knew the conditions of the county and who could go into the case with a knowledge of the facts?—If they were appointed in a way such as I should approve of, I should like to have a voice in the selection of those men.

2467. Would you approve of the appointment of such men?—I have scarcely gone into that question.

2468. But that is a very important element in this business?—They would have to be appointed by representative bodies, by bodies representing both sides of agriculture, both owners and occupiers, and their appointment would have to be confirmed by the Board of Agriculture.

2469. If you had one or two expert men in each county who had been engaged in that business and who had made it a study, would not it be a better thing for the outgoing and incoming tenants to have men of that capacity, rather than to have men who have never handled agricultural questions and do not know what exhausted improvements are?—There are men who are

Mr. C. Middleton. 30 Nov. 1893.

carrying on arbitrations who do not grasp the provisions of the Act.

2470. But if they were acquainted with it and made it a study would not they have a knowledge as to what the exhausted improvements under the Act were?—I think it might be an advantage if the proper men were selected, it would cheapen the thing, and it would be more equitably worked.

Compensation under the Act.

2471. Do not you think that it is misleading to give the compensation according to the rise and fall of the produce, or would not the increased fertility meet it better?—The letting value rises or falls according to the state of farming, not altogether according to the state of the farms.

2472. Have not rents risen and fallen from the unfortunate conditions they are placed in just now by competition and by bad seasons?—There are many factors that really fix the value of land from time to time.

2473. Do you not think that this compensation award should be between the outgoing tenant and the landlord?—Certainly, in the first place, I should say that the owner is the man that the outgoing tenant should look to for compensation; the owner will then make his arrangement with the incoming tenant.

2474. Do you think that that is a sound proposition?—Yes.

2475. Throwing the whole burden upon the incoming tenant?—The outgoing tenant must look to the owner for his compensation, and it is then open to the landlord to make any arrangement with the incoming tenant.

2476. So that an incoming tenant offering for a farm values the farm according to its increased fertility?—He values it at what it is worth at the time that he takes it.

2477. He makes his offer simply?—At the same time he will consider whether he is likely to have any compensation to pay.

2478. How is he to know, a stranger coming into the country?—He will generally take pains to inquire what compensation he has to pay the outgoing tenant.

2479. Has he any chance like the landlord, or landlord's agent, of knowing what ought to be paid?—I would ask the owner if any compensation was to be paid to the outgoing tenant.

2480. Should it not be put into the Act that the outgoing tenant and the landlord should be the only two parties to deal with this matter?—I have not quite considered it. I am not prepared to assent to that at the present moment.

Wages.

2481. (*Mr. Gilmour.*) In the larger wage that you speak of of 1*l.* and upwards, do you include perquisites in that money value, or do they get perquisites besides?—In many cases the house is included.

2482. And a garden?—A small garden.

System of agriculture in Cleveland district.

2483. (*Mr. Little.*) Would you tell us what is the general system of agriculture in the Cleveland district. What are the principal objects that the farmers pursue?—They vary. Shall I give my own?

2484. I was going to ask your own separately. I imagine that yours is somewhat different from that of the ordinary farmers?—Near towns there is a good deal of milk selling—a good deal of dairy farming.

2485. In the Cleveland district you said there was about two-thirds arable land?—Yes.

2486. What are the principal products sold?—Grain.

2487. Barley and oats?—Barley and oats, and some wheat.

2488. Is it a sheep country?—Very few farmers keep sheep—very little of the land is adapted for feeding with roots.

2489. Is it a breeding country?—There is some breeding on most of the farms.

2490. Your own farm lies near to Middlesborough?—Three miles from Middlesborough.

2491. Have you a station nearer than Middlesborough?—Yes; there is a station on the farm.

2492. Then you have great facilities for disposing of your produce. You have liberty to sell and you have considerable facility for disposing of the produce?—Yes. When prices are what I consider remunerative I sell the produce; if not I consume it.

2493. What produce do you sell—straw?—I sell some straw. I keep a large herd of dairy cattle and I am not able to sell much straw.

Mr. C. Middleton. 30 Nov. 1893.

2494. Do you sell seeds, or clover crops, green?—Sometimes.

2495. And they sometimes are very remunerative?—They are sold at as much as 10*l.* an acre.

2496. To mow and remove you have to pay for no labour on the crop?—That is so.

2497. Can you get stable manure for the farm?—I get it from about 60 horses.

2498. It is an inexpensive manure, is it not?—No, I consider that I pay its full value for it—with the cost of carriage added it is rather an expensive manure.

Low prices.

2499. Can you give us any particulars as to prices of produce? You spoke of the great fall in prices; have you any particulars at hand of the prices that you yourself have realised?—The first wheat I sold off my farm was at 70*s.* a quarter.

2500. That is 20 years ago, but in the last seven or ten years?—I have no figures, except I might say that there has been a general fall in prices.

Rates.

2501. You spoke of the rates having risen. I think you were going to put forward figures, to show what the rates have been during the last eight years?—I have particulars of what several of the rates have been during those eight years.

2502. But is that the actual amount paid, or the sum in the pound?—The actual amount paid for the eight years.

2503. Will you give us that?—I have the actual amount for the poor rate each year, and the average for the eight years of the whole of the rates that I have actually paid. The average of the whole rates that I have paid in the last eight years is 66*l.* 1*s.* 3*d.*

2504. But I am referring to the rise and fall; you complain of a rise in the rates?—Yes; the poor rates have fluctuated according to the state of trade in the district. I can give you for every year from 1886 to 1893, the amount of the poor rate. In 1886 it was 42*l.*; in 1887 it was 42*l.*; in 1888 it was 44*l.* 2*s.*; in 1889 it fell to 37*l.* 16*s.*; in 1890 it fell to 33*l.* 12*s.*; in 1891 it fell to 29*l.* 8*s.*; in 1892 it got up to 39*l.* 18*s.*, and in 1893 I paid 42*l.*, and I anticipate that in 1894 it will be higher still.

2505. Then so far as the poor rate alone goes, there is not a rise; there is no increase?—Not in the eight years.

2506. Then if there has been an increase in rates, it has been a sanitary rate or some rate of that kind?—Of course my complaint as to the increase of the rate, was as a comparison between the rates now and what the rates were at the time that I took the farm.

2507. (*Chairman.*) When was the transfer of that parish from one union into another?—I think it would be in 1886 or 1887.

2508. That was the main cause of the increase?—Yes; it was a local cause.

Agricultural Holdings Act.

2509. (*Mr. Little.*) Now with reference to the Agricultural Holdings Act, you spoke of a single arbitrator being appointed; are you aware that under the Act that is possible?—I am perfectly aware that it is so.

Compensation.

2510. Is not the principle upon which compensation is based, that a man should be paid for that which he has not had an opportunity of recovering?—That is the essence of the Act.

2511. My friend on my left asked you about the landlord only being responsible; he is the only person responsible under the Act for the compensation to the outgoing tenant?—That is so.

2512. As regards a large portion of the usual sum awarded to the outgoing tenant, is not the incoming tenant the proper person to pay it, I mean for acts of husbandry, for crops, and for manures?—Certainly, for the tillage.

2513. And for manures?—He would be bound by his agreement.

2514. In the absence of agreement, is there not some common sense in making the incoming tenant pay for those things which are perishable and may be worked out in a short time?—Certainly, for the cultivation of the land and the manure left on the farm he should pay.

Mr. C. Middleton. 30 Nov. 1893.

2515. And the manures in the soil; as a matter of fact and common sense, is it not reasonable?—It is only reasonable that the incoming tenant should be expected to pay for them.

2516. That the tenant should pay for what he may exhaust?—It seems reasonable that he should do that.

2517. For that which is perishable, that is to say, for "indition" as distinct from "fertility," as Sir John Lawes defines it?—At the same time, as the incoming tenant, I should still like to have some voice in the matter. I should like to know what it was I was paying for as a general principle.

2518. As a general principle and practice the incoming tenant paying for that which may be exhausted in a short time, you think, is a reasonable and common sense one?—On the whole it is.

2519. (*Mr. Chaplin.*) Upon that subject I should like to ask one further question. In your district what time do you enter, at Michaelmas or Lady Day?—Lady Day.

2520. Is it not almost impossible to have any other arrangement than that the incoming tenant should pay tenant right to the out-going tenant?—Practically, there is no tenant-right except what is awarded under the Act.

2521. Are the farms in your district as a rule, held under the Act?—There is no means of contracting out of it. There are some farms, where there has been an agreement substituted for compensation under the Act.

2522. Quite so; what I want to know is, are the farms in your district held under the Act, or held under agreement, or held under custom?—In the majority of cases there is an agreement, but I believe in very few cases is specific compensation provided for in the agreement. As a rule, I should say the compensation would be really under the Act. There are one or two estates where they have a specific scale of compensation, which takes the place of compensation, which might be awarded under the Act.

2523. In your district of Yorkshire, there was no custom of the county?—No, not under which you could have compensation.

2524. But that is the case in many parts of Yorkshire, is it not?—Not in the North Riding.

2525. It would be then in the East Riding with which you are not acquainted?—On the Wolds of Yorkshire there were some.

2526. What I want to press upon you is this. I want to ask whether in the case of an agreement, or in the case of a farm, which is held under an agreement in which supposing compensation is given, it would be practicable in a Lady Day entry for the landlord in all cases to pay compensation to the tenant?—In the first place he should do. Of course he might not be able to let his farm.

2527. Then he becomes his own incoming tenant, and has to pay it himself; but where there is an incoming tenant, would it not be an unworkable system as a practice that the compensation which the landlord would be called upon to pay, would be for the production of crops which the incoming tenant is going to reap?—Generally so, to a great extent.

2528. Then it would be practically an unworkable arrangement in the case of a Lady Day entry?—Of course compensation would not be awarded, unless it was of value to the incoming tenant.

Importation of live-stock.

2529. You spoke upon the question of cattle disease; have you suffered in past days in your part of Yorkshire from the effect of diseases like pleuro-pneumonia and foot-and-mouth disease?—In the case of foot-and-mouth disease, not in very recent years. Some few years ago before we had the legislation that we have now we did suffer to a great extent.

2530. In past years?—In past years.

2531. Did you in your part of Yorkshire, suffer also from pleuro-pneumonia?—We have had no very serious outbreaks recently.

2532. Have restrictions been imposed in your part of Yorkshire, for the prevention of cattle disease by the Board of Agriculture?—In some areas.

2533. Where that has been the case, has it inflicted a great deal of inconvenience?—No doubt; at the same time we are prepared to submit to inconvenience, and have been glad to do so for the sake of immunity from disease.

Mr. C. Middleton. 30 Nov. 1893.

2534. I ask the question for the purpose of arriving at this opinion, and that is that the return of any of those diseases would inflict a great deal of injury to agriculture?—There is no doubt of that.

2535. And it is for that reason that you advocate a total prohibition of the importation of live cattle into the country; and that your Chamber, as I understand, advocate universal compulsory slaughter at the port of landing?—The Chamber go for that. I go further. I would prohibit the importation of all live stock.

2536. Are you aware that that is practically the case at the present moment, and has been so for a good many months, and that no animals are permitted to be imported alive into the interior?—At the present moment, but at the same time we are still in constant fear that these regulations will be relaxed at any moment, as soon as certain countries have a clean bill of health, and we are afraid that the state of affairs in those countries would not justify the relaxation.

2537. For that reason what you press as a matter of great importance is that the slaughter of all cattle on landing should be made compulsory?—We press that very strongly.

Agreements.

2538. With regard to what you said about the Agricultural Holdings Act, do I understand you that farms are more usually held under agreements in writing in your district, than under the Agricultural Holdings Act itself?—In most cases there is an agreement in writing—in nearly every case.

Agricultural Holdings Act. Compensation.

2539. And where that is the case do those agreements, as a rule, give satisfaction?—They do not take the place of the Act. I may say that in my own agreement there is a compensation clause which I do not consider a reasonable substitution for the Act, and if I were leaving the farm I should probably make a claim under the Act.

2540. You would make a claim under the Act; you prefer to claim under the Act instead of asking for additional compensation under the agreement?—With reference to my agreement I would like additional clauses in my agreement to prevent an appeal to the Act.

2541. You have asked for additional clauses giving you further compensation, and it has not been accepted, is that it?—When the Act was passed I asked for further clauses which would meet the case.

Compensation for high farming.

2542. You spoke of continuous high farming, and you mentioned the case where for 20 years a good deal of cake might have been consumed on grass land, and I understood you to say that one of your complaints of the Act was that for that continuous good farming there was at present no compensation?—No further compensation than there would be for a very short period.

2543. Does not the tenant to some extent get compensation from the use of the increased fertility of the land in all those years?—To some extent he does; at the same time he has added permanently to the letting value of that pasture.

2544. Besides that, you think that he ought to be compensated in addition to anything that he has at present?—He ought to have some further compensation.

2545. I apprehend from what you told us that this is a good farm?—It is a useful farm.

2546. Is it a fair sample of the farms in the district?—I should say it is, perhaps better than the average.

2547. Better than most is it?—From the situation and buildings on it, it is.

2548. In a good year how many quarters of wheat do you grow per acre?—We are quite content with five quarters to the acre; I have grown more.

2549. But will it grow five quarters to the acre as a rule?—It is only on a very small area that I grow wheat, and naturally it is on the best of the land. When I grow a larger acreage I did not grow five quarters per acre.

Rent per acre.

2550. The rent is now 36*s.* per acre?—Yes.

2551. How long has that been the rent?—I think since 1883.

2552. And then it was reduced?—It was reduced from 2*l.*, I think in 1883, I could not give the exact year, it was reduced from 40*s.*

Mr. C. Middleton.) Nov. 1893.

2553. Was 40*s.* the rent at which you took it?—Yes.

2554. Then in the good days that you speak of, when wheat was making 70*s.* per quarter, you had a pretty good time of it?—I did not make much money even then.

2555. At all events you were much more favourably situated than you are at present?—Undoubtedly.

2556. I think you told us you had considerable facilities for getting manure?—Yes.

2557. And that, I suppose, is one of the reasons why the rent appears to be comparatively high?—I say that I cart this manure three miles.

2558. Does your rent represent the standard of rents at all in the district?—It is higher than the average.

2559. What would be the average?—In the immediate district I should say the average would be 30*s.* to 32*s.* per acre, and as we get further away from the town the average is lower.

ow prices.

2560. I understood you to say that the chief cause of agricultural depression, in your opinion, is the great fall in the price of agricultural produce?—That is the chief cause.

2561. And I suppose the real remedy would be a rise in price?—Yes.

2562. You were asked just now whether the tendency of the various remedies which had been suggested would not rather be an increased rent to that which is paid by tenants at present, and consequently that the chief part of the benefit would go to the landlords. What I want to ask is this question: When the prices were higher, and when the rents were much higher than they are at present, some 20 years ago, were not the tenant farmers infinitely better off than they are at present?—They must have been better off than they are now. In many cases they are as badly off as they possibly can be.

2563. And 20 years ago farmers did fairly well?—Much better than now.

2564. And there was no cry of depression?—Well, more or less there has been generally some cry.

2565. 20 years ago?—20 years ago there were rather inflated values in most things.

2566. At all events they were infinitely better off than now?—I think prices were higher from 1873 to 1875 and 1876 than they have ever been almost in this generation.

2567. (*Mr. Giffen.*) Were not there complaints of high wages in 1872 and 1873?—Wages were very high then.

2568. (*Mr. Dalton.*) Do you think the profits have almost vanished in your district?—In many cases there are no profits.

Rents.

2569. How do you account for the rents keeping up so high?—I must confess I do not understand it. It is a marvel to me how rents are paid at all in some cases.

2570. But they are very high in your neighbourhood, apparently?—They are high. I think, in many cases, there must be considerable arrears, and that rents are not actually paid.

2571. But there is a demand for farms still in the neighbourhood?—Any farm almost could be let at some rent. I think almost all of them are actually let.

2572. At these high rents?—Not all high rents.

2573. Tolerably high rents?—Yes.

2574. And yet nobody is making any profit out of it?—Very few.

2575. That is very strange?—I would not like to say that any farmer is making a profit beyond living.

Rates.

2576. You gave the poor rates for eight years; have you got the other rates?—I have the total rates.

2577. What are the other rates?—The highway rate, the sanitary rate, and the police rate.

2578. Have these gone up or down in the last eight years?—When I took the farm there was no sanitary rate. That has not averaged much. The average of the poor rate for the eight years has been 38*l.* 17*s.*; the average of the highway rate is 17*l.* 10*s.*; the police rate is 6*l.* 0*s.* 9*d.*, and the sanitary rate is 3*l.* 13*s.* 6*d.* in the eight years.

2579. If you had taken the farm in 1886 and there had been the arrangement of halving the rates between the owner and occupier, you would not have gained—the rates have not risen, and in some cases they have fallen?—Not in 1886; in 1876 I should. He would have paid half the sanitary rate.

Mr. C. Middleton. 30 Nov. 1893.

2580. But during the last eight years you would not have gained by it?—There has been no very great increase during the eight years.

2581. There has been a slight increase in the last two years in the poor rate; is that owing to a strike?—It is owing generally to bad trade.

2582. Has not there been a strike?—There has been a strike among the colliers in Durham, which must affect the iron trade, you know.

2583. Have you any particular plan for making other properties contribute to the rates?—I suggest that there should be only one basis for all taxation, and that should be the income tax basis.

2584. You have no other remedy?—No.

2585. (*Mr. Lambert.*) Supposing there was a rise in agricultural prices of 25 per cent. next year, do you think that the landlords would increase their rent?—If the increase was maintained undoubtedly the landlord would ask for his share.

Tenants' capital.

2586. Do you think that the tenants are short of capital in your district?—No doubt they are; at all times the tendency has been for farmers to take more land than they have sufficient capital for. Of late years their capital must have been enormously reduced. At the present day not half the farmers in the country have sufficient capital employed upon their farms.

Arrears of rent.

2587. You said just now that there were a great many arrears of rent in your opinion?—Of course I have no means of knowing that. I think there must be, seeing the way that many men carry on their farms, otherwise I do not know, how they could pay their rent.

2588. Do the arrears of rent show that there has been too much rent charged in the past?—It means that the tenant is not actually able to pay the rent.

2589. He is not actually able to pay the rent charged by the landlord, you mean?—Perhaps the landlord has taken what he can get, of course I cannot prove that. It is only a supposition.

Free sale.

2590. You said just now that the tenant might sell what he liked as long as he pays his rent?—In some cases, in spite of agreement to the contrary, they have been allowed to sell.

2591. As long as he pays the rent; is the rent the chief object to the landlord?—To some landlords I am sorry to say it is.

Land Courts.

2592. Why do you object to an outside tribunal to fix the rents?—I think for the same reason that there would be an objection to fix the price of any commodity.

2593. But you said that reductions would be enforced by the tenants being unable to take farms?—The law of supply and demand may regulate that.

2594. Would not it be better that some impartial tribunal should come in to fix the rent which the tenant would be able to pay, without resorting to that extreme method?—I am opposed to any compulsory tribunal for the fixing of rents.

Demand for farms.

2595. You said just now that the land agents told you that farms were let more readily than they were?—Several agents say they have had less difficulty in the last two years than in the preceding years.

2596. That does not show that tenants are unable to take farms?—I could not understand the statement. It might be true, but I must confess that I do not understand how it was so.

Low prices.

2597. What is the reduction in value of agricultural produce in your neighbourhood—I mean to say the proportionate reduction?—I have not worked it out at all in figures. Of course the prices are not stationary—they fluctuate.

2598. Is it more that 15 per cent.?—Decidedly so, I should think.

2599. And there has been 15 per cent. reduction in rent?—In round figures, yes.

2600. Therefore the prices of agricultural produce have fallen a great deal more than the rent has fallen?—That is so.

Rates.

2601. Do you think the tenant would derive benefit from lowering the rates?—He would receive part of the

benefit; he would not get the whole. In the case of a fresh tenancy, no doubt, the landlord would receive a considerable part of the benefit.

2602. He would only receive it through the voluntary action of his landlord?—If it helped the landlord it must help his tenant.

2603. You said that some landlords only considered rent?—Some few; it is quite exceptional. I should be sorry that it should go forth that it is so of the majority of landlords.

Improvements by tenants.

2604. Do you think that permanent improvements should be allowed, or that a tenant should be allowed to make a permanent improvement with the consent of an outside tribunal?—Yes, where his landlord refuses permission.

2605. Where the landlord refuses a reasonable reduction of rent do you think an outside tribunal should have the power of fixing that as well?—I cannot assent to that.

2606. Why do you bring the outside tribunal in in one instance and not in the other?—There is rather a difference; I am opposed to outsiders fixing the prices of any article.

2607. But this would be arbitrary, to allow the tenants to put up buildings and permanent improvements without the landlord's consent?—If it was for the benefit of the holding, that is, where the landlord is not able to put it up and still refuses to allow the tenant to do so.

2608. I put rent upon exactly the same level. The landlord refuses to reduce his rent?—I cannot admit the principle of anyone fixing the price of a thing.

2609. Is not an arbitrary principle inserted in the Agricultural Holdings Act?—No; to a certain extent it provides how a man may deal with his property. I do not think, that the principle of fixing rents is at all embodied in any part of the Act.

2610. But there is an arbitrary principle, a compulsory principle, in the Agricultural Holdings Acts?—Yes, to a certain extent.

Prices of dairy produce.

2611. Could you tell me, as compared with 20 years ago, what are the prices of buttermilk, and such like produce in your district?—There has not been so great a fall in the price of dairy produce in the last 20 years as in cereals.

2612. You said too there was a 5 per cent. increase in railway rates since the passing of the recent Act?—Generally all round there has been an increase of 5 per cent.

2613. Which is not applied to foreign produce?—I say it was stated in the evidence given before the Committee, and I do not think that the railway companies rebutted that evidence, that the 5 per cent. increase has not been put on at the seaports.

Reduction of rents.

2614. (*Mr. Channing.*) You spoke of some landlords only considering rent. You, of course, are aware that a great many of the landlords are so burdened with mortgages and charges that they are not in a position to make the same reductions that others can make?—I quite admit that many are not in a position to make them.

2615. Your Chambers in Yorkshire have never considered the legal question of mortgages and charges upon land in its relation to agriculture, have they?—No, they look upon them as charges which exist and which cannot well be removed.

2616. You spoke of land being readily relet at some sort of rent. I should like to ask you whether the rents at which land is relet to new tenants are very much lower than rents which older tenants in the same district are paying?—Of course in many cases where there has been a change, the rent has been reduced. There are some cases where the rent has not been reduced, where they have been relet at the existing rent.

2617. Have you heard of any farms relet during the last three years, or since 1888, at an increase of rent?—I heard of one case, I do not know whether it was actually so, but I did hear that an agent had let a farm at a higher rent; I do not know whether that was so.

Law of distress.

2618. You spoke of the insufficient capital of tenants generally. Have you any opinion to express about the law of distress and its effect upon that question?—No doubt the law of distress cuts both ways. It enables men to take more land than they would otherwise do, and it unduly forces up rents. Even with the limited protection that the owner has under the present law of distress he has a sort of preferential claim, and in consequence many a man is allowed to take more land than otherwise he would be able to take.

Mr. C. Middleton.
30 Nov. 1893.

2619. With less capital?—More land than he could take and work fairly.

2620. (*Chairman.*) Has your Chamber of Agriculture expressed any opinion upon that subject?—I do not call to mind any particular resolution on that subject.

2621. Can you state what is the general view of the district about it?—Some are in favour of the law of distress remaining as it is at present because they consider that the landlord is the most lenient creditor that they would have to deal with. The feeling of small farmers is that they would rather have the law of distress stand as it is now. Many larger farmers would have it done away with because they would be put in a better position.

2622. It rather protects the small farmers against other creditors?—Well, at the expense of other creditors. He looks upon it that if it were done away with, the landlord would not be able to show the same forbearance that he does.

2623. He would be obliged to press for the rent as soon as it is due?—Yes.

Tenants' capital.

2624. (*Mr. Channing.*) It thus leads to letting men with insufficient capital go upon the land, and it diminishes the general credit of the farmer in dealing with others?—It must do so to a small extent.

2625. About the capital. The reductions in your district seem to have been very small. Is it your opinion that tenants in the last 15 years have in some cases been paying the rent out of capital; I mean, that allowing the minimum profit that they might reasonably expect in their business, the rent has not been made out of the land?—Many of them must no doubt have done so.

Arbitration.

2626. Then you expressed an opinion in favour of a single arbitrator; you would have him appointed, I think, by some representatives of the landlords' interest and of the farmers' interest. Have you worked that out in any proposal?—No, because it was not a proposal. I replied that it did not seem an unfair way if they were appointed by both sides. I thought that might be a way out of the difficulty.

2627. Are you aware that it has been suggested that they should be appointed by a committee of the County Council, with the approval of the Board of Agriculture?—I have seen some such suggestion.

2628. Do you approve of that idea?—I have not considered the question sufficiently to give an answer upon that point.

2629. But surely you are of opinion that men specially selected for their fitness by some person or persons competent to select them would be better than the ordinary chance valuers?—It would be both cheaper, and you would have better decisions given.

Free sale.

2630. You took your own farm and paid a higher rent for it, because you had freedom of sale of produce, I understand?—Undoubtedly so.

2631. I want to know whether it is your opinion that freedom of sale of produce should be given by law as well as by agreement, as you yourself arranged?—I am scarcely prepared to advocate that.

2632. But if the law provides that an equivalent in the form of manure—artificial manure or otherwise—should be returned?—I should like to see much greater freedom of cultivation and sale of produce than is generally allowed, subject, of course, to reasonable precautions against deterioration.

2633. In all these leases there are provisions for penal rents for breaches of order of cultivation, and so on. Do you approve of that as a way of dealing with the matter?—I look upon that as a dead letter, because I think that any penal rent would not be enforced by any court of law, and that the case would be treated on its merits by an arbitrator.

2634. But would it not be much simpler to put back the manures and leave the tenant to manage his business in his own way?—I think that there should be as much freedom as is consistent with the landlord's interests, given to every tenant.

Compensation for high farming.

2635. You gave us a case, which I will not ask further questions about, in which a tenant had an award in respect of continuous high cultivation?—Yes,

Mr. C. Middleton.

30 Nov. 1893.

I know one case. The man who made the award told me of this case.

2636. Have you anything to add materially to what you have already told us in regard to that case. Is this in Yorkshire?—It was in Yorkshire.

2637. Your opinion was, I suppose, on the advice of some solicitor or someone acquainted with the law that he would not have been sustained in his award?—No; that was the arbitrator's own opinion; it was the opinion of anyone who had studied the Act that it would be so.

2638. You wish that right to be made legal?—Yes.

2639. And also the right to get suitable permanent improvements if an arbitrator considered them to fit in with the general uses of the farm?—Yes.

2640. You are anxious to get this increased compensation for really high farming for tenants. Would you limit it only to a quitting tenant or do you think that on the change of the terms of the tenancy he also ought to have, under those circumstances, what he had done for the farm considered before the terms were re-adjusted?—I take it, if he was making a fresh agreement, he would naturally consider that himself, and in any future terms he would take that into consideration. I cannot help thinking that the assessing of the amount of compensation might give rise to friction, and might make it more difficult to come to terms for a future tenancy.

Compensation for improvements.

2641. You think that a tenant would ask to have his improvements considered in settling the new terms?—If I was agreeing to fresh terms I should undoubtedly consider that myself, and besides, if the amount of compensation was assessed at the end of the tenancy, if the sitting tenant received it in one hand he would have to pay it with the other.

2642. Do you think it is just that he should have his improvements considered in settling the rent?—I am opposed to raising a man's rent on his own improvements.

2643. You were asked questions about the payments of incoming tenants being too high. It has been often said in some counties the incoming tenant really pays for more than he gets in doing so under the custom?—I do not think so.

2644. In the southern counties, is it not so?—I am aware that the tenant-right is very heavy, but, perhaps, it is a necessary consequence of the period of the year at which the change of tenancy takes place.

2645. But the Agricultural Holdings Act is limited to added fertility and real improvement in the soil, so that the incoming tenant is paying for value received?—There is no doubt that to the extent that one man has improved it the other pays higher for it.

2646. Would not it be much simpler to get rid of the whole of the anomalies, and merely to say that the landlord, or the incoming tenant through him, should pay for the added fertility of the farm?—I cannot say that I have considered that question to be able to give an opinion.

2647. I presume you are not in favour of free sale of improvements?—No.

Ground game.

2648. (*Captain Thomas.*) Have you much ground game?—There are more rabbits than there ought to be.

2649. Have the farmers availed themselves of the Ground Game Act?—Not to any very great extent.

2650. Has any damage been done by the ground game?—I know cases where damage has been done by rabbits.

2651. Are the farmers compensated in any way?—I have a case in my mind where a man had to leave his farm entirely on that account. The game was let to a shooting tenant, that was how it arose. The man was a very good tenant, and he had to leave his farm on account of the damage done by rabbits. I daresay it was owing to misrepresentations of the gamekeeper employed by the shooting tenant.

2652. Do the landowners allow the tenants to shoot the ground game?—Some do not interfere, others express a wish that they should not avail themselves of the Act, but there is not much cause for complaint.

Rates.

2653. You had your rent reduced 10 per cent. and then 5 per cent.?—When I took the farm it was in a union where the basis of rates was very low indeed. When we came into the Middlesborough Union they adopted a different basis of assessment, and it was very much higher.

Mr. C. Middleton.

30 Nov. 1893.

2654. You got your rent reduced?—Yes.

2655. And of course, naturally you would expect to get your rates reduced in proportion?—Practically I had not been assessed at the full rent, and I could not go before the Assessment Committee.

2656. Are the farms let by tender?—Not as a rule.

Tenants capital.

2657. The farmers have been paying some of that rent out of capital. Have they much capital?—They cannot have much left in many of these cases.

2658. How do they manage to pay rent? Do they borrow money?—I do not know. It has been always a puzzle to me how many farmers pay the rent at all. One can judge by what they have on their farms. It is quite incomprehensible how they pay the rent.

2659. What capital do you consider necessary per acre for a farm?—It varies a good deal according to the system of farming you adopt.

2660. Take an arable farm for instance?—In my own case, I am employing about 12*l.* per acre, but I know a great many farms where they are not employing half that capital. I know farms where the capital is not much more than 2*l.* or 3*l.* per acre, where there is very little stock kept.

2661. Is the land suffering from want of capital?—It must suffer from want of capital where there is so little employed. There is no manure nor labour.

2662. Is that more so now than it was years ago?—There is no doubt that the capital is much less; the stock is reduced and less labour is employed. You need only go through the country to see it.

Labour.

2663. Are you well supplied with labour?—As a rule there is quite sufficient to meet the demand.

2664. Is the quality as good as it used to be?—Scarcely so. The best of the lads and young men drift away to other employments.

Tithe.

2665. (*Mr. Everett.*) You have paid tithe on your farm hitherto?—Only the small tithe, the vicarial tithe.

2666. Do you pay that in addition to the rent?—Yes, in addition to the rent that I pay to the landlord. I recoup him for that which he paid to the tithe owner.

2667. You really pay that addition to the 36*s.* per acre?—Yes.

Low prices.

2668. You have told us that the fall in prices, that the low prices, are the worst trouble that agriculturists are suffering under I think?—Yes.

2669. Agriculture on the whole was very prosperous was it not till 1879—speaking generally?—About 1875 or 1876 prices were the highest and values were the highest, and since then it has got gradually lower. In 1879 owing to an excessively bad season the people felt it more that year.

2670. Till that year the industry had been as a whole a fairly prosperous industry?—Yes, the pressure had not begun so soon in Yorkshire as in the South of England.

2671. During the period when farmers were paying the high rents previously to 1879 they paid both their rents and rates more easily, I think you told Mr. Chaplin?—There is no doubt about that.

2672. And the fall in prices has checked permanent improvements upon the land, has it not?—To a great extent it has done so.

2673. And tended to lessen the production out of the soil?—Undoubtedly.

2674. And to diminish employment upon the soil?—That is so.

2675. In fact it has lessened the amount of money that the produce on an average acre of land would give, and there is so much less to divide amongst the classes interested in the industry?—The amount land is producing is less per acre.

2676. And not only a less quantity of stuff but much less money to divide amongst the classes interested?—Much less.

2677. Is not rent really the measure of prosperity? When rents are going up is it not a token that the industry is a prosperous one?—Yes.

Mr. C. Middleton. 30 Nov, 1893.

2678. And when they are going down, that the industry is in distress?—The capacity to pay rent must be an index.

2679. The continuance of high rents is a proof that the industry is flourishing and the continuance of low rents shows the reverse?—Of course the rents do not get adjusted so quickly as the circumstances change.

2680. But still a rising rent is an indication that the industry is prosperous, and a falling rent is a sign that the industry is suffering adversity?—It must mean that.

2681. Looking over a wide circle; would you regard a fall in price as a blessing or as a calamity?—I do not think that excessive lowness of price is an unmixed benefit to any class.

2682. Do you know of any industry besides agriculture that has been as prosperous during the last 15 years as it was before?—There are industries more liable to sudden and violent fluctuations even than farming is.

2683. Do you think if all the ameliorations that you have suggested were carried out, but notwithstanding that prices still continued to fall, those ameliorations would prevent agriculture from suffering still more trouble?—I am certain that they could not put it back on its former basis.

2684. And if prices continued to fall they could not prevent it falling into a still worse condition?—No.

2685. Have you any idea what the cause of the fall in prices is?—I suppose, to a certain extent, it must be owing to large importations.

2686. You are aware that we had protection at one time?—Yes.

2687. You know that the Corn Laws were imposed in 1815?—Yes.

2688. And that those Corn Laws lasted 31 years?—Yes.

2689. Are you also aware that the 32 years that followed repeal were more prosperous to agriculture than the years of protection?—For one reason that at that time war had a great deal to do with the level of prices. The prices were always affected more or less by the state of the country as to whether we were at peace or at war with other countries.

2690. I may say that during the 32 years of free trade rule, prices of corn were just about the same as the 31 years during which the Corn Laws lasted?—I am scarcely prepared to go back so far. It is beyond my experience.

2691. (*Mr. Elton.*) Does your experience go back to the time when wheat cultivation was not so prevalent as it became under modern machinery?—I cannot go back to the earlier days. That is much beyond the time that I am prepared to speak to.

2692. What sort of barley have you? You spoke about the malt for making beer; do you grow on your farm or in your district a good malting barley for beer?—It is just a useful barley.

2693. You were speaking generally, not with special reference to your own industry?—That is so. I apply it generally to the whole county.

Margarine Act.

2694. With reference to margarine being sold for butter, you said, or at least I gathered so, that the sale of margarine still interferes with the proper sale of butter?—Beyond that, it re-acts upon the whole dairy industry of the country; it displaces so much genuine butter that less butter is made, which throws more milk upon the market which would otherwise be made into butter.

2695. If the margarine was out of the way do you think that the inferior qualities of Irish butter would be sold?—I do not object to margarine being sold as what it really is. All that I ask for is that it should not be sold as butter.

Mr. C. Middleton. 30 Nov. 1893.

2696. You would not object to the low class of Irish butter that I have heard described as fit for adulterating margarine?—I do not object to anything being sold provided it is sold in its true name.

2697. Only one more question; you say that margarine ought not only to be sold under its own name, but also in its true colours?—That is so; until that is done it will be utterly impossible to check adulteration.

2698. I am only asking for information, but you say that pure margarine is almost white?—It is very pale.

2699. Like butter made with scalded cream?—I will not say that no butter is as light in colour as pure margarine, but there is very little butter that has so little colour as margarine.

2700. What is it made of?—Animal fat of all grades, from carefully prepared to the veriest filth that can be produced.

2701. The Margarine Act is neglected in some boroughs where they neglect the Food and Drugs Act?—Entirely in some boroughs and in some counties as well.

2702. Can you tell me whether there is any special neglect of the Margarine Act, or is it only special neglect of the Adulteration Acts?—I am not prepared to speak, but the Margarine Act is not enforced by some authorities where the Food and Drugs Act is.

2703. That is what I wanted to know?—I should say that there is a systematic neglect of the Margarine Act even where there is a partial enforcement of the Food and Drugs Act.

2704. Then is the Margarine Act deliberately and systematically evaded?—By some authorities it certainly is.

2705. I am quite aware that some years ago margarine was made out of the disagreeable ingredients you have mentioned; have you not heard that margarine was made completely out of cotton seed oil coloured up with cocoa-nut?—I would not say that there is any grease under the sun that is not made into margarine.

2706. I want to know a little more exactly, because I had something to do with the Margarine Act?—There are all grades from carefully refined fat, downwards; Vegetable oils I know are used in addition.

2707. I have had a good deal of evidence put before me to show that the animal fat manufacture had almost entirely ceased a few years ago, and that margarine was no longer made of animal fat because so much is made out of railway grease and waste cotton oil?—I should say that the higher grades of margarine are made from carefully refined fat.

2708. Are not you aware that the margarine of commerce made from cotton seed and cocoa-nut oil would not be white but butter colour?—My impression was that cotton-seed oil was more used for enriching cheese than margarine.

2709. We will take your impression. You do not know that this cotton seed oil is largely used in making imitations of butter?—I do not know it from my own experience.

Agricultural Holdings Act.

2710. (*Lord Vernon.*) Do not you think that if tenants were quite secure of realising the outlay upon any improvements they make, they would make further improvements than they do at present?—Where they have capital to do it with, I think they would.

Arbitration.

2711. In your evidence you say you think it would be a good thing to enable arbitrations to take place with one arbitrator instead of two?—It is a matter of reducing the cost.

2712. Do not you think that if certain valuers who were to arbitrate under the Act were obliged to hold certificates that would meet the case?—I am certainly in favour of every man who is empowered to administer the Act having the certificate granted.

The witness withdrew.

Mr. S. Kidner.

Mr. Samuel Kidner called and examined.

Mr. S. Kidner.

30 Nov. 1893.

30 Nov. 1893.

2713. (*Chairman.*) Are you a farmer residing at Taunton?—Yes.

2714. What sized farm do you occupy?—340 acres.

2715. Have you been requested to come here on behalf of the Taunton Farmers' Club?—Yes.

2716. How many members are there of that club?—About 140 I think. It is considerably over 100. I am not certain of the number.

2717. Are they all farmers within that district?——They are all farmers within that district, and there are a few landowners in it as well.

2718. What is the general character of the country?—Mixed agriculture.

2719. Is there much arable land?—I should think more than half, probably.

2720. And the other, is it grass?—It is grass. We have some orchard.

2721. Are the farms mainly dairy farms or what?—No, the system is very mixed as well—breeding and grazing—as much mixture as you ordinarily find. Most of the dairy work is done in the farmhouses. Very few dairies are let there.

2722. On what subjects have you been requested to speak here?—I have some notes, would you wish me to read them?

Causes of depression.

2723. Yes?—The principal causes of agricultural depression I think are the following, the low prices obtainable for all kinds of agricultural produce, due chiefly to foreign competition. The great increase in rent in times of inflated prices, with a too slow reduction under the subsequent depression. Antiquated and vexatious agreements and the want of security for the tenant's capital. The unfair burdens placed on the land, and preferential railway rates in favour of foreign produce.

Remedies for depression.

Immediate relief is to be sought in the lowering of rents, which are still far too high, and in many cases considerably above those prevailing 30 years ago. And among the enactments required I should first place that dealing with the question of land tenure, a more enlightened interpretation of which would, I think, materially improve the relations of landlord and tenant, bring their interest into greater harmony, and thereby strengthen their common interest. On the question of land tenure I would suggest that more freedom of cultivation and sale of produce is urgently required, and although agreements have in late years in many cases been drawn on more reasonable lines many (and on large estates) still contain provisions and restrictions which are one-sided and unreasonable, and in no way warranted by the conditions under which agriculture in the present day has to be carried on. These are framed for the most part by lawyers and agents employed by the landlord, and generally not much in sympathy with the tenant farmer, and too often with no practical knowledge. Under these conditions the tenant, acting single handed, is seldom in a position to dictate terms, or obtain reasonable concessions, and many, through ignorance or carelessness, take little trouble to get such agreements drawn on practical lines, the majority having little idea of some of those conditions until learning them to their cost. I think beyond stipulations as to maintaining the character of the farm (by that I mean that pasture should not be converted into arable and such like) and as to repairs, &c., few covenants are required, but that it should be legally established that the tenant should be compensated for any improvements by which he has increased the value of his holding, whilst at the same time he should be responsible to his landlord for any deterioration caused by him through neglect or mismanagement. This I think could be easily accomplished by the provision of an official and popularly elected referee in stated districts to whom the task should be assigned at the commencement of a term, of scheduling the condition of the holding, such schedule to form the basis on which increased value or deterioration should be estimated at the termination of a holding, or such other time, as may be agreed on.

2724. (*Mr. Chaplin.*) Would you read that last sentence again?—Yes. By the provision of an official and popularly elected referee in stated districts, to whom the task should be assigned at the commencement of a term of scheduling the condition of the holding, such schedule to form the basis on which increased value or deterioration should be estimated, at the termination of a holding, or such other time as may be agreed on. In the procedure, in case of valuations it should be competent for either party to act for themselves, if they so desire, and the official referee to settle all matters on which they cannot agree, unless they mutually agree on some other third party. As regards sitting tenants it is urgently required to the well-being of agriculture and for the protection of the sitting tenant, that some tribunal be appointed to fix rents in case of appeal, and that fair compensation be awarded for disturbance, in view of the disadvantages under which a tenant labours, in the contemplation of a change of holding, not only by his being thrown out of business, and perhaps in middle life or advanced age having to leave his home and friends, but also by the large pecuniary loss he necessarily sustains. This, however, should not apply to disturbance on account of bad management. And under the heading of game——

Reduction in rents.

2725. (*Chairman.*) I think before we go to those other matters we had better ask you a few questions upon the subjects that you have already dealt with, namely, the question of rent, and the question of tenure. You stated just now that the rents in your districts are still in your opinion rather too high?—Yes.

2726. And although there have been reductions they have not come down to the point at which they were before the rise a few years ago?—That is so.

2727. What are the average rents in your district?—I should say generally that they would range from 1*l.* to over 2*l.* an acre in the district.

2728. What was the time at which the rents were high to which you alluded?—I should think in the seventies.

2729. When did they begin to fall?—Soon after the year 1879, I should think.

2730. At what rates were the rents in 1870 as compared with the present time?—It depends a great deal upon whether people hold on leases or whether they have yearly agreements. In the cases where they have yearly agreements the rents have fallen much lower than where they have leases. In the latter case I must say that the landlords have been very liberal under the circumstances, and they have made reductions, but they are still too high and above what they would be if they were held under yearly agreements.

2731. Have leases been prevalent in your district?—Yes, they were formerly, but they are not so much now.

2732. But taking cases where there was no lease, what has been the fall in rent since 1870?—I should say probably from 20 to 30 per cent. in very many cases.

2733. But in spite of that considerable reduction you say they have not fallen to the point at which they were before the rise?—In this case I daresay they would. In the greatest cases of reduction there is no doubt in the world in some of the land where wheat and things which are at a great discount are grown they may have fallen below the prices prevailing 30 years ago, but on a great many holdings they are not back to that point.

2734. Then you say that a considerable number are still under lease?—Yes.

2735. There it has depended wholly on the consideration of the landlord whether the rents are reduced or not?—Yes.

2736. And the landlords have in many cases reduced the rents?—In almost all cases I may say they have been reduced. I hardly know an exception—in fact, I do not know an exception.

2737. Has any land gone out of cultivation in your district?—No.

2738. Are farms easily let still?—Yes.

2739. Is there a demand for farms?—Yes.

2740. Are there men forthcoming with capital to take them?—Yes, but with a very reduced capital to what used to be the case. I should think there is no difficulty in that way in getting good tenants for the

Mr. S. Kidner.
30 Nov. 1893.

best farms, but on the holdings which are less desirable they do not always get very desirable tenants, but they are easily let. There is no difficulty in that way.

2741. Should you say at present rents or at reduced rents, or is it only where the farms were vacant, that they make the reduction?—The rents are reduced in every case very considerably. I think, if I may be allowed to suggest one very great point, it is that in the case of rents where the greatest reduction has been made, it has been to the new tenant where the old one could not possibly obtain it. I have known many cases of that sort.

2742. You have known many cases where the land has been re-let at a lower rent than has been conceded to the sitting tenant?—That is so, and that has been exaggerated in this way, that a new tenant very often comes and bids the old rent, and he begins to pull the farm the very first year and he gets his rent reduced by reducing the value; he loses nothing, that is where the mischief comes in.

2743. A new tenant has come in, paying the same rent and perhaps more than the old tenant, and after a year, or even within the year, he gets the rent reduced?—Yes.

2744. (*Mr. Chaplin.*) You said he began to "pull" it?—Yes, he runs no risk of leaving any of his own capital behind.

Land courts.

2745. (*Chairman.*) You are then of opinion that the rent should be determined by an independent authority?—In the case of sitting tenants, I can see no other way of doing it.

2746. Not in the case of an incoming tenant?—In the case of an incoming tenant you may have some other provision. If a tenant could have the value of all his improvements, and also compensation for disturbance, I think he would be in a position to make his own terms; but, without that, he would not be in a position to do so.

2747. But take the case that you have mentioned, namely, of a tenant who coming in and paying the same rent, or higher, than the outgoing tenant, and who within a year afterwards asks for a reduction of rent, do you think in that case he should have his rent determined by a tribunal?—If he had taken it on his own basis and had turned out another tenant, I do not think that he has any ground for consideration.

2748. And you would distinguish such a case as that from an ordinary sitting tenant?—I think in justice you should; perhaps it may be difficult in practice to make that distinction.

Leases.

2749. In the case of leases do you think that the leaseholder should appeal to a tribunal for a reduction of rent?—Yes, I think so; because in many cases they were forced into those leases under special conditions. It was the only safeguard at the time.

2750. What special conditions do you refer to?—I think I may mention my own case. I happen to be in that unfortunate position of having a long lease, and it was simply this, that at the end of every term there seemed to be excuses for raising the rent; and on the second occasion of the renewal of the lease, without any reference to the state of agriculture, after having made a hard bargain when things were looking up, we anticipated that they would go on improving; and if I turned out I should have left everything that I had on the farm; the farm was as well farmed as anyone's could be, and for my own protection I took a long lease. I can give you the dates and the per-centage that was put on the farm.

2751. (*Lord Cobham.*) How long was the lease?—21 years.

2752. (*Chairman.*) When did you have the last renewal?—In the year 1878. In 1868 I took the farm, and made a very hard bargain, and I had to take it over at 30 per cent. advance, and I considered the matter settled, and went on and spent my money rather freely. At the end of 10 years—I took it on a 10 years' lease—another 23 per cent. was demanded; and although I should have left everything on the farm that I had spent money upon if I went out, I decided to go. I was met by a slight concession that turned the scale, and I was induced to stay on; and I took it at 17 per cent. rise for the 10 years between 1868 and 1878, for which there was no just excuse.

2753. You undertook your leases in 1878 under conditions in which, I understand you to say, that you could not resist the unfair treatment?—That was so.

2754. The conditions were that you could not recover the expenditure that you had laid out for improvements on the place?—That was so.

Mr. S. Kidner.
30 Nov. 1893.

2755. That was before the Agricultural Holdings Act?—Yes, that was before the Agricultural Holdings Act.

2756. Therefore you were under a disadvantage?—Yes, I was under a disadvantage. I followed on from a lease that my father had taken 45 or 46 years ago.

2757. And the lease was entered upon just before the bad times?—Yes.

2758. And when you are still in hopes that things might improve?—That was so.

2759. And unfortunately circumstances have turned out the contrary; instead of improving it has been the reverse?—Yes.

2760. And you have found yourself landed in a heavy rent for 21 years?—My landlord has permanently altered that lease to a certain extent, and he is still making a temporary reduction now. Of course that is voluntary on his part, but it is still beyond what I think I should have the farm for; it is certainly beyond what it is worth if I were under a yearly agreement.

2761. What permanent reduction has he made?—To the extent of about 25 per cent., and I was at once rented 47 per cent. over what my father took it at.

2762. (*Mr. Channing.*) Was it a permanent reduction?—Yes, it was altered on the lease to that extent.

2763. (*Chairman.*) Did he give you a new lease?—It was simply a note.

2764. Is was a note endorsed on the back of the lease?—Yes, and it is permanent as regards that.

2765. Making a legal reduction for the remainder of that term?—That is so.

2766. And beyond that you have temporary reductions also?—In the last year there has been, but that still leaves it 25 per cent. beyond what my father had it at in 1847, after these deductions have been made.

2767. But you are comparing the present with 1847?—That would be so.

2768. Then you think that tenants under circumstances such as you are in should be relieved of their leases and their rents reduced?—That is so.

2769. By some external tribunal?—I think so.

Agricultural Holdings Act.

2770. With reference to the recommendations for the amendment of the Agricultural Holdings Act, you say that you think there ought to be some further provision of security for the tenant, that he should be compensated for his improvements, and you have suggested that a valuation or schedule should be taken at the commencement of the tenancy as a record of the condition and state of the farm for the purpose of comparison whenever that tenant leaves?—Yes.

2771. That recommendation, I presume, would only apply to future holdings?—To future holdings. You could hardly make it retrospective, because of course you would have no record.

2772. Therefore it would not benefit existing tenants?—You would hardly act on that basis.

2773. Have you any proposals as regards existing tenants?—Well, the onus, it seems to me, must rest upon them to prove the improvements which they have made; but I think they should be compensated for all the improvements that they can prove.

2774. The onus must rest with them, however?—Yes.

Compensation for improvements.

2775. What changes would you make in the Agricultural Holdings Act with the view to better secure the existing tenant?—That he should have full compensation for the value of any improvements to be made. Really, I think, as these things are valued now, it seems to me always done on the score of expenditure. We all know where a tenant has gone in for improving his farm he has done it at a certain risk, and there are certain failures, but that is not taken into consideration in the valuation of the improvement. The value of the farm is more to the tenant after he has given it up than it was before he carried out the improvement. In carrying out that improvement he has a great deal of risk, and there are certain failures, and he has to bring his judgment to bear on making that improvement.

Mr. S. Kidner. 30 Nov. 1893.

2776. The basis of the present Agricultural Holdings Act is the actual expenditure upon the improvement, I suppose?—It is the way those valuers would interpret it.

2777. And you think that the basis should be upon another principle—that of the actual value given to the holding by the expenditure?—That is so, and I do not think there is any necessity for the different classes of improvements. I cannot see why they are not all included under one class, and that it should be open to the tenant to make what improvement he chooses. It seems to me that he runs the whole risk, and if he cannot show improvement he will get nothing for it. It is the way it is interpreted in almost every case.

2778. In your experience, the valuers, as between outgoing and incoming tenants, never take into account more than the actual outlay?—That would be so.

2779. In your opinion they ought to go beyond that and to estimate the additional value given to the holding by the expenditure?—Yes.

2780. Have these two matters been discussed by your Farmer's Club?—Yes, and resolutions framed and sent up to the Central Chamber of Agriculture entirely on those lines, and they were unanimously adopted.

2781. Have they recommended a tribunal for the determination of rents?—Yes.

2782. As regards the sitting tenant, as I understand?—Yes.

2783. And not as regards the incoming tenant?—It was not specified in the resolution, but as regards the sitting tenant it is most urgently required.

2784. And your other point is to secure to the tenant the full value of his improvements?—Yes; and greater freedom of cultivation and sale.

2785. Then the third point is the securing to the tenant a greater freedom of cultivation?—Yes.

2786. How far, in your opinion, should that go?—I cannot see that any restrictions are wanted if you have an intelligent agriculturist. It is not possible for a lawyer in his office, by restrictions, to teach him how to do it, and I think in my experience I have never known a bad farmer made into a good one by stringent enactments of that kind. I know an estate or two where they have full liberty to farm as they like, and I think the management of those estates will compare favourably with many others, and the farmers make the best of the land in those cases.

2787. Would you allow a tenant to break up pasture?—No, I would not. I provide for that in that proviso as to the altering of the holdings.

2788. That proviso was intended to cover that case?—It was intended to cover that case. I think it would be unreasonable if that were not provided for.

2789. Do you think that a tenant should be allowed to put up any kind of buildings?—I think so. If at the end of a lease it is shown to be unnecessary on the holding, the tenant could evidently recover nothing for it, or only the value of the materials. I can see no objection to it, the whole risk would be the tenant's.

2790. Now go on to the other points?—There was just one other matter that seemed to come under the land tenure part of the case, and that is the question of game. My chief point with regard to that is, and I think most tenant-farmers would agree with me, where the landlord kills the game for his own enjoyment I think it is a very desirable thing, and personally I am always pleased when I see my landlord shooting, and I am all the more pleased if he has a good bag; but where it is let to a third party it almost always leads to disagreement and annoyance and injury, and I would propose that: "Where "the owner does not retain the sporting rights for his "own enjoyment, before being let to a third party, "it be first offered to the farming tenant at a fair "natural sporting rent: And that agricultural tenants "be entitled to full compensation for damage by game "over which he does not hold sporting rights." I suppose that would be legal at present.

2791. (*Mr. Chaplin.*) Who is to say what is the "fair natural sporting rent"?—What I mean is that it should not be estimated on the basis that a man could rear a lot of tame pheasants; but if you put a licence on it, it should only be a shilling an acre or something of that sort, it would not be so difficult to estimate. This same referee could do it.

2792. You say the rent is to be settled by some outside authority?—I think so. In cases of appeal, if you had a provision of that sort, in 19 out of 20 cases the landlord and the tenant will settle it themselves, but I think it is necessary to have something of that sort behind it. These provisions would seldom interfere between landlord and tenant, where they both desire to do what is right.

2793. (*Chairman.*) I understand that you do not object to the landlord reserving to himself the right of shooting the game?—No, I should be sorry to see that interfered with.

2794. But in the event of the landlord not being anxious to keep the sporting right, but to part with it to a third party, then you think the tenant should have the preference?—I think so. It is a very annoying thing to see third parties going over the farm and killing game. I will illustrate a case which I know is annoying a set of tenants. There are two estates close adjoining me, and one of them has the game let to a gentleman in Bristol who preserves pheasants to any extent, and he shoots those pheasants two or three days in the year, and the sporting in the district is very much injured on that score. I look upon that as a very important point, inasmuch as it tends to empty the houses in the district.

2795. Supposing that recommendation were adopted would the tenant have the right of letting the game?—I see no reason why he should not, if it is let at all. I think that the man who occupies the land is the proper one to have it. It can be no advantage to the landlord to let it to anyone else; if it could be shown that it was I should hesitate. I should interfere with the landlord's rights as little as possible, but if the tenant is to let it he is likely to be less annoyed with the person to whom he lets it himself.

2796. (*Mr. Chaplin.*) And if the tenant lets it is he to let it at the best rent he can get, or is it to be let at a rent which is to be fixed likewise by an outside tribunal?—If it is to be fixed by an outside tribunal he should also stipulate the way.

2797. Which is it to be?—He should let it himself.

2798. At the best rent that he can get?—That would be at his option I should say.

2799. I only want to know?—It is a point on which I do not feel strongly as long as the tenant is not placed in a position of being annoyed.

2800. In that case where the tenant is to let it you contemplate that in some cases the tenant himself should sublet it. I want to know whether in that case he is to be allowed to let it for the best rent that he can get, or is the rent to be fixed by somebody else? It is a very simple question?—I think he should be allowed to use his own mind. I do not see any reason for interfering with him in that case.

2801. (*Chairman.*) What I rather gather to be your view is that presumptively the game should go with the farm?—Yes.

2802. And you think that the landlord should have the right of taking it himself?—I do.

2803. But if the landlord does not take it you think that the tenant should have the option?—I think that it would be to the advantage of agriculture, and more likely to provide sport for gentlemen living in the district, and I think it is a desirable thing when landlords live in the district and shoot over their own estates, thus they are brought into contact with their tenants.

Local rates.

2804. Now, what is the next point?—The next point is the matter of taxation. The unfair burdens placed on land require immediate attention, and I would suggest that a first and immediate remedy be sought by the imposition of a van and wheel tax for the maintenance of roads, which was previously so weakly abandoned. The adoptive Acts, such as Lighting, Drainage, Water, &c., should not be chargeable on land that derives no benefit from them, and greater contributions to local rates generally should be contributed from the Imperial Exchequer, as affecting the nation at large. With regard to these adoptive Acts, I have a case in point, which has made me feel it rather heavily. I am living I think a little more than a mile from a village with 1,000 inhabitants. Some years ago it was decided that they should have gas in this village, and we had a rather clever lawyer in the place who worked things out very accurately, and he naturally wanted to make

Mr. S. Kidner.
30 Nov. 1893.

as many people as possible pay in order to relieve himself; but he found by taking the whole parish he would be outvoted in his requisite two-thirds majority, so he took in a smaller area where he ran no risk of being outvoted. My farm is situated nearly a mile from the last gas lamp, and I derive no good from it, and I have to pay those gas rates, which is very unjust. They are at the present time bringing in water to that village, and they might try the same thing, but I am in hopes that the Public Health Act is different in that respect from the Lighting and Watching Act, and that we may be able to stave it off.

2805. I think under the Public Health Act land would be excluded?—I think there is a provision for that.

2806. What I understand you to say is that the same provision should be extended to the Lighting Act, and other Acts which would involve expenditure which is not for the benefit of the land?—Yes. That is a very hard case indeed that I have to pay for those gas lamps in Milverton, which are not of the slightest advantage to me.

2807. That does not touch the general question; it is a special point of considerable interest, but not one touching the whole question?—It would not affect all cases alike, but in the parish of Milverton, it is so.

2808. Have you any other recommendation touching more generally on local taxation?—I think that schools, and lunacy, and the poor law, and roads, and different things should have larger contributions from the Imperial funds.

State subventions in aid of rates.

2809. Have you derived any benefit from the subventions?—Very little indeed. It seems to me that subventions are looked upon by the authorities as money which must be spent for carrying out extra work, and it has proved of very little advantage to the ratepayer, and I think of very little advantage to the community at large, although those people who have the spending of it would argue otherwise.

2810. That does not seem to be much inducement for Parliament to go further in the same direction?—No, and the great evil is that it is handed over for too specific purposes. I should quite agree with you that in handing over Imperial taxation some provision is necessary that it should not be treated as outside money. There is a tendency amongst local spending bodies to treat Imperial revenue as so much money gained. It should be handed down to local authorities to spend on the understanding that if they spend more they should find it themselves.

2811. It would be scarcely worth while to go further in that direction unless there was some change in the system so as to induce the local authorities to make the best of it?—We can hardly take that view. I do not say that we derive no benefit, but it is very much minimised by the way in which it is spent.

Railway rates.

2812. What are your further recommendations?—As to preferential railway rates. We say that in no case should preferential rates be allowed on foreign as against home produce, and a simple form of mileage rates for agricultural produce and requirements should be obtainable. Wherever railway charges are made we have very great difficulty in finding whether they are the legal rates or otherwise, or how they compare with others. The whole thing wants simplifying to ascertain whether there is an agreed charge made, and it should be more distinctly defined.

Labelling of foreign produce.

2813. What else do you wish to say on that question?—That all foreign produce should be labelled, and that dealers in such should declare themselves, in such a way as to give the least chance of frauds being perpetrated by the sale of foreign for home produce. The

Beer.

next point is with reference to the transfer of duty from malt to beer. The transfer of duty from malt to beer has acted prejudicially against home-grown barleys by encouraging the use of these foreign barleys as against those of more bulky home growth, and a re-transfer would greatly benefit the growers of English barley. I have one other item; shall I read it?

2814. Yes?—It is that with reference to foreign substances used in beer. All beer brewed by the use of substances other than malt and hops should be definitely declared, both by the brewer and retail seller.

Fixing of rent.

2815. Adverting for a moment to the question of fixing the rent are you of opinion that the rent should be fixed for any time?—I think it would be better to leave it, and to allow either party to appeal when they thought it had grown out of proportion to the times.

Mr. S. Kidner.
30 Nov. 1893.

2816. You contemplate the possibility of revising the rent?—It should be fixed for some term. It would be rather vexatious to have it revised every year. I think it should be every four or five years.

2817. You would put it at five years?—Yes. It would be vexatious to have it continually altered, I think. There is one other matter I wish to make a strong point of which has been passed over by the chairman. May I advert to it? It was a matter of valuation at the end of a tenancy. That is a matter that has grown into a very great abuse, and instead of two valuers who are competent going in prepared to make a fair valuation, and ascertain the improvements it seems to me that they go in on the score of two horsedealers trying to see how they can get the most out of each other, and in many cases they take two or three or four days, spending their clients' money, over that which ought to be settled by two competent men in a fourth of the time. In those cases I see no reason whatever why where a tenant feels himself competent he should not act; he would not act more as an advocate than those men do at the present time, and he would not be incurring the expense of these other men. It has been simply a matter of robbery the way these men conduct their business, and people are afraid to set the valuers at work. I could give you an example to illustrate what I mean. It was the case of a small farm adjoining my own, and a certain gentleman was put to value it for the outgoing tenant. They made a very hard bargain, and on a valuation of 120*l.* they spent 47*l.* odd in valuation. The landlord had not attended at the time of the first valuation, but he had attended subsequently, and one of the three gentlemen engaged in the first valuation valued for the outgoing tenant and was now valuing for the incoming tenant, and the landlord naturally thought that he would take his own figures. But the valuer said "so and so has happened since that," and the result was that about 10*l.* or 15*l.* out of the whole valuation was left for someone besides the valuers.

Valuation.

Agricultural Holdings Act.

2818. (*Lord Cobham.*) One of the great objections to the Act is the great cost of working you say?—The cost of working. I see no reason why the tenant or his agent should not act as their own valuers and have a referee over them.

2819. (*Lord Vernon.*) Do you see any reason why there should not be certificated valuers, and that one man should not do the work?—I think there is no reason at all why that should not be done. I think that would be better. I should have no objection at all to leaving it to one man. Of course the landlord and his tenant may choose to come to a settlement without any expense whatever. I think they would in a great many cases. That is the only objection. I think that you might even save the expenses of that one man.

2820. When you took your farm you did so thinking it would be a great advantage to you?—I did it simply because at the end of every term it was made an excuse to raise the rent. In the last case it certainly was done without any other reason.

Leases.

2821. Do not you think it would cause a great outcry if you passed an enactment breaking existing leases?—I do not see why it should. If you are dealing with a fair adjustment and regulation of land, it seems to me that that goes in with the whole thing; it is no more unfair than the other would be.

2822. Why should you break leases for agriculturists and for no other class of the community?—Simply because agriculture has been found to be in such a depressed state, and where those leases exist which are unreasonable it cannot be possibly any advantage to anyone that they should be maintained.

2823. Supposing a man has a cotton mill and he finds his industry ruining him, is he also to have the power of breaking the lease?—He entered into his lease without being hampered in the same way as an agricultural tenant would be. As I explained just now, the agricultural tenant has hardly any option. He would not be quite a free agent.

2824. But you distinctly took your farm on the understanding that it was an advantage to yourself?—That was so. I thought it might be. It was the only means I saw of protecting myself; at any rate that was more the point of it.

2825. Do not you think that it would meet the grievance if it was made illegal to make future leases

Mr. S. Kidner. 30 Nov. 1893.

for longer than a certain length of time—say, three, four, or five years?—That would not affect existing leases.

2826. What you suggest is to benefit those who hold disadvantageous leases?—I have a provision which I advocate, that in any dispute between the landlord and tenant they should appeal to the referee, and I do not see why it should not apply to a leaseholder as well as those under yearly occupations.

2827. (*Mr. Elton.*) You want to pass from a state of contract to status?—Judicially.

2828. Or an obligation imposed by the law?—That would be so.

2829. And then in that case in such a vast change as that taking place you would sweep in those existing leases which might have been made not knowing that a great change was going to take place?—I think so.

2830. I want to know; you spoke about the rent varying from 1*l.* to 2*l.* per acre. Does that represent the difference between the hill land and the valley land?—Yes, and the wheat land and the lighter barley land. I would illustrate that by my own holding—the home holding which I represented I am paying considerably more for than I did some years ago. On the other hand I have just taken an off farm from the same landlord. That farm is of a different character—wheat-land—and that would be considerably less.

2831. That would be rather in the nature of the hill land?—No, not hill land; it is wheat as against barley land more, but it would apply to hill land as well.

2832. I want to bring out the circumstances. You live in the fertile valley of Taunton Dean?—I suppose it goes by that name, I am afraid it has not been so.

2833. There are 26 parishes in the valley?—Yes, I think I am within the vale.

trictions ases.

2834. I quite understood what you said about legal restrictions not being any good if they are broken by the whim or caprice of either party to the contract. Have you any example of such vexatious clauses being put in?—I can speak of our discussion at our farmers' club the other day. One tenant farmer, Mr. Bruford, he was a man who stood up on the landlord's behalf, and the only defence he could make of it was that although he had a lease and had all those restrictions in it he continually broke them and did it systematically, and that he was not interfered with. That was the only defence he made.

2835. Then I also understood on the other side of the question that you except alterations in the character and permanent condition of the holding?—Yes.

2836. That is so?—I would not allow pasture to be converted into arable or orchard, or an orchard to be let down.

2837. I want to bring your answer out in its full light. Instead of contract you may take the rule from the law of waste?—That is so.

2838. That is to say waste as the offence of changing the permanent condition of the thing?—Yes.

2839. And you would not do away with the law of waste, but with the restrictions of contract as usually found, because you think they are old fashioned?—That is so. To give an instance: In a small farm I took the other day I suggested to my landlord when I took a previous agreement that I generally grew a surplus of straw and that I should be allowed to market it, and that I would undertake to bring back the values in cake or some other fertiliser. But the other day the agent had been employed in making a lease and I find I am compelled, although spending more than my rent in feeding stuffs every year, to sign the old agreement, that is, not to sell the straw. This is only a yearly agreement. I was assured that I should be able to do it, but I was compelled to throw over the contract or sign that condition after holding a previous one on more enlightened conditions, and having spent the amount of my rent in feeding stuffs every year.

2840. I suppose, as a matter of fact, and putting aside the rather slighted position you were in, that has always been allowed in that neighbourhood?—I do not think that it is reasonable that it should be asked to be inserted—that we should be asked to sign what we do not intend to carry out.

2841. There is a change taking place on that point?—In my case the change is rather retrogressive.

2842. When we were much younger, a landlord used to go to the Court of Chancery and say that someone was threatening to move straw into a neighbouring town?—There was some reason for that when there was no other means of fertilizing the land when the straw was taken off. I understand the reason for those proceedings in olden times.

2843. Not very olden times, but quite recently?—But when originally enacted there was no other means of fertilizing the land when the straw was once taken off.

2844. That would seem to be the explanation why the Court adopted those rules in a previous generation before the artificial manure came in?—Yes.

Shooting rights.

2845. About your sporting; your general principle is, that sporting would go with the farm, and that a good measure of the value is the amount of rate at which it is assessed; you say 1*s.* or 6*d.* an acre?—Yes.

2846. That would be no more than evidence of the value, not the measure of the value. You merely use it as an illustration?—Yes.

2847. In practice, there would be great difficulties, because the shooting is generally in the coverts adjoining the farm and not on the farm itself, and it is no good for a person having one part of it without the other?—But I think that the farming tenants should be considered first, and I think the only advantage in the game, and in having the game laws, is, as I said just now, to provide sport for gentlemen living in the district. I think, if it was not for that the game laws would be indefensible.

2848. I am not contesting what you say, but am only bringing out the details. I want to know what happens when the farms adjoin on to a great wood. Have you thought what provisions should be made for the coverts adjoining the farm?—It seems to me that the game in the coverts should take its own chance and must not trespass. If a landland does not like to include shooting to his tenants, I think the game should take its chance, and that the owner of the game should not allow it to trespass any more than any stock would be allowed to trespass.

2849. But my meaning was, on the other side of the hedge. I want to know whether the farmer was to take the covert-shooting as being a necessary incident?—Not necessarily an incident of sporting rights. I think if a landlord chooses to exclude the coverts from the holding he has a right to do so, and I should like to interfere with his rights as little as possible.

2850. Of course it is a subject that would require a good deal of information?—It is desirable that the tenant should have it, but I do not think it is a necessity.

2851. I gather that you have got an opinion?—I think if it is let to anyone else it would still be likely to cause a great many disagreements.

2852. In fact there is in that part of the country, I gather, a very strong feeling against those casual sporting men?—There is is a very strong feeling and it causes a great deal of annoyance. It not only causes annoyance to the tenants on the property, but it interferes with the general sporting character of the country and is a great injury to the neighbourhood in that way.

2853. I gather from that, and it is within my own experience, that there is rather a practice of letting the sporting rights by word of mouth to people coming rather casually?—I do not think it would be a practice. I do not think you can carry it so far as that.

2854. I thought you gave some instances?—I spoke of two considerable estates that are close by me, where there is a grievance in that way.

2855. Do you happen to know whether they are in most cases let by documents, or by verbal licence?—I think the case that I spoke of last, of those young men coming to the shooting, to the annoyance of the tenants. I do not think it is let at all; it is given them.

2856. By verbal licence?—I think if it is given to anyone, it belongs to the tenant in the one case, and in the other case it is rented somewhat highly.

2857. I suppose if not reserved it belongs to the tenant?—It is always reserved in all leases.

Mr. S. Kidner. 30 Nov. 1893.

2858. The people with only a verbal licence going to shoot, they would not be tenants; they could not prosecute for trespass?—I should think not. That is not one of the grievances at any rate.

2859. It is more of an annoyance strangers coming from elsewhere and taking game off the land? It is to this class of sporting rights that you object?—I think so very distinctly. I see no advantage of the game laws on those lands.

2860. You have no objection to the landlord rearing his pheasants, and you do not consider it a burden, but you object to the people who come from a distance?—I think that people would put up with a great deal from their landlord. I have that same feeling for my landlord, and when he shoots on my farm I am always pleased, and the bigger bag he has the better I am pleased, but I should not like it if it was a stranger shooting if I had not the first chance of shooting.

2861. Especially if he made a kind of trade of it?—Especially if he made a kind of a trade of it.

Beer duty.

2862. (*Mr. Everett.*) The only question I have to ask is with reference to what you said as to your idea that we had better get the beer duty transferred back again to the malt. You are aware that the malt duty was transferred to the beer in 1880?—Yes.

2863. And since that time there has been a falling in the price of all the articles of produce on the farm?—Yes.

2864. In wheat and barley, meat and wool?—Yes.

2865. Which do you think has fallen the least of those articles?—Probably barley.

2866. Is it not a curious thing then when we see that that product has fallen less than any of the others that we should find fault with that change as if that change had been the cause of reducing barley?—I do not think so, because the fall in the price of barley was almost immediate on the transfer of the duty; and beyond that I think the area in which good malting barley is grown is very much more limited than that of any other grain. There is probably no other country in the world, generally, that grows it so good, and we are not so open to foreign competition. If left with the previous permission my own impression is that the barley would not have fallen if the duty had not been transferred.

2867. It is the fact that barley has only fallen half the number of shillings per quarter lower than wheat has since 1880, and not anything like the same percentage as wool has fallen?—That is so, but I am inclined to think it is one of the things that would have fallen very little, and it is a direct injury to the agriculturist, and I do not think that it is any good to anyone, only the Chancellor of the Exchequer will obtain so much more revenue.

2868. Have you found any difficulty in making a good price of the very best barley?—We have as good as we can grow it. I can tell you that I have made as much as 49*s.* per quarter on my barley, and this year I have only half a crop, I thought of very fair quality, and I have only made 33*s.*, and I do not think that the short crop has influenced the price at all. The short crop in England seems to have no effect whatever. I do not think we have sold the same quality of barley for any better price in previous years.

2869. You have not as good a quality as we this year, for the best is making 40*s.* with us?—I thought it was pretty good. It is as good as in the average of years.

2870. (*Captain Thomas.*) What is the size of the farms in your district?—They would vary from 150 acres; but the majority would be from 250 to 400 or 500 acres.

Mr. S. Kidner. 30 Nov. 189

Size of farms.

2871. Which has suffered the most—the small or the large farms?—I should say the small farms, and they are generally the worst managed, I think.

2872. Is your landlord a large owner of land in the district?—Yes, he owns a great deal. He is a wealthy man generally.

2873. Do you find, as a rule, that tenants on large estates are better treated than those on small estates?—I think so, and I think among the older families you have generally more liberal treatment.

2874. How are the farms let; are they let by tender or otherwise?—Otherwise generally, seldom by tender.

Agents.

2875. Are the estates fairly well managed?—You mean as regards the agents.

2876. I mean to say, are they practical agriculturists?—I cannot say everything I should wish to say about them. It is rather a personal matter. I do not think there is a great deal of satisfaction given in that. The agents in a great many cases are certainly not popular with the farmers; very much otherwise in a great many cases.

2877. And naturally that is a grievance?—It is, I fear. It is a growing one, I am afraid.

2878. Do you think that that has something to do with the cry for the courts?—That is so.

2879. That those men who manage estates at the present time are not practical, and they cannot give satisfaction?—In a great many cases they are more like sharp men that are put in to do the best they can for the owners of the land, and in a very great many cases they have not had to make their living by farming, and know nothing about it practically.

2880. Are solicitors generally engaged?—Not much. You do not have the most complaints against them.

Reduction rent.

2881. What has been the average reduction of rent in your district?—I think I mentioned from 30 to 40 per cent. That would be from the highest times.

2882. Are the farmers able to pay the rents at the reduction in rent?—Certainly not; for some years I think the tenant's capital has decreased, and this year with small crops, it would be a very serious matter. I do not think any rent can be made this year.

2883. Are the rents regularly paid?—I do not think that they are in a great many cases. That is one reason why rents are taken in order to keep the tenants, and it is also a reason why I think tenants do not come forward, that they are not in a position to do so in a great many cases.

2884. How do the farmers manage to pay rents—those who do pay?—By good cultivation and drawing on their capital in a great many cases.

2885. Have they got much capital as a rule?—Yes, I should suppose years ago you would have found as much capital on the farms in our district as in many other districts. I can give an illustration: When I took my farm, which I occupy, from my mother it was over 20*l.* an acre; it had been valued by my uncles who had no interest in making it more than it should be and there would be a great many other farms—the best farms on the best land—where the farms would have had as much, but if we reckon it up now it would be very much reduced.

2886. Do you think that the land is as well cultivated as it was 20 years ago?—All the best farms are.

The witness withdrew.

Adjourned to to-morrow at 12 o'clock.

Seventh Day.

Friday, 1st December 1893.

PRESENT:

The Right Hon. GEORGE JOHN SHAW-LEFEVRE, M.P., in the Chair.

The Right Hon. Baron Vernon.
The Right Hon. Henry Chaplin, M.P.
Sir Robert Nigel Fitzhardinge Kingscote, K.C.B.
Robert Giffen, Esq., C.B.
Charles Isaac Elton, Esq., Q.C.
Captain Owen Thomas.
Francis Allston Channing, Esq., M.P.
John Clay, Esq.
Robert Lacey Everett, Esq., M.P.
John Gilmour, Esq.
George Lambert, Esq., M.P.
William Cutlack Little, Esq.
Walter Hume Long, Esq., M.P.
Charles Whitehead, Esq., F.L.S.

Herbert Lyon, Esq., *Secretary.*
R. F. Crawford, Esq., } *Assistant*
Freeman Thomas, Esq., } *Secretaries.*

Mr. Samuel Kidner recalled and further examined.

Mr. S. Kidner.

1 Dec. 1893.

2887. (*Mr. Channing.*) I think you said yesterday that you came as the representative of the Taunton Farmer's Club?—That is so.

2888. And that consists of how many members?—From 130 to 140. I am not certain, it is considerably over 100.

2889. You can claim to speak in a representative position to a certain extent?—Yes.

2890. What you expressed to us yesterday represents the views of a number of other farmers in that neighbourhood?—Certainly. We had a meeting on Saturday week, when almost the whole of these matters were discussed, and I may say we were unanimous in our decision.

2891. You said, I think, about the rent of your own farm, that you hold a lease, that it was still, with the present reduction of about 25 per cent. more than what it was 50 years ago?—That is so.

2892. Do you think that anything like that would be the case on the other farms in the same district?—In some cases it would be, and in some cases, on wheat lands, they would have gone below that. Mine is more a light land, a barley farm more.

2893. The yearly tenants of course have been in a better position to make bargains for obtaining reductions?—Certainly they have of late.

2894. And I think you said that their reductions have been greater?—Yes, that is so.

2895. But still, even in their case, I think you said that the reductions in the case of the renewal of an agreement with the sitting tenant have not been so great as in the case of farms being let to new tenants?—Yes, greater reductions have been made to new tenants, and a great many of the old tenants have succumbed to men who have come and taken the farms at greatly reduced rents, or obtained them shortly after the tenancy began.

2896. Do you know instances of tenants who have done their farms well and kept them up in fertility, have been refused reductions which have been given to other tenants who have not done their farms so well?—I think I can show where they have been unfairly treated; but you want farms on the same estate, would not you, to show that, because the reductions differ on different estates.

2897. To put the question in another form, so far as reductions are concerned, should there not be rather an equivalent of the market value than what the tenant has done to the farm?—That is so. The greatest reductions have been made on the worst managed farms.

Compensation for improvements.

2898. Is it your opinion that where a similar reduction has been made, to a certain extent the compensation which must be due to a tenant who has worked his farm well, for what he has done to the farm, is confiscated by the landlord?—Certainly, and the maintenance of the rent has been due to his management.

2899. That is to say, what the tenant has done to his farm in improving it may be confiscated by the landlord refusing a sufficient reduction as well as by an increase of the rent?—Certainly, that is so.

The scheduling of holdings.

2900. Your remedy for that state of things is to have the condition of the land accurately scheduled at the beginning of the tenancy?—Yes.

2901. And to have a tribunal of reference starting from that schedule of condition?—Yes.

Official referees.

2902. Have your club formulated any proposal as to what the tribunal should be?—Well it was proposed that it should be a popularly appointed referee in certain districts; the districts should not be too large.

2903. Do you mean that you would elect an agricultural arbitrator for a district in the same way as a county councillor?—You would have the same constituents, they would not be all interested; it should be the people interested who should have the election.

2904. But are you aware that it has been suggested that the Board of Agriculture and the county council should jointly appoint a list of such arbitrators for each county, and that the tenant and landlord should be free to choose under an amended Act an arbitrator from that official list?—No, I was not aware of that.

2905. Would you approve of such a suggestion?—I think that may do.

Cases of hardship.

2906. Could you produce other cases besides your own in which the leases have operated unfairly?—I could produce them, but they are difficult to obtain.

2907. I will put this question. In your experience are there cases in which hardships have occurred where there is a reluctance on the part of the tenants to state their case, and to identify their farms from a fear of incurring the displeasure of their landlords?—Certainly that is so.

Compensation for disturbance

2908. You spoke of compensation for disturbance in addition to the tribunal?—Yes.

2909. Have you formulated that in any way?—The strongest point is perhaps that any tenant in anticipating a change of holding, has at the same time to face the loss of quite 10 per cent. of his capital, inasmuch as there are certain expenses attending the sale and disposal of the stock, and we all know that upon entering upon a farm there is a reasonable margin for other expenses.

Mr. S. Kidner. 1 Dec. 1893.

2910. And that 10 per cent. would have to be faced in losing the goodwill?—That is so, and having to go into a fresh district in middle age or at advanced life, to make fresh friends and associations.

2911. The whole of that makes a very strong money and practical consideration for a farmer in settling the terms of renewal of his agreement?—It certainly does, and a tenant puts up with a very great deal before he faces all those things.

2912. In your opinion has that led to farmers on a renewal of their leases, paying a considerably higher rent than they would have done if protected by some compensation for disturbance?—Certainly it has.

Land court.

2913. (*Mr. Lambert.*) Would a court of appeal between landlord and tenant, or an outside tribunal, excite any feeling between the two?—I think not.

2914. You do not think so?—I do not see why it should, and I think that ultimately it would create a better feeling between landlord and tenant, inasmuch as each would have a chance of getting fair play.

2915. I suppose there is no difficulty in letting farms in your neighbourhood?—No.

2916. Are there more farmers than farms?—I should say there are.

2917. And therefore you advocate this protection because there is more than one farmer endeavouring to get one farm?—That is so.

2918. You said that rent had been paid largely out of capital, do you think that that is continuing now?—I should say so, to an exaggerated extent this year at any rate, and taking into view the very disastrous summer we have had.

Reduction of rent.

2919. And you look upon an immediate remedy to the tenant farmer from a reduction of rent?—Yes.

Arrears of rent.

2920. Are there many arrears of rent in your district?—I should think there are. They continually crop up where you should have least suspected it, and that leads one to think that it prevails to a considerable extent.

2921. Would arrears mean that there has been too much rent paid for the farms in the past?—I think very likely.

Shooting rights.

2922. You spoke about the game yesterday. Would you advocate the ground game belonging to the tenant?—I think that is very satisfactory as it is at present, when the landlord and tenant both have the right. That is as the law stands, is it not.

2923. Would you give the farmer the right of killing ground game as he pleases on his farm?—Certainly.

2924. You think that the law should be amended in that respect?—I think so; I do not see why he should have any restriction. I do not think it would create any evil if it were taken off.

2925. Your proposal is to give the tenant the first option of having this game on the farm?—Yes.

2926. I presume that you have had cases in which a sporting tenant has come in and carted away game from the agricultural tenants' farms?—Yes, we have one very strong case almost adjoining me.

2927. You said yesterday that the agreements might be enforced although they might be relaxed?—That is so very often at the end of a holding.

2928. Therefore they can be enforced at the option of the landlord?—That is so.

Official referees.

2929. With reference to the referee, you advocate a popularly elected referee. What would you mean by a popular election?—That the people who are interested in his employment should have some voice in his election.

Reduction of rent by official referees.

2930. (*Mr. Little.*) You propose that the rents of sitting tenants should be revised by an outside authority?—In case of appeal.

2931. That is to say, where the landlord and tenant do not agree, I presume?—Yes.

2932. Your rent has been reduced to a point lower than that at which it stood before your recent agreement?—Yes.

2933. You pay less rent than when the depression began?—Yes.

2934. And the reduction has been made, notwithstanding the lease, voluntarily by the landlord?—Yes.

2935. Do you think that a land court or a popularly elected referee would have done more than your landlord has done voluntarily?—Yes.

Mr. S. Kidner. 1 Dec. 18

2936. And that in the face of the competition which you admit is going on for farms?—Yes.

2937. Supposing that the farm could be let readily to other tenants at the present rent; do you think that a popularly elected referee would be able to reconcile his conscience to reducing the rent below what a tenant would give for it?—I do, in the view of getting full compensation for my capital, and just compensation for disturbance.

Compensation for disturbance.

2938. But disturbance is, to a great extent, a sentiment?—To a great extent, it is, but to a very great extent, it is actual, inasmuch as I explained just now that when a tenant is leaving his farm he may lose 10 per cent. on the change. It is material in that case.

2939. Do you contend that a tenant who hires a farm for a definite period acquires a right to that farm for all time?—A certain right. I think it should be open to the landlord to resume it at any time that he chooses, but he should compensate the tenant for the loss sustained by the change of tenancy. I do not think that a man will satisfactorily farm his land unless he has some assurance of that kind.

2940. Is it not a thing that the landlord may take into consideration when letting the farm whether he shall have it cultivated properly or not?—Unfortunately it is hardly so with the law of distress. Bad and good tenants come into competition, and the bad tenant is put into competition in the matter of rent, and that bad tenant intends to come in and rob the farm, and take what he can out of it.

Law of distress.

2941. If the law of distress were altered, do you think that the competition would be so much lessened that landlords and tenants would then take into consideration that the farm must be well farmed?—It would have some influence in that direction, certainly.

Reduction of rents.

2942. You admit that rents have been reduced in your neighbourhood according to the circumstances of the case?—Yes.

2943. That, where owing to the nature of the cultivation the crops have diminished most in value, the reduction has been greatest, and where more profitable crops have been grown, the reduction has been less?—That is generally so; on some estates the reductions have been much more liberal than on others.

2944. You made some distinction between the case of the sitting tenant and the future tenant. I think you were prepared to leave the future tenants to take care of themselves?—Then the future tenant opens on the bargain with a free hand.

2945. And the present tenants, you think, do not?—Certainly, they do not.

2946. They must have come in at some time or other?—Hardly, in my case; I almost grew there.

2947. But still there must have been a beginning of the tenancy?—Well, there must have been; but it is almost in the form of a continuation.

2948. Every one has a beginning as a tenant, and comes in as a future tenant will come in?—As regards the tenancy, you can hardly take it so in my case, I think.

2949. You draw a distinction between those who came in some time ago, and who have had possession a long time, and those who come in in the future?—There is a distinction, I think.

2950. I think you let fall an expression about an incoming tenant who had turned out another?—In some cases that is so.

2951. You do not adopt the phrase of "landgrabber"?—No, we are not Irish.

Freedom of cultivation

2952. Now as regards freedom of cultivation of the soil and sale. I suppose that means the sale of produce, it does not mean sale of goodwill?—Sale of produce.

2953. Do you expect this to be provided for by enactment?—I think so.

2954. Do you think that the law should prescribe the terms upon which land should be let?—I think if land were to be cultivated to the best advantage by an intelligent tenant, he must have the free use of the land, and the landlord is protected, you would be able to get rid of the tenant if he does not farm it properly.

r. S. Kidner. 1 Dec. 1893.

2955. But you would interfere between the landlord and the tenant, and say that the landlord shall not agree with the tenant to put the land to a particular use?—I think that is necessary.

2956. And you would apply that in the case of sitting tenants?—Yes.

2957. That concession would be valuable to them?—Yes, I think so.

2958. If when you had been taking your farm on a new lease, you had stipulated for such terms, do you think that your landlord would have asked more money?—Well, that hardly affected the case, seeing that they were taken in times of inflated prices, and now under any conditions the rents have to be reduced.

2959. Suppose you had been bargaining some years ago, and you had said "Now I want to sell and "grow what I like, and do what I please," do you think the landlord would have asked more rent?—I do not think that you could have done so, for the landlord would not have granted it.

2960. Should you have been prepared to pay for the privilege?—No, I use that privilege now; at the same time, I do it at my own peril.

2961. I would not put it in your individual case; but do not you think people treating for a farm in the neighbourhood of a town would consider the circumstances whether the produce was saleable or not—whether a certain amount of produce would be allowed to be removed or not?—I do not think that it would affect the case if the landlord was protected from deterioration of the farm.

2962. I want to know whether you think that the landlord in making a bargain would ask more. It is not a question whether he would be protected, but whether he would ask more?—I can hardly conceive the case, because hand-in-hand with that I put in compensation for deterioration. I cannot see how it affects it in that case.

2963. Of course if you will not admit it, I cannot go any further. What I want to ask you is this. Would not the landlord ask more in letting a farm under these conditions, than under the ordinary conditions?—Where they have freedom of sale in that way I do not think that the rents are higher under those circumstances, but I think it is fair to say he would not ask more.

2964. Do you think that a farm lying near a town where the sale of hay, and straw, and roots is permitted makes any more rent than a farm in the same position where no privilege of that kind is allowed?—Yes, it makes more rent on account of its position being close to good markets.

2965. But I say that two farms in the same position, near to a town, in one case where the straw and hay is removed, and in the other case the tenant is obliged to consume it, would not the landlord ask more in that case with the condition of removal than in the case of the condition of consumption?—It would be worth more.

2966. And the tenant would give more?—It would be worth more; that would be a fair assumption.

2967. You propose to give over to the tenant something that he has not bargained for, which is valuable, and which he does not give money for?—Yes.

2968. And that is conveying part of the landlord's property to the tenant?—I do not see that, because the landlord is not injured by it.

2969. If it is something that he has to sell, and you give it to the tenant, is not that depriving him of it?—I should put it on the ground that it belongs to the tenant, and the landlord is withholding it.

2970. It would not belong to the tenant if he hired the land under other conditions?—He did it under pressure; he was not a free agent.

2971. It might be the case with some, but surely not with the majority of tenants. You are looking at one case where a man like yourself is induced to remain, and a case where a high rent is paid for the purpose of keeping the holding, but the ordinary tenant must be presumed to go in with the understanding of the conditions under which he is farming?—Yes.

2972. And you admit that he would give more, and his farm is worth more, if he is allowed to remove the produce than if he is not?—There would be no good in advocating it otherwise.

2973. Then it is entirely for the benefit of the sitting tenant?—And for the well-being of agriculture.

Mr. S. Kidner. 1 Dec. 1893. Compensation for improvements.

2974. With regard to compensation to tenants for improvements, you are aware now that what you propose is the law, and that compensation by law is given on the value of an improvement to an incoming tenant?—On certain classes of improvements.

2975. Well, improvements that are compensated for under the Act?—Yes.

2976. It was a matter of complaint in your evidence that the compensation was given on the cost, and not on the basis of value?—Yes.

2977. But you have discovered that by the Act it is to be awarded on the basis of value to an incoming tenant?—I did not know that that was so.

2978. Supposing it were upon cost, is not prime cost the most reasonable basis for compensation?—In very many cases; in the case of manures and feeding stuffs, I take it, it is the only basis. But there are other things than manures, such as laying down pasture, and draining, and different things, in which there may have been a great deal of skill and judgment displayed, and I think there is something beyond that in certain cases and certain failures that have to be anticipated.

2979. In the great majority of cases, is not the improvement one that the landlord or the incoming tenant could carry out at his own cost?—Well, in the case of permanent pasture he could hardly do it, which was the case I had in my mind.

2980. That is the case where you say the letting value, the value to an incoming tenant, is a proper basis of compensation?—It is a continually increasing sum.

2981. And there you think that the prime cost requires addition in respect of interest, and, on this ground, that the tenant has not had full time to recoup himself?—I do not think the ground that the tenant had not full time to recoup himself has anything to do with it. It seems to me to be what property he leaves for his landlord.

2982. But surely he is using the landlord's material when he lays down the grass?—He rents the raw material of the landlord for his use. He pays rent for that.

2983. You cannot separate the improvement from the land?—Certainly not; that is just why the tenants want protection.

2984. The improvement without the land is worth nothing; the land without the improvement is worth something?—Certainly it is.

2985. And the tenant is using the landlord's land?—Certainly.

2986. And if he has an opportunity of recouping himself will he not be willing to spend his money?—Certainly; but there is no reason if he does that that he should not be compensated to the full value of his improvement. I am not arguing that the land in its original state was not the landlord's, and I am not arguing that he should have the full value of the land as he leaves it, but only the value of the improvement.

2987. That is secured by the Agricultural Holdings Act, or should be so?—I think so.

2988. It is; but would not you say that the compensation on the basis of cost is the best for the tenant?—It is very difficult to ascertain. I think that it is very much better estimated by results. It goes over a length of years and it may be manured year by year, and there may be no manure, so that I think it a better basis to go by results.

2989. Does not the tenant sometimes spend money on improvements which are not very successful?—Certainly he does.

2990. Is he not, so far as he is concerned, more secure when he receives compensation for money that he has spent than when he is paid for actual results?—He may be; but in that case you would compensate the man with bad judgment equally with the man who laid it out with a great deal of judgment, which I do not think is desirable.

2991. Surely a valuer in valuing the improvement would take into consideration whether the work had been done with proper judgment?—But in that case it is "heads I win and tails you lose." If you exercise

Mr. S. Kidner. 1 Dec. 1893.

your judgment, and receive nothing for it, and another man spends more money than he should have done he would have so much deducted according to your argument.

2992. I beg your pardon. If he spends the money with judgment he would receive it back again minus that which he had already received by the use of it?—I do not see where the use of it comes in. I think it is what he leaves there.

2993. If a man has let his farm to a tenant who enjoys the benefit of it for a number of years he has had the use of it?—He has had the use of it; but if he makes a wise speculation I do not see why he should not enjoy the benefit of it.

Compensation for disturbance.

2994. You did not give us any idea with reference to disturbance as to the way in which you would measure the injury to the tenant?—I think that should be left to the referee. It would be chiefly on a money value. There is the sentimental consideration which I indicated, but it would be difficult to place a money value upon that, perhaps. Certainly there is a definite money loss, and he would have to anticipate that.

2995. Would you base the compensation solely on the loss which is occasioned to the man by removal and by depriving him of something valuable?—I think so. It should be done on a liberal scale in view of the other circumstances; but it is difficult to place a money value on a sentimental consideration.

Compensation to the landlord.

2996. You said that compensation should be secured to the landlord for deterioration. How do you propose to secure that?—On the basis of the schedule that would be made at the commencement of the term. If various fields were left in a worse state than they were found at that time to that extent the tenant would be liable.

2997. But that is not securing the money; that is securing the principle that the money should be paid. But how do you secure it from the tenant who has farmed the land badly?—How is the tenant going to get it from the landlord?

2998. But there is something left with the landlord?—It is not fair to assume that the tenant has nothing left, I suppose.

2999. The land is the security, is it not, to the tenant?—Not necessarily. It does not always belong to the landlord unhappily. In many cases you will find that it is mortgaged to its full value and beyond.

2999*a*. Have you ever known a case where the tenant has failed to receive compensation due from the landlord?—No, I do not think so.

Official referees.

3000. With reference to the referee, you propose that a popularly elected referee should decide certain cases, and should go over farms to ascertain the value?—Yes.

3001. I did not exactly catch how this referee was to be popularly elected. What is the machinery?—I have not indicated that. I prefer that it should be left on a broad basis. I should prefer a popular element. Mr. Channing has suggested that the Board of Agriculture have a scheme in contemplation. I daresay it may meet the case.

3002. (*Mr. Channing.*) I did not make that suggestion. I said that it had been suggested that the county council, with the approval of the Board of Agriculture, might make the appointment?—It is a matter that wants a little more threshing out.

3003. (*Mr. Little.*) But still you have proposed the principle of popular election for the appointment of referees?—That is my opinion that it would be the most desirable way of electing him.

3004. You think that this man who would be placed in a judicial position should be popularly elected?—Yes.

3005. Would you give him office for a definite term or for life?—For a definite term, so that if he failed, as may possibly be the case, he may be replaced.

3006. And would you pay him a salary, or would you make the parties who called him in pay?—I would make the parties who called him in pay chiefly. I think all that would be necessary would be to fix the fees.

3007. Do you think that a popularly elected referee would be tempted to court popular opinion?—I do not think so. My experience has been that when a man is put in a position of that sort, such a man as would be elected, he is put on his mettle and generally does what is fair and right.

Mr. S. Kidner. 1 Dec. 1893. Arbitration.

3008. You referred to the expense of arbitration. Is not the result of any interference by the State between contracting parties to formalise and make more difficult the settlement of the compensation?—Yes.

3009. It is a natural result?—It is a natural result, but I think that there is room to exemplify it in view of the existing state of affairs.

3010. But the Agricultural Holdings Act requires an expert to interpret it?—It does. It is very much too complicated. Very few farmers understand it, or have ever read it.

3011. Does not it lead to complication between the parties?—I think it is unnecessarily complicated.

3012. I will not go into the particulars, but you admit that it is a necessary consequence of interference between parties that the procedure is made more formal?—Yes.

3013. It is generally more prolonged?—I do not think it should be.

3014. You spoke of the old system of valuation which I think you said was something like horse dealing between valuers on one side and the other?—Yes.

3015. That was a rough-and-ready way of settling it without much evidence?—I am speaking of the present system of arbitration in mentioning that.

3016. Surely not under the Agricultural Holdings Act?—Very few cases came under the Agricultural Holdings Act, but where that is used as a basis for the agreement it is not so.

3017. The difficulty is not with the Agricultural Holdings Act, but in not using the Agricultural Holdings Act?—I think that it is a weak point in the procedure that I mentioned. I do not see why, where a tenant feel himself competent, he should pay a man for the valuation; why not act for himself.

3018. The parties can act for themselves?—I do not think so; it must be an indifferent. They can act if they mutually agree; otherwise it must be settled by an "indifferent" party.

3019. Parties may agree as to the amount of compensation?—They may agree.

3020. Then they may act?—If there is a mutual agreement between the landlord and tenant, but if they cannot agree and they have to go to a formal valuation, each of those parties has to appoint an independent authority.

3021. "The landlord and the tenant may agree on "the amount and mode and time of payment of com- "pensation to be paid under this Act. If in any case "they do not so agree, the difference shall be settled "by a reference." Then, "where there is a reference "under this Act, a referee, or two referees, and an "umpire, shall be appointed as follows:—(1) If the "parties concur, there may be a single referee "appointed by them jointly": that is to say, they may agree if they please, or appoint a single referee?—If that is so, that meets the case. My impression is that if they failed to agree, and went into it as a matter of arbitration, the two "indifferent" persons would have to be appointed. That word comes in the Act somewhere, I think.

3022. Have you had anything to do with arbitration under the Act?—Not under the Act—under the agreements that prevail at the present time, I have.

3023. You know probably that before an arbitrator or umpire can make an award he must examine witnesses and vouchers that he could not possibly satisfy himself without?—Yes.

3024. That all means expense of course?—Yes.

3025. And possibly you are not aware, but you may have heard that arbitrators make a lawyer draw the award?—Very often it is so, I know.

3026. It is a very dangerous thing for a man who is not a lawyer to draw it?—Yes.

3027. And it might lead to litigation and still further expense?—Yes.

3028. Therefore the expense of arbitration under the Act is a necessary consequence of the State interference?—Yes, and I think they are unnecessarily complicated.

Mr. S. Kidner. — 1 Dec. 1893.

3029. (*Mr. Long.*) I wish to ask you one question arising out of the evidence you have given. I understood you to say that you thought it would be better that compensation should be based on the results rather than upon the expenditure?—I think so.

Compensation for improvements.

3030. How would that affect the experiments frequently made by occupiers which are justifiable at the time, and which in 10 or 15 years—take a shorter or longer period—turn out to be complete failures?—If it is of no value to the landowner, I do not think the tenant is justified in expecting anything from it; he has made a rash speculation and an unfortunate one.

3031. But if the speculation could not be described as rash at the time that he made it, surely it is not properly to be described as rash because subsequently it turns out a failure?—He leaves no value, and I should not give him anything.

3032. Would you limit actual compensation to where he leaves actually improved results?—The value of his improvement.

3033. Improved results?—Improved results, or what the land would let at more for his improvements.

3034. But supposing that the land that he has with those improved results on it is of less value in the market, how is his improved result to be arrived at?—There would be none.

3035. Then in other words supposing the farm let at a lower rent the tenant would have no claim?—The lower rent may be due to worse times.

3036. How is the value of the land to be arrived at? What is the value of the land?—By the schedule the farm would be scheduled, and that would be used as a basis, and the value based upon that. You cannot get it by rent inasmuch as times vary so.

3037. What is the value of the land, if rent is not the value of the land?—It is the value of the land, but without those improvements it would have dropped so much more.

3038. In your opinion the improvements may be considered as permanent, the land being still more increased in value?—That is so.

3039. Is not that a very difficult claim to make?—I think it would be simpler than the present form if holdings were properly scheduled and a short description given in each case.

Present rent per acre.

3040. (*Mr. Chaplin.*) I think you said that the farm you held was three hundred acres?—It is 340 acres.

3041. What is the rent per acre that you are paying?—Just over 2*l.* Well, it would not be on the whole of it; the home farm, the 240 acres, is just over 2*l.*; the other lying off a little distance, I have retaken at something under 30*s.* an acre.

3042. Some part of it you have taken under 30*s.* per acre?—I have just taken it; I have not actually entered on the tenancy of it. The home farm is about 2 guineas an acre.

3043. Is the rent that you are paying now part of it 2*l.* an acre, and part of it 30*s.* per acre included in whatever reductions have been made?—Not whatever reductions, but what is a permanent reduction. In the last year I received a 10 per cent. reduction on the home farm beyond that.

3044. I suppose the outgoings upon the farm are very considerable altogether in the working expenses?—Something like 10*s.* or 11*s.* an acre.

Cost of labour.

3045. Is your labour bill heavy?—Yes, it is 600*l.* or 700*l.* a year.

3046. Then the labour bill alone is very nearly as much as the whole of the rent on your farm?—Yes, I may say as regards that that 140*l.* or 150*l.* would be due to my growing flax which I have worked in the winter; it amounts to almost 8*l.* per acre, the labour on it, probably. It is a good piece of flax.

3047. In addition to that you have a large expenditure of money in artificial manures?—Yes, as large as my rent, beyond that if you take artificial manures; there is no question about that.

Receipts and outgoings.

3048. What proportion does the rent bear to the total outgoings on the farm?—I find that unless I make about 2,300*l.*, or 2,400*l.* gross I cannot get on very well.

3049. What proportion does the rent bear to the whole outgoings of the farm?—That would be included.

Mr. S. Kidner. — 1 Dec. 1893.

3050. Including everything, when you have made up your accounts, what proportion would the outlay be to the rent?—There is 622*l.* about, or 624*l.*, about one fourth—that would hardly be so; that would include my own living. It would not be so much as that.

3051. (*Lord Vernon.*) You mean it is less your profit?—Yes, less my profit when there is any.

3052. (*Mr. Chaplin.*) It would be about one-fifth, perhaps?—That would be more like it,—one-third more it would work the other way.

3053. No, I think not?—It would work the other way if you took it at 2,000*l.*

3054. Your living would be a decided outgoing?—But that is included in the 2,300*l.* or 2,400*l.*

3055. (*Lord Vernon.*) If you take gross profit it would be included in the 2,300*l.* or 2,400*l.*—if you take your own profit out of the 2,400*l.* it leaves the total outgoings?—It would make 600*l.* as against 2,000*l.*

3056. (*Mr. Chaplin.*) Clearly the expense would be part of the outgoings of the farm. I understand the gross outgoings are something like 2,400*l.*, including your own living?—No. I was wrong in that—that would be the gross income that I was estimating, the gross outgoing would be more like 2,400*l.* probably.

3057. (*Mr. Elton.*) Your gross receipts are about 2,400*l.*?—That is what it should be.

3058. (*Mr. Chaplin.*) It is not the receipts that I am endeavouring to arrive at?—The outgoing would be more like 2,100*l.*

3059. The labour bill is practically as much as the outlay on cake and artificial manures is as much or even more than the rent; of course there are numerous outgoings besides, which I have not entered into, and I want to arrive as clearly as I can, at what proportion does the rent bear to the whole annual outgoings on the farm—I think it comes out something like one-fourth?—A little over one-third—between one-third and one-fourth.

Low prices.

3060. I think you stated earlier in your evidence, that in your judgment the principal cause of agricultural depression was the great fall in the prices of agricultural produce?—Yes.

Reduction of rent.

3061. And that the chief remedy was the reduction of rents, where they have not been reduced already?—Where they have not been sufficiently reduced already.

3062. In many cases I think you said they had been reduced as much as 40 per cent.?—In some cases, and on some estates the reductions have been much more liberal than on others.

3063. Of course, they vary considerably?—They vary considerably.

3064. What further reduction do you look to, to be adequate to relieve the pressure?—I can see no reason at the present time, why my rent should be more than it was 30 or 40 years ago, there is nothing to justify it.

3065. I am not speaking of that particular rent; but generally speaking, about the district from which you come, what reduction do you think would be adequate to relieve the pressure?—You could hardly take this year as a standard, because it is due to bad seasons; but in a great many cases we have not been liberally dealt with. I think another 20 per cent. at least should be taken off the rent.

3066. And that you think would relieve the agricultural depression?—To a very great extent, I do, in fact, I think we might try to struggle on with that reduction.

3067. I quite understand in the case of this farm, which appears to be highly rented at the present time, that you individually might gain substantial relief. May I ask you with regard to those farms where the land is very much inferior to yours, are you of opinion that a reduction of 20 per cent. would be a remedy for agricultural depression?—In purely agricultural districts, where they have been allowed to go out of cultivation, that is quite another matter. We have nothing of that sort of thing in our district.

3068. When you speak of a remedy for agricultural depression, you would be more correct in saying that it would be a considerable relief to the tenants in your particular district of England?—That is it.

Compensation for disturbance.

3069. You have given your views on the question of land tenure, and I understood you to say that you are

Mr. S. Kidner.

1 Dec. 1893.

an advocate of what you describe as compensation for disturbance?—Yes.

3070. Will you state exactly what you mean by that?—Well, in the view of a man not being able to stay on his holding, either from not being able to get his rent properly adjusted, or because the landlord wants to remove him from any cause whatever, except in the case of bad management, which I will always except, the tenant necessarily sustains very great loss in turning out of that farm, inasmuch as in marketing the whole produce of that farm he anticipates extra expense in going to a fresh one; in the majority of cases he loses quite 10 per cent. of his capital.

Compensation for improvements.

3071. Do you mean to say in the case of a tenant who received full compensation for his improvements for everything that he has expended, that he necessarily by leaving undergoes a great loss for which he ought to be compensated?—Yes, beyond those improvements he necessarily sustains a great loss, except in accidental circumstances. There may be accidental circumstances, but generally speaking, it is always the case.

3072. Who is to estimate that loss?—I think the referee.

3073. On what?—The referee or any other tribunal appointed that would be better fitted to estimate it.

3074. But you had, in the case of this farm, I suppose, when you entered upon it, made your bargain with the landlord; you were under the impression that you were making an agreement favourable to yourself?—I cannot say as much as that. I had to take it under very vexatious conditions, and I entered on the lease out of desperation with the chance of getting fair play. That was really my state of mind, and it was at a time when agricultural prospects had been looking fairly well, and we were in hopes of it still going on improving.

3075. But on first entering, I suppose you made an original agreement?—No; my father came there when I was six months old.

3076. You succeeded your father?—It was my mother's afterwards, and I managed it for her from almost the age of 15, and afterwards I took it of her.

3077. Either your own fortune, or the fortune you expected to succeed to, was already invested in that farm?—That was so.

3078. Your position is that of a tenant who makes a bargain originally for himself?—I was bound to do so.

3079. This principle which you advocate is to apply not only to your own case, but you advocate it for general adoption?—Yes.

3080. May I take the case of an ordinary tenant who is making an agreement for entering upon a farm, and I suppose that when he makes that agreement, you would say, as a general rule, that he does so because he thinks that it is advantageous to himself?—Yes.

3081. In many cases it is the fact, is it not, that there are numerous applicants for a farm at the same time?—Yes.

3082. You will admit, will you not, that a farmer who is selected from a number of applicants *pro tanto* obtains an advantage from the landlord?—That would be in certain cases looked on in that way.

3083. And the other parties whose applications are refused are placed comparatively in a disadvantageous position?—It may be for their good, but I have no doubt that that is the view they take of it.

3084. We will suppose that he held the farm for a certain number of years, and ultimately has to leave?—Yes.

3085. During all those years he has had the benefit of his advantage which has been refused to his competitors?—An assumed advantage.

3086. At the end of that time the gentleman who has had this advantage is to receive compensation, because it ceases; do you propose under those circumstances that the gentlemen who have not had the advantage at all should be compensated too?—Certainly not.

3087. Why not?—This man took it on the assumption that he would get fair treatment as long as he paid a fair rent and managed the farm properly. I think that is a fair assumption, but when treated otherwise, I think that he has some claim in the way I indicate.

Mr. S. Kidner.

1 Dec. 1893.

3088. The man who took it took it on the understanding that he would be holding, subject to the conditions on which he took it?—Yes.

3089. And one of those conditions was that if he left the farm he should receive compensation for unexhausted improvements, and for his outlay, the benefit of which he had been unable to reap. If he gets that what further claim has he?—If you treat him as an individual he probably would not have a very strong claim; but considering the case of agriculture it is very much to the advantage of agriculture that that man should manage the farm highly and add improvements if he had security in that way.

3090. You base it entirely on the advantage to agriculture?—It would be on the chief points you indicate; but in a case like my own there is something beyond that.

3091. Your case is the case of a farmer who enters upon a lease?—Yes.

3092. And I think in your evidence you stated that the conditions of your lease were such that you could not recover the expenditure that you have laid out for improvements on the place?—Yes, that is so.

3093. Why did you enter into a lease on such an unbusiness-like arrangement, if you will forgive me for saying so?—In the first place I entered at the end of a 21 years' lease which my father took it at—these clauses for compensation were unknown almost at that time and the use of artificial manures was practically unknown. It is the system that created it in the interval, and you would not recommend any man to adopt or think it desirable that I should not adopt those new and improved methods; but at the end of that term the tenant finds a certain residue left in the soil which he cannot obtain, and almost his only resource is to keep on the farm, and try to work on it. Therefore, I say that you are not quite a free agent.

3094. At what date was that?—The farm was taken in 1847, and the lease expired at the end of 21 years, that would be in 1868, would it not?

3095. You say at the same time you undertook your lease in 1878?—In 1868 and 1878.

3096. And in 1878 the conditions were that you could nor recover the expenditure that you have laid out for improvements?—That is so.

3097. Do I understand that up to as late as 1878 in your part of the country compensation for unexhausted improvements was unknown?—In many cases it was; but on entering on the agreement in 1868 I was not a free agent, and the landlord was not a man with modern ideas; he was antiquated in his ideas; he thought they were correct. Being antiquated and not very enlightened, I am inclined to think if I had asked I could not have obtained a modern agreement with those clauses for compensation, at the end of 1878, when I found myself in this position.

3098. Your views are somewhat biassed on account of the treatment that you received individually?—Those things make an impression upon us; but there are similar cases; it is not an isolated case.

3099. Is that the general position with regard to landlords and tenants in your district at present that the conditions of their leases are that they cannot claim for improvements?—Now they have the Agricultural Holdings Act, and it would not be a legal agreement or it would not hold under the Agricultural Holdings Act, but until that Act was passed it was very generally so.

3100. Was there no custom of the country?—Very little.

3101. There was some?—You could not call it a custom of the country; it was so seldom used that it could not be described as a custom of the country.

Abolition of leases.

3102. In one part of your evidence you stated that where farms were held upon a lease, you thought that in the time of adversity when things turned out unfavourably for the tenant that the lease ought to be broken?—I think it ought under present conditions, but I do not think we should see any leases at all under an improved regulation. My idea is that the necessity for leases would be done away with.

3103. Should you approve of the converse proposition that where there has been a time of prosperity the

Mr. S. Kidner. Dec. 1893.

leases ought to be broken in the interest of the landlord?—The same should apply; either should be open to appeal to the referee I think for either an increase or decrease in rent.

3104. That would practically mean the abolition of leases altogether?—I think so.

ie fixing rent.

3105. You said also that there ought to be an outside tribunal for the purpose of fixing rents; was that to apply to all tenants?—I think so but I can hardly see how you can settle the question of disturbance without it.

3106. On what principle are the rents to be fixed?—By valuation I should say.

3107. Yes; but on what principle is that valuation to be made; what do mean by a fair rent?—A rent at which a man with good management would be supposed to be able to live on the farm, and obtain a fair return for his outlay.

3108. What do you call a fair return?—What the miners would call a living wage.

3109. I do not know what a living wage means, and I have not been able to ascertain what it means; but perhaps you will tell me what your idea of a fair return for a tenant's outlay would be?—If a man takes a farm and invests 5,000*l.* or 6,000*l.*, I think that judicially he should be entitled to receive a fair living for that and good interest for his money.

3110. What do you mean by good interest for his money?—It would vary with the times. We have to do without any at present as far as I can discover. That would vary with the times. I do not think you could fix that now for 20 years hence.

3111. I want to ascertain what your idea of a fair rent is and how it is to be fixed, and upon what basis. You say to me in reply that it should be fixed on such a basis that a man should get a fair return for his outlay—a fair interest for his money; I want to know what per-centage you consider is a fair interest?—Ten per cent. he should be able to obtain if he works his capital as he should do.

3112. Ten per cent. is very great interest to obtain on very good security?—Hardly; if a man lays out 5,000*l.* or 6,000*l.* and gives his time to the farm I do not think it is too much. A great many people connected with breweries get far more without employing any of their time; they simply hold out their hand and get it, and the farmer puts his own time and judgment into his work.

3113. (*Mr. Giffen.*) Would that be remuneration for his own labours?—I am including that; it is a difficult thing to finally check that.

gislative terference tween ndlord id tenant.

3114. (*Mr. Chaplin.*) What grounds would justify the interference of the legislature to say in the interests of this particular class only, that until they have made 10 per cent. on their money the relations between the landlord and the tenant must be interfered with by law. Do you propose to limit the application of the principle to tenant farmers?—We have only to deal with tenant farmers; you can hardly give an answer till a case occurs. Tenant farmers are situated in a very peculiar position inasmuch as they necessarily embark very much of their capital in the soil which is inalienable from that soil, and I think it is in the interest of agriculture that every encouragement should be given to the investment of that capital in the soil.

3115. You think, in the public interest, this experimental step would be justified of forbidding the landlord by law from selling the use of his land at the best price that he could obtain?—Yes.

3116. Because it is a matter of great public interest?—I think that it is justifiable.

3117. You will admit that it is a matter of great interest that the public should be able to obtain their food cheap?—Certainly.

3118. On the same ground, would you apply that principle to the tenant and forbid him by law from selling the produce of his land at the best price that he could obtain?—That is quite another matter; he manufactures that article, as it were.

3119. Why draw the distinction between the landlord and tenant?—Because it is due to his action and production of the article. You can almost put it as the manufactured article, whereas the land is the raw material on which he is to work, and is a part of the country.

Mr. S. Kidner. 1 Dec. 1893.

3120. But neither the landlord nor the tenant could call it manufactured without the capital of the landlord on the one hand and the capital of the tenant on the other, and if your interference by law is justified by public interest in the one case, why is it not justified by public interest in the other?—If you apply it to the sale of agricultural produce, you will have to apply it to all manufactured articles throughout the country, but, as I explained, why it is justifiable in the interest of the tenant is because he is in this peculiar position—that he has to embark his capital in the soil, and it is inalienable from the soil; the farmer's produce is open to the competition of the whole world.

3121. When you draw the distinction between the manufactured article on the one hand and the raw material on the other, is it not absolutely the case that the land in its present state partakes very much of the nature of a manufactured article; would there not have been an enormous amount of capital employed in placing the land in the position in which it is, which enables it to be profitable and bear crops?—Certainly. The great distinction is that the one is limited and the other is unlimited, and skill and competition keeps the one in place. The land in the country is limited, of course, but inasmuch as the products in competition with the whole world is limited, and no interference is required, the matter of competition keeps the public right. If I charge too much for my produce, the foreigner comes in and undersells me and keeps me in my place.

3122. But this does not answer my question. Why is the interference to be justified in the one case and not in the other? I am endeavouring to make it clear to you that land, in one sense, is as much a manufactured article as the product of the land, or rather the land that you receive from the hands of the landlord is a manufactured article. He has laid out very large sums of money in the erection of buildings and fences and drainage, and a variety of other works, which altogether equals the value of the land itself?—Yes.

3123. Having done that, why, on the ground of public interest, are you to forbid the landlord from selling the use of this land for the best price that he can obtain when you think it will be entirely uncalled for, on grounds of public interest, to forbid the tenant to sell the produce?—That comes more in the comparison of the tenant's improvements. It would be a fairer question, "Why do you forbid the landlord to sell his at "the best rent he can get, and at the same time let the "tenant sell his improvements at the best price that "he can." I do not press that he should allow the tenant, but that it should be valued.

3124. That is another question altogether?—It seems to me that is where the parallel comes in.

Official referees.

3125. You stated you thought that for the purposes of compensation a popularly elected referee should be appointed to schedule a holding, I think you described it, at the commencement of the term?—Yes.

The scheduling of holdings.

3126. Is that to apply to all holdings?—To agricultural holdings.

3127. Throughout the country?—I think so.

3128. It is a very large proposal of course; have you carefully considered it?—Yes. I do not think it would be in any way unworkable or more cumbrous ——

3129. Will you explain to the Commission how it is to be carried out?—It seems to me that a man who knows his business may go through my farm and value it.

3130. First of all, whom is the referee to be appointed by?—That is a larger point which I left somewhat open, and purposely. I should presume that the popular element should come in, and those interested in what he has to do should have a voice in the election. If he were appointed by any other authority he would do what is fair and right.

3131. That is a considerable proposal which you say you have carefully considered. I think you should explain to the Committee how you propose to carry it out, and the first natural question that I ask is, whom is this popularly elected referee to be appointed by, and for whom is he to do this work?—For the landlord and tenant for whom he makes the schedule, and I think he should be appointed by the tenants and landlords in the district where he is employed, and I should have no objection to the landlords having preferential or plural voting in the matter where they occupy more farms

Mr. S. Kidner. 1 Dec. 1893.

than one. I think that it should be done as fairly as possible.

3132. I do not want to know what you have objections to; I want to know what your proposal is which you say you have carefully considered—what is the precise proposal?—That you would take the area of the district council, that is a district which is contemplated, or you might make it take the area of the union, and there should be a popularly appointed referee within that district for a stated period. I should not put him in office too long, he may not be satisfactory, and I think in his election the tenants and the landlords in that district should have a voice.

3133. Very well; but then who is he to be appointed by and paid by?—Paid by the landlord and tenant conjointly.

3134. Who is to appoint him?—The returning officer would manage the election, I take it.

3135. The election; whom is he to be elected by?—By the tenants and landlords in the district.

3136. All the tenants and all the landlords in a given union then, are to have votes for the election of this referee?—I think so.

3137. Are they to have one vote, or is the landlord to have more?—I should think in fairness a large landowner should have more than one vote as against a tenant who occupied one of his farms.

3138. Then this referee having been appointed upon every change of tenancy or every entry upon a farm, what is he to do?—To compare the condition of the farm at the end of that tenancy with the condition at the commencement, so that his schedule that he has made should be used as a basis for another valuer whom the tenant and landlord may appoint.

3139. How is he to compare the condition of the farm with its condition at the commencement of the tenancy when the system itself is only just commencing?—I think it will be very easy to go through and schedule a farm, every field growing such a crop, in such a state, whether clean or dirty, or in a high state of cultivation or otherwise; I can see no very great difficulty in it.

3140. How long would it take him to schedule a certain farm in this way?—A day or two at the outside I think.

3141. And then he would make a record of its character, its condition, and its general cultivation?—I think so.

3142. And that would have to be done on every change of tenancy on every farm?—It would not necessarily be done by the official referee after it is once made, that is the basis.

3143. Where is the record to be kept?—The tenant and landlord should each of them have a copy of it, probably.

3144. It is practically open to tenants and landlord to do that at present if it is desirable?—Yes.

3145. Do you propose to make it compulsory?—I think it would be desirable; it may be optional for either of the parties to have it done.

3146. You have hardly considered the scheme sufficiently, I should think. At all events I am sorry to say that I am not able gather a very clear idea of how it is to be carried out?—It is attended with some little difficulty. I intended to have left it somewhat open; I simply indicated that there should be an outside tribunal.

3147. There, I think, you have succeeded very well?—I hope so.

Compensation for improvements.

3148. (*Mr. Gilmour.*) I think you said yesterday that while you considered the sitting tenant ought to have the benefit of a tribunal, you do not think that men entering their farms now should have that assistance?—You mean in the future.

3149. Yes?—Yes, for the future I think so.

3150. Immediately they get into their farm?—Yes, I think so, but it would be very evident that the compensation would be very much less if a man left his tenancy at the end of a year or two years to what it would be if he were there 20 years.

3151. I understood you yesterday to have said that you did not think that it should refer at all to the incoming tenant?—I did not intend that.

3152. As regards the sitting tenant you answered yes, and not as regards the incoming tenant?—The incoming tenant is treated as against the sitting tenant. I thought that was the light in which he was spoken of.

Mr. S. Kidner. 1 Dec. 1893.

Official referees.

3153. In the election of the referee would not it, in your opinion, be a practicable way in every county to put it in the power of the man—in Scotland called the sheriff of the county, I do not know in England who it would be, perhaps the County Court Judge, that he should nominate, for a certain term of years, so many men whose reputation would be such as to allow them to take that position?—I think that would do very well, probably that is a better scheme. He would be open to receive representations of course.

Restriction in leases.

3154. (*Mr. Clay.*) With regard to antiquated restrictions in leases, what is your experience in your own case?—I have one in my pocket which I was asked to sign on an off-lying farm which I took, and it was made by one of the principal landowners in the district. It was represented as being a very fair and reasonable agreement, and I may say that nineteen-twentieths of the tenants for whom he is agent, signed this same agreement. In fact, when I had this, I saw some of them, and this agreement was signed by men that I put down as men who ought to have known better. I went through the agreement and struck out half of it. They could hardly find fault with it because the whole of my objections were complied with; but at the same time nineteen-twentieths of the tenants on this estate signed this lease or something similar to it.

3155. You would not say that those restrictions were fair?—Certainly they are not. This lease is similar to a great many that tenants in the district signed. I was prepared to fight the matter, and the way I came by this document was, I asked the lawyer to make a copy, and this is the document with my marginal notes. (*producing the same*). Very much to my surprise I had not to fight it very much, but these objections of mine were met; but others complied with those requirements and signed a similar agreement.

3156. (*Mr. Chaplin.*) You did not sign it?—I did not sign it.

3157. (*Mr. Clay.*) You say this was signed by others?—Very similar agreements equally objectionable were signed by others. I should not say they were word for word with this agreement.

Official referees.

3158. Regarding this official referee, you think it would smooth the difficulties between landlord and tenant?—I certainly do. I think it would improve their relations in most cases.

3159. It would be the means of bringing landlords and old tenants together if it were practicable?—I think so. He would very seldom have to act in the case of rent.

Compensation for disturbance.

3160. Regarding the compensation for disturbance, you look upon it that a person who has been 40 or 50 years settled down on a farm, to be a matter not altogether of sentiment, but that he has some just right to have some say in the matter?—I think so.

3161. And it would be beneficial both to the country and the landlord and the tenant?—I think it would be beneficial to all parties concerned.

Official referees.

3162. Mr. Chaplin tried to get information from you about how the person is to be appointed. I know in England you have not such machinery as we have in Scotland, of a sub-sheriff who resides in the county, and who knows all the best men who might be appointed as referees?—Quite so.

3163. You thought some machinery like that might be copied into England?—Yes, I think so, if such machinery as that would answer the purpose.

3164. It would be no hardship to the landlord?—I do not think so; if he was a fair man appointed and did what was fair, it would do away with a great deal of haggling and ill-feeling.

Freedom of cultivation.

3165. You live near the town, and you sell your produce there, and you pay a little more rent in consequence?—Yes.

3166. Is it not a fact that when they sell straw, they bring an equal quantity of manure, or perhaps more on the farm than they took off?—This is generally so, almost always so.

3167. Is it not a fact that on farms let near towns where they sell their straw, the tenants have opportunities of bringing manure on to those farms, and they

Mr. S. Kidner. — 1 Dec. 1893.

are in a better condition than farms at a greater distance?—I think so. The town is generally built with pretty good land round it.

3168. Made from the tenant's improvements?—To a great extent, that is so.

3169. (*Mr. Giffen.*) Your contention practically comes to this, that when a tenant has been in occupation of a farm for some time, whatever the law may say, whatever the agreement may be between the tenant and the landlord, it is like drawing up a partnership agreement, and you think that the tenant has an equitable right not to be disturbed?—I think he has a right.

3170. That by the force of events, and by the nature of things a kind of partnership grows up, and that the tenant has an equitable right against disturbance, that is what I understand you to contend?—And beyond that he sustains a pecuniary loss.

3171. You are aware that this is not a legal right, but you maintain that it is an equitable right, and it is a fair case for converting it into a legal right?—I think so.

3172. I did not quite gather from you when the referee was appealed to for how long a period the rent was to be fixed, or whether it was to be an indefinite period?—I should say for short periods of four or five years, and if any appeal were made, it would go on for that length of time. It would be vexatious to be open every year.

3273. There would be a minimum period?—There would be a minimum period which I should not fix at too long, say three, or four, or five years; it certainly would be vexatious to have them opened every year.

3174. And as regards the incoming tenant I suppose your view is that whatever rent he agreed to come in at, it would last for a certain number of years?—Certainly.

3175. And only at the end of that period he should appeal to the Court?—That is the idea.

3176. (*Chairman.*) How long would that last?—Three or four years. Not too long a period; I should like it to be guarded against being re-opened.

3177. (*Mr. Giffen.*) Would not it be better met by giving fixity of tenure to the tenant, and right to sell, rather than to give compensation?—I do not think that, where a landlord wishes to resume his farm for any particular purpose, he may have a very disagreeable tenant next door to him; I think it would be hard to have to keep that tenant, but on giving him up and granting him compensation, the landlord may shift him. I am rather in favour of the view of compensation for disturbance.

3178. You think that the equity of the case will be satisfied if compensation were given for disturbance without going further, and having fixity of tenure?—I think so, the landlord should have an opportunity of resuming his farm when he chose.

3179. Then I think you have mentioned that at the present moment there was no difficulty in getting good tenants for the best farms?—That is so.

3180. That there are more farmers than farms?—Yes.

3181. Would it not be correct to say that that is one of the causes of depression as far as the farmer feels it, whatever may happen in fall of prices, with this excessive competition the landlord could let his farm at a high rent, because he would have the command of the market? How is this difficulty of excessive competition for farms to be met, supposing it to be a real cause of depression?—I suppose that these surplus men must find a world elsewhere, it seems the only remedy; two men can only live——

3182. It seems to me, that if this state of things exists, I do not see how almost any of the other causes of improvement could really be permanent, because of this excessive competition?—That is so.

3183. (*Mr. Whitehead.*) This surplusage of tenants does not exist everywhere does it?—My experience would not extend to other parts of the country—that would not be so, but in our district there is certainly no difficulty in acquiring tenants.

3184. Do you know whether it applies only to your own district?—It would be very extended. If you take the whole of the West of England, it would apply.

3185. The whole of the West of England?— I should say so.

3186. May I ask what counties you mean?—In Somerset, Devon, and Cornwall, I think you will have very great difficulty in finding a farm that is lying void there.

3187. (*Mr. Long.*) Is not Wiltshire included in the West of England?—I took the West of England to mean Somerset, Devon, and Cornwall, that is what we speak of as the West of England.

3188. (*Mr. Whitehead.*) You spoke of the incidence of local taxation as being unfair, and that it pressed heavily upon the agriculturists?—Yes. — Local taxation.

3189. Have you suggested any remedies for that?—We should have larger subsidies from the Imperial Exchequer, and I think it would be a very fair tax perhaps in the shape of the van and wheel tax, which we all thought would be passed into law, as we were told it was going to be passed; and I think almost every farmer was very much surprised that it was abandoned. — Van and wheel tax.

3190. That is the opinion of your Chamber and the district?—Yes, and it is a very strong opinion. It is a point which you very often hear mentioned. I know the van-owners were sending petitions from meetings, but I know the farmers generally looked on it in a rather amused light as having no argument in it, and no action was adopted by them.

3191. Do you suggest a division of the rates between the landlord and tenant?—I do not see any advantage in that; I think in this case it would be an advantage to the tenant farmer, inasmuch as the man who pays the first has to pay somewhat the most; but beyond that I think it would lead to extravagance, inasmuch as the tenant farmer would not have the same interest to keep the local expenditure down as at the present time. — Rates.

3192. And if agricultural depression were removed it would probably mean an increase of rent, would it not?—Very likely, I do not think that is a strong point.

3193. What is the present amount of your rates in the pound?—1*s.* 8*d.* for the half-year was the last.

3194. Would that be about the average, two 1*s.* 8*d.* rates?—It would be rather more than that because the next brings in a gas rate, and a school rate, which are not included in that.

3195. May we take it that the two 1*s.* 8*d.* rates are what you pay in the year?—It would hardly cover my rates.

3196. Could you tell the Commission what the rates were 10 years ago?—They have not varied a very great deal; they were very high 10 years ago—10 years ago you are speaking of now. I was going further back, they would vary very little indeed.

3197. I think you told us you had a reduction in rent?—Yes.

3198. Has that been applied through your Union?—Yes, I should not know a case where it had not been applied.

3199. Have reductions on the basis of assessment followed the reductions in rent?—Not generally. I am on that score getting a report from the Chamber of Agriculture at the present time, I appealed on that new tenancy, and the Assessment Committee absolutely refused to take rent as a basis, they simply compared it with other farms, and they asked me how it compared with other farms, and I said I was not concerned with that, that I had taken this farm in the open market, and unless they could show otherwise they were bound to accept the rent as a basis. — Assessment.

3200. So that the Assessment Committee have not made up the assessment corresponding with the rent?—That is so, and that acts very unfairly in the matter of land. I may say in the town of Wolverton a great many are assessed at very nearly half the value, and very nearly all the land is over the rent value.

3201. Will you tell the Commission what your assessment actually is?—On my home farm it is very nearly taken on the basis of schedule A. with the 10 per cent. reduction.

3202. Schedule A. in the income tax?—Schedule A. in the income tax.

3203. With 10 per cent. reduction?—Yes.

3204. (*Chairman.*) How does it compare with the rent?—It would be the rent on Schedule A., that is the general reduction.

Mr. S. Kidner. 1 Dec. 1893.

3205. (*Mr. Little.*) Schedule A. is not reduced, do you mean?—Schedule A. is reduced at our Assessment Committee, they take A. as their basis.

3206. But I think that your assessment under Schedule A. is minus 10 per cent.?—My own particular case, the home farm, is very nearly that, but they do not adopt that as a basis generally, but go more by comparison of the rents in the district.

3207. If it is the Schedule A. minus 10 per cent., and Schedule A. has been reduced, then you are rated properly?—I have no grievance as against the home farm, but against this farm I have taken. I do not think it amounts to a hardship inasmuch as this property in the town is not nearly up to Schedule A.

Rate subventions.

3208. (*Mr. Whitehead.*) You said subventions were not much good, will you say how?—I had in my mind as regards that, more especially the case of the technical education grant. As far as I can discover in our own district the money has been almost entirely wasted. We have classes for wood carving, and cooking, and different things, and they are entirely patronised by the ladies of the village.

3209. (*Mr. Elton.*) And butter making?—That has done some good, that is the one exception; but generally speaking the subventions for those classes have been simply money thrown away.

3210. (*Mr. Whitehead.*) You are speaking of technical education only; but there are other subventions, for instance, the police and lunatics?—Well, there is just a case in that way.

3211. They have been applied to their proper purposes in those cases?—Yes. Well, then again, if you take the case of boards of guardians there is also a very great tendency in order to spend the money with very little consideration by increasing the salaries of officers from this Imperial grant. If it came from the local rates it would be dealt with in a different way.

3212. If you had more subventions that would be intensified?—Yes; but there is a general feeling that if there were more of it it would be applied better.

3213. Have you an idea of the actual amount of the subventions that are allowed?—As regards the schools there would be something over half, and the salaries of the union officers I know are very considerably in excess. In fact they are ruinous.

3214. Do you think that the farmers hardly realise the large amount of the subventions?—Probably not.

3215. Would not it be desirable that they should be published?—I think everything should be done to elucidate the facts, something of that sort is desirable.

Cattle disease.

3216. (*Sir Nigel Kingscote.*) In your district have you suffered from cattle, or sheep, or pig disease?—Not very generally. In my own case neither the one nor the other; but I have had rinderpest and foot-and-mouth disease; but I have fortunately escaped the others.

3217. Has the question of cattle disease been considered by the Farmers' Club?—Yes.

3218. What is their opinion?—They are strongly of opinion that the most stringent measures should be used to keep it out of the country, and we are prepared to submit to very drastic measures when difficulties arise.

3219. Have you passed any resolution as regards compulsory slaughter at the ports?—No, I have not. In fact our Farmers' Club in the matter of discussion is almost a recent institution. We have been organised for some time, more in the shape of a co-operative society, and it is but recently that we have carried on any discussions.

3220. What is your own opinion?—That it would be a very good thing; I think it is quite necessary for the farmer, and that the consumer would lose nothing by it.

3221. You said yesterday that rents in your district ran from 1*l.* to 2*l.* an acre, and that the quantity of grass land was very nearly equal to arable?—Yes.

3222. Are there not extensive orchards?—Not so extensive as they would be in Devonshire, and it is not a growing industry. Orchards are not looked upon as generally very remunerative.

Mr. S. Kidner. 1 Dec. 189

Fruit culture.

3223. Are orchards, as regards your district, much the same as pasture?—Yes, and they are generally valued at about the same rate as the best pasture, it is usual to value the orchard on the farm in the same way as the pasture.

3224. Not more than the pasture?—No, the best of the pasture land on the farm would be the usual valuation for the orchard.

3225. Is there much more flax than your own grown in your neighbourhood?—Very little indeed.

Competitio for farms.

3226. You say that in your district, when the farms are vacant, there are always men ready to take them?—Yes.

3227. There is a competition for them, is there?—Yes.

Legislative interferen between landlords and tenant

3228. Do you consider that these men cannot make what they would call a just agreement with the owner of the land by themselves, and that they require either an enactment by the legislature or court to settle the agreement between them?—I think so. I think it would be desirable on all hands. It would lessen the friction, which always occurs in the case of a hard deal, and I think the present and future relations of landlord and tenant would be very much better and improved by having this appeal.

3229. You think that neither party has intelligence enough to settle the matter for themselves?—Intelligence enough, yes, but there is between dealers always a very great deal of haggling.

3230. And therefore you think that the legislature should step in to make agreements for them. But you know the legislature cannot possibly take into account the circumstances of situation, soil, and climate?—They can easily take that into consideration, any man who makes a valuation would take that into consideration.

3231. I thought you wished the court or the legislature to settle it?—A referee would probably be appointed, and if the court had to settle it it would refer the matter to some referee to make a report, I take it. They could hardly do it in London.

3232. (*Chairman.*) I thought you said just now that on the commencement of the tendency the new tenant and the landlord might be left to themselves to make what bargain they thought fit?—I think they are on equal terms.

3233. Then it is only when the tenant has been in possession for four or five years that he should have the protection of the courts?—Yes.

3234. (*Mr. Little.*) That was only as regards rent, I think, not as regards cultivation and sale of produce?—I did not include that, I think a landlord should not have the power of restricting the produce of the land by unfair agreements.

3235. (*Chairman.*) But I think that would be a matter of general law?—It is a matter of general law.

3236. You would not refer those terms other than rent to a special tribunal?—That is so.

The scheduling of holdings.

3237. You would or you would not?—In the case of a new taking I do not think that the referee would want to be called in beyond scheduling the farm to say the state in which it was found.

3238. The referee must inspect the farm in order to schedule it, and when that four or five years commences he may be able to determine what the rent should be?—Or to see what improvement have been made, if he had to value improvements.

Co-operation for purchase of manures.

3239. (*Mr. Lambert.*) You said just now that yours was a tenant farmers' club for the purchase of manures?—Yes.

3240. Has it been a benefit to the farmers to purchase in that way?—Yes, for almost twenty years. We buy all our manures by contract, with stipulated analyses, and every sample is analysed before we use it; it is always analysed by Dr. Voelcker.

The witness withdrew.

Mr. JOHN NOAKES called and examined.

Mr. J. Noakes.

1 Dec. 1893.

3241. (*Chairman.*) You are a farmer living in the Tunbridge Wells district?—Yes.

3242. And you represent the views of the Tunbridge Wells Farmers' Club?—Yes.

3243. Is that a large association?—Yes.

3244. How many members are there?—I cannot tell you exactly, but somewhere about 150 members, I suppose.

3245. What size of farm do you occupy yourself?—My home farm where I reside is about 286 acres, and then I have marsh land to the extent of about 240 acres.

3246. How long have you held these?—Where I reside, I have occupied it for 33 years.

3247. What is that 240 acres farm?—It is all grass marsh land on Romney Marsh.

3248. Is it all grass?—It is all grass.

3249. What is that 286 acre farm?—My home farm is mixed, arable and hops.

3250. Is that near Sevenoaks?—Near Tunbridge Wells.

3251. You come here to represent the views of the Farmers' Club; will you tell us the views which they specially wish to put before the Commission?—Fortunately, in the neighbourhood of Tunbridge Wells we are rather peculiarly situated, and I must say we have no grievance particularly, except what I wrote the secretary some time ago, that we suffer very much from the severe foreign competition.

3252. From the low prices of your produce?—Yes.

3253. Do you attribute it to foreign competition entirely?—To foreign competition entirely.

3254. What is the general class of cultivation in that district?—Ours is a mixed system of cultivation; there are very few roots grown. Our staple article is hops.

3255. Is that what the farmers mainly make their profits out of?—Yes, almost entirely.

3256. Is it specially with reference to hops that you have come before this Commission?—Not particularly so. There is a considerable quantity of fruit growing in our locality.

3257. Has there been any improvement in the case of hops during the last three or four years?—We have had a fairly good trade in hops the last three years; that is what I say makes our position in our locality rather peculiar; we cannot feel that we are so depressed as they are in many parts of the country, where it is grass and cereals entirely.

3258. You have had good seasons, and better prices for the last three years or four years, and thus have improved your position very much?—The growth of hops is not generally understood. It is very peculiar, but we have had fairly good years, because we have grown short crops. That is the peculiar position we are in. Previous to that, we had a very heavy crop of hops, and it was almost ruin to us, because of the foreign competition; that is where the foreign competition comes in.

3259. But the last three years on account of having rather short crops, the price improved, so that you have been fairly well off?—Yes.

3260. But I suppose there has been foreign competition?—Oh, yes, very severe.

3261. What suggestions have you to make on behalf of the Farmers' Club?—With reference to foreign competition, I do not think the state of things is to be remedied. Of course, there is only one remedy in our idea, that there should be some duty put on everything that is imported. But that is not practicable at all. We feel that there is no compensation given to the occupiers to lessen the cost of production.

3262. You think that everything should be done for the purpose of lessening the cost of production in order to enable you to meet the competition?—That is my idea. I do not suppose it is practicable as I say to advocate a duty to be put on hops, but there is no mistake, the public would not be affected in any shape or way, and it would be a great benefit in my opinion.

3263. Has there been much reduction of rent in your neighbourhood?—Yes, there has been a reduction generally.

Reduction of rents.

3264. What is the reduction?—I must tell you that our locality in the neighbourhood of Tunbridge Wells is a residential district, and perhaps you are aware that we are fortunate in having two or three very large landed proprietors. We have Lord Abergavenny for one, who has a large estate but rather a poor one, and we have also the Marquis of Camden, who has a very large estate. That is also a poor estate. The rents generally are very moderate. I suppose the average of the rents on those two farms would not be more than 12*s.* or 12*s.* 6*d.* per acre.

3265. And you consider the rents are very moderate?—Yes.

3266. Have considerable reductions been made?—There have been reductions; for instance, Lord Camden's rent audit was the week before last; his rents, as I tell you, are low, but, notwithstanding, he made an allowance of 20 per cent.

3267. But taking the last 10 years, has there been an actual reduction of rent?—There has been an actual reduction of rent of about 20 per cent.

3268. And you have not much to complain of on the score of rent?—No, my rent audit was on Wednesday in this week. In my home farm where I grow hops my landlord thought it would not require reduction. But on my grassland, where I pay a rent of four hundred and some odd pounds, my landlord without my asking him made me a reduction of 25 per cent. It was required, and rather more than that; it has been a very disastrous year.

3269. Is that on account of the drought?—Yes, and the low prices, the exceedingly low prices.

3270. Does your Farmers' Club discuss the question of rents, and whether there should be any tribunal to decide what rents should be?—Not at all. I must tell you for your information that we are rather opposed to any interference between landlord and tenant on the question of the appointment of an arbitrator; we are very much opposed to that.

Legislative interference between landlord and tenant.

3271. Is the whole club opposed to that?—The whole club is opposed to that; in fact, the whole district. There are one or two exceptions, but the majority is opposed to that.

3272. Has the question been discussed by them?—Yes, we were discussing it a short time ago.

3273. Have you had any discussion upon the Agricultural Holdings Act?—We are not favourable to it generally. In fact in almost every instance the owners contract themselves and the occupiers contract themselves out as much as possible.

The Agricultural Holdings Act.

3274. Do you mean that they get rather better terms from their landlords than those conceded by the Agricultural Holdings Act?—We have the feeling in our district that we do not wish to disturb the relations between landlord and tenant more than we can help. There is a perfect unanimity and good feeling in our district generally; and we do not wish to disturb it.

3275. Do you desire to see any alteration in the Agricultural Holdings Act?—Not that I am aware of. There has been nothing suggested to that effect.

3276. You have come here to speak on the question of rating?—Yes, that is what we feel most. We think something ought to be done in the way of rating. I can give my individual case to show how unfairly it operates. On my farm I am assessed at 349*l.* 10*s.*, and the rate last year was 4*s.* 2*d.* in the 1*l.*

Rates.

3277. Have the rates increased of late years or not?—Yes, they have increased considerably. We have to pay the school rate now, and we have several little things to pay, and our rates have increased, I should think, about 8*d.* or 10*d.* in the 1*l.* within the last 10 years or so.

3278. Is that in spite of all the subventions?—Yes, in spite of all the subventions. The public will have such good roads, and we have to pay for it, and expenses generally have increased.

3279. How do you account for the great increase in the rates?—There is a tendency generally to increase

Highway and Poor Rates.

Mr. J. Noakes.

1 Dec. 1893.

the rates. The expenses on our roads have increased very considerably.

3280. Has the Poor Rate increased?—Yes.

3281. Do you know what the increase in the Poor Rate has been?—I cannot say.

School rates.

3282. Is there a School Board in your parish?—No.

3283. You have not a school rate then?—We have a school rate—it is a voluntary rate.

3284. Is it not a legal rate?—No.

3285. What are your suggestions with regard to the rating?—Just allow me to explain the inequality and unfairness; as I say, it applies to my own individual case. I am assessed at 349*l.* 10*s.* 0*d.* Mine is not a good farm really. I do not make a very large return upon it as a rule. I went down to the village near to where I reside, and made inquiries of our Overseer with reference to these rates. He told me the amounts that three or four persons doing a large and lucrative business and doing exceedingly well were rated at. There is one case of a builder living on his own property. Well, I have some property adjoining, and he asked me only a short time ago, "If you ever want to sell" (he thought that I should want to sell, being a tenant farmer), "if you want to sell that property, I wish you "would give me the offer of it." That individual is doing a very large business, employing a great number of hands, and altogether doing a very lucrative business. I find that he is rated at 16*l.* a year, and he sends four children to this school. There is a school rate of 4*d.* in the 1*l.*, and he is rated at 16*l.*, and that is all he pays upon, and I pay on 349*l.* 10*s.* I pay 6*l.* to this school rate, or nearly within a fraction of that, and he pays 5*s.* 4*d.*, and he sends four children to the school.

3286. I thought you said that the school rate was a voluntary one?—Yes.

3287. Therefore you are not bound to pay that?—But we pay that to prevent a greater evil in the way of a School Board.

3288. (*Mr. Long.*) It is practically a compulsory rate?—I imagine that if I did not pay it my landlord would be sure to charge it to me with the rent. I am not liable. That rate is on the property.

3289. If you had to pay for the School Board it would be a higher rate?—Yes.

3290. Is there any other means by which you can avoid a School Board?—No. To give another case that is very similar: There is a person who sends four of his children to this school; a man of good position, a very diligent man in his business, and saving money and buying property; he sends four children, and he is rated at 18*l.*

3291. (*Chairman.*) I suppose the same argument would apply to all the rates; not merely the school rates, but all rates. What I understand your case to be is that there are men of business making considerable incomes in the district who are assessed only upon the value of their houses, and who do not pay upon their trade income?—Yes, and actually making use of those schools which I pay for. I have educated my children and the State did not assist me, and now I have to educate the children of those persons who are in as good a position as I am myself.

3292. You think it rather harder on account of the argument used about the children?—I only mention the school rate in connexion with those persons sending their children to school. But you mean with reference to the rates generally. Well, there is that inequality. The collector comes to me, and I have to pay this enormous rate for the benefit of those persons who have good lucrative businesses who are paying little or nothing at all.

Taxation of income for local purposes.

3293. What is your proposal with reference to the rates?—I have a scheme of my own, and I should stand alone in that. My individual idea is that every man should pay according to his ability; that there should be no local rates at all; that roads, poor, and lunacy, everything of that kind, should be Imperial. That is my view, and then these men that I have spoken of would have to pay according to their income.

3294. You mean to have no local management?—There should be local management most certainly.

3295. But does not management involve the levying of the rates?—There is another instance in the parish of Lamberhurst, that is a person doing a very large business—a grocer and draper. He is a very rich man. I am not in a position to know exactly, but I have no doubt he has 50,000*l.* or 60,000*l.* in the Funds, and he is rated at 34*l.* a year. That is all that he pays upon for lunacy and everything of that kind.

Mr. Noakes.

1 Dec. 1893.

3296. I quite understand your complaint, namely, that there are people living within your district who have property elsewhere, or who are making considerable incomes elsewhere, but who do not contribute in the same proportion that the farmers do?—Yes, it comes very heavy upon us.

3297. What is your proposal to remedy that? I understand you to say that you think that the management of the roads, and lunacy, and poor should be local, and I will ask you whether you think the collection of rates for the purpose of bearing this cost should also be local?—It should come out of the Imperial Exchequer. I do not know how the money should be collected. It is very simple to collect income tax for various purposes, and I do not see why the money should not be collected in the same way for other purposes.

3298. Your proposal is that the management should be local, but that the cost should be borne by the State?—I think so. I am a member of the Highway Board at Tunbridge, and the payment for the Imperial Exchequer would be as easy as the levying of a rate in my opinion.

3299. (*Mr. Long.*) Your contention is that this gentleman, who has a large sum in the Funds, and was rated at 34*l.*, is not assessed upon his real income, but merely upon his rating, for local expenditure?—It is only upon his house that he lives in.

3300. There is all the difference between the case where local expenditure is met by Imperial funds while controlled by local authorities, and the case that I understood you to put, which is that local taxation should not fall upon land and houses, but upon income?—My view is that our property should not be rated at all.

3301. You think that income should be rated?—That is what I think; I, as an occupier, make a return of income tax—if I make any income—unfortunately I made a return with no income for some time, and I say on the same principle let me pay everything upon my income.

3302. (*Chairman.*) Let us follow out that proposal. You think that the rates should be levied upon the income tax?—I think so.

3303. Then the landlord who gets 346*l.* a year would have to pay on that?—I cannot quite say that. I know the difficulty in rating, but I mean that every person should pay on his income. There should be no rates. I do not agree with the rating in that way, but I should have it a tax. I do not call it a rate.

3304. Call it a tax. All that I want to ascertain is exactly what your proposition is. So far as I understand it, it is this: that everything should be taxed according to a man's income?—That is so.

3305. If that were carried out I presume that your landlord would pay in respect of the 346*l.* a year which he receives from you?—Yes.

3306. (*Mr. Long.*) Not on the 346*l.*, but on what represents income after deducting, if your system were to be adopted, the portion of the money which goes back into the property?—It is as simple as possible. I paid my landlord on Tuesday last. There was the gross so much; and on the deductions from income tax which I had paid, and repairs, and everything of the kind were so much, and I had to pay him minus that, which is about 600*l.*

3307. (*Chairman.*) As I understand you your landlord would then have to pay in proportion to the net receipts which he gets from you, which would represent his income?—He would have to pay on 600*l.*

3308. Then you would have to pay on your profits?—I certainly should.

3309. Then for the whole farm, including both yourself and landlord, that would be rather more than you are paying now?—It would be a larger amount. I admit that, but I want to get on even terms with the man who has 60,000*l.* in the Funds.

3310. Your view is that everybody within the district should be taxed in proportion to his income?—Yes, I know that it is rather an extraordinary idea, but it is the correct one. It is very unfair that tenant farmers should bear this proportion. It is said by many that

Mr. J. Noakes. Dec. 1893.

it is only a rent question. I say that it is a tax upon the land, and I want to be relieved of this burden upon the land.

3311. Have you anything else you desire to bring before the Commission?—Only with respect to the effect of foreign competition, which causes the very low prices of our produce.

3312. That you have already dealt with?—That is what I have touched upon to a certain extent.

p farm-

3313. What proportion of hops do you grow yourself—or how much land?—I have rather more than 50 acres of hops.

3314. Do most of the farmers in your district grow hops?—Almost all the farmers do.

3315. And fruit too?—A little fruit.

3316. Do you grow fruit?—Very little.

3317. But I rather gathered from you that the hops having done well during the last three or four years it has made a great difference, and you have been able to make a profit out of the farm?—Hops during the last three years have done much better; previous to that, in consequence as I say of being swamped by the foreigner, we were almost ruined. For the last three years, from the short crops, we have had better prices, and hop growing has been remunerative.

3318. And you have been able to make a profit out of the farm on account of the hops?—Yes.

3319. Is that generally the case in your neighbourhood?—I think so.

3320. (*Mr. Whitehead.*) You spoke about the profits on hops as having been considerable; does that apply to all districts about the country?—No, I think not.

3321. You have been favoured in your district?—Unfortunately a portion of East Kent was not so much favoured. We are in the Weald of Kent, and perhaps this year we have the advantage of East Kent, as in that favoured district of East Kent they have not realised the prices they have been accustomed to.

3322. You spoke of the rents on Lord Camden's estate as being 12*s.* an acre; would that include hop land?—That would include the whole. I mention that without any data to go upon; but from what I gather from the occupiers, that is somewhere about the rent.

3323. Including hops?—I do not think they would exist without hops.

3324. Would there be a large proportion of hop land on such holdings?—Not a large proportion. As a rule all that part of the estate is not a rich estate at all, but there is a little land peculiarly adapted for growing hops along the alluvial soil where the rivers run, and I should think generally on the Bayham estate there is about 10 per cent. of the land in hops.

3325. The Tunbridge Wells farmers have no grievance with regard to the system of selling hops?—Nothing has been mentioned in that way.

3326. You are satisfied?—Yes.

ıxation of ome local urposes.

3327. (*Mr. Giffen.*) Those discussions in your club respecting the taxation of income have not been confined merely to the rating of land and agricultural produce, have they; has there been much reference to experiments of the same kind in other countries or in this country in former times? Has what you now propose been fully considered with reference to former experience?—Yes.

3328. You are quite aware that the experiment has been tried in the way that you propose, and been found not to answer?—I do not quite follow you.

3329. Taxing the incomes received by the residents of particular localities for the local purposes of the locality has been found quite impracticable, that it cannot be done; is that your experience? I want to know whether the club has discussed the experience of foreign countries upon that subject?—There has been no discussion whatever. I was not aware that it had been tried in other countries.

3330. I think I may ask you whether you are not aware that there is quite a literature upon the subject, and that a great deal has been written upon it at different times, and that the conclusion is that you cannot tax the whole income of the residents of a locality for the purposes of the local expenditure of the locality? Have you tried it?—No, but my contention is not to have any local taxation whatever, and that it ought to be done by taxing incomes.

3331. I thought from your answer to Mr. Long that you rather withdrew that?—I want to do away with everything local, but you may have an arrangement by local means to meet everything by Imperial taxation.

Mr. J. Noakes. 1 Dec. 1893.

3332. That is to say that you fall back upon the idea that what you require for local purposes should come out of a common purse?—What is required for local purposes should come out of a common purse.

3333. In discussing that point has there been any reference to the idea that probably the local expenditure would be extremely wasteful and extravagant? There would be no local check, and the business would become intolerable in that way?—I do not think so at all; I try to take quite a different view.

3334. That the local authorities and local people would have the expenditure of the money, and that the central exchequer should provide the funds; is that the kind of thing that would answer?—It would be arranged similarly to the way in which the Poor Law is administered.

3335. But the Poor Law is administered locally?—It would be done by local means.

3336. But the point is that the local officers not spending their own money or the money of the people whom they represent, but spending money which they receive from a common purse, would have very different ideas upon what they might and would spend from what they have now?—But possibly we should be able to arrange it with the parish councils.

3337. The parish councils would also according to your idea be drawing money from the Imperial exchequer?—They would.

3338. But do not you see that the interest of everybody in the locality would be to spend the money?—Yes; my opinion is, and has been for some time, that arrange as you please the poor in whom we are all interested, and the good roads in which we are all interested, should be put upon the Imperial funds. That is my contention—you can arrange about the machinery of it, that is an after consideration.

3339. But from the nature of the case the expenditure must necessarily be local, and done by local agents, in which case it would lead to extravagance, or if not, if you meet the expenditure by means of Imperial agents, then you have a wide extension of the functions of State government, which is not desirable. These are not matters frequently discussed, and I should like to know if the attention of the club has been given to those points, and discussed?—Yes; it has been fully discussed.

3340. (*Mr. Little.*) Would you apply the system that you propose of charging all the expenditure upon the Imperial Exchequer to the expenditure of urban authorities, as well as rural?—I should generally.

3341. You are aware that the rates in urban districts are very much higher than in the rural districts?—I am quite aware of that.

3342. Have you calculated what share the rural districts would get in proportion to the urban districts?—No, I have not calculated that; but I think in the case of urban districts they might be excluded and left to their own management entirely. My scheme applies more to rural districts than to urban.

3343. Is there any probability or possibility of applying a system of relief to the rural districts that is not given to the urban?—I do not know how that would apply.

3344. You are not prepared to say if all the rates were thrown together and paid out of the Imperial Exchequer, that the rural districts would benefit by that?—I am inclined to think that the rural districts would benefit very much by it.

3345. What districts?—The rural districts.

3346. But if it were shown to you that that is quite a mistake, and that if all the rates were paid for out of the Imperial funds, the urban districts would benefit much more than the rural districts, should you still be in favour of it?—I do not think the urban districts would benefit.

3347. But assuming that they would, is it a mere question of principle or a question of gain to the rural districts?—My suggestion is simply the relief to agriculture.

Mr. J. Noakes.
1 Dec. 1893.

3348. But supposing agriculture is taxed more in another form, there would be no relief?—No, certainly not.

3349. You are in favour of some revision of local taxation which would relieve agriculture, but you have not thoroughly considered the means by which that might be carried out?—Simply in the way I say, for everybody to pay according to his ability on his income.

3350. When you talk of income you are aware that income tax is not levied upon people who can show that they have less than 150*l.* a year?—Yes.

Reduction of rents.

3351. (*Mr. Lambert.*) I believe you said that you had 25 per cent. reduction of rent?—Yes.

3352. Is 25 per cent. reduction general in your neighbourhood?—This applies to marsh lands. I tell you that I have two occupations, one where I reside and the other on the marsh land.

3353. I mean generally on the kind of land on which you had that reduction?—I think there is pretty well that reduction generally. I do not mean to say that there is a reduction, but it is simply an allowance for this year; there has been a considerable reduction previously, but this year in consequence of the very bad season there has been an allowance, in my instance, of 25 per cent.

3354. This was an abatement?—It was an abatement.

3355. It is not permanent?—It is not permanent.

3356. Have you any particular grievances in your district?—We have no grievance particularly, no further than that we are smarting rather under foreign competition.

Import duties.

3357. You said something just now about putting a duty on imports; do you recognise that as practicable?—I think it is altogether so, and my scheme for that (I have had one for some time) is this—I think it is practicable to charge everything that comes into this country if it is only a small duty, a decimal duty. I think they ought to do it.

3358. You have not lost hope that some kind of protection will be imposed?—I hope it will be. I have not lost hope.

3359. You said, I think, that no compensation paid to the tenant would lessen the cost of production; what do you mean by that?—That there is nothing to lessen the cost of production.

3360. What do you mean by compensation?—On the one side, if you will allow me, you may put corn, meat, fruit, and wool, which are at a very low price, and on the other side we have to pay a higher rate, while we have to pay very nearly, if not quite, the same rent that we used to. There is nothing done to meet us; we have to pay rather a higher rate than we used to. That is what I complain about so particularly. I say in these times when our income is so very limited, when the tax collector asks me for more rate than he used to, I feel it very hard.

Increased cost of production.

3361. What I mean is this: Who do you think could pay you compensation because the cost of production had not decreased in the same proportion as the value of agricultural produce?—My view of that is simply what I said before, the cost of production is not lessened, we pay the same rate, and moreover we pay rather more money for labour than we used to. Everything tends against the interest of the farmer.

3362. You do not think that any compensation can be paid to you from any outside authority?—The only compensation that we can get is in some shape or way an import duty, if you consider that as compensation.

Reduction rents.

3363. You said you had to pay the same rent; I understood you to say that the reductions of rent had been pretty general in your neighbourhood?—There has been a little reduction.

3364. A little?—But in this individual instance of 25 per cent., that has nothing to do with where I reside. That is a reduction on my farm on Romney Marsh.

3365. But I want you to take a general survey of your neighbourhood?—The rents have been triflingly reduced, but very little. Generally the rents, excepting on Lord Camden's estate and the Marquis of Abergavenny's estate, are rather too high, and they ought to be reduced.

3366. Then why are they not reduced?—Because we have had three fairly good years of hops; but failing that, I do not know what we should do.

Mr. J. Noakes.
1 Dec. 1893.

3367. You think that the rents are too high at present?—They are too high at present. In my individual case, I told my landlord that. I do not want any one to step in. We shall be able to make that all right.

Legislative interference between landlord and tenant.

3368. Why do you object to any outside interference to reduce the rent which is too high?—I am very much of opinion that if we were to have some one in that way it would disturb that good relation between landlord and tenant which exists at the present time, and I would rather give up farming if those relations were to be disturbed.

3369. Can a good feeling exist between landlord and tenant when the tenant is paying too much rent to his landlord?—I have been very fairly satisfied with the rent; but with the expenses now on the land, as well as the rates being higher, I can hardly be fairly asked by my landlord to pay them. I pay them, and I am so far satisfied in that way, but I feel that I am really paying too much for rates. I can hardly complain of my landlord, because my rent, though high, is not too high at present.

3370. But if you are paying more than a reasonable amount of rent, is it the fact that there can be a good feeling existing between landlord and tenant?—Well, generally not so, but I think in my individual case, my landlord has always met me in a very fair way, and this year he has given me on my grass land 25 per cent., so I do not complain.

3371. My point is this: if a tenant is paying more than he ought to pay for his farm, do you think that that would induce a good feeling between the landlord and the tenant?—No, I do not say that; certainly not. Quite the opposite.

3372. Do you not think that some authority outside to fix the rent at a fair level would bring about a more smooth working of things between landlord and tenant?—No, I do not think so at all; not the slightest. If they could do it smoothly it would be quite the opposite, but they would not; that is my impression.

Rates.

3373. You said that there was a considerable increase of rates in your district—of 8*d.* or 10*d.* in the pound?—Yes.

3374. You knew of those rates, did you not, before you took the farm?—Yes.

3375. Did you not take them into account when you took that farm?—I may say I never took the farm; my poor father took it before me and I have drifted into it.

3376. But supposing that the whole of the rates were taken off your farm, would you not have to pay that increase in rent?—I should think very likely I should.

3377. Then how would a reduction of rates benefit the tenant?—As I say, it is an open question whether it would. "This school rate," I said to my landlord's agent, "is 6*l.* now; I have to pay it, but I never agreed "to pay it." He said he would speak to my landlord about it; but I said "I only mention it for your con- "sideration. I think you ought to pay it."

3378. You would advocate a division of rates between landlord and tenant?—I think that would be preferable to the tenant paying the extra amount of rate at the present time; it is more than farms can bear generally in our district; there is no doubt about that.

3379. You are aware, I suppose, that a very large amount has been given to local authorities in local subventions?—Yes.

3780. And yet your rates have increased?—Yes.

3781. To what do you attribute that?—Only in one way; our machinery gets much more expensive. The clerk to the board of guardians is every now and then coming up and saying that he has so much work to do for the Rural Sanitary Authority that he asks for 25*l.* a year more, and so it goes on from 200*l.* to something like 250*l.* a year; and all our machinery tends that way.

3382. Do you not think that if there were the incentive of direct local taxation that would tend to more economical expenditure than by having these subventions in which the local authorities have not so much interest in the economical administration?—I am not aware that it would decrease them, but I am very much inclined to think it would not increase them.

Mr. J. Noakes. 1 Dec. 1893.

Now with regard to the Highway Board I notice the same thing. I am very much opposed to it, and I have been rather an economist on those different boards. Even the surveyor came and wanted an increase of salary; it was granted him directly; everything tends that way.

3383. (*Chairman.*) We may take it that you have been a member of the Highway Board and you find that the expenses are mounting up?—Wonderfully.

Low prices and import duties.

3384. (*Mr. Chaplin.*) I think your evidence comes to this, that the real cause of depression in your district is that fall in prices of produce and that the only real remedy is a rise in the price of produce?—That is the long and the short of it.

3385. You advocate I think a duty upon hops?—Yes, we are of opinion that there should be a duty upon hops.

3386. Do you approve of a proposal that has been submitted by some of the witnesses to this Commission that part of the present duty should be taken off beer and that an equivalent amount should be raised by a duty on foreign barley and foreign hops?—I quite think so.

3387. Have you suffered in your district at all from the prevalence of cattle diseases, either lately or at any time in the past?—Not to any extent. We have had a few cases of swine fever, but only a very few cases.

Mr. J. Noakes. 1 Dec. 1893.

Cattle disease.

3388. Have you ever suffered from pleuro-pneumonia or foot-and-mouth disease?—I have, but not very recently.

3389. Any recurrence of the disease owing to relaxation of the restrictions I suppose would be most injurious?—Very much so indeed. Fortunately, we have been free from what has been done for several years past. We have been nearly free from pleuro-pneumonia and foot-and-mouth disease—we have nothing of the kind now.

3390. Would you dread the recurrence of it?—Yes.

3391. Do you agree with the proposal which has been submitted to this Commission that in order to prevent the importation of those diseases it should be made compulsory in all cases that foreign cattle should be slaughtered at the point of landing?—I should hail with delight that it should be so.

3392. You attach importance to that?—Very great importance.

The witness withdrew.

LORD VERNON took the Chair.

Mr. W. J. Harris. 1 Dec. 1893.

Mr. WILLIAM JAMES HARRIS called and examined.

Mr. W. J. Harris. 1 Dec. 1893.

3393. (*Lord Vernon*) You are here really to give evidence on your own behalf, are you not?—I am appointed by the Devon Chamber of Agriculture but under special conditions. Those conditions are that I shall say exactly what I like without any reference to the opinions of the Chamber.

3394. Are you here as a deputy?—I am a deputy from the Devon Chamber of Agriculture.

3395. Is the Devon a large Chamber?—Yes.

3396. What number of members are there?—I do not know exactly, I think 300 or 400.

3397. But you have come specially here to give evidence?—I am appointed on the vote of that Chamber.

Small holdings.

3398. But you have come to give evidence more particularly in favour of small holdings?—Somewhat in favour of small holdings, but especially to show that small holdings cannot succeed under present circumstances unless this depression in agriculture is removed in some way.

3399. Have you got an estate of your own?—Yes.

3400. What acreage is it?—I have over 2,000 acres now.

3401. When did you buy?—In 1871 most of it.

3402. Was that the inflated time? Had prices risen then?—I bought it very moderately.

3403. Did you cut it up partly in small holdings?—I did. Two of the principal farms fell in; I knew nothing about farming myself at that time; it was simply the desire for rural occupation that made me buy the estate, and I adopted the small holdings system.

3404. How much did you cut up in that way?—Very little at first, but I have been increasing it ever since until now—perhaps between 400 and 500 acres.

Size of holdings.

3405. What sized holdings have you?—They vary from 3 acres to over 40 acres.

3406. What size of holdings answers the best?—The man who holds only a small acreage can manage it and earn wages besides.

3407. What sort of land do you find answers in this sized holding?—They must have a little of arable land and a good deal more grass land, so as to keep cows, and just grow enough winter meat for the cows, and keep pigs as well.

3408. You have the land close to the cottage?—Yes; I was able to arrange that, and it is a very great point. It is no good having a holding far away from the cottage, because the tenant does not want to go a mile to fetch his cows home. His time is money, and he has to earn wages besides.

Population.

3409. Did the population of that district increase largely from your action?—The population, when I bought my estate, was 243, and at the last census it was 418. The agricultural population, therefore, of my estate has gone up by nearly 80 per cent.; and the agricultural population of the county in which I live has gone down about 30 per cent.

3410. But from 1871 to 1891 you did a considerable amount of building in connection with these small holdings?—A considerable amount.

3411. And I suppose the increase is not purely an agricultural population?—It is very nearly so. They are nearly all of them agricultural labourers who have got on; but a bootmaker would come, for instance, and a mason, and so on, and a miller, and some of the railway men took a little land. (*See* Appendix A. X.)

3412. At what period between 1871 and the present time has the increase been most rapid?—It has been gradual all the way through and just about the same at one period as at another until lately.

Small holders and outside employment.

3413. It has so far answered very well?—It has answered up to recently and I hope it will continue to answer, but it is so very dependent upon the labour that we can give the men. They cannot live on these small holdings without they earn wages as well— only in exceptional cases can they. I have been more fortunately placed than most landowners could be, because I have got a railway station close to me, and certain little industries have risen up which have given some of the men extra occupation. They must have wages as well as their own farm work, and that is the point I wanted to bring before the Commission.

3414. Do you think that there will be a difficulty in continuing them in their small holdings?—Yes, I am very much afraid that some of them may have to leave very soon.

Decrease in arable land and rural population.

3415. Why?—Because my son who is the chief tenant on my property and the other tenants, are gradually giving up arable farming and are laying their land down to grass. The arable farming for the last two years has been unprofitable, and the grass farming still has its uses. We can work the grass land at a profit but not the arable land, and therefore if the arable land is to go out of cultivation and be laid down to grass on my estate, or on any other estate or in the whole of England, it will be just the same thing. If you look at the statistics of decrease of population and the decrease of arable acreage in Devonshire, you will find they have corresponded very nearly the one with the other, between the two periods of 1871 and 1891. I think you will find the arable acreage has decreased from 500,000 acres in 1871 to 360,000 acres in 1891, and the population has decreased in like manner, that is to say, the labouring classes in the agricultural districts.

3416. (*Mr. Chaplin.*) That is to say that the arable cultivation and the rural population decreases *pari passu*, that is your experience?—That is just so.

Mr. W. J. Harris.
1 Dec. 1893.

3417. (*Lord Vernon.*) The argument that would apply to your estate of small holdings would equally apply to the whole land of the country?—Yes.

3418. Therefore it is not specially due to the fact of your estate being cut up into small holdings?—I want to show that by the establishment of small holdings I increased the population very considerably, and that owing to the bad condition of arable farming at the present time I very much fear that the population will run down again, and that some of those men may have to leave.

3419. But do not you suppose that with a smaller population in any particular district the same difficulty would arise?—Under present circumstances I do, but I do not think it would have been so under the circumstances of the prices current a short time since, when in fact the men were all doing well.

3420. When you say "a short time since," how long ago do you mean?—Eight or 10 years ago; perhaps less than that even.

3421. What did they principally cultivate?—The larger farmers have been in the habit of growing a moderate quantity of wheat. It is not a good wheat-growing country, but oats and roots for cattle are largely grown.

Small holders and outside employment.

3422. But from what I understand you to say they are dependent upon other occupations?—I am speaking now of the larger farmers in the parish.

3423. But it would be impossible for those small holders of three and five acres to live on the produce of those three or five acres?—Quite so.

3424. And they must have extra outside employment?—They must have outside employment, and after that outside employment fails, I fear that the system may fall to the ground.

Tenure of small holdings.

3425. Would you give us some idea as to how your small holdings are held. Are they let, or are they on some understanding?—They are let on an understanding, I would willingly give a lease to any of them if they wished to have it, but none of them desire it. They do not want to pay the expense of the lease. I let them on this understanding that the rent was fixed according to the value of the land at the beginning; a value which a large farmer would give, and that it was not to be altered upon their improvements, and they have improved the land very much indeed. You have seen them, Mr. Lambert (*one of the Commissioners*), do not you think so? Yes.

Number and size of holdings.

3426. Will you please to tell me how many different holdings you have on those 500 acres?—I suppose 25 holdings.

3427. On how much acreage?—On 450 acres I think, it may be a little more, I have not counted them. The men are not all living in my houses. I have let little holdings to some with houses of their own which are close by; those houses do not belong to me, but in nearly all cases the houses do.

3428. Are most of the holdings of the same size?—They vary very much; one man has got 50 acres, and he began as a drainer at 12*s.* a week; until the other day he was doing well, but unfortunately the times are too much for him.

3429. What do you mean by "the other day"?—Well, I thought he was doing well until two or three months ago, but some misfortune seems altogether to have overtaken him. I believe the misfortune is not owing to his farming. He became security for one of his sons, and this son turned out badly, and the banks came down upon him, but he persevered after that. But I fancy things have been bad with him for the last two years, and he has probably been losing on his tillage and by the fall in the price of cattle.

3430. That is in no way connected with his agricultural experiments?—Yes, to some extent. Of course the guarantee for his son was in no way connected with agricultural experiments, but I think that agriculture has been very much less profitable to him than it was five or six years ago. He was doing thoroughly well, and he increased the acreage whenever I could let him a little more land until recently.

Tenure.

3431. Do you never have any difficulty with the tenants on the small holdings in consequence of their renting land from you simply upon an understanding?—I have never had the slightest difficulty.

Mr. W. J. Harris.
1 Dec. 1893.

3432. I see that you mention the exceptional advantages that foreign countries enjoy in the supply of produce. Would you tell me what exceptional advantages you maintain that they do enjoy?—Yes, they are really very many. I will endeavour to give them to you. I will first take the gold currency countries, such as the United States, Canada, and Australia. I may say that I have lately taken a journey round the world, and entirely devoted myself to agricultural investigations. I found that these were the principal advantages which the farmers of these countries enjoy over an English farmer. The English farmer is worse off, in the first place, than the foreign farmers, on account of certain advantages which the foreign farmers derive from the ease with which the soil is worked abroad. As a rule our English soil is not nearly so easily worked. For instance, I find in Australia, in New Zealand, in Manitoba, and in the United States as far as I went—I did not go very far into the United States—that they were ploughing with two and even three or four furrow ploughs, it just depended upon the consistency of the land. If it is light land they can get through it very easily. One man will drive these ploughs, and the rate for ploughing is 4*s.* 6*d.* per acre, which is very much less than land is ploughed for in England, that is the contract price for ploughing in Australia and New Zealand. The cost for harvesting in Australia and California is very much less than in England. They harvest with a stripper. It is a machine which runs along and cuts the ears of wheat off as it goes, and then they are returned back into a chamber attached to the machine, which goes round and threshes it out and it is discharged in bags, and it is ready for market. That costs 4*s.* 6*d.* per acre. Our cost of harvesting and so forth would be four or five times as much. Then the weeding of land is comparatively unnecessary abroad; the climate is very different. Then there is no call for a succession of crops abroad, and they do not use any manure. I consider that the necessity for rotation farming alone goes against the English farmer to the extent of at least 20*s.* per acre. They (the foreigners) grow wheat year after year on the same ground. In New South Wales, where I stayed with a farmer for a little time, I saw the whole operation. I saw a field there which had been tilled for wheat over 20 years in succession.

Advantages.

Production in foreign countries.

3433. (*Mr. Channing.*) Was it equally productive at the end?—I was going to give you some evidence on that very point. I brought some samples back from that very field, and I sent them to Dr. Voelcker.

3434. (*Mr. Chaplin.*) May I ask what countries you are referring to now?—I am referring specially to Australia and California. In those countries which use the stripper that is their way of harvesting. It is only in very dry countries that the stripper can be used. In New Zealand and British Columbia and Canada the stripper could not be used. I am now speaking of the harvesting.

3435. What do you say about New Zealand?—Well, I could equally mention New Zealand as an instance of occasionally growing wheat crops year after year, although not so much is done there in growing wheat; but in Manitoba, and the United States especially, it is the universal custom. Dr. Voelcker gives an exceedingly good account of the soils, samples of which I brought from New South Wales and Victoria. I can give the exact analyses of the soil of the field which was in wheat for twenty years; it is wonderfully good.

Production in England.

3436. (*Lord Vernon.*) I do not see how you can propose that this country may be improved so as to make it equally productive?—That is what I say, they have this advantage, we could not grow wheat here year after year; it is very doubtful if it would answer, even if our system of farming were entirely altered.

Disadvantages.

3437. How do you contend that your small holdings could answer if wheat can be grown so much cheaper elsewhere?—That is what I was coming to, I was arguing that their future success was doubtful, as in all probability the end would be that we should not be able to keep them up, if there was not sufficient inducement for arable culture to be kept up. Their success is so largely dependent upon the wages which arable farmers can pay. Well, then there is the rent and tithe, which I put down at least 15*s.* an acre against the English farmer. I presume that the foreign farmer pays some rent or interest of money, and that the average rent and tithe in England would be at least 17*s.* or 18*s.*, and that the cost to the foreign farmer for interest

on cost would be perhaps 3*s.*, and that would bring it down to 15*s.*, and the rates and taxes 5*s.* against the English farmer on the average. There are hardly any taxes abroad. Everything is paid by the Central Government. In New South Wales there are no taxes at all, either Imperial or local.

mpara- e cost of oduction.

3438. (*Mr. Chaplin.*) How much do you estimate rent, tithes, and taxes?—I consider the disadvantages that English farmers suffer compared with foreign farmers in exporting countries having a gold currency from all causes amount on the average to 102*s.* per acre, and that the advantages which they, the English farmers, gain in having neither freight nor insurance, I put at 15*s.* per acre, and the short yield of most foreign countries compared with England I put at 50*s.* in the English farmer's favour.

3439. (*Lord Vernon.*) 102*s.* an acre, you say?—Yes, that is what it costs more to cultivate an acre of wheat land in England than it would abroad. And then you have to take off the extra yield of the English land, which I put down at 50*s.* per acre. In average years the English wheat does not bring so much as the foreign.

3440. What does the 102*s.* per acre consist of?—I put it down in this way. The ease with which the soil is worked, preventing previous preparation and the saving in cost of ploughing and harvesting, 40*s.*; weeding, not necessary abroad, 2*s.*; no need for a succession of crops, and certain harvest weather I put at 20*s.* in favour of the foreigners. An English farmer has to use manures which a foreign farmer has not; or he has to grow certain intermediate crops which supply the fertilising for the wheat, which crops in all probability do not pay all their expenses, and rent as well. I put down that at 20*s.* in favour of the foreign farmers. Then rent and tithe 15*s.*; and taxes and rates 5*s.* That brings it to 102*s.* per acre. Against that, there are disadvantages which the foreigner has compared with the English farmer, I put the freight, carriage, and insurance at 15*s.* per acre, calculated on a yield of 14 or 15 bushels—that would be reckoned as about the average for roughly farmed land abroad; and the short yield I have put at 50*s.* an acre,—that is to say, the English farmer produces more to the acre. That gives 65*s.* against 102*s.* The American and Colonial farmers also save 3*s.* in the cost of seed, which I have not calculated.

3441. (*Mr. Chaplin.*) 40*s.* Is that the net gain to the foreigner?—Yes, I think that the price of most foreign wheat is rather higher than English, especially Australian, Californian, and American wheat—it sells rather higher, and that would be still another advantage.

ompara- ve yield er acre.

3442. (*Lord Vernon.*) But your calculation is based upon the yield in England and the yield in Australia?—I think it is about 14 bushels abroad versus 3½ quarters in England, and the English wheat being as a rule rather less valuable, sells at a lower price; there is something to be allowed for that as well.

3443. (*Mr. Lambert.*) What is the average crop that these figures are based upon?—3½ quarters to the acre.

3444. (*Mr. Giffen.*) Is not that 14 or 15 bushels rather too high?—I think you will find that recently the United States Statistical Department stated that the average yield, represented by the figure 100, was 14 or 14·5 bushels, I forget which. In Manitoba it is much more than that. In South Australia it is much less. In New South Wales there is an immense tract of land, hitherto only used as a sheep run, which they have just commenced clearing for wheat, and which is about the most fertile in the world. I refer to an immense acreage in the Murrumbidgee district, also between the Macquarie and the Castleragh rivers, also on the Darling Downs in Queensland and in the Mallee districts of Victoria and South Australia, amounting in the aggregate to nearly 50,000,000 acres. When I was in Australia I stayed with a farmer who owned 40,000 acres in the district first mentioned (the Murrumbidgee district). He had never previously tilled more than 17 acres to corn, and this was the twenty-second year of its growing wheat without any rest, and a lot of land was being cleared and cultivated when I was there. The field I have mentioned has generally been cut for hay when the ears were not ripe, but one year, about six years ago, it was allowed to ripen, and produced 26 bushels per acre. I am giving you the figures of the farmer. But it is about the best wheat-land that I have ever seen. I imagine that there will be an enormous growth of wheat there if the price goes up, but the price is so exceedingly low that there is not much inducement to cultivate it. I calculate that the average yield would be 17 or 18 bushels there. I do not like to place too much reliance on statements made by interested parties, but I calculate that the cultivation would go on for many years, and that it would produce 17 or 18 bushels to the acre. I do not think that the English farmer could compete with that. I have only dealt with the gold currency countries at present. I consider that our colonies and ourselves, and even the United States, are beginning to suffer serious disadvantages in having to compete with silver and paper currency, but especially with paper currency countries. I consider that the Indian farmer is getting as much, and perhaps rather more, for his wheat than he did 20 to 25 years ago.

Mr. W. J. Harris. 1 Dec. 1893.

Foreign countries with silver and paper currency.

3445. (*Mr. Everett.*) That is a silver country?—Yes.

India.

3446. (*Lord Vernon.*) With reference to this they hardly exported any from India then at the time you speak of?—That was 20 years ago. When I gave evidence before the Duke of Richmond's Commission in 1882 they asked me that question then, and I happened to refer to my evidence the other day. The export from India had evidently been going on a long time then. I do not think that she has very materially increased her exports since, notwithstanding the advantage she has in respect of currency; but there is no doubt that wheat costs the Indian farmer no more, and he is receiving quite as much. India has not suffered from the depression in price.

Russia.

3447. (*Mr. Chaplin.*) The Indian farmer is receiving as much in rupees now at the present gold price in England as he was when the gold price was much higher?—Yes, as much as when wheat was 48*s.* or 50*s.* per quarter in England. The Russian farmer—that is a paper country—I can remember the rouble being 3*s.* 2*d.*, and now it is 2*s.* 4½*d.*, and has been as low as 2*s.* The Russian farmer considers the rouble exactly the same value now as he did 30 years ago. If you tried to pass silver roubles in the interior of Russia now, and also several years ago, the farmers would have looked at them with considerable suspicion, they would rather have a paper rouble because they are accustomed to it. In Argentina, of course, the difference is far greater. I do not pretend to assert that the farmer in Argentina does not know that there has been some depreciation in the currency, but at the same time the difference is so enormous that it gives him a tremendous bounty. The premium on gold is 228, that means that a dollar in Argentina is worth about 1*s.* 3*d.* in our money, its normal value was 4*s.*, and it is only a very few years since the dollar was worth 3*s.* 8*d.* in Argentina, and the farmer is paying his men with very little advance in the currency of the country. He can buy land with very little advance in the currency of the country, and therefore his position in producing wheat has vastly improved. The important point is that the Argentina farmer, even if wheat were 20*s.* per quarter in England would be getting a considerable profit. In reports from the Foreign Office from Mr. Gastrell, our agent in Argentina, you will find an exact confirmation of what I say. I have been for years telling people what will be the result. I happen to be in a firm which largely imports corn from all parts of the world, and of course I am greatly interested in the import of corn; but I have seen these circumstances coming upon us for many years, and I have spoken freely on the subject, and forewarned people of what is going to happen, and it has proved to be exactly what I have said it would be.

Argentina.

Import duties.

3448. (*Lord Vernon.*) What remedy do you propose?—Nothing but protection of some kind, or import duties to level prices in favour of the English farmer, and I believe that in England our farmers will be ruined if it is not done. We could stand against the gold currency countries if all the burdens incident to British agriculture were removed, but against silver and paper currency countries there is nothing that will help except a counter-balancing charge.

Effect of the difference of exchange with India.

3449–50. (*Mr. Everett.*) Could you not give us in detail how much the Indian farmer, who receives his old prices to-day in silver, can sell his wheat at in our money owing to the difference in exchange?—We cannot grow wheat in competition with India to-day; the Indian farmers exchange has gone from 10 rupees for the sovereign to 17 rupees. If I took a sovereign to India 30 years ago, I could only get 10 rupees for it. With my sovereign to-day I can buy 17 equivalents of wheat now, whereas I could only buy 10 equivalents of wheat then.

Mr. W. J. Harris. 1 Dec. 1893.

3451. Will rupees buy as much as they did before?—Yes.

3452. But owing to the difference in exchange you can sell it here for less?—Certainly for much less. The profit or commission that we grain merchants require is very small; it is an exceedingly close trade. It is the exchange that makes the whole difference in cost.

3453. But the difference which has arisen in exchange falls upon our price and not upon theirs?—Yes, I think it is an unfair advantage which is going to ruin the British farmer, and through the British farmer is going to do a great injury to the British nation.

3454. I thought perhaps you had the details showing this in figures?—I think my figures are given with reference to 17 versus 10 rupees.

Rates on small holdings.

3455. (*Lord Vernon.*) I want you to finish what we were on before, that is to say, with reference to the conditions under which you think small holdings for labourers can be successfully established?—If you can keep up arable farming in England, small holdings will succeed in most parts of the country, I have proved it, you must of course be moderate as to your rental. There is another point, and that is with regard to the letting of small holdings. The small holder generally improves his holding much more than a large one does. These improvements are often subjected to a higher rating. Directly he has improved his holding down come the authorities and try to rate him higher. It is a most iniquitous system, and it stops all improvement in land or at all events is a great bar, that rating should go up with the improvement in cultivation as it does. If a small holder lays down a good piece of arable land, and makes it good meadow land, that land, worth originally from 10*s.* to 15*s.* per acre, becomes worth 2*l.* an acre, and the little farm so improved is therefore subjected to a higher rating. In my parish the small holders being more numerous than the others we have been able to out-vote these people, and we have kept the rates down, but I see what it would be if the voting were the other way.

Mr. W. J. Harris. 1 Dec. 1893.

The witness withdrew. (For Mr. Harris's further evidence *see* Ques. 4759 *et seq.*, page 132.)

Adjourned to Thursday next at 12 o'clock.

Eighth Day.

Thursday, 7th December 1893.

PRESENT:

THE RIGHT HON. GEORGE JOHN SHAW-LEFEVRE, M.P., IN THE CHAIR.

Viscount COBHAM.
Sir ROBERT NIGEL FITZHARDINGE KINGSCOTE, K.C.B.
ROBERT GIFFEN, Esq., C.B.
Captain OWEN THOMAS.
FRANCIS ALLSTON CHANNING, Esq., M.P.
JOHN CLAY, Esq.
CORNELIUS NEALE DALTON, Esq.
ROBERT LACEY EVERETT, Esq., M.P.
JOHN GILMOUR, Esq.
GEORGE LAMBERT, Esq., M.P.
WILLIAM CUTLACK LITTLE, Esq.
CHARLES WHITEHEAD, Esq., F.L.S.

HERBERT LYON, Esq., *Secretary.*
R. F. CRAWFORD, Esq., } *Assistant*
FREEMAN THOMAS, Esq., } *Secretaries.*

Mr. WALTER F. INGRAM called and examined.

Mr. W. F. Ingram. 7 Dec. 1893.

3456. (*Chairman.*) You are a member of the East Sussex Farmers' Club?—Yes.

3457. And you have been requested by that association to come here to present their views?—Yes.

3458. What does the club consist of?—Of about 100 members, and though it is not a very big club, in our county of East Sussex there are very large farms, so that it really represents a very large area.

Size of farms.

3459. It is mainly a district of large farms?—Our county is so very different. All round Lewes and right away in fact from Hastings to Brighton of course there are the South Downs. Those are all very large farms, and then there is the Weald, below the Downs, where a great many of the farms are small ones. I should say that they are the rule.

3460. What sized farms are they on the average?—The largest farms run up to 500 acres. I could hardly say what the average is. They are all sizes, from 1 or 2 acres up to 500 acres.

3461. Is there a considerable number of quite small farms there?—I should say the small farms are increasing now considerably.

3462. What sizes do they run to generally? Is it about 20 acres or upwards?—We call a small farm anything from 5 acres up to 100 acres.

3463. I suppose a man would hardly occupy himself wholly upon a 5-acre farm?—No.

3464. You would hardly call those farms at all?—No.

3465. What is the smallest farm on which a man could live entirely?—I should think 20 acres is the smallest farm on which a man could live.

3466. Are those increasing in number?—Yes.

3467. Do you represent mainly the larger farms or the smaller farms?—Our club consists mainly of the larger farmers. I may say that I am also an agent of various properties, and of course am in that way representing a great many small farmers.

3468. Do you farm yourself?—No.

3469. You are an agent for estates?—Yes.

Acreage under management.

3470. How many properties do you manage, or what is the acreage of the whole of them?—Well, I should think about 25,000 acres now. I have had through my hands more.

3471. For several different owners, I suppose?—Yes.

3472. And all in East Sussex?—Yes, practically all in East Sussex. I have the management of some property also in Essex and Hertfordshire.

Mr. W. F. Ingram. 7 Dec. 1893.

r. W. F. ngram. Dec. 1893.

3473. But what you intend to speak of to-day will be mainly in East Sussex?—Yes. I may say that I have had the management in East Sussex of another 20,000 acres I should think.

3474. How long have you been engaged in this?—I have been in Sussex since 1877; that is 16 years.

3475. Will you describe briefly what has been the condition of things during that period—the changes that have taken place?—Do you mean as to the method of farming?

dition arms.

3476. No, the condition of the farms under your management?—With regard to prices, I propose to give you the prices of corn and sheep farms. I may say that with regard to dairy farms, of which we have a good number, they have chiefly sprung up in the last few years, and therefore I cannot compare the two periods of 20 years, which I propose to compare with regard to the other farms. Probably you will have evidence before you as to the dairy farms, and you will have a better comparison of prices than I could give you. I have some prices here of different farms. I have the receipts of a farm at a place called Stanmer near Brighton—a large sheep and corn farm of about 800 acres, and I find that in the year 1869–70 the corn realised 1,256*l.*, and in the year 1891–92 it realised 569*l.*

ll in ces. mparison ween 9–70 and 91–92.

3477. Is it the same amount of acreage?—The same amount of acreage.

3478. Was the quantity the same in both cases?—The quantity was the same in both cases. The actual quantity of the corn land may not be exactly the same, but practically the farm has been farmed in exactly the same way. I mean there might be a variation of a few acres; that I cannot tell.

3479. It has not been laid down to grass in large quantities?—No.

3480. (*Mr. Lambert.*) Was the produce the same per acre in 1869–70 as in 1891–2?—I am not prepared to give you the acreage in wheat, barley, and oats.

3481. (*Chairman.*) You have taken an illustration of a farm where the conditions are pretty much the same in 1869–70 compared with 1891–2?—Yes.

anges in nancy.

3482. You are taking this farm where the conditions of cultivation are very much the same?—I am sorry to say that we have had very many changes during the last 20 years in the tenants, so that it is rather a hard thing to find farms even to make a comparison. You will not find the same tenants and the same conditions.

3483. You have selected this farm as a fair illustration, taking the two periods?—Yes.

3484. (*Mr. Lambert.*) What is the produce per acre?—As regards the produce this land ought to grow an average of something like four quarters of wheat.

3485. (*Chairman.*) You have not stated the exact acreage in corn?—I believe it is practically the same.

3486. But you do not know how much in either case?—No, I am afraid I have not got that. I could supply that later no doubt if I might do so. Then I have another large farm which I have taken for the purpose of illustration, and I have taken the receipts for the year 1891. I have taken the corn grown in the year 1891 and I have worked that out at the prices in 1873 and in 1893, a period of 20 years, and perhaps that would give what you would wish to know about the comparison in prices.

ll in ices. mparison tween 73 and 93.

3487. What is it?—Shall I read the whole of the figures or only give the total?

3488. Please give a summary?—The wheat in 1873 would have realised 1,155*l.*, in 1893 it would have realised 623*l.* The oats would have realised 234*l.* in 1873, and in 1893, 153*l.* The sheep, the ewes would have realised 551*l.* in 1873 as against 286*l.* in 1893; and the lambs 741*l.* as against 444*l.* in those respective years.

3489. Are you taking in those cases the lowest prices of this year?—No; the average price at what I believe they would have sold at in each year. I might inform you that the average price in the year 1873 is obtained from a large farmer who has kept accurate accounts, and who has supplied me with the prices realised then. Wool would have realised 313*l.* in 1873 as against 173*l.* in 1893, and cattle I believe would have dropped 117*l.*

3490. From what?—It is rather a hard matter to get at the drop in cattle because although there has been a considerable drop in the fat price of cattle, there has also been a drop in the price of stores. I will tell you how I work it out. I consider there has been a drop in the price of fat cattle of 6*l.*, but on the other hand stores have dropped 3*l.* As 39 cattle were sold off that farm that would represent 117*l.* and therefore I say the drop is 117*l.*

Mr. W. F. Ingram. 7 Dec. 1893.

3491. In comparing with 1873 you have taken the top prices, the year when the prices were at their highest?—I can give you all the prices if you care to have them. I have taken the average prices.

3492. I do not mean the highest price, but the year 1873, when the prices were high, before there was any fall?—Yes, I have gone back to the seventies because that was the period before the bad time set in.

3493. What has been the effect of that fall in prices upon rents?—Before I go to that I have some more particulars, but I daresay you would not care to be bothered with those. If you care to have those I can give them to you.

3494. Do you desire to lay them before the Commission?—They are really figures supplied by tenant farmers, and I know that they are accurate if you care to have them (*the witness handed in a statement*).

3495. (*Mr. Little.*) If they are actual results I should rather like to have them. What we have had at present is rather hypothetical. I suppose it is based on the assumption that about the same number of acres of corn are grown and the same number of sheep and beasts are kept?—Yes.

3496. It may be the case that two large farms are conducted on a regular system by the same man, but it is an assumption that the crops of 1873 and 1893 were the same?—Of course, that is an assumption.

3497. Taking the average, is that the market price of the day?—Yes.

3498. If that were taken on a very large scale, one might draw an inference from it, but taking it from a single farm it might be misleading?—Quite so.

3499. (*Chairman.*) That is the case of the Swanborough Farm is it not?—That is 1883 and 1893.

Comparison between 1882 and 1892.

3500. Will you read that case out?—I might say that the year 1883 and 1893 really means 1882 and 1892. Perhaps I ought to say that because the corn grown in 1893 has not been sold yet.

3501. You might read out the comparison between 1882 and 1892 in the case of Swanborough Farm?—This is a farm near Lewes, and is a corn and sheep farm in the same way. The acreage is about 800 acres. I may say that we do not confine ourselves very much to acreage, because a very considerable portion of this is down land, and 50 or 100 acres one way or other does not make much difference. The corn realised in 1883, 1956*l.*, and in 1893, 789*l.* The flock, which includes wool, 968*l.*, as against 532*l.* The cattle are really no guide, because the man changed his system from buying in cattle to breeding cattle. There is a wide difference in the figures, but they are really 1,660*l.*, as against 578*l.*

3502. That is not a reliable test?—It is not a reliable test. And on that farm there have been 60 acres laid down.

Outgoings.

3503. With regard to the outgoings, the expenditure, in that particular case, will you tell us what is interesting, as showing the reductions in rents and tithe and so forth?—The rent in that case has been lowered from 800*l.* to 400*l.* The tithe has fallen from 117*l.* to 85*l.* I am omitting the shillings in every case. The Poor and Highway Rate were 77*l.* and are now 43*l.* or 44*l.* There is a charge called the Water Scot, which is practically the same, only a few shillings different. The labour has fallen from 956*l.* to 844*l.*

3504. What is that reduction of labour due to; is it lower wages or less employment of men?—It is partly from the 60 acres laid down; that would make a certain amount of difference, and fewer hands I should say.

3505. Not a reduction of wages?—No, there might have been a very slight reduction of wages, but very little. Then there is that farm which gives a comparison of three decades put in on the left-hand side of my paper.

3506. That only gives the receipts?—Yes.

Fall in prices. Comparison between 1873, 1883, 1893.

3507. If you think it worth while to give those figures we shall take them?—These are the receipts of Falmer's Farm near Brighton, a similar farm, for the years 1873, 1883, and 1893. The receipts from corn in

Mr. W. F. Ingram.
7 Dec. 1893.

1873 were 1,656*l.*; in 1883, 887*l.*, and in 1893, 572*l.* The flock for 1873, was 1,261*l.*; for 1883, 1,296*l.*; and for 1893, 630*l.* The total receipts, not the addition of those two items, but the total receipts on the farm were in 1873, 3,351*l.*; in 1883, 2,608*l.*; and in 1893, 1508*l.*

3508. The reduction in corn would seem to indicate that there has been a reduction in the cultivation, because the reduction is 66 per cent.?—That is quite possible, owing to certain pieces of ground which are called locally "Grattons," that is, small seeds being left to stand over for another year. The usual practice is to sow seed, either mow them or feed them with the sheep, and break them up in the autumn; but now owing to the bad prices realised by corn some farmers keep them over for another year, which means a decrease in the actual corn acreage.

3509. Up to 1893—do you mean the present year?—Practically it is 1892; it is the corn of 1892, but the sheep of 1893.

3510. Therefore the very bad harvest of the present year is not taken into account?—I have not taken this year into account in any case, because I think that this is quite an exceptional year, and has no real bearing on agriculture generally; at any rate, I hope so.

3511. Last year was a very bad year for the yield of corn?—Yes, very bad. It would be largely decreased this year, but I hope we may not see 1893 again.

3512. Is it as bad as 1879?—That was a very wet season. This is a worse year, that is with the exception that in 1879, owing to the wet, we lost a lot of sheep with the rot. Some of the flock farmers were more severely hit in 1879.

3513. Apart from that, the receipts probably were even worse than in 1879?—Certainly.

Reduction and abatements in rent.

3514. Now will you tell us the effect of the fall in prices upon rents?—Upon the large estate which I manage, the Stanmer Estate of Lord Chichester (I have taken out in each case the agricultural rents—there are certain other rents which I do not think have any bearing on agricultural rents), the agricultural rents have fallen from 9,285*l.* in 1877 to 5,319*l.* this year. That is a drop of 3,966*l.*, or rather more than 42½ per cent.

3515. Is that a permanent reduction, or partially due to abatements?—That is a permanent reduction.

3516. Besides that, have there been any temporary abatements?—I was going to give you three estates, and in the case of all three estates this year there have been abatements varying from 10 to 25 per cent.

3517. (*Mr. Everett.*) In addition to the reduction?—Yes.

3518. (*Chairman.*) Due to the extremely bad years you have spoken of?—Yes; what I am now giving you are three properties.

3519. (*Mr. Whitehead.*) The abatements are not on the Stanmer Estate?—Yes, from 10 to 25 per cent., according to circumstances, in addition. Lord Chichester did not tar them all with the same brush.

3520. (*Chairman.*) Is that on the half-year's rent, or the whole year's rent?—That is on the first half-year's rent of the year.

3521. That probably will have to be followed by very large abatements?—That is the half-year's rent due last Lady-day. We have a curious custom on most of the large properties in Sussex, which is, that the rents are paid on what are called half-year back; therefore the rent paid in October is the rent due on the previous Lady-day.

3522. There is always a half-year in arrear?—A half-year in arrear.

3523. And in the rents paid on Lady-day there is reduction of 10 to 25 per cent. on Lord Chichester's estate?—Yes.

3524. That will have to be repeated again the next half-year very likely?—I think that it is very probable. Lord Chichester has not made any promise yet.

3525. (*Mr. Everett.*) That is in addition to the 42 per cent.?—Yes, in addition to the 42 per cent.

3526. (*Chairman.*) You did not tell us what the acreage of Lord Chichester's estate was?—Between 16,000 and 17,000 acres.

3527. Now as to the other estate, Viscount Gage's Firle estate?—A great deal of that is down land. On Lord Gage's Firle estate there is rather over 12,000 acres. The rents have fallen from 12,284*l.* to 7,078*l.* That is almost exactly the same reduction as in the other case; about 42½ per cent. In addition, there has been 15 per cent. given all round this last half-year.

Mr. W. F. Ingram.
7 Dec. 1893.

3528. There is not much down land?—Yes, it is very much the same sort of property.

3529. But the rental per acre seems very much higher than in the other case?—Yes, I think, taking it all round, it is better land. Then I have another estate, but I have not obtained the owner's authority for giving those figures.

3530. You need not mention his name then. What are the figures?—This is an adjoining estate. It is quite the same sort of thing; a property of between 6,000 and 7,000 acres. The rents have fallen from 7,445*l.* in 1871 to 4,479*l.* in 1893. I believe some abatements have been given on that estate, but I cannot say how much.

3531. Those three cases, I presume, are cases of large farms, are they not?—Large and small farms; they are very typical of East Sussex; of what I described at first, our land being on the downs and below the downs.

Reduction in rents on small farms.

3532. Have you any case of property entirely in the Weald with a larger proportion of small farms?—No, I have not; but on the smaller properties—the ownerships where there are smaller farms, the reductions given have not been as large as on the large properties.

3533. Is that because the owners were not willing to make them, or was it because the tenants did not require them?—The largest reductions have been given on those large sheep farms, and I think they have been more hit really than the smaller men. Then I think as a rule on large estates the tenants are rather better off; probably the owner is more capable of helping them.

Expenditure on improvements.

3534. Besides those reductions of rent has there been large expenditure in improvements?—On the Stanmer Estate in the year 1892 a sum of 2,678*l.* was expended in repairs and improvements.

3535. Was that more than the average of past years?—I was going to give 1893, which was 2,550*l.*, so that there is very little difference.

3536. Would that be about the average?—There is very little difference in the different years. The repairs have been always kept up.

Changes in tenancy.

3537. Have there been frequent changes of tenancies, in those estates?—Yes. I am sorry to say that there have been a good many, certainly in the last 20 years.

3538. Have there been more than the average?—No, I do not think there have been more than the average. I should say rather less than the average—I do not think there is very much difference.

3539. (*Mr. Everett.*) Do you mean the average of other estates, or is it the average of previous years?—I was referring to other estates; I thought that was the question I was asked.

3540. (*Chairman.*) When changes have taken place has it been impossible to find new tenants?—It has been very difficult in the case of these large farms.

Sub-division of large farms.

3541. Have you been compelled to break up the large farms at all?—We have done, and we are doing so in the Weald, but it is almost impossible to break up those large hill farms.

3542. And you find considerable difficulty in finding tenants for those large farms?—Yes, on account of the want of capital, I think; there are so very few men to take them.

3543. Have you succeeded in finding tenants for them or not; is there much land in hand?—Yes, there is a good deal of land in hand.

3544. The owners will cultivate them?—Yes.

Uncultivated land.

3545. Has any land gone out of cultivation?—It is not what is called "gone out of cultivation," but there is some very near it I am sorry to say; it is so very badly farmed.

Difficulty in letting.

3546. Then in the case of the farms in the Weald, you have not found the same difficulty in letting them, have you?—No, there is not nearly the same difficulty in letting a farm, anything up to about 100 acres, assuming there is not too much arable land to it.

Sub-division of farms.

3547. And have you broken up the farms there in order to let them in small holdings?—Yes, where it is

. W. F. gram. cc. 1893.

possible to do so; but the great difficulty is that one of houses and buildings.

3548. But for that difficulty would a great deal more be done in that direction?—Yes, certainly.

3549. And the owners have not had capital enough to effect the changes?—No.

3550. Where they have had capital have they done so?—Yes.

ltry ing.

3551. The small farms are let, not as arable farms, but as dairy farms I suppose?—Principally; and some of the very small farms are let as chicken farms in East Sussex; as you are no doubt aware, there is a good deal done in poultry rearing.

3552. That has increased very much of late?—Yes.

3553. A great number of small farms are devoted almost wholly to that industry?—Yes.

3554. Has it had the effect of breaking up large farms for smaller ones for the purpose of chicken farming?—Hardly that. Large farms have not been broken up for small chicken farms, but small farms have been broken up to smaller farms for chicken farms.

3555. What sized farms are those chicken farms?—They begin with a cottage, and a quarter of an acre or less of ground, and there are some big men, I suppose, holding from 15 to 20 acres.

3556. Not more than that?—I should not think more than that for purely chicken farms. Of course they may combine them with other things. It is rather hard to say exactly where a chicken farm begins and ends.

3557. Since when has that been an industry which has grown up?—During the last 20 years in East Sussex it has been increasing every year.

3558. I presume, therefore, it is profitable?—Yes.

3559. What do the rents of these chicken farms generally average? Could you put an average rent for them?—I should think that they paid something like 1*l.* an acre, but really I do not know so much about the actual part of East Sussex where the principal chicken rearing is carried on. It is principally carried on at Heathfield, and that is rather beyond my district.

3560. Is it extending into your district?—Yes, very largely.

3561. Some of those farms are devoted to the rearing of chickens and some to the fattening of them; have they divided the processes?—Yes, they are two businesses rather.

3562. One is rearing and the other is fattening?—One is rearing and the other is cramming.

tes.

3563. Have the tenants, as a rule, obtained the advantage of the reduction of rates in proportion to their reduction of rents?—Yes, I think that they have. A short time ago we started an assessment committee in our Farmers' Club, and we sent round circulars to all the members saying that a certain number—about six or seven of our body—would form an assessment committee and would advise all our members as to their assessments, and we have not had a single case before us; so I presume that they take advantage of it.

3564. In other words, assessments have been reduced in proportion to their reduction of rent?—I think they are all quite alive to having the assessments reduced.

3565. And you think they have had the assessments reduced and obtained the advantage in the reduction of rates?—Yes, in nearly all cases. I do not know that all the small farmers have got it, because they are not so well up in it.

3566. If they have not done so, it is from ignorance of the opportunity they have?—Yes. I very often, as agent, ask them, and if they have not done so I help them, but I generally find that they have done so.

3567. But, looking at the rates as so much in the pound, have they been about the same?—I do not think that they have altered at all, but I think that they ought to be altered. They ought to have been lower, because the assessment is so very largely increased.

3568. Decreased you mean?—In the rateable value I mean—I mean the county rate basis, and the rateable value has increased through East Sussex, notwithstanding those reductions made on the separate farms.

3569. Then a larger proportion has fallen upon the house property; is that it?—Property has increased, but the county-rate basis has increased so enormously and also the rateable value for various purposes has increased also in the Unions that I think the rates ought to be decreased.

Mr. W. F. Ingram. 7 Dec. 1893.

3570. But they are about stationary in the town?—Yes. Our county-rate basis has increased between 1874 and 1894 from 927,000*l.* to 1,641,000*l.*—an increase of over 75 per cent.

3571. Then, if during that period there has been a reduction of rent at all in proportion, namely from 43 to 44 per cent., and the tenants have obtained the reduction in the assessments, it shows that the value of other property has risen?—Certainly, and the increase of that property would, no doubt, make an increase in the various county rates for police, and various other purposes; I quite admit that, but with this increase, the rates have not decreased.

3572. And, therefore, the farmers ought to have a double advantage, namely, the reduction in the assessments, and the reduction in the rate per pound?—Yes, they ought to have the double advantage.

3573. But they have only had one advantage—the reduction of the assessments?—Yes.

3574. But, at all events, the result of your evidence is that the tenant farmers have, in the main, derived the full advantage of the reduction of rent in the reduction of their assessments?—Certainly.

3575. And the rates in the pound have not increased?—Therefore, they have had an advantage, certainly.

3576. (*Mr. Dalton.*) Has the poor rate gone down?—No, not in the amount in the pound.

3577. It has for the whole county very much, but not in your own district, has it?—Not as far as I am aware in East Sussex; not in the amount per pound. Might I say, before I go further, this: I give the case of a purely Agricultural Union, in which I know that the agricultural rateable values have been very much decreased, where it has increased from, in 1873, 19,000*l.* to 22,000*l.* The actual figures are an increase of nearly 20 per cent.

3578. And that, in spite of the fact that the rent has been reduced nearly a quarter?—Yes, and the assessment has been reduced. The agricultural assessments were all reduced some time ago 20 per cent.

3579. That also shows that other property has risen in value, and has increased the total assessment of the Union?—That is very nearly all due to a railway. I might say that I have some figures as to the rates and taxes on land in Sussex, if you care to have them, or anything of that sort.

3580. (*Chairman.*) What are they?—The average rates, taxes, and tithes per acre, on certain farms. do not know whether you care for them.

3581. Give us a summary, without going too much into detail?—One farm of 138 acres in the Weald averages 6*s.* 5*d.* per acre.

3582. When?—This year.

Tithes.

3583. (*Mr. Little.*) Can you distinguish the tithe?—The tithe is 18*l.* 4*s.* 5*d.*. I can give it to you.

3584. Per acre I mean?—I may say that I have not taken in in these calculations Income Tax, and I have taken the tithe at the value in the year 1893. For instance the apportioned tithe of that particular farm is 24*l.* 7*s.* 6*d.*, but owing to the averages being low it is now 18*l.*

3585. (*Chairman.*) With regard to the tithe on these three estates that you speak of, have the landlords paid the tithe in consequence of the passing of the last Tithe Act?—Yes.

3586. And have they been able to recover the tithe from the tenants, or is that an additional outlay to the landlord?—In a great many cases the tenants have derived a considerable benefit from the tithe being paid by the landlord, but I have taken that into consideration.

3587. You mean in the reduction of the rent?—Yes, in the reduction of the rent.

3588. Now will you go on further?—I may say that with regard to these charges, they run up as high as 9*s.* 7*d.* per acre, taking in rates and taxes and tithes on some farms.

3589. (*Mr. Everett.*) That is with the tithe at its present reduction?—The tithe in 1893, that is at 70*l.* odd, I forget the exact figure.

Mr. W. F. Ingram.
7 Dec. 1893.

Cost of labour.

3590. (*Chairman.*) Will you describe shortly the effect on labour?—I may say that the labour is very hard to arrive at owing to the altered conditions of so many of our farms. I have the labour on the first farm that I gave, namely, Stanmer, for the years 1870, 1876, 1884, and 1892. For the year 1870 it was 889*l.*; for 1876, 1,068*l.*; for 1884, 1,175*l.*; and for 1892, 1,195*l.* Then I have the labour on another large sheep and corn farm for the years 1863, 1873, 1883, and 1893. For 1863 it was 700*l.*; 1873, 770*l.*; 1883, 860*l.*; and 1893, 893*l.*

3591. (*Mr. Lambert.*) What was the acreage of that farm?—That farm was about 700 acres.

3592. (*Chairman.*) That will show that the labour bill has been gradually increasing upon the farm?—Yes. But, as I have said, it is so very hard in a great many cases to arrive at the labour because circumstances have changed so very much on a great many of those farms. There has been a great deal of land laid down, and a great many of the Sussex farms have been turned into dairy farms from corn farms. Might I say

Quality of labour.

with regard to the labour that we all think that the labour is very inferior and getting a great deal more inferior to what it was in the past, owing to the best men going off to other employments.

3593. And that in spite of the fact that the wages have been maintained. I understood you that practically there has been no reduction in the wages?—No, there was a rise in wages some 10 years ago I suppose, and then that has fallen slightly since, so that I do not think that there is much difference.

3594. (*Sir Nigel Kingscote.*) Labour being inferior, you have to get more labourers?—It takes three men to do the work of two.

3595. That is the explanation of the rise in the labour bill?—Then I say that it is difficult to compare labour, because the use of machinery has come so much more in force.

3596. (*Chairman.*) What remedy has been suggested; is there any remedy suggested for that?—One remedy is that there should be more cottages. There is a difficulty on certain estates with certain farms as regards cottages.

3597. Is that through want of capital to spend upon them?—From want of capital.

3598. Have those dairy farms in the Weald paid?—I should say when they first began that they did pay; latterly they have not paid owing to the great fall in prices. Now there is a better prospect of their paying owing to the rise in prices, the rise being due in our case I think to combination.

3599. What kind of combination?—Amongst the farmers They have formed in our part of the county an association, and they have made arrangements with the dairy people in the towns to raise the price to the consumer, and therefore the middleman has been able to pay the farmer more for his milk and he (the farmer) has been able to make better contracts.

3600. With regard to the charges on agricultural land in Sussex, is that what you were speaking about in mentioning the rates and taxes?—Yes.

Agricultural Holdings Act.

3601. And then on the question of land tenure, has the Farmers' Club to which you belong expressed any opinion with regard to the Agricultural Holdings Act?—No, I do not think they have. I may say that we have, I think, a very fair system of tenant right.

3602. Is it more favourable than the Act?—I think I should explain it in this way, that before the Agricultural Holdings Act was passed the valuers in Sussex had a scale of tenant right. When the Act was passed they met to consider the Act, and they agreed that under the Act the tenants should be paid on a certain scale. A good many of those valuers being agents as well have adopted that scale and put that into their agreements, so that the farmers on those properties have practically got the benefit of the Act.

Counter-claims.

3603. Have others not got the benefit of the Act?—Well, they can claim of course under the Act, but then they will be liable to a counter-claim.

3604. Would the tenants who are under this agreement not be liable to counter-claims?—Yes, they would be liable.

3605. Then how is it that they are better off—I do not quite follow you?—Well, I do not actually think that the counter-claim would be likely to be made. I think that they are better off, though it is rather hard to find out why they are.

Mr. W. F. Ingram.
7 Dec. 1893.

Valuation.

3606. One set of tenants claim without the agreements under the Act, and the others claim under the Act, and when they claim under the agreements it is not very likely that the counter-claim will be made?—I think that is it; that is the effect in practice rather, but I may say that personally I am very strongly of opinion that there should be a counter-claim. I would not do away with the counter-claim, because the great fault of our valuations is that the valuers do not allow sufficient for the bad state in which farms are left; that when there are claims made in that respect there is not sufficient notice taken of them, and the result is that it is a premium on bad farming.

3607. Do you think that the valuers should also take into account the good state of the farm in cases where the farms have been cultivated in a good manner?—Yes, I think they might, if it was general, properly recognise the state of the case when the farm is left in a bad state, but I think the good tenants are handicapped by what I call a premium on bad farming owing to the valuers not recognising that sufficiently.

3608. It would seem fair that the valuers who take into account the deterioration of the farm should also take into account the improvement in the farm?—I should not object to that at all if we had the other.

3609. Are they not entitled by law to take into account the general deterioration of the farm?—Yes, claims are very often made, but they are practically not recognised—not nearly sufficiently recognised.

Fixing of rents.

3610. Has there been any discussion in your club on the subject of fixing the rents?—I think they are all universally against it; I should say so.

3611. Has the question been discussed?—No.

3612. But so far as you know they are not in favour of it?—Quite so.

3613. What is your own opinion?—I should be decidedly against it.

3614. On what ground?—I think unless circumstances change very much indeed that the tenants are perfectly able to take care of themselves, and from a landlord's point of view that if a man was likely to be leaving in two years, or two or three years, and was looking forward to a fixed rent at the end of that time, he would let his farm run down very much; he would very likely do so with the idea of getting a lower rent fixed in consequence.

Reduction in rent on small farms.

3615. I think you said that the reductions had not been so large upon the smaller farms and upon the smaller properties as upon the larger ones?—No.

3616. And that that was partly due to the inability of the owner to give the reductions?—I did not quite mean that, but I think that the general impression is that on the larger estates they are treated rather more liberally.

3617. Has there been any demand on the part of members of the club for other alterations of the Agricultural Holdings Act?—No, I do not think so.

State loans.

3618. Do you consider that it would be desirable that the State should advance money for improvements?—Of course I am not at all aware—I am not sufficiently acquainted with State affairs to know whether they could do so, but I think it would be a very great advantage if they would make advances for the building of cottages and for the building of farm buildings for small holdings, at a low rate.

3619. I think you have stated that but for the difficulty that the owners have in advancing capital there would be further progress made with the breaking-up of large farms into small ones?—Yes, I think that a great advantage, and more would be done if the owners could be helped.

3620. Has that matter been discussed at all by the members of your club?—No, the difficulty as to cottages is very often mentioned, but the remedy has not been mentioned.

Protection.

3621. Is there any other point that you desire to bring before the Commission?—The remedies I am afraid are not very easy to suggest. Of course the remedy that our club suggests is Protection, particularly as regards foreign flour; what they say is that the trade of making this flour is out of the country, that we do not get the offal at home from the milling, and that they do not believe that a slight duty would raise the

r. W. F. ngram. *Dec. 1893.*

price of bread, considering that the lowering of the price of wheat has not affected the price of bread as much as it should do; that is the view of the club, it is not my own view, because I think Protection is perfectly hopeless, but I am bound to give it as the opinion of the club.

the use.

3622. That is the view of the majority of the club?—Not all. Then we think that the same measures as have been enforced should be continued with regard to the prevention of cattle disease. The members of our club think that whatever Government has been in power of late years they have done all that they possibly can to help the farmer, but they think that if we had had cattle disease really badly as we have had it in former years on the top of our troubles we should have been in a worse state than we are now. Then we think also that we have suffered from the railway rates, and there ought to be an equalization of railway rates. How far that has been done we are not in a position to say, because we cannot compare the foreign, not exactly the foreign rates, but the rates for foreign produce, that is what I mean to imply. Then we think that the burdens on land in the way of rates, tithes, and taxes are unfair, and there is a very strong feeling as regards the highway rate, and that, as they put it, the people who use the roads do not pay for them. For instance, the timber merchants and people like them have benefited enormously from the turnpikes being taken off. We know cases of timber merchants who openly say that from the turnpikes being taken off they are 300*l.* a year better off. The principal remedy that I propose is the prevention of adulteration and fraud, particularly in dairy produce. The adulteration of butter and the adulteration of milk by separated milk, the adulteration of feeding stuffs and artificial manures. I am not speaking of the whole body of the club, because I have only discussed this with a certain number, and, perhaps, I had better put this personally. I think that if some system of cheap analysis could be given to the farmers it would be of very great benefit. At present there are very few analyses taken. It is true a certain number of farmers belong to the Royal Society and they send up. We have thought of trying, in fact we have tried, to get an analyst for our club, but we find that the expense prevents us. We think also that foreign meat should be labelled or sold as foreign meat in some way or another, and though, perhaps, foreign meat is a blessing to the community, it has certainly hit the farmers very hard indeed. I might give a sort of instance of that. Formerly, in our markets, if you went into our cattle markets you would see butchers from all our seaside towns; they were all more or less in competition with one another. Now every single one of those butchers, I think, has an ice chamber and gets his meat from London, and instead of having the number of butchers that we used to have 20 years ago we do not have more than three or four now. I daresay one cannot help it, but it is hard upon the farmers.

lway s.

dlway s.

ulterat.

holding ourers sat.

3623. When you speak of "our" markets you mean the local markets?—The local markets; all those used to be attended by the butchers from those large towns, and now we only get a few of them.

3624. What are the main markets for your district, the seaside towns, I do not mean local markets; does your produce go to the seaside towns or to London, or the local markets?—I should say our beef and mutton, our meat, went principally to those towns, and our dairy produce goes principally to those towns and a certain amount to London. Then a good deal of our produce is distributed throughout the country, for instance, on the sheep farms that I talked of we do not sell the sheep fat, we sell our sheep as stores, and they are distributed throughout Sussex, Surrey, and Kent, and down into various other counties. I think we all regard it that our great difficulty has been the difficulty of labour, and that is where the small holdings as a rule pay, because they are generally worked by a farmer and a son or two.

mall holdgs for bourers.

3625. Do you consider the increase of small holdings to be important in its effect upon labour?—I think you get rid of the difficulty of labour very much—that is the main object in establishing them.

3626. It is an inducement, too, for the men to remain in the district of the country?—I do not think that an agricultural labourer is, as a rule, a man to put into a small holding. There are a certain number of them of course who take small holdings.

Mr. W. F. Ingram. *7 Dec. 1893.*

3627. Who should be put there then?—I think with regard to the small holdings that every village ought to have a certain number of them, and the people who would probably take them would be the small shopkeepers of various kinds, such as wheelwrights, blacksmiths, and those sort of people. There are very few cases within my knowledge of the labourers being capable of taking a small holding. Certain exceptional men do, and those should have them.

3628. Have you known cases in your district of labourers rising to be small farmers?—Yes.

3629. Are there many such cases?—Not a great many. You see the difficulty with the labourers on small holdings is that a small holding, as a rule, does not keep him; he has got to find labour elsewhere, and the farmers are not very keen on employing him. There is a very good reason for it, because, as a rule, I think that the small holder thinks of himself before he thinks of the farmer, and very naturally. If he has got hay to get up and the farmer has hay to get up, the man starts and gets his own hay up first.

Creameries.

3630. (*Lord Cobham.*) Of what size are the holdings you speak of?—Those would not be more than up to 20 acres. Although I do not know of them personally, I think that the establishment of creameries would be a good thing; not dairy factories, but creameries.

3631. By the joint action of the farmers?—Yes.

3632. I think you said that the dairy farmers combine for the purpose of raising the price of their milk?—Yes.

3633. That would show that they have it in their power to combine for the general good of their body; cannot they undertake many of those other functions that you spoke of?—Yes, they might undertake them; but I think that the creameries are better than dairy factories.

Allotments.

3634. Do you think that allotments will provide a sort of stepping-stone for agricultural labourers to small holdings?—They might do, but I think not as a rule. First of all, I think that every man who has a cottage ought to have sufficient garden, and he then does not want very much allotment ground; and my experience of allotments is that when the men get better off they give up the allotments. I know of a case when there was a good deal of stir under the allotments—I believe about the year 1842. The owner of the property laid out a lot of land in allotments, something like 45 acres, and that has now dropped to 9 acres, though the conditions are very much the same, with the same number of houses, and so on, and of those 9 acres a certain amount is held by the village innkeeper.

3635. You mean that as wages have risen the demand for allotments has fallen off?—I think that the labourer's position is better, take it all round, and as it has got better they have not cared to work so much in the allotments. The allotments have not been so much an object to them.

3636. Has that been the case in the last few years, when there has been so much stir about allotments?—No; I think outside towns there has been more done, and rightly so, about allotments. I think all through our country, particularly in the purely rural places, they already had allotments and they did not want them.

3637. And they are not applying for them now?—They have been outside the towns.

3638. Has the County Council done much with the technical instruction grants for the labourers?—Well, they have had a certain amount of lectures on gardening and various subjects.

Technical instruction.

3639. Do you think that a good result has been obtained?—No, I should not think that there has been very much. You see the difficulty is this: what our County Council said was that in everything that was done in reference to technical education, the people who derived the benefit must pay something towards it. I proposed a scheme to them for teaching labourers better-class work, and to do that I proposed at the end of their time that the pupils should be paid a sort of premium, but then the County Council said that they could not pay that.

3640. They will not allow any instruction without some payment?—No. For these lectures they did not charge much, only 1*d.* a head; for everything that is done there is a charge made.

Mr. W. F. Ingram. 7 Dec. 1893.

3641. And that has been an obstacle you think?—I think in this case. I do not know that my scheme was a good one; perhaps it was a bad one—but what I said was that you cannot take young men—purely agricultural young fellows—away from home and place them with a man and teach them a business without paying them something, because they have to pay their lodgings. But the County Council said, "We cannot pay that." Then there have been dairy schools through our county.

3642. Have they been popular?—Yes, I think very popular on the whole. I think our people want a lot of teaching in making butter, but the difficulty is when it is made there is a great difficulty in disposing of it. You may make the best butter, but the British public—well I think they will eat anything—I do not think they are judges.

Small holdings. Loans for providing buildings.

3643. You are in favour of advances for the encouragement of small holdings to provide buildings for them?—Yes.

3644. Do you think that such advances would earn the interest charged upon them?—Yes, I think so; just in the same way as Land Improvement Companies do. I suppose that would be paid off in 30 years, and it would be the same kind of thing I suppose.

3645. I suppose you wish a lower rate of interest than the Lands Improvement Companies charge?—Certainly, or I do not suppose it would be taken up, or it would be taken up now under the Lands Improvement Companies.

3646. Money, in fact, you think should be advanced by Government at a much lower rate than the companies charge at present?—If it is to answer, I do not say that the Government can do it, because that is a matter I know nothing about. But it must be a lower rate than the Land Improvement Companies now give.

3647. Should the money be repayable within a certain term of years?—I think that would be better; not to go on *ad infinitum*.

Cottage rents.

3648. It would not be less than 3½ per cent. Do you think that money on cottages in East Sussex would be certain to earn that amount?—I do not know that it would with the present rates charged for cottages.

3649. What are the rates paid for cottages?—They run from 1*s.* to 2*s.* 6*d.* a week. 2*s.* 6*d.* is only charged as a rule when it is near a town or something of that sort. A good many of the tenants all through our estates do not pay more than 1*s.* 6*d.*, and on certain properties not more than 1*s.* per week.

Wood cutting.

3650. Referring to the labourers, have they not got certain rights of cutting wood which they value a good deal?—There are no rights.

3651. The right of cutting wood I mean?—Certain farms have a certain amount of underwood with the farms, what we call "shaws," little coppices. Those go with the farms, and the tenants cut them. The labourers on the farm are employed, and of course we have a great deal of underwood through Sussex and a great deal of spare labour is used in the woods.

3652. And in this way they have benefited the labourers?—Yes; in this way they can always find labour. A man who is worth anything at all will find labour in the winter in the wooded parts of the country.

3653. They do not derive benefit in the shape of actual woodcutting from the coppice?—No; for instance, if a man buys a piece of underwood the man he employs to cut it takes all the brushwood and brambles and deadwood, and the man who cuts down trees takes all the chips. In that sort of way the labourer is benefited, but there is no particular land laid out upon which wood is grown for the use of labourers.

3654. There are no common rights of such a character?—Not that I know of in my experience.

Labourers' cottages.

3655. (*Sir Nigel Kingscote.*) You said that in some parts of Sussex there was a dearth of cottages. Have you found on the large farms that the cottages are in out-of-the-way parts where the labourers are very reluctant to go?—Certainly; you could hardly wonder at that.

3656. You have to build cottages, and mostly near the villages?—Yes, or near roads, in order that they should get to the shops and get to the schools.

Small holdings.

3657. Given fair land, what is the size of a farm that a man his wife and four or five or six children could live upon without any other occupation? How many acres would you give him to live upon?—I should think that he ought to have nearly 50 acres, but in the case of those chicken farms they do undoubtedly make a living on small holdings.

Mr. W. F. Ingram. 7 Dec. 1893.

Sale of live stock—(*a*) by auction

3658. Would you tell me how you generally sell your cattle and sheep, whether by auction, or at markets, or how?—Till the last 15 years we had no auctions I should say. We sold them either in the markets or at fairs. Lately auctions have sprung up, but personally I think they are a mistake. I think if you have auctions at all you ought to have them very general.

(*b*) by live weight.

3659. Are your beasts sold by weight or merely as animals?—A very few are sold by weight, but practically selling by weight is not done.

3660. Do you advocate selling by weight?—Yes.

3661. Do you advocate it strongly?—Strongly. For instance in our town of Lewes we have got a cattle market there which is nearly defunct, and for years, in spite of the Act, there has been no weighing-machine there. I have not been there for some time, but up to quite lately there was not one there, and I do not think there is one there now.

Slaughter of foreign cattle.

3662. Would your Farmers' Club advocate the slaughter of all animals at the port of disembarkation?—I suppose from our own personal feeling we should, but we do not want to be selfish; we know that our Scotch brothers import a lot of foreign store stock, and if this is of advantage to them, and if sufficient restrictions are adopted, we do not want to interfere with this trade.

3663. You do not think that the South of England could rear sufficient stock to supply our Scotch brethren?—We do not know that. We know that this year there are a great many beasts that have gone into Scotland which would generally have stopped with us.

Rents.

3664. (*Mr. Whitehead.*) Do you not consider that the rents of the estates you have mentioned to day are high?—Certainly not now, whatever they were.

3665. According to the style of land—it is simply down sheep farms?—Still I do not think that they are high.

3666. Is the rental of the surrounding estates in the same proportion as those that you have mentioned?—I should say so, with the exception that I think, as I said before, that the smaller farms in the Weald have not had the same reductions.

3667. Would the rental of the Stanmer estate, 9,285*l.*, be net, or plus tithe?—That would be plus tithe. I have taken the tithe into account in all my calculations.

3668. 5,319*l.* is the rent it pays now, and that would be minus tithe?—There might be some tithe still paid by the tenants, but that would not come in.

3669. Those figures would not be quite accurate as compared with the others then?—They are quite accurate as a comparison of the rents paid at that time, and the rents paid now. You are obliged to bring the tithe in paid by the landlord, and it was not previously.

Size of small holdings.

3670. You spoke of small holdings, they are not in the nature of allotment holdings. What is about the average size of these small holdings that you spoke of?—They would run from 5 acres up to 100 acres; that is the sort of farm I consider a small holding.

3671. Is there any other special cultivation than that of poultry farming upon them?—They take poultry or dairy principally. Of course near the towns there is a certain amount of market gardening done in them.

3672. Has that proved profitable?—It is not nearly so profitable as it was a few years ago; they have suffered, I should say, very much.

Market gardening.

3673. Have you not found that where there is any special cultivation tenants have done fairly well—comparatively at least?—Poultry, yes; dairy, no, and market gardening, no.

3674. Why not market gardening?—I think that it has increased so much. There is this great difficulty in market gardening, that we cannot get the early things. That of course we cannot help; it is the climate. You get all the best prices if you can get early vegetables to the markets.

3675. And you say it is not profitable, although there are large populations near at Eastbourne, and Brighton,

Mr. W. F. Ingram. Dec. 1893.

and so on?—I think that it is profitable just close to the towns.

3676. Only close to the towns?—Yes, but then you see those are in a great measure not small holdings, but large extents of market gardening.

3677. With regard to market gardening, is the reason of their not being profitable because of the insufficiency of the means of distribution?—I think if there could be better means of distribution that the whole system of small holdings would be very much more profitable in the country. If, for instance, they could do the same sort of thing that the Normandy peasants do, that is to say, come into the towns and villages, and sell their produce in the market.

Poultry farming.

3678. And that would apply to poultry keeping in the same way, would it not?—No, I do not think so, because there is a regular system; there are people called higglers, who come round and pick up all the poultry, and send it off by rail. Poultry is sent up from our districts by the ton.

3679. No eggs are produced, I suppose?—I do not think that they produce a great many eggs, because they go in for chickens.

3680. Might not poultry farming, with regard to chickens and eggs, be very much extended with advantage?—Yes, I think it might be extended, and I think it is being extended almost every day in our county.

Fertilisers and Feeding Stuffs Act.

3681. With regard to the Fertilisers and Feeding Stuffs Act, do you think that will benefit the farmers?—Yes.

3682. Will they take advantage of it?—I think they will, where they are sufficiently educated to do so; but I think they might be helped, and I dare say that they will be helped with pamphlets, and so on, from the Board of Agriculture, giving them the information of what they ought to apply for. I mean in buying, say, cake, they ought to be told what to stipulate for. For instance, the Royal Agricultural Society have issued in their Journal, under the chemical part of it, a statement of what people ought to ask for.

Protection.

3683. (*Mr. Giffen.*) You told us that although the club were in favour of Protection, you are not of that opinion yourself?—Quite so.

3684. But then why not ask Protection for all kinds of agricultural produce, not merely confine it to flour?—I think it comes to this, that they say flour, but then if they thought that the other farmers throughout the United Kingdom would not be satisfied with that, and that they would want Protection on something else, they would join their brother farmers in getting it.

3685. Is it a strong feeling in the club?—A very strong feeling.

3686. Is it only a preponderant opinion or is it a strong feeling?—I should say it was a preponderant opinion. Personally, I do not see why it should raise the price of bread considering that the fall in the price of wheat has not lowered the price of bread.

Price of bread.

3687. Are you quite sure that the fall in wheat has not lowered the price of bread?—With us that is so.

3688. Have you gone into the subject carefully with all the necessary attention that you must give to a subject of that kind, which is extremely difficult, and are you quite sure that the price of bread has not been lowered by the fall in the price of wheat?—I daresay that it could be proved the other way.

3689. It is really a very difficult subject to follow out I mean?—Our millers used to take as a guiding rule that when wheat was so much a load (our load is five quarters of wheat), they charged us so much a gallon for their flour, but now that wheat is at a very much lower price per load, we have not had a corresponding drop in the gallon of flour that we know of.

3690. Of course, you are aware that as regards the price of bread, you have not merely to take into account the price of English wheat, but the price of all kinds of foreign wheat, and that there may not be the fall in foreign wheat that there is in English wheat, that the bread is the result of a mixture?—We can see the price in the papers, and we know within a little what price the foreign wheat is.

3691. But taking into account not merely the fall in English wheat, but wheat generally, do you think that it has no effect upon the price of bread?—It is my opinion that there has not been a corresponding fall in the price of bread.

Mr. W. F. Ingram. 7 Dec. 1893.

3692. Are you yourself in favour of foreign meat being labelled and sold as foreign meat? You said your club was in favour of it; do you support that view?—Yes, if it can be done. It seems there are numerous difficulties, but if any system is devised—I do not propose any system—I think it would be a good thing.

Labelling of foreign meat.

3693. Would you not be satisfied with a measure by which sellers of foreign meat would be compelled to stick up above their shops that foreign meat is sold here?—I think that would be a very good thing. For instance, in the town where I live, Brighton, there is a large shop called The Farmers' Supply Association. I cannot say for certain, but it is believed that the whole of the meat sold by them is foreign, although they call themselves The Farmers' Supply Association, and they lead people to believe that they sell English meat, and we consider that to be a grievance.

3694. But do you, as a matter of fact, anticipate that you would get a much better price for your own meat if those restrictive laws were introduced?—No; we do not think generally that we would. But we think in common fairness it should be done.

3695. What advantage would that be to you, then?—We think there would be a certain amount of advantage; we should get some advantage in an increased price.

3696. But you are not prepared to say how much advantage; you have not gone into it very much?—I think that must be a matter of speculation; I do not think you could say.

3697. And you are not aware of the amount of evidence there has been that possibly the labelling of foreign meat, and the putting up of signs on shop doors that foreign meat is sold, might have the opposite effect of a good advertisement on foreign meat?—We are willing to try the experiment.

3698. But still, you have not considered it from that point of view?—No, but we are willing to try the experiment.

Reduction of rent and cost of labour.

3699. Are tenants able to make their living now at the reduced rents that you have spoken of generally. I do not mean in any particular years?—I do not think that the rent goes to the root of the matter. Our great difficulty is labour. Tenants come to me, and they say, "Well, sir, I want a reduction of rent. You "know it is not the rent that hits us, it is the labour. "We cannot get it off the labour, so we must come "to you for a reduction of rent."

3700. If you gave it from the rent, would not that be sufficient for the tenant farmer?—If you took off all the rent, I do not think it would be enough.

3701. That is to say, that the land in your neighbourhood is not able to pay rent at all under the present conditions; is that what we are to understand?—Of course I can answer you, but I do not know, it is rather difficult, if this is to be produced in print against me.

3702. You have stated that you are of opinion that the tenants could not live if they paid no rent at all on some of the farms?—Yes.

3703. The inference would be that they ought not to pay rent?—I do not think that it is to the interest of the country that they should not pay a rent. If you do not pay a rent, you get improvements and repairs stopped at once.

3704. No doubt; but why should a man go and undertake a burden which really he cannot afford to do. He would be much better engaged in doing something else?—But what is a farmer fit for; what can he do?

3705. (*Chairman.*) You said, except in the case of very large farms, it was still possible to let farms at the rents which are now being levied. That would tend to show that there is a demand for farms, would it not?—For small farms.

3706. But you said the difficulty was in the case of very large farms, and that that arose from the want of capital of the farmer?—That is the difficulty in letting. I say the great difficulty on those farms is the difficulty of labour; I think where you have small farms, so that a man and his sons can work them, that difficulty of labour is very much got over.

Mr. W. F. Ingram. 7 Dec. 1893.

3707. In the case of small farms, the man himself labours, and he does employ another labourer, and he superintends it closely himself?—The man and his sons generally do the work.

Rent and expenditure in improvements.

3708. (*Mr. Giffen.*) In the case of other farms, we might take it as a general rule, that if rent is paid at all, there is a class of people on the whole who can afford to pay and do pay the rent because the business goes on?—Yes, there are a certain number of tenants who continue to pay, undoubtedly.

3709. Because that leads me to the other question which I was going to put, which is, whether the tenant farmer carrying on business would himself benefit very much by a great many of the remedies which you have been suggesting, such as the transfer of rates from local to Imperial charge, and things of that kind; is it quite certain that the tenant farmer would be the gainer?—I think he would. Of course, I am perfectly aware that you can say that if you take off charges you simply increase the rent, but I think that it is to the advantage of the farm and the estate, and of the country generally that rents should be paid I do not see how the repairs and improvements can be carried on unless rent is paid.

3710. But the question rather is how much rent then; is it sufficient rent to enable the landlord to spend money upon repairs and improvements, or is it something beyond that?—I do not think I am prepared to say in general terms. Every farm must pay the rent it can carry according to the capabilities of the farm.

3711. And looking at it from the point of view of a tenant farmer, as a matter of business you say that he goes to the landlord, and says, "I cannot pay so much "rent, because I have to pay so much more for labour." Surely it does not matter to the tenant farmer whether he pays it to the labourer or to the landlord?—It is better for him to pay it to the landlord, and then he would probably get some of the benefit. On any well-managed estate the tenant generally manages to get some benefit out of the rent that he pays.

3712. It is a good thing for the tenant to be upon a prosperous estate?—Certainly.

3713. (*Mr. Clay.*) Do you admit the principle that rent is what is left over after the amount paid for labour and the outgoings of the farm generally?—I have often heard it so stated, but I do not know that I say so particularly. I have always thought that that was a proposition which was very generally accepted.

3714. It is generally understood in the business after he pays money for labour, and cultivating the land, the rent is what is left over; do you admit that?—I always thought it was a generally-understood proposition.

Tenant right.

3715. Regarding the tenant-right, have you any schedule to lay before the Commission as to the way in which you deal with the tenants?—I spoke of a schedule, but I am afraid that I have not brought it with me. I could let the Commission have it; I could forward it.

The Agricultural Holdings Act.

3716. Have you had cases in your county coming under the Agricultural Holdings Act?—Very few. There have been a certain number, but not very many. I think we have got a pretty fair system of tenant-right ourselves to start with, but I daresay they have not in other parts of the country.

3717. You consider that your system is fairly reasonable?—I think it is, and it is very general now in all agreements to put in payments for cake consumed and that sort of thing in the last year and last year but one, and the tenants are satisfied with that.

Compensation for land laid down to grass.

3718. Has your system been extended to giving a tenant extra for his good farming and laying down to grass?—For good farming, no; for laying down to grass, yes. If the tenant has laid down to grass without the landlord's consent, he generally comes to the landlord and says to him, "I have got so many acres "laid down to grass, for which I found the seeds, and "the work I did myself. Will you give me compen-"sation for this, because if not I am going to break "it up;" and the landlord now-a-days, wishing to have it under grass, pays the money. I have done it in a great many cases myself.

3719. (*Chairman.*) The alternative is, that the tenant derives a profit from breaking it up?—I do not know that he derives very much profit, but he has it in his power to do it, and then he is paid. After all he is only paid for the labour of ploughing it up.

3720. (*Lord Cobham.*) Are you speaking of outgoing tenants?—Yes, of outgoing tenants; they would be principally, because they would want the grass themselves until they left. *Mr. W. F. Ingram.* 7 Dec. 1893.

3721. (*Chairman.*) He would come to you before he goes?—Yes; I have arranged a good many cases.

Changes in tenancy.

3722. (*Mr. Clay.*) You have had a good many outgoing tenants?—Yes, a good many changes.

3723. It is not a very satisfactory sign?—It is not; might I say I understood I was asked more on those properties than about the average of the county generally.

3724. (*Chairman.*) I did not so understand you. As compared with previous years, have changes been frequent?—Compared with the good times they have been very much more frequent.

3725. (*Mr. Clay.*) Those tenants would be obliged to leave because the rents were too high?—No.

3726. Why did they leave?—Owing to the want of money.

3727. Their financial position is bad, I suppose?—Well, they have suffered losses, and as a rule they go into smaller holdings.

3728. Their financial position would be bad because they had paid too much rent for the land?—I do not think that is on account of the rent.

3729. What was it then?—The bad times.

3730. It comes back to the rent; if you pay too much rent you get your banking account run down?—The rent is a certain amount of the outgoings, but it represents very little in the profit and loss. That is my view, and all our big farmers would say the same. I think that they are really grateful to the landlords for what they have done in the reductions they have made for them.

3731. You have not farmed yourself?—No.

Farms in hand.

3732. (*Mr. Gilmour.*) Speaking of the difference in the rent in those large estates for which you are agent, I think you mentioned that you had a good deal of land in hand on some of those estates. How do you pay the rent of those farms?—They are left out.

Rent.

3733. Was that the case in 1877?—No, they were paying rents, but I did not want to give anything that were not actual figures.

3734. But then there would be less land in your own hand in 1877 than in 1893?—Certainly.

3735. It is hardly a fair comparison of the state of the rent roll?—The rents I should put them at would make the case worse.

3736. Would not it be a better comparison if you had a reduction made of 42 per cent., and an abatement of 15 per cent. added on to that, would it not have shown a much fairer state of matters?—No, I do not think so, because I could put them at as quite as low a rent, or probably less. For instance, on one of those farms that I have left out, the reduction was more than 50 per cent. That has only come in hand this year.

3737. (*Mr. Little.*) Is it left out in the earlier statement as well as the latter?—Yes.

3738. And the comparison is between the lands now let?—Yes, it is left out in both years. You will see the three farms.

3739. (*Mr. Gilmour.*) Are they the same farms, and the same acreage?—Exactly.

Combination in the milk trade.

3740. You spoke of combination, of a milk ring. Has that been going on for some time?—No; that was only started about six months ago.

3741. In practice are they able to keep or force up the price of milk in your district?—The price of milk naturally rose on account of this very dry summer. Whether they will be able to keep it up I cannot say. I am not a member of this association.

3742. But what is the price. Do you know the price that the members of this combination get for their milk per gallon?—I think 1*s.* per gallon—that is imperial gallon.

Fall in prices and reduced out-goings; comparison between 1873 and 1893.

3743. (*Mr. Little.*) You gave us in the earlier part of your evidence some particulars of the receipts for different descriptions of produce at different times on certain farms. The second one, I think, showed a reduction of 1348*l.* in the value of corn, and the flock between 1873 and 1893; 532*l.* in wheat; 81*l.* in oats;

Mr. W. F. Ingram. Dec. 1893.

265*l.* in sheep; 297*l.* in the lambs; and 173*l.* in the wool. Is that correct?—I have not divided it; I have not got the comparison. I gave you the totals, but I have no doubt that is right. The wool is 140*l.* It was 313*l.* as against 173*l.*

3744. Then there was 1,300*l.* less received in those two items of the flock and the corn?—I think you understood these were not actual receipts. This is a farm from which I took the produce, and I compared the two sets of prices.

3745. Then I assume that that is a fair estimate. You make the returns from corn and flock 1,300*l.* less than 20 years ago?—Certainly.

3746. And that on a farm of about 800 acres?—Yes.

3747. That is more than the entire rent I suppose. 1,300*l.* would be more than the rent of 800 acres?—The old rent.

3748. Yes?—It would of course be a great deal more than I would be prepared to let it at now.

3749. The purport of these figures is to show that the reduction in produce is greater than could possibly be met by a reduction in rent?—Yes.

3750. In the second case it was a comparison between 1883 and 1893. Was that an actual one?—It was an actual one.

3751. And there the decrease in corn and flock is from 2,924*l.* to 1,321*l.*, or a total reduction of 1,603*l.* a year?—You are taking corn and flock only.

3752. Yes, 1,603*l.* And then there has been a decrease of rent from 800*l.* to 400*l.*?—Yes.

3753. The tithe from 117*l.* to 85*l.*, and all rates from 77*l.* to 44*l.*, and labour from 966*l.* to 844*l.*?—Yes.

3754. The whole reduction in expenditure only amounts to 587*l.*?—Yes.

3755. So that of the 1,603*l.* decrease in the value of produce, 587*l.* is met by the reduction of rent, rates, and taxes and labour?—I am not sure whether you have taken the labour in.

3756. Yes, I have. Then there is 1,000*l.* there which is not met even by reduction of rent of 50 per cent. or by the reduction in rates and tithe rent-charge, and labour. Is there any other item of expenditure upon which any such reduction has been made?—No, there has been probably a slight reduction in the price of feeding stuffs and probably in the price of artificial manures. I have not got the figures.

3757. Do you think there is any possibility of making 1,000*l.* a year of reduction in any other item of expenditure?—No.

3758. The receipts as far as these figures go would be 1,000*l.* a year less on the 800*l.* after the reduction of 50 per cent. in the rent?—Yes.

3759. That is the point you wish to make by these figures?—Yes.

Rent.

3760. Now about the rent you get on this Stanmer estate, it was 9,285*l.* in 1873 and 5,391*l.* in 1893?—Yes.

3761. And are those net amounts or have the repairs to be paid out of these sums?—All the repairs have to be paid out of these sums.

3762. And supposing all repairs to be about 2,500*l.* a year as you say, the reduction in the landlord's income has been nearly 60 per cent., that is, if the same sum has to be taken off for repairs now that had to be taken off out of the larger income, the net income payable to the landlord is reduced to a greater extent than the gross rent?—Certainly. And then that does not take in tithe and land tax and various other things.

Large and small farms.

3763. You said on the whole in your neighbourhood small farms had been more successful than large ones, and you gave as one reason the labour difficulty. Would it be possible in your large farm districts to make small farms in the Chalk and Down district?—Not very easily. I do not know how you could work them better than we are working them with sheep. You cannot work small holdings with sheep. You would have the sheep all together.

3764. The large farm is rather a necessity of the Chalk and Down district?—Yes.

3765. Then the success of the small farmers may be due to some extent that they farm land which may be adapted to another purpose than sheep and corn-growing?—Yes.

3766. Their great advantage is that they do not depend on sheep and corn?—Yes. *Mr. W. F. Ingram.* 7 Dec. 1893.

3767. And the small farmer who consumes a considerable portion of his produce has an advantage in that respect, has he not; the fall in the price of produce consumed does not matter to him?—Not in the amount that he consumes himself.

3768. All he consumes in the shape of corn or wheat produced on the farm, or milk or butter?—No; some of the small farmers feed a certain amount for wheat, and they do not object to seeing the price low for instance, and they consume all the wheat that they grow.

Agreement

3769. I understood that very generally in your neighbourhood an agreement has been substituted for the Agricultural Holdings Act?—Yes.

3770. Has there been any dispute as to the terms of the substituted agreement being reasonable or unreasonable?—I never heard of it.

Payment of compensation.

3771. Is it your experience that farmers prefer the comparative certainty of an agreement and the simplicity of a valuation under an agreement to one under the Agricultural Holdings Act? Do they prefer compensation by agreement to compensation by the Act?—Certainly, very few of them will take up the Agricultural Holdings Act if they can help it.

3772. Do they prefer the signing of an agreement to leaving it open?—I should say that in the majority of cases we have got no agreements at all, and of course I might say no cases practically.

3773. But where there is no agreement of course the tenant could claim under the Act?—Yes.

3774. And they do not?—No.

3775. Do they claim by custom?—No, they claim under their former valuation.

3776. That is the custom?—Our principle is to be paid as you go out, just as you pay when you come in.

3777. That is the one universal custom?—Yes.

3778. The only one that is universal, is as a man enters so he quits?—Yes.

Valuation.

3779. You said that in valuations generally there was no sufficient account taken of deterioration or injury to the holding on leaving a farm. Would you think it desirable, if it were possible, to record, whenever a man entered a farm, the particular state and condition that it was in?—Certainly, for his own protection on going out.

3780. And it would be for the protection of the landlord?—And for the protection of the landlord.

3781. Would you say that that would be a desirable thing to be done on every estate by the agent of the estate?—I think it would.

3782. Would you be in favour of its being done by a public official?—We are not very keen about public officials as a rule.

3783. That is a thing fairly possible on an estate?—Yes, and I think it ought to be done. I will not say I do it in all cases, but I do it in a great many cases.

3784. (*Chairman.*) Do you do it field by field, or how is it done?—Field by field.

3785. (*Mr. Channing.*) That does not include the buildings?—Yes, it even includes the buildings in this way, that the tenant would say to me, "If I am to "keep this place in repair, will you put it in repair "first." My answer to that is, "I will not undertake "to put everything in repair, but I will undertake to "go over all the buildings if you like and give you an "account of the state that the buildings are now in, "and I shall not call upon you to do any repairs to "anything that is in a bad state." I very often do that, and therefore it does in a great many cases include the buildings.

Loans for providing buildings.

3786. (*Mr. Little.*) There is only one other point on which I should like to ask you a question. You spoke of an advance of public money for the purpose of improvements in the building of cottages. You have had experience in building cottages?—Yes.

3787. How much do you spend on a cottage for a labourer?—I do not think that you can do it under 130*l.* That, of course, is not a single cottage; that is to say, four cottages are built together.

Mr. W. F. Ingram. 7 Dec. 1893.

3788. 130*l.* each. Would that include proper outhouses?—Yes; of course, presuming that you can get a water-supply easily, because sometimes the water-supply makes a great difference.

3789. I presume you would put the cottage where the water was?—We do, if we can, certainly; and of course we have to get a certificate now from the local authority.

3790. Supposing you borrow money from the Government at the lowest possible rate, the terms for repayment to be within 50 years, and the interest 5 per cent., do you think you can get a rent to recover that 5 per cent. on the 130*l.* If you borrow the capital you have to replace the money in 50 years, it would cost something like 5 per cent., would it not?—That depends on how liberal the Government would be.

3791. Take 3½ per cent., which is a little more than the price they pay for it, they must then add so much for redemption; assuming that it costs 5 per cent. to replace the money, can you let the cottages at 5 per cent. on 130*l.* and bear the costs of repairs and rates?—In the purely agricultural districts, no.

3792. Is not that the difficulty in dealing with cottages and providing new cottages that at the present time the labourer does not pay a rent which is equivalent to the interest on the outlay?—That is so undoubtedly.

3793. Do you think it would be a good thing if the labourers paid the full rent for the cottages, if they could be induced to do so, and have it made up in wages? A cottage costs 130*l.*, that is paying 4 per cent.?—You can arrange with your labourer.

3794. Do you think it would be a good thing for the labourer to pay the full rent and receive a proportionately higher wage? If he paid 2*s.* 6*d.* per week he would not pay it out of his present wages; he would want 1*s.* per week advance on his wages?—You would be raising the farmer's payment, would you not, because the cottage is the landlord's business—he is the owner. There are a certain number of cottages to let with the farms, but in a great many cases with us the owners let them direct.

3795. The point I want to bring out is this: You say cottages are needed; will they be built if they cannot be made to pay?—No, I do not suppose they will.

3796. How can they be made to pay?—In the purely agricultural districts right away from a town, or village, they could not be built to pay, but where you get anywhere near a town, building them even for agricultural labourers would pay because then you would get the rent.

Land in hand.

3797. Have you made a rent out of lands in hand?—No.

3798. No rent?—No rent the last few years.

Highway rates.

3799. You complain of the cost of main roads. Is not the cost covered by the Government grant?—I think there is an unfairness in the main-road question; only certain of the roads are main roads.

3800. That depends upon the County Council?—Yes.

3801. The County Council have the power of extending them?—Yes.

3802. Do you think you have not sufficient?—Well, in some parishes they have roads that are a great deal used to railway stations, and so on, and they have not been taken over by the County Council as main roads.

3803. You are not aware whether the subvention or rather the grant from the Government covers the cost of main roads?—I am not aware. I was formerly a highway surveyor, but I have not been lately.

3804. (*Mr. Lambert.*) Are your figures that you gave just now based on actual fact, or are they hypothetical as regards the rental or the value for produce in 1873 and 1893?—In that particular case it was hypothetical as regards prices. It was actual fact as regards quantities.

3805. The prices were hypothetical then?—The prices in that particular case; in the other case they were all actual prices.

Condition of agriculture in 1873.

3806. Would 1873 be the high-water mark of agricultural prosperity?—No, I do not think so. I have taken everything in 20 years, but I simply took it as a period as being 20 years before 1893.

3807. But would that be the high-water mark of agricultural prosperity?—I should think it would be one of the best times, not for instance the highest prices of wheat.

Mr. W. F. Ingram. 7 Dec. 1893.

3808. When I spoke of agricultural prosperity I was taking it generally—the general agricultural prosperity, the price of everything, cattle, wool, and sheep and corn?—I should think it would be a very good time, but not the best time.

3809. What would be the best time?—The Crimean War.

3810. Were rents as high in 1873 as they ever were?—Yes, I should think that they were. I am not speaking of my own knowledge.

3811. Were tenant farmers prosperous at that time?—Yes.

3812. And do you think they were saving money?—I am not in a position to say. I hope that they were.

3813. Did rents increase from, say, 1860 to 1873?—Yes.

3814. They did?—Yes.

3815. I presume that they have not increased as much from that date as they have decreased from 1873 to 1893?—No, I do not think so.

3816. But there was a great increase of rent from 1860 to 1873?—There was an increase, but I am afraid that I cannot tell you how much.

Rent and expenditure on improvements.

3817. Assuming that the tenant paid no rent at all would not he be able to make improvements upon his land?—He would make what are called tenants' improvements; I daresay he might make those, but he would not carry on the landlord's improvements.

3818. Would not you think that he is very likely to make landlord's improvements?—I should not say so with a yearly agreement.

3819. Not if they paid no rent?—I do not think so.

3820. But the improvements were only 25 per cent. according to your figures just now of the net rental?—Practically that is the gross rental, because the landlord's charges have got to come off that, tithe, land tax, and so on. I am giving the actual rents as paid by the tenants; and then the landlord has got to pay all the usual charges, and in addition to those charges for tithe, taxes, and so on. He also spends that amount in repairs.

3821. But my point is this: you said just now that the landlord, if he got no rent, would not make improvements?—I said that he could not.

3822. But do not you think that the tenant would make improvements?—No, I do not think so.

3823. And would not the tenant be in a better position if he paid no rent at all?—He would be in a better position, certainly, but he would not then be in a position to go and spend money in improvements, because, as I think I have shown, or tried to show, it is more than a question of rent, pure and simple.

Remission of rents.

3824. Do you think if the tenants had the farms rent free that they could live?—Am I to answer these questions, sir, because if this is to appear in print, it is a little awkward.

3825. (*Chairman.*) Supposing you put your farms rent free, would they be taken?—Some would, and some, I think, would not. I have tried really to give you, as far as I can, my idea of the situation, not only from the landlord's point of view, which, of course, I represent, but I also represent a large body of farmers in this Farmers' Club, and, therefore, I have tried to give their views.

3826. (*Mr. Lambert.*) I quite agree that your evidence is very valuable, but my point is this, would the farmers be able to enjoy a moderate amount of prosperity if they paid no rent at all?—I think I have shown on an actual farm, on a statement given me by a farmer, whose name I am ready to give, that there has been such a fall in prices, even in the last ten years, that if you took off his rent altogether, he still would be out of pocket.

3827. And you think that the farmer is not justified, at present prices, in paying any rent at all?—I really cannot answer that, unless I am obliged.

Poultry farming.

3828. On the small farms, the chicken farms, as you call them, have rents been reduced in proportion to those large farms?—No, I should not say so, certainly. I daresay that there are a great many cases where there has been no reduction at all.

3829. Not on the small farms?—Not on those particular chicken farms.

3830. Why do you think that the labourers are unfit to take small holdings?—I think as a body they are not, but there are a certain number of the most intelligent of them, and the most hard-working of them, who are capable, and I think that they should have opportunities of taking small holdings.

3831. Why do not you think that they, as a general rule, are capable of improving their condition in a small holding?—To start with, as a rule, they have not got the capital. You must have a certain amount of capital; and then I do not think that they have got sufficient intelligence.

3832. Is the Agricultural Holdings Act an inducement to good or bad farming at the end of the tenancy?—I hardly know any cases where it has been used. It has been used in one or two cases.

3833. So that having been rather a failure in your neighbourhood, it has not been put into practical operation?—It has not been put into practical operation.

3834. Now with reference to the game. How do you let farms with regard to game; do the tenants have the right to kill ground game as they please, or only under the Ground Game Act?—Where the shooting is reserved they have only the right under the Ground Game Act.

3835. Would they appreciate a change giving them the right to kill ground game if they please?—I do not think any change is necessary. I think that they do kill it.

3836. But they are not allowed to except under the Ground Game Act?—But they do I think, excepting that they may not put traps in the open, that is all.

3837. And only one gun is allowed?—Yes.

3838. Do you think that the tenant farmers would appreciate a change of the law which would give them the right to kill ground game as they please?—No, I do not think that they would, because I think that they have practically got it.

3839. But as they have not actually got it, would not they appreciate a law making them have what they think they have got?—No, I do not think they would.

3840. (*Mr. Channing.*) I think you know a little about the experiment of Lord Hampden of collecting milk and dairy produce generally, and sending it to the large towns?—I know a certain amount of it, although I have had nothing to do with the dairy factory there.

3841. The only question is, in your opinion, does that experiment conduce to the well-being of the farmers in the neighbourhood?—It has conduced to the well-being of the farmers in the neighbourhood, particularly to the small men who send milk there.

3842. And otherwise some of them would be ousted from the markets or be in a worse position?—They would not sell it at all; it would be pretty much out of their reach; if it was not for the factory, they would not send a churn or half a churn of milk by the railway. They can send it in small quantities to the factory.

3843. You are in favour of agricultural co-operation in the distribution of produce?—I am in favour of creameries, and not factories.

3844. In this case you would use the separated milk on the farms?—I should have the cream sent in, and then I think that the separated milk would be used on the farms and prevent to a certain extent the adulteration in the town of new milk with separated milk.

3845. And the milk would be useful to the farmers in feeding stock and pigs and so on?—Certainly.

3846. In what years were these heavy reductions made on those various estates?—They have been going on gradually since 1878. In 1878 they began on these estates with abatements, and there were abatements given at each audit. Gradually the abatements have become permanent reductions.

3847. But in what year should you say these heavy reductions became permanent—before 1885 or 1886?—There was a large reduction in one estate in 1886, and then there have been reductions since then.

3848. But no heavy permanent reductions were made in 1880 or 1881?—In 1880 or 1881 I think that the abatements became reductions—about that time—perhaps in 1882. When the bad times first came the landlords began to give abatements, and those were followed by permanent reductions instead of the abatements.

Mr. W. F. Ingram.

7 Dec. 1893.

3849. (*Chairman.*) And that process has been continued?—That process has been continued.

3850. Abatements generally preceding reductions?—That is the kind of thing.

3851. (*Mr. Channing.*) But the immense reductions on Lord Chichester's estate—the greater part of them was not arrived at until some years after 1880?—No.

Payment of compensation.

3852. Now you speak of the time scale for compensation for improvements adopted by the valuers. Do you think that is sufficient to compensate tenants for the work that they do on their farms?—There are two scales as it were. There is the ordinary scale for the tenant-right valuation, and then another scale which has been arrived at for feeding stuffs, and boning land, and the application of lime, and that sort of thing, which is the second scale, and which has been put in force since the passing of the Agricultural Holdings Act.

3853. None of those scales would go very far back. They would not give to the farmer any compensation who had carried out continuous high farming for a long number of years?—No; you see with regard to that, our system was in Sussex to have payment for half manures and that sort of thing. That would be what you are referring to. These half manures have been generally bought up by the landlords because it was thought to be a bad thing.

Counter-claims.

3854. You spoke about the counter-claims and said, I think very justly, that the landlords ought to be protected from deterioration, but I suppose you are aware in practice, under the sixth section of the Agricultural Holdings Act, counter-claims have been made of the very widest description?—Yes.

3855. And you are probably aware that in arbitration cases, in cases under the Act, those counter-claims have been cut down enormously?—Yes.

Valuation.

3856. I understood you to say that your own practice was to schedule the condition of the land, and also the buildings so far as possible on the entry?—Not invariably.

3857. In certain cases?—Yes.

3858. The question I want to ask is this, whether you do not think that that system ought not to be adopted generally, so that the specific acts of injury to the farm, or the points in which the farm had been deteriorated by the neglect of the tenant, should be perfectly obvious on the face of the schedule of the condition of the farm to begin with?—I think it would be a very excellent thing indeed, and from the tenant's point of view that there is also injustice when he has a claim made on him for deterioration and sufficient notice is not taken of the fact that when he went in the land was in a bad state then, and that would prevent that injustice.

3859. So that it would be much better to have the whole condition of the farm ascertained beforehand and to have the actual counter-claim of the landlord limited in connexion with the certified condition?—That would be a very good plan.

3860. There is only one other question I want to ask you. You said that the farmers in East Sussex, in your neighbourhood, were disinclined to use the labour of men who had small holdings. I think I understood you to say that?—I think there is a difficulty as to that.

Labour and small holdings.

3861. You say that you want better labour. Is there any better way of getting good, strong, and sensible and skilled labourers, than giving them some occupation in the neighbourhood which would add to their wages?—No, certainly not, but that has been found to be a difficulty. I could give you an instance where that has been found to be a difficulty, where there was a lot of small holdings.

3862. You said the farmers did not think they get enough work out of the men?—Not enough work.

3863. (*Chairman.*) The men were working for themselves, that was the difficulty?—Yes.

Labourers cottages.

3864. (*Mr. Channing.*) I want to get from you whether you think that better cottages are the only means of keeping the best class of labour on the land, or whether you do not see your way to include small holdings as an inducement also?—I know that it has been found a difficulty. I know of a village where there were a great many small holdings, which have

Mr. W. F. Ingram. 7 Dec. 1893.

been going on for years and years. For 45 years the big farm there was occupied by one man, and the time that he held that farm he used to give those people who had a small holding employment, and they managed pretty well. The tenant died. A new tenant came in, and he tried employing these men for a little time, and then (he said so at all events) he found that it did not answer, because when he wanted to make his hay, and carry his hay, they were making and carrying theirs, and that therefore he did not care to employ them. He gave up employing them, and most of those small holdings have dropped to the ground.

Uncultivated land.

3865. (*Captain Thomas.*) Is there any land out of cultivation in your district?—No, I do not think I know any land out of cultivation, but I think one of the most serious aspects of the present crisis is, that the labour is so scamped that a great deal of land, particularly in the Weald of Sussex, is very nearly out of cultivation, and the enormous quantity of money that has been spent in drainage and other improvements is rapidly being lost in consequence.

Changes in tenancy.

3866. Are there many farms to let, or many farmed by owners themselves at the present time?—I do not think that there is a great deal of land farmed by owners themselves, and I do not think that there are a great many farms to let. There will be changes at Michaelmas in 1894, more than usual, owing to this bad time.

3867. When these changes take place do you expect to find the farms in bad condition?—Frightfully bad as a rule, and that is owing, I think, to the labour difficulty; although there is plenty of labour it is not good, and is dear, and therefore the labour is cut off.

3868. Are the landlords and tenants on fairly good terms?—Very good terms, I think.

3869. Are rents paid regularly?—Very fairly regularly, I think.

Arrears.

3870. Are many farmers in arrears?—No, very few, with the exception of those that I explained were this half-year in arrear, that is always so.

Mr. W. I Ingram. 7 Dec. 189

3871. How do you let farms when they become vacant, by tender, or how?—Generally by advertisement, or it is always well known that so-and-so is leaving, and his farm is to be let. If the farm is a pretty good one it is let without any advertisement as a rule.

The letting of farms.

3872. Is it let by the year, or on a lease, or how are the majority of the farms let?—They are all let by the year, no farmer will take a lease.

3873. The farmers will not take a lease?—No.

3874. (*Chairman.*) You have stated to me that the difficulty with regard to the large farms was finding farmers with sufficient capital to take them?—Yes.

3875. If you find a farmer with sufficient capital, do you think he can make a profit at the present rental?—One can only suppose that they would do so, or they would not keep on, but I am not enough in in their confidence—they do not tell me.

3876. You see the importance of the question?—I think that a great many of them are hanging on simply in the hope of better times, and I think that a good many of them are making nothing.

3877. At this moment?—At this moment, I am sorry to say, I think that is so.

Poultry farming.

3878. With regard to the small chicken farms, do those men produce the corn themselves—the food on which they feed the poultry, or do they buy it?—I should think that in the real chicken-farm districts they bought it.

3879. Then the low price of food is a very important element to them, is it not?—Certainly.

3880. And consequently the price of food would be a serious matter to them?—Yes, it would certainly, in certain things; supposing they fed on wheat and you raised the price of wheat, that would be a serious thing to them.

3881. Has the low price of food appreciably increased this particular industry?—No, I do not know that it has, it is a thing that spreads gradually, their neighbours have done pretty well at it, and they have a try.

The witness withdrew.

Mr. J. Martin.

Mr. JOSEPH MARTIN called and examined.

Mr. J. Martin.

3882. (*Chairman.*) Are you a farmer residing in Cambridge?—Yes, at Little Port, Isle of Ely.

3883. Are you a member of the Farmers' Association?—No.

3884. At whose request do you come here?—I believe the Chamber of Agriculture mentioned my name, and I think Mr. Little mentioned my name as well.

3885. Do you represent the views of the farmers in your district or only your own?—I represent perhaps both, because I was selected by the Chamber of Agriculture, though not a member of the Chamber of Agriculture, and they look upon me as a representative.

Size of farm.

3886. What sized farm have you?—1,500 acres.

3887. How long have you been a tenant in it?—I have grown grey in the service—a great many years.

3888. And you have 1,500 acres?—I have reduced it lately.

Reduction in rents.

3889. Has there been a considerable reduction of rent of late years?—What land I hold at the present time is my own and my family's subject to annuities and other charges. I am not much of a tenant farmer at the present time.

3890. You manage and cultivate your farm, I suppose?—Yes, I was a farmer and had 2,500 acres at one time.

Condition of agriculture.

3891. Will you describe the condition of things in your district during the last few years?—It is impossible to imagine anything worse than we are at present.

3892. (*Lord Cobham.*) Is that the fen district?—I represent the fen districts and a little high land adjoining the corn-growing districts.

3893. (*Chairman.*) Is it mainly wheat?—Wheat and other cereals. Wheat is the principal growth.

Causes of depression.

3894. Will you state briefly what your opinion is?—Well, I look upon it that the cause of depression arises from foreign importation, unrestricted competition, very much increased the last few years by unfavourable seasons, and of course the low price of corn.

Uncultivated lan

3895. Is there any land in your district out of cultivation?—Not a great deal out of cultivation; there are a few odd lots. I would just mention that in my neighbourhood there are small quantities, and a great many small owners, peasant proprietors you may say.

3896. Have they done better than the larger owners?—I do not think they have. I suppose small owners, with six, seven, or eight acres, let them to small farmers.

Reduction in rents.

3897. Has there been a great reduction of rent in those small holdings?—Not quite so much as in the large farms.

Changes i tenancy.

3898. Have there been changes of tenancy among them?—Considerable.

3899. A great many?—Yes.

3900. What do they grow?—Oats, wheat, and barley, perhaps they keep a cow, and that maintains the house

Protection

3901. They are not so much dependent upon the wheat as the large farmers?—Perhaps not. I suggest in the first place an increase in the price of produce. Of course I am not here to advocate Protection, because I do not approve of it; when there is only about one seventeenth of the produce grown that is necessary for our population we cannot ask for a tax upon wheat, but I am not prepared to say that it would not be desirable to put a tax on barley.

3902. Can you grow barley upon your farm?—Not much.

Price of barley.

3903. Then that would not help you much?—Not my own farm. I was informed that barley could be bought in London last week 28 stone 8 lbs. for 13*s.* 6*d.* or 14*s.*

3904. (*Mr. Whitehead.*) Is your barley good enough for malting?—I should think not as a rule

Mr. J. Martin.

iry ming.

tes.

or rate.

ghway e.

nd tax d tithes.

3905. (*Chairman.*) Have you kept careful accounts on your own farm for some years?—I have; I have not got any here.

3906. Could you lay before the Commission the results year by year on your farm?—I do not think I could do that, but I have no hesitation in saying that between 1879 and three years ago I lost 13,000*l.* in my own business. I should not like that to go out of this room, although I do not care much about it.

3907–8. And before that time you made profits?—Yes, the first part of my life.

3909. Up to what year?—It began in 1879.

3910. Have all the years been bad since then?—More or less. There have been some years when I have got on pretty well.

3911. Have you continued to farm your land in the same way?—I have altered my farm and gone a little into dairying, but not much.

3912. Have you laid down any grass?—Our country will not lay grass—the fen land.

3913. But still you have done more in dairying?—Yes.

3914. And grown less wheat?—Not until the last year or two, and I am sowing less this year.

3915. What other remedies do you suggest?—Well, of course, I look upon rent as being the last thing that is to be paid. I should suggest that the rates be made an imperial charge. When I say the rates I mean the turnpike roads, schools, lunatics, and also the school attendance, the whole of those to be imperial charges.

3916. Have you been able to get a reduction of the assessment on your farm?—I am chairman of the assessment committee at Ely, and a few years ago we took 20 per cent. off all the land, and within the last four or five years we took off 10 per cent., and the last 10 per cent. we took off houses as well as the land.

3917. Therefore you have had a reduction on the assessments of 30 per cent.?—Yes, 30 per cent.

3918. Is that equivalent to the general reduction of rent in the neighbourhood?—I am afraid not; I will give you examples of rent after a while.

3919. It is probable that the assessment committee will go further in that direction?—I think they will. I think they would treat cases as they arose. Anyone that applied for a reduction they would treat that case separately.

3920. Has the rate per pound remained the same, is it about stationary?—That has been increased.

3921. What has the increase been?—In 1870 the poor rates were 2*s.* 9*d.* in the pound; in 1892, the two half-yearly rates were 1*s.* rates; in 1870, the two half-yearly rates were 9*d.* each; in 1892, there were two rates of 1*s.* each; they have increased 35 per cent.

3922. How do you account for that increase?—There are so many things thrown upon the poor rates to what there used to be.

3923. Has the reduction of the assessment anything to do with it?—Not much, I should think, because there has been an increase of property added.

3924. There has been an increase in other respects?—Yes, factories, and one thing and another.

3925. Then the highway rates have been increased from one rate of 5*d.*, to two rates of 8*d.*?—That is a little to be explained, the extra highway rate, because in some parts we have improved the common occupation roads, and made them stone roads.

3926. Will you go on with your recommendations?—I should suggest that the land tax should be handed over to the county councils, and I think that the tithe wants a thorough revision. In some cases in my parish there is 12*s.* an acre tithe.

3927. (*Mr. Everett.*) Is that now, or the commutation?—That is the commuted sum.

3928. (*Chairman.*) Is it on the whole farm now?—My farm would be 5*s.*, or a little more. I should think 4*s.* an acre for everything.

3929. At the present time?—I am not speaking of my own when I speak of 12*s.*, but cases I know of.

3930. There has been a benefit from the reduction of the tithe?—I do not think they have suffered so much as the landowners.

3931. You have had some benefit?—25 per cent.; I think, too, that the county market return ought to be the basis on which the tithe is based for the locality. I do not know whether you follow me.

3932. The county markets, is it?—The return of the corn for the county market ought to be the basis on which the tithe in the locality is calculated.

3933. Instead of taking the whole imperial return?—Yes. We have an instance of that in Chatteris, between St. Ives and March. They have a special Act of Parliament under which they can apply at the quarter sessions, and they take the average of the Wisbech market for the seven preceding years, and then base the tithes upon that, and why I say that I think it ought to be based on the local markets, is this: in comparing the returns, with the imperial return, I find that in some cases the weekly return makes the imperial return 3*s.* 11*d.* more than the home return.

3934. What is the cause of this difference?—It is a difference in the quality of wheat. I find that in barley, in some cases, I can give you dates of the return, there is a difference of 6*s.* 1*d.* in the quarter of barley sold at Ely and the barley returned by the imperial return; and the difference in oats is 2*s.* 5*d.* per quarter.

3935. Would the alteration in this respect afford a substantial relief?—Every little helps; in my return of wheat in the year 1892—I have kept my own returns for 40 years pretty well—my own average prices in the year 1892 are 25*s.* 4*d.* per quarter, and the imperial return is 30*s.* 3*d.* per quarter. You must take this into account: I make my return from the harvest of 1892 up to 1893, and this would be from the January to January. I am only showing the difference.

3936. (*Mr. Giffen.*) You could not give us the corresponding figures for 1835?—I cannot go so far back as that.

3937. (*Chairman.*) Would that be of inferior quality?—It was a small yield, between five and six coomb, that is 2½ to 3 quarters an acre.

3938. In 1892 it was a bad quality?—It was a bad yield and a bad quality. I think the returns ought to be made by the growers, and not by the merchants. Of course these are all little things, but if returned by the merchants, the wheat will be returned three or four times, and most likely at an advance in value.

3939. What is the next point?—I think the tithes ought to be taken annually, and not septennially, and I think there is another hardship pressing upon the landlords in schedule A.; they are not allowed to make any reduction for repairs. I can give you these returns about the tithes if you like. I have put down large farms.

3940. What have you to say upon that?—It is very difficult to find tenants for large farms, because of the capital required; people will not invest in a losing concern.

3941. Has there been any tendency to break up the large farms into small ones?—I will allude to that. I will give an instance of a large farm that was let in the year 1878, consisting of 1,100 acres of land; the rent was then 2,000*l.*, and the tithe 300*l.*, all paid by the tenant; his gross payment was then 2,300*l.* He entered upon that farm in 1878, and the farm was in a bad state, and he paid the outgoing tenant a premium of 500*l.*; that farm is now reduced two-thirds.

3942. When you speak of a premium of 500*l.*, what do you mean?—It was for the goodwill, it was for the privilege of taking the farm, and he paid the tenant's value afterwards.

3943. Was it a lease then?—I really cannot say that. I do not think it was; but I cannot say. It is now reduced two-thirds, and the tithe in addition to the reduction is paid by the landlord.

3944. Do you mean to say that he pays only 700*l.* a year?—That is it, and the landlord pays the tithe.

3945. The landlord's share is reduced from 2,000*l.* to 300*l.*?—No, the tithe would not be so much as it was then—about 400*l.* or 450*l.*—the tithe would not be more than 250*l.* now. As a rule, I believe larger farms are farmed better than smaller ones where you can get tenants; they employ more labour, make more meat, and keep a larger amount of sheep and cattle. Now I should like to give an instance of the selling value of the farm. 880 acres of land cost, about 14 years ago, 23,000*l.*, the amount expended upon the buildings and

Mr. J. Martin.

7 Dec. 1893.

Tithes and the corn returns.

The letting of large farms.

Mr. J. Martin. 7 Dec. 1893.

house was 5,000*l.*, since the purchase. It was mortgaged at the time for 20,000*l.*, leaving a margin of 8,000*l.* In 1891 the owner died.

3946. Did the owner farm it himself?—Yes, he had let it, but the tenant left it and he farmed it himself. They could neither sell nor let it, and they advertised it; the mortgagees took possession, and they have got it now. The farm adjoining was sold last year, quite as good land, and it made about 10*l.* an acre, and if this farm were valued at the same price it would make a loss of 19,200*l.* in about 12 years.

3947. Have the mortgagees been able to let it?—No.

3948. Do they farm it themselves?—They farm it themselves. Some land in my own parish in 1879 was let to three or four tenants at 30*s.* an acre, the tenant paying the tithe and the drainage tax; it is now let to a man at 10*s.* and 12*s.* 6*d.* an acre, the landlord paying the tithe.

3949. Are these farms suitable only for the growing of wheat?—Only for the growing of wheat and corn and cereals.

Small holdings.

3950. Mainly wheat?—Mainly wheat. Small farms are more easily let, because tenants with a family, with one or two lads do all the work. As a rule buildings on these small occupations are neglected by the tenants. The rents have fallen from 75 to 25 per cent. on these small farms. I will give you two or three very short examples. In 1872 404 acres were let on lease for 450*l.*, the landlord paying the tithe and drainage tax—for the year 1890 the net rent paid was 360*l.* In 1892 the same farm was let to the same tenant for 150*l.* gross; deduct tithe and tax 75*l.*, and that gives a net income to the landlord of 75*l.* (of course he has to do repairs); instead of 360*l.*, nearly a reduction of 80 per cent., and this adjoins a hard road, and is within two miles of a railway station on the main line.

3951. (*Lord Cobham.*) Has it got any permanent grass on it?—Not a great deal. I would give another instance: 273 acres in 1876 made 360*l.*, tithe and drainage tax deducted 54*l.* 12*s.* 0*d.*; at that time the rent was 305*l.* 8*s.* 0*d.*; in 1892 it was let for 143*l.* tithe and drainage tax 54*l.* 12*s.* 0*d.*; income 88*l.* 8*s.* 0*d.*, a reduction of 70 per cent.

3952. (*Chairman.*) With regard to those farms do you know those farms yourself?—I think I do.

3953. Can the tenants with that reduction pay their way?—I do not think they will. I think they are inclined to give up. Then there are 400 acres within a mile and half of a church and schools just built, and a railway station; the rent formerly was 400*l.* and now it is 100*l.*, that is 75 per cent. reduction.

3954. And these cases occur within your own Union?—They are within six miles of my house.

3955. Are they cases which would come before your assessment committee?—I do not think that they would. There is only one that would come before the assessment committee and that is in a separate parish, and I do not think that would even.

3956. (*Lord Cobham.*) You are not speaking exclusively of a fen farm?—This large farm that I speak of is not fen land, but I can give an instance of high land the same. The small farms as a rule keep no sheep, and not a large quantity of cattle, and that is a consideration because you get no meat for the people. There are a great many small holdings in my parish, but as a rule they have no premises on them; a man will buy a small piece of six acres, he will put a house and a few premises on it, and then he will hire two or three lots so as to make up his holding. My district is very peculiar because it was formerly all sea; it has been reclaimed and drained artificially, and then there are small quantities of land, 6, 7, 8, 10, and 20 acres. In the small holdings all the work is done by the tenants and, as a rule, they keep no animal except a pig and a cow.

3957. (*Chairman.*) What sized holdings are you speaking of now?—Well, they vary from 5 acres up to 50 acres. But I was going to say that 193 tenants in my parish occupy between 5 acres and 90 acres.

3958. Are those men living wholly upon the land?—Some are and some are not. It is rather against us as farmers. They have perhaps ground and they want to go and till their ground when we want them.

3959. What is the smallest amount of land that men occupy who live wholly by the land?—From 20 to 25 acres.

3960. Are there many?—Several.

Mr. J. Martin. 7 Dec. 1893.

3961. (*Mr. Everett.*) How many of those farmers are there in your parish?—193 men with between 5 acres and 90 acres.

3962. (*Chairman.*) Men who are occupying less than that have to supplement their work by going out as labourers to others?—Yes.

3963. But you find there is a difficulty very often that when their services are wanted they are tilling their own ground?—That is just it. We have a great many allotments. The feoffees, who are a charity, let 186 allotments of an acre and more.

3964. Is there much demand for them?—A very fair demand. The feoffees pay all outgoings, and they charge from 42*s.* to 20*s.* per acre.

3965. Have those rents been reduced during the bad times or not?—They are considerably less than they were.

3966. But in the same proportion as the others?—In the same proportion as the others. We have not had so many allotments till the last six, seven, or eight years.

3967. So that you cannot compare them?—No.

3968. The rent seems a fair one?—It is not extravagant.

3969. But it is not very low?—We have to pay 6*s.* and 7*s.* an acre for drainage and the tithes and outgoings; they pay nothing but the rent.

3970. (*Lord Cobham.*) What do they grow, potatoes and cabbages?—Yes.

3971. Wheat?—A little barley and a little wheat. And then there are some benefit clubs, which also purchase land, and they let their land in allotments as well.

3972. (*Chairman.*) Do the labourers gradually rise from the cultivation of allotments to small holdings, and then go on to larger farms?—Some do. I do not know whether you would like a little analysis of the parish which I have got here (*handing in the same*).

3973. It is the parish of Littleport. There are four farms above 1,000 acres, three farms between 500 acres and 1,000 acres, and four farms between 100 acres and 500 acres, and all the others are small holdings?—I think the next point is the future of the land, is not it?

3974. Yes?—Unless we have a very different price of corn a great deal of land must go out of cultivation, as far as the growth of cereals is concerned, and merely return to grass; the result of that will be that the labouring population will be driven into the towns.

3975. Will that apply equally to the small holdings that you spoke of?—They employ no labour on the small holdings, and the man works his holding with his own family.

3976. I mean the change in cultivation?—As Mr. Birt once told me when I asked about the railway, he said, "It does not pay," and the growing of corn does not pay, and we shall not grow corn if it does not pay.

3977. You are going on to say something about small holdings?—I mean 50 acres, and 90 acres, and 150 acres, they do the work themselves. To turn the large farms into small holdings means expending a large amount of capital.

3978. (*Lord Cobham.*) What is the drainage tax?—It varies, in some places it is 7*s.* an acre, and in my own particular district it is a little under 2*s.*, it varies considerably according to the season. If it is a very wet season a large amount of course is spent in draining the land by the purchase of coal.

3979. As the land goes out of cultivation, the drainage tax would not have to be paid?—No, but we are obliged to do it. 150 years gone by a great deal of land was sold for the payment of taxes.

3980. (*Chairman.*) This return that I have in my hand is a return of about 200 holdings of between 10 acres and 100 acres?—Yes.

3981. Of which 170 are between 10 acres and 50 acres. I want to know with regard to those holdings, whether they will be able to cultivate them?—If I speak what I know, they are very much behind in the rents where it ought to have been paid. I do not know whether they can pay or not. No doubt they are in a better position than a day labourer.

3982. Have they struck out new lines of cultivation?—There is not that kind of thing in our district.

3983. There has been no cultivation of fruit in your district?—Not in my particular district; around Wisbech and other places there has been to a large extent. I do not think it would answer in our district.

3984. Why is that?—It wants silty land, and ours is more a black moor.

3985. What else have you got to say?—I should be happy to answer any question; I do not know of anything else.

3986. (*Mr. Channing.*) Are you near Histon, that part of Cambridge?—No; I am not very near, perhaps 15 miles off I should think.

3987. (*Mr. Lambert.*) You said you had lost 14,000*l.*; was that as a tenant?—Partly as a tenant and partly as a landlord.

3988. How much have you lost as a tenant?—I do not know. I cannot tell you, because I kept the accounts together as the tenant and landlord.

3989. Could you give an approximate estimate?—I could not.

3990. Did you lose anything as a tenant?—I did. You get sometimes as I did in one or two years. In 1892 I grew five coomb an acre, 2½ quarters, and sometimes it was worth 11*s.* per coomb; that would pay expenses.

3991. You cannot give an answer as to how much you lost as a tenant?—No.

3992. You said that people will not invest in a losing concern—why?—Because it will not pay.

3993. Presuming there are no outgoings and no rent, would it pay then to farm?—No rent, no tithes, and no taxes it might pay.

3994. Presuming that there was no rent to pay, do you think it would pay then?—I do not think you could make it pay at the present price.

3995. So that all the rent the farmers are paying is really being paid out of their own pockets?—I think the major part is. I will give you an instance of a piece of high land, 15 acres of barley, and 3 acres produced 50 coomb at 13*s.* per coomb.

3996. The major part of the rent is being paid out of the farmers' capital?—I think so.

3997. You said in years gone by land was sold merely for the payment of taxes; have you any proof of that?—It is only what I have heard. I believe there are records which state it.

3998. So that really land has gone up from that amount, merely the payment of taxes to prices that you have quoted in 1873?—But when it was sold for the payment of taxes the land was undrained and uncultivated; it was a wild morass.

3999. (*Mr. Little.*) You have had a good deal of experience as a landlord, as a tenant, as an occupying owner, and as a general adviser?—I have.

4000. In all those capacities?—I have.

4001. I do not know whether you have acted as agent, but you have constantly been called upon to advise members of your own family and others both as tenants and as landlords?—I have.

4002. As regards the district which you come from, it is a district I know very well. I think I may put it that it is one of very varied ownership and occupation?—Yes, and quality too.

4003. And there are all classes of owners and all classes of occupiers, are there not?—Yes.

4004. A great proportion of the owners would be middle-class people?—Yes.

4005. And widows?—A great many widows.

4006. Generally representatives of people who want investments?—Yes.

4007. Very few of the "bloated aristocrats" are about, I believe?—There is only one peer that has any land.

4008. A great deal of the land has been tilled by farmers in previous years who bought their occupations?—Yes.

4009. And left them to their families?—Yes.

4010. The fen land has been made entirely by the application of capital?—Yes.

4011. It would be worthless if it had not been for the expenditure of the capital?—Certainly. *Mr. J. Martin.* 7 Dec. 1893.

4012. And maintained in its present condition by continual outlay, in keeping up banks, and draining?—Yes.

4013. That is an annual cost?—Yes.

4014. If that were neglected for a very short time the land would revert to a condition of absolute worthlessness?—Water, I think, in some cases.

4015. The division of land was made in the seventeenth century?—It was.

4016. Lots of land were given to the owners of commonable messuages, in doles of 6 to 10 acres each?—Yes.

4017. And those have remained small properties?—Yes, called adventurers.

4018. They generally have not been amalgamated?—No.

4019. There have been always a large number of small holdings?—Yes. Large and small farms compared.

4020. Is it your opinion that small holders have been uniformly more successful than the large owners?—Up to recent times I should say not, but latterly I think they have been.

4021. Would you say that they have been as improving as the larger farmers?—Certainly not.

4022. Would the drainage works have ever been carried out by small proprietors?—They are always cheeseparing whenever we have our meetings.

4023. Having this experience which you spoke of as a landlord and as a tenant and occupying owner do you think the land laws have had any appreciable effect in producing this depression?—No; I do not know how you mean exactly. Landlords and tenants.

4024. Has the law of the land as regards the landowner—the devolution of land—had any effect?—I should say not.

4025. You are not aware from your experience?—Not at all.

4026. Has it had an appreciable effect in this depression?—It has not.

4027. Has the relation of the landlord and tenant been satisfactory?—I think the understanding is very satisfactory, and the terms upon which the land is let are as satisfactory as they can be.

4028. Is it usual to let land verbally without a written agreement?—Very often from year to year. Yearly agreements.

4029. Is it usual to restrain the tenant as regards the course of his crops, and the sale of his produce?—Yes, to a certain extent.

4030. They have the right to remove the produce, or to consume it?—Yes. Freedom of cultivation.

4031. And this freedom of cultivation and sale of produce has not prevented the farmers from feeling the great depression?—No, certainly not.

4032. Then, in your case, and in the case of a great many of your neighbours, you would not say that an alteration in the land laws, or in the law between landlord and tenant, would be of any great benefit?—I cannot suggest any alteration; the only alteration is a better price for the produce.

4033. I do not know whether you are aware of the return which was recently issued of the amount of the rates at different periods?—No, I am not aware of it. Rates.

4034. Because that would tend to show that the rates had diminished in amount?—I have not seen it.

4035. The highway rates have risen in your parish in consequence of improvements?—Yes, within the last 15 years we have made miles of occupation road, which was really soft road, into hard road.

4036. And that is not a subject of complaint?—That is for your own benefit; it is for the benefit of the occupiers.

4037. (*Mr. Giffen.*) Can you give us any particulars of that loss of 14,000*l.* you mentioned; in what way your balances were made up showing the loss?—In 1879 we had an awful harvest, and what I lost that year was not quite all the money, but a great loss. Losses in farming.

4038. What I am aiming at is to know if you could state the loss. Is it a loss that appears in a balance-sheet?—I always make a valuation at the beginning of every year, and I value all stock and produce and

Mr. J. Martin.

7 Dec. 1893.

everything; and if I had known that you wished to ask me that question I would have brought up my books.

4039. If you had begun the valuation in 1879, so much stock and produce at a certain price, and left off at a later date with the stock and produce at a lower price, then a part of the loss is simply that you have got the same things at less prices, it is not actual loss?—As a rule, when I make the valuation I generally make the same amount of cattle in live stock one year to compare with another, because as it is floating capital I do not take advantage of it, so that I keep the stock at the same amount of money.

4040. It is a cash loss?—It is a cash loss.

Tithes and the corn returns.

4041. Then you would like to see the tithe upon the local price?—Yes.

4042. You simply base your idea upon the fact that these local prices are less now than the imperial prices?—No.

4043. It would be very much in your favour?—I do this because our produce is of inferior quality.

4044. But the difference would be so much in your favour?—It would be in our favour.

4045. Have you considered the question that in the original tithe commutation, if you had based the commutation upon the local prices, you might not be any better off than with the imperial prices?—I do not know that we should not.

4046. But you have not considered that point?—No.

Drainage rates.

4047. (*Sir Nigel Kingscote.*) Do you pay a drainage rate?—Yes.

4048. Is it a heavy one in Littleport?—I am a chairman of the district; it is 2*s.* an acre. This is for draining of the land, pumping the water into the river; that is the plain English of it.

4049. I suppose the tenant has to pay that as a rule?—Not as a rule; the landlord pays it. Of course it is a matter of agreement, but as a rule the landlord has to pay.

Farms in hand.

4050. (*Lord Cobham.*) Are there many farms vacant?—Several are kept by the landlords who cannot let them.

4051. Is the amount of land increasing or diminishing?—I do not think there is much difference, There are a great many notices given to leave next Michaelmas.

Sale of straw.

4052. Do you sell your straw and hay off?—I do a little. There is no restriction; they do as they like.

4053. Is there a sale of straw?—Just this year.

4054. But not as a rule?—I tried of course this year.

4055. Would it stand the carriage to London?—We sell it to dealers on the spot, and they send it to different places.

Yield of farm since 1886.

4056. (*Chairman.*) Was the yield of your farm very bad in 1892?—Yes.

4057. And again this year?—It is better this year. We have no oats or barley.

4058. Is your produce very bad this year?—Oats and barley a fair yield.

4059. And the prices are very low?—Yes.

4060. Excepting those two bad years 1892 and 1893, do you think that you would have incurred a loss in the last six or seven years?—I think I should. The price is nothing; if you get a fair crop the price is so low that there is no margin.

4061. I wanted to know your experience. Substracting the last two years, what was your experience of the last six or seven years?—Two or three years ago I maintained my position, but the last two years I have lost, and previous to the last two years, for two or three years previously I maintained my position.

Mr. Mart

7 Dec. 1

4062. (*Mr. Little.*) I think you said you could furnish us with the exact yield of your land?—I can get it, but I have not got it.

4063. (*Chairman.*) I should like to see your results for each year?—I will let you have them. (*See* Appendix A., XII.)

Small holding

4064. I see from the figures you have laid before us that nearly one third of the whole parish, which I think is 16,000 acres, is held in small holdings?—I believe it is.

4065. To estimate what they have done it is a very material question to ascertain whether they have done better than the larger farmers?—I do not think there is much in it.

4066. I thought they had done better in this respect that they had not suffered so much from the labour question?—Because they have done the labour themselves and they live off the allotments, or whatever they can.

4067. I presume also they grow a less proportion of corn?—They do grow a less proportion of corn but they make no beef or mutton. It is entirely grown to feed the pigs and cows.

4068. They grow for themselves?—That is it.

4069. For their own consumption?—That is so.

4070. And therefore the outgoings are not so seriously reduced?—No.

4071. They do not sell a large quantity of corn?—They have not it to sell.

4072. What do they sell?—It depends on what the corn is.

4073. Have the pigs the potatoes?—Yes.

4074. And it is possible that they may not be so seriously affected by the low price of corn?—They have no Friday to contend with and we have, and that makes all the difference. They have no wages to pay.

4075. (*Lord Cobham.*) You would be worse off for labour without these allotments?—I do not think so.

4076. Does not it keep the labour in the parish?—I do not think so.

4077. (*Mr. Everett.*) When was this land reclaimed?—About 1660.

Tithes.

4078. You spoke of the tithe on this land; how comes that to be titheable?—That is a question; when it was titheable.

4079. It was titheable by Act of Parliament?—It was a matter of arrangement, confirmed perhaps under the Commutation.

4080. It was tithed under the Common Law of the country was it?—I do not know. It has always been a question to me how they could get the tithe there.

4081. It was not given by pious donors?—No, because this land was all water.

4082. All the land was water?—I understand that when one of the mains was cut Dutchmen were engaged to carry out the work and carried the earth in baskets on their heads. This was about the year 1660.

4083. Do you know what happened to this land between the years 1820 and 1840, because we had a very similar fall in prices then? Do you happen to know anything about that period?—Something like the depression now though not so severe.

4084. It did not go out of cultivation then?—No.

The witness withdrew.

Adjourned to to-morrow at 12 o'clock.

Ninth Day.

Friday, 8th December 1893.

PRESENT:

The Right Hon. GEORGE JOHN SHAW-LEFEVRE, M.P., in the Chair.

Viscount Cobham.
The Right Hon. Baron Vernon.
Sir Robert Nigel Fitzhardinge Kingscote, K.C.B.
Robert Giffen, Esq., C.B.
Captain Owen Thomas.
Francis Allston Channing, Esq., M.P.
John Clay, Esq.
Cornelius Neale Dalton, Esq.
Robert Lacey Everett, Esq., M.P.
John Gilmour, Esq.
George Lambert, Esq., M.P.
William Cutlack Little, Esq.
Walter Hume Long, Esq., M.P.
Charles Whitehead, Esq., F.L.S.

Herbert Lyon, Esq., *Secretary.*
R. F. Crawford, Esq., *Assistant Secretary.*

Sir Gardner Engleheart, C.B., and Mr. John Leonard Bolden, called and examined.

Sir G. Engleheart, C.B., and Mr. J. L. Bolden.

8 Dec. 1893.

Agreements.

4085. (*Chairman to Sir Gardner Engleheart.*) You are Clerk of the Council and Registrar to the Duchy of Lancaster?—Yes.

4086. And you have held that position for 20 years?—Since the early part of 1872.

4087. And who is the gentleman with you?—Mr. Bolden is the Surveyor-General, and has been so since about 1886.

4088. Were you examined before the Duke of Richmond's Commission in 1880?—I was.

4089. And the gentleman who then held the position of Surveyor-General was then examined?—Yes, Mr. Cartwright.

4090. The Commission do not wish to go over the ground that you went over on that occasion, and therefore I will ask you general questions. You then stated to the Duke of Richmond's Commission that the agricultural estates of the Duchy of Lancaster consisted of about 35,000 acres, of which 32,000 was land let in farms?—Yes.

4091. And that they were scattered over 13 different counties?—Yes.

4092. But that the chief estates were in Lancashire, Yorkshire, Staffordshire, and Middlesex?—Yes, but it is slightly altered now. We have sold nearly 2,000 acres in the last 13 years, and the total amount is now 33,000 and a few odd acres, of which part is wood. We have rather extended the woodland to 2,300 acres.

4093. Is that property held as farm property?—It was partly farm property and partly beneficial holdings.

4094. What do you mean by "beneficial holdings"?—It was let on long leases, sometimes with a premium when the lease was originally granted, and it has been since improved.

4095. I think you stated in 1880 that the greater part of this property, in fact with small exceptions, was then let on lease?—Yes; but in this respect the greatest change has taken place.

4096. I wanted to ask you if a considerable change has taken place in the interval?—Yes. About seven-eighths was then let on lease and one-eighth in yearly holdings. Now the proportions are entirely altered, and two-thirds of the whole property is let on yearly tenancy and only one-third on lease.

4097. In the interval the leases on a large portion of the property have fallen in and the tenants have not been willing to renew them but remain on as tenants from year to year?—We never renew beneficial leases but take advantage of the termination of the lease to let the farms to tenants from year to year.

4098. What was the proportion of beneficial leases?—The proportion of the beneficial leases to rackrent in 1880 was about 15 to 17, the 15 represents the beneficial leases.

4099. The beneficial leases have fallen in and you have not renewed them?—They have fallen in, except to the extent of 1,250 acres.

4100. In the case of the ordinary leases have they fallen in in the interval?—Some of them have, and have been renewed to other farmers.

4101. Have you found it possible to renew the leases or are the farmers unwilling to renew the leases?—We hardly ever give leases; we almost always give yearly tenancies.

4102. Is that because the tenants are unwilling or is it as a matter of policy that you do that?—We do not object. It arises partly from the security which was sought formerly in a long lease being now gained under the Agricultural Holdings Act, and partly that they take very short views of agricultural life, and like to be free to be off.

4103. They are rather afraid of the future?—They are afraid of the future.

Rent.

4104. I think you stated in 1880 that the average holding was about 150 acres and that the average rent then of those, excluding the beneficial holdings, was about 1*l.* 1*s.* 3*d.*?—That was only upon some selected estates. Three estates were selected.

4105. They were given as samples of the estates where there were no beneficial holdings?—Quite so.

4106. And, therefore, they give a fair average of what the rent was?—Yes. We have now selected three estates. We could not select the same for many reasons. We have tabulated them, and I propose to hand them in if you would like to see them. (*See* Appendix A., XIII.)

Reductions in rent.

4107. Since 1880 the depression I suppose has been severely felt on your property?—Very much so.

4108. Will you state what has been your experience during that time?—You mean in the depreciation of the rent?

4109. In the fall of rent?—Taking the whole estates with this diminished acreage I think you will find that the average, than which nothing is more deceptive, was 17*s.* 6*d.* per acre upon the 35,000 acres in 1880, and now, I think it has fallen 1*s.* upon the 33,000 acres; it is about 16*s.* 5*d.* As I said before, it really is most deceptive.

4110. The comparison is fallacious because the former figure included a very large amount of beneficial leases?—No doubt.

4111. Of which the rent was small in proportion to the value of the land?—No doubt.

4112. Apparently a considerable number of those leases has fallen in, but notwithstanding that the rent has been reduced by 1*s.* per acre; but that would not give a fair comparison of what the real effect has been?—I think I could give it more closely than that. Taking the present rackrent and excluding the land which we

Sir G. Engleheart, C.B., and Mr. J. L. Bolden.

8 Dec. 1893.

have in hand, and excluding moor lands, which are merely shooting properties I think the average rackrent is about 1*l.* 6*s.* per acre.

4113. It is that now?—It is that now, and I think in 1880 it was 1*l.* 5*s.* per acre. I think it has slightly increased, but then, as I said before, the beneficial holdings, having fallen in, made the problem very difficult to work out.

4114. You are not comparing like with like?—It is almost impossible to compare like with like.

4115. We must confine ourselves rather more to generalities, without attempting to compare the state of things now with those of 1880?—I think Mr. Bolden will be able to give you more information upon particular estates than I can pretend to, because he is more in touch with the matter.

4116. (*To Mr. Bolden.*) Perhaps you can give a comparison as to the present position as compared with that of 1880?—May I hand in some tabulated statements? I refer to them in that paper which you have there, and there they are all (*handing in the same*). These are the Duchy farm leases.

Acreage and rental.

4117. I cannot go through the figures, but you would perhaps tell us the general effect of them?—The total acreage is 33,264 acres divided into 13 counties, and the total rent, exclusive of fee-farm rents and quit-rents, and rents of quarries, foreshore, and encroachments, 47,827*l.*; the acreage of the agricultural lands is 24,116, and the rent is 20,402*l.* (*See* Appendix A., XV.)

4118. (*Lord Vernon.*) Does that include woods and water?—No.

4119. Is it purely cultivated land?—No, it takes in about 7,000 acres of moor-land farms in Yorkshire; but it is exceedingly difficult to separate them.

4120. Is that 4,000 acres let on rackrent now?—The amount of rackrent is 17,000*l.* odd. (*Mr. Bolden.*) Excluding moorland, the rent is 19,800*l.*

4121. (*Chairman.*) Can you compare the present state of things with what it was eight years ago?—Yes.

Estate in Staffordshire: reduction in rent.

4122. Will you give it to us; does that include shooting rent?—The tenants have all the shooting. In Staffordshire I think you must go back 20 years, and you must take it that the average reduction in rent in Staffordshire is something like 25 per cent.

4123. (*Lord Vernon.*) Is that in Needwood Forest?—That is in Needwood Forest.

4124. (*Chairman.*) What is the size of that estate?—3,500 acres.

4125. And going back 20 years the reduction is 25 per cent.?—Yes. I think you must go back something like 20 years.

4126. Since then the reductions began?—There were temporary allowances made from about 1878, when the bad time began—1878 and 1879—and these temporary allowances went up to 1887; then the rents were revised and a new valuation was made, and the rents were permanently reduced.

4127. Has there been any further reduction since those abatements?—Not much.

Position of the tenants.

4128. Have the tenants paid their rents fairly well since then?—Yes.

4129. Have there been many changes of occupation?—Very few—scarcely any.

4130. Are we to take it that, in your opinion, the rents are such as the tenants can fairly pay?—I think so. I made the valuation myself.

4131. Have you any land in hand there?—No. (*Sir Gardner Engleheart.*) Last year, after the audits, the whole arrear in Staffordshire was 2*l.*

4132. (*Lord Vernon to Mr. Bolden.*) What is the average of that land in Staffordshire?—I do not think you could take an average; the farms vary so very much indeed. It is mostly grass land—some of it very poor, and some of it pretty good. It would be very fallacious to give an average.

4133. (*Lord Cobham.*) Are there no arrears to write off?—In Staffordshire none. Last year there was nothing.

4134. In 20 years you must have knocked off something?—Yes.

Total acreage and rental.

4135. (*Mr. Giffen.*) What is the total rent in Staffordshire?—Do you mean in the purely agricultural part?

4136. Of that 3,500 acres?—4,500*l.*

Sir G. Engleheart, C.B., and Mr. J. Bolden.

8 Dec. 1

4137. (*Lord Vernon.*) Is the whole of the Needwood Forest included in that acreage?—No; Needwood Forest has been divided into a number of different holdings.

4138. What you own in Needwood Forest is included in that?—Yes.

4139. There is a very considerable acreage of woodland there?—But I have not included woodland, there are 1147 acres of woods. To be perfectly accurate it is 3,600 acres, and the rent is 4,504*l.* now.

4140. (*Mr. Everett.*) Is it mostly grassland?—Yes, mostly.

Reductic in rent.

4141. (*Lord Vernon.*) When did the drop of 25 per cent. take place principally?—There were temporary allowances made from 1878 and 1879 up to 1887. The allowances I should think have varied from 15 to 25 per cent. Then the farms were re-valued, and what was then a temporary allowance was made into a permanent reduction.

4142. (*Chairman.*) And there have not been more than the average changes of occupation?—No.

4143. (*Mr. Lambert.*) Can you give the extreme reductions in both instances, the lesser and the greater reduction upon a single farm?—The most is 50 per cent. in the case of a farm of 159 acres which was reduced from 158*l.* to 80*l.*

4144. (*Chairman.*) That is the extreme reduction?—Yes.

4145. Then in the others the reduction must have been less than 25 per cent.?—Yes; the average reduction was something like 22 per cent., and from that to 25 per cent.; the lowest was 15 per cent., that was nearly all grass.

Shooting rights.

4146. And the tenants in all these cases have the shooting?—Yes.

4147. Do they let their shooting or keep it?—As a rule they let it.

Estate in Lancashir Rent.

4148. Can you give us another illustration from another part of the country?—Take an estate in Lancashire, Myerscough (*see* Appendix A., XIII). 1,382 acres, that was let out on a beneficial lease until 1886, and I cannot tell you what the rent was exactly, or what the reductions were. I know what the tenant lessee got for it, I know what the middleman got in 1886, and I know what the rent is now; but I do not know what reductions were made.

4149. Then it was held by a middleman from you, who sub-let it to farmers?—Yes.

4150. And what was the rent he was able to get?—In 1886 when it fell in hand his rental was 2,572*l.* I know he made some temporary allowances, I believe about 10 per cent.

Expenditure on improvements.

4151. What are the rents now?—We have made an expenditure of 13,000*l.* upon it, I am speaking in round figures.

4152. In improvements?—In improvements; in respect to the drainage we had a very great difficulty in getting an outfall from the water, and expensive pumping machinery was required. We did a great deal of ordinary fixed draining in addition, and put a number of new buildings up, and that was the total outlay of capital. If you deduct 5 per cent. for the outlay made on capital——

4153. Is that what you charge the tenants?—No, we do not charge them anything.

Rent.

4154. That, I suppose, was on account of the difficulty of the times, but ordinarily what would you charge the tenants for improvements?—Every case would be treated on its own merits. I do not think I can give a general answer. After deducting 5 per cent. interest upon the capital employed, and after deducting what we have to pay annually—the cost of our pumping engines and the engineer's wages—our rent now comes out at 2,201*l.* That makes a reduction of 33 per per cent.

4155. (*Mr. Lambert.*) I have got it 2,552*l.*?—It was 2,572*l.* in 1886.

Expenditure on improvements.

4156. (*Chairman.*) What is the actual rent that you are now receiving? Is that 2201*l.*?—2,365*l.* is the gross; off that has to come 164*l.*, the average annual cost of the pumping and the man's wages. (*Sir*

Gardner Engleheart.) As to the 5 per cent., we take from our Consol Fund to make these improvements. In theory we ought to give Her Majesty 2¾ per cent. on those Consols so taken, and at the same time to establish a sinking fund, which in a certain number of years would produce the capital so expended, and the 5 per cent. is to cover both those.

4157. (*Lord Cobham.*) How many years does it take you to replace that borrowed capital?—For the buildings it is perhaps 40 or 50 years, and for the drainage 20 or 25 years. It depends upon the nature of the improvement.

4158. (*Chairman to Mr. Bolden.*) Is this property grass?—It is partly grass and partly arable.

4159. Then the actual reductions of rent have not been considerable to the tenants, but you have improved their position by that large outlay?—Yes.

Changes of tenancy.

4160. Have there been many changes of occupation there or not?—Very few. One man gave up his farm and we divided it into two, and the other tenancies have simply been family changes; for instance, one man gave up to his brother.

Size of farms.

4161. What is the average size of the farms? Is the average small?—I will tell you the size of the farms. There was one farm of 300 acres, another of 165 acres, and the others vary from 111 acres down to 14 acres.

4162. They are generally small farms?—Yes.

4163. I suppose there is no land in hand there?—No.

4164. Have the tenants all round paid their rents?—Yes, all but one.

4165. And in the one case where there has been a change you split it up into two?—Yes.

4166. And you found it desirable to do so?—Yes.

Estate in Lincolnshire.

4167. Will you now go on to your other farms?—There is another estate in Lincolnshire (*see* Appendix A., XIII). In 1880 the acreage was 876 acres; the gross rent in 1880 was 1,076*l.*, and the rent now is 944*l.*, and there has been an outlay on improvements of 2,000*l.*

Reductions in rent.

4168. The reductions of rent have not been considerable there?—About 19 per cent., I think, it works out.

4169. Does it work out at 19 per cent. if you take into account the interest on improvements?—Yes.

4170. (*Mr. Everett.*) Is that grass or arable?—Mixed, chiefly arable.

4171. (*Sir Nigel Kingscote.*) Whereabouts is it?—In Lincolnshire. They are scattered farms; there are five of them, and some of them are in what is called the East Fen, one in Midville, and some near New Bolingbroke.

4172. (*Mr. Little.*) That is fen land?—It is fen land.

4173. (*Chairman.*) Have the tenants lately paid all their rent?—Yes, there is nothing owing.

4174. Have there been temporary abatements quite lately?—Last year.

4175. And this year, will it be necessary to make abatements?—No, I got the rent the other day.

Changes of tenancy.

4176. Have there been any changes of occupation there?—One person got old and asked to transfer the lease to another tenant.

4177. But have there been any changes of tenants beyond that?—Not since 1885.

4178. Now let us have one other estate, a considerable estate?—You have got the three we took down, Needwood, Myerscough, and one in Norfolk (*see* Appendix A., XIII).

4179. I want to know about Norfolk and Yorkshire?—I can give a number of farms and a comparison of individual farms.

Estate in Yorkshire.

4180. The general result of Yorkshire we should like to have; can you give the general result?—If you take 20 years they will average about 22 or 23 per cent. reduction.

Acreage and rental.

4181. What is the acreage there?—Exclusive of moorland farms 7,134 acres.

4182. What is the present rental?—7,894*l.*

4183. Is that all let at rack-rents, or on beneficial leases?—On rack-rents.

4184. The reduction, taking into account the expenditure, has been 22 per cent.; is that so?—About that.

4185. (*Mr. Everett.*) Is that arable or pasture?—Mixed.

4186. (*Chairman.*) Have there been any changes of occupation or not?—Some; not a great many.

4187. And have the tenants paid their rents lately?—As a rule, yes.

Estate in Norfolk.

4188. Then will you go on to Norfolk?—There we have 4,261 acres in hand, farming ourselves, and we have 800 acres let.

4189. When did these lands fall in?—They fell in hand at various times; the first in 1878.

4190. Whereabouts in Norfolk is that?—A place called Methwold, some six or eight miles from Brandon. Some is fen land.

4191. The first farm fell in in 1878?—Yes.

4192. When did the others fall in?—At various times up to the present. In 1883, three fell in, in 1885, some more, and one in 1889.

4193. How do you account for the difference in this estate compared with the others?—In two parishes, Methwold and Feltwell, there are about 27,000 acres. and I believe something like 23,000 acres are in the owner's hands.

4194. (*Mr. Everett.*) What class of land is that?—Partly fen land and partly thin gravelly land on chalk—very poor land all of it.

Rent.

4195. (*Chairman to Sir Gardner Engleheart.*) What was the rent before these changes took place?—I think I could answer that. Up to 1879 we got about 7*s.* 6*d.* per acre—not a net rent, but a gross rent of 7*s.* 6*d.* per acre, on which I laid out a considerable sum of money in hopes of better times which were not realised. We expected it would rise to 10*s.* per acre, and that was the rent which was inserted in the new lease, which the tenant was ultimately to pay, but we never got more net than 5*s.* per acre.

4196. And eventually the tenants were unable to pay that?—Yes.

Land in hand.

4197. And they gave up, and you have had the farms on hand since?—(*to Mr. Bolden.*) What is your experience?—Until last year we made a profit; last year we made a loss.

4198. (*Lord Vernon.*) Was that after paying your rent?—Oh dear no.

4199. (*Chairman.*) What did your profit amount to; did it amount to your expected rent of 7*s.* 6*d.* per acre?—No.

4200. (*Mr. Lambert.*) What kind of farms are there on the 800 acres that are let?—One is a good farm. The 800 acres are let at 500*l.* a year.

4201. (*Chairman.*) Which is better than the other?—Some of it is fen land, but what is not fen land is good land.

4202. Have you tried to let this land from time to time in the interval?—Yes.

4203. And you failed to do so?—Yes.

4204. We may take it that the difference between the condition of that estate and the others is that this land is extremely poor?—Yes, and a long way from a railway station, and a very long way from a market.

4205. Have the tenants who were upon it lost their capital?—I think they did, but I may say that people who own their land, and farmed their own land, also lost their capital.

4206. That was the common fate of all?—Yes. We own the Manor of Methwold; the great bulk of it was copyhold.

4207. How did you provide the capital or farming the land?—We had some money put by for a particular purpose in Exchequer bills, and Her Majesty's consent being given we appropriated it for stocking the farms.

4208. Do you put bailiffs on each separate farm?—No; one man who does nothing else looks after the whole, and I go down as often as I can. He has 4,261 acres in hand.

4209. And this year have you done as badly as last year?—This year is bad because we had no hay. I think our valuation will come out very badly.

4210. You have suffered from the drought?—Everything has been burnt up.

Sir G. Engleheart, C.B., and Mr. J. L. Bolden.

8 Dec. 1893.

4211. Last year did you suffer?—It was very wet in the fen land. It looked remarkably well, but when harvest came everything was drowned with wet.

4212. Then you have had two very disastrous years, very low prices and bad production?—Yes.

4213. Have your losses been heavy both last year and this year?—I have not made the accounts up for this year, but last year it was not anything very bad. After paying all expenses of every kind, paying all drainage rates, and pumping engine expenses, and repairs, and salary, wages, and so forth, we made a loss of about 200*l.*, and paid no rent at all, and no interest upon any of the capital.

4214. Is the average of the farms large or not?—What we have in hand?

4215. Yes?—The fen farms are from 300 up to 700 acres; the other farms are less; the upper farms, 450 to 470. One is 57 acres.

4216. Have you tried to break up the larger farms into smaller ones, or what?—I should be quite prepared to do so if anyone would take them.

4217. Have you had no offers for those farms?—None.

Large and small farms compared.

4218. Looking generally at the property under your management would you say that the depression is more felt by the large farms or by the small ones?—I think mostly by the large ones.

4219. Is that specially in the case of the grass districts?—Yes.

4220. You think small farms have answered better?—Yes, I think so.

Freedom of sale.

4221. Do you insist upon the restrictions or conditions as to the sale of produce and the sale of straw, and so forth?—Since the evidence given in 1880 new forms of lease have been got out, and they are on the table. I think those leases are very fair to the tenants; I do not think anybody could object to them.

4222. Do they give great freedom to the tenants?—Yes.

Difficulty in letting.

4223. With the exception of the land you have spoken of in Norfolk, have you found a difficulty in getting tenants for any vacant farms?—At a reduced rental, no.

4224. When you speak of reduced rental, do you mean at a rent less than the other tenants on the same properties are paying or not?—No; I found it a little difficult—

4225. You mean on account of the reductions which the others have enjoyed?—I may say that we have got an estate near Pontefract where they are mining coal, and I have great difficulty there in finding good tenants, not altogether on account of the difficulty in agriculture, but on account partly of the injury done by the miners.

Sub-division of farms.

4226. Then where opportunities have occurred you subdivided the farms where possible?—Where possible we have.

4227. You get the tenants more easily, and you find it a wise policy to do that?—Yes.

4228. Has that involved expenditure?—Yes, a very considerable expenditure.

4229. But it has been worth while to do that?—There was a difficulty in finding tenants at all, in some cases, where a farm was very large, and in self-defence we were obliged to do it. (*Sir Gardner Engleheart.*) It might be interesting to state that we have nearly 300 tenants, and that half hold under 10 acres each, or not exceeding 10 acres each.

Small holdings.

4230. (*To Mr. Bolden.*) Do those persons live wholly by the land, or have they generally some other occupation?—Small holders generally have some other occupation.

4231. Are many of them labourers, or are they small village tradespeople?—Some labourers and some blacksmiths and joiners, and so on.

4232. Have you had an increased demand for small holdings of that kind?—I do not think it has increased. We have always had a good demand since I have been connected with it.

4233. (*Lord Cobham.*) In what county have you most of them?—In Yorkshire; we have 37 under an acre each.

4234. (*Chairman.*) They are really allotments, or practically so?—No, they have allotments in addition.

(*Sir Gardner Engleheart*) Many of them have cottages with good gardens. (*Mr. Bolden.*) I can give you a list (*see* Appendix A., XVI).

Sir G. Engleheart, C.B., and Mr. J. L. Bolden.

8 Dec. 1893.

4235. Have you many small holdings, not called gardens or allotments, but small farms?—We have a certain number; I suppose you would call between 20 and 50 acres small farms. We have 28 under 20 and 14 between 20 and 50 acres altogether.

4236. Have those tenants felt the depression?—No, they do not complain much.

4237. Have they received the same reductions as the other tenants?—No, I think not.

4238. They have paid the old rent?—We have revalued everything. In 1887 we let at what we thought a fair rent, but many of these have got cottages.

Land in hand.

4239. Then, excepting in Norfolk, you have not any land in hand, and you find practically no real difficulty in getting tenants?—In Yorkshire we have no agricultural lands in hand, but we have a few acres of moorland in hand.

Expenditure on improvements.

4240. What has been your aggregate expenditure for improvements since 1880; have you got that?—On agricultural property we have spent 40,900*l.* in new buildings, fencings, and so forth. On draining we have spent 8,600*l.*; that is in capital improvements. In repairs we spent 18,000*l.* (*see* Appendix A., XIV).

4241. (*Lord Vernon.*) In how many years?—13 years.

4242. (*Chairman.*) What was the 18,000*l.* spent on?—In ordinary repairs.

4243. (*Mr. Little.*) Was that in under-draining, or did it include arterial drainage?—In one case it does.

4244. (*Lord Cobham.*) That would be on the 24,000 acres?—No, on the 17,000 acres, because the moorland must come off.

4245. (*Chairman.*) Have you come to the end of your expenditure on improvements?—Oh, dear no, we never shall.

4246. I think that on some of this land, in consequence of the falling in of beneficial leases, the expenditure was very heavy?—So it is.

4247. And you have not come to the end of it?—No.

4248. Are you well supplied with cottages?—Many of the estates are not.

4249. And more expenditure would be needed for those?—I think so.

4250. Is there any other point you desire to bring before the Commission?—No, I do not know that there is. I have got a number of papers here in case you wish to ask questions.

4251. (*To Sir Gardner Engleheart.*) I have put to you all the matters referred to in this paper. Is there anything else you wish to lay before the Commission?—No, I think not.

4252. (*Mr. Channing.*) Are these tabulated statements to be put in?—We have given them in every conceivable form which we thought might possibly be useful.

Land in hand.

4253. (*Chairman to Mr. Bolden.*) Have you any expectation of being able to let the land in Norfolk or not?—One lives in hopes, but my hope is very small.

4254. You will be compelled to go on farming for some time to come?—I see nothing for it but to farm on. We cannot let it go back to a state of nature.

4255. Is not there an advantage in farming on such a large scale of 4,000 acres. Have you derived any advantage in carrying on the operation on such a large scale as compared with farming upon a smaller scale?—No.

4256. (*To Sir Gardner Engleheart.*) You have got 4,000 acres in hand?—We thought that the Queen should set an example to the neighbourhood and should not allow her property to go back into prairie, if it were possible that we could rescue it. And, therefore, that induced us on *quasi* public grounds to lay out more money than an individual landowner would be disposed to.

4257. There might be a temptation to let it go into prairie land?—Or shooting. (*Mr. Bolden.*) It would be very much cheaper to have had it swamped.

4258. (*Lord Cobham.*) If you got 20*s.* an acre, would it not pay?—Yes.

Sale of land.

4259. (*Lord Vernon.*) It was originally reclaimed land; have you pumped it?—Yes.

4260. (*Lord Cobham.*) When you sell land do you sell it in the ordinary way by public auction?—No.

4261. How?—We never sell it unless we get a good price for it. We sell it privately. (*Sir Gardner Engleheart.*) We are not sellers of land.

4262. You do not sell to tenants?—We have concentrated to some extent. The policy of the Duchy has been to sell outlying fragmentary portions as it were.

4263. Otherwise you do not sell?—No. (*Mr. Bolden.*) We have sold 1,799 acres.

4264. (*Mr. Channing.*) And part of this is in the neighbourhood of growing towns?—Yes.

Shooting rights.

4265. (*Lord Cobham.*) Do you find that rabbits increase when the farmers get the shooting?—They have allowed them to increase very much to the injury of the farm in some cases.

4266. And when the farms are let to shooting tenants you do not find the same results?—No.

Successful tenants.

4267. (*Mr. Whitehead.*) I think upon the estates where the rents are very high the tenants have done well as a rule—in Lancashire, Staffordshire, and Lincolnshire?—I have had no complaints, and they are content.

4268. What is the reason of that? Is there any special culture, or what is it that makes them do better than other tenants?—The Lancashire tenants are in the neighbourhood of big towns; they have a good market for their milk, and they make cheese.

4269. That would account for that result?—I think so. Staffordshire is a milk country. I think milk has done pretty well for them. In Lincolnshire we have an exceptionally good tenant; a man of very large capital, who has done very well. I think, generally, a man of great energy.

4270. So that there are exceptional circumstances upon all those estates?—I think there are.

Barley growing in Norfolk.

4271. May I ask further whether in Norfolk you grow barley at all?—Yes, but we cannot grow good barley.

4272. Not of good quality?—No.

Causes of depression.

4273. (*Mr. Gilmour.*) Have the management of the Duchy farms any opinion—collectively I mean—upon the main question of the reason of the depression? Have they had that matter under consideration?—There can be no doubt that the very low prices of produce and the bad seasons we have had are the principal causes of the depression.

Protection.

4274. Have they at the same time then considered in any way how the present depression can be remedied or lessened?—Of course we have all thought of what might be done, but as to what is likely to be done, that is a very different thing.

4275. What do you think can be done?—Of course, if you went in for Protection we should raise the prices, but it is not in the least likely that we should have it.

Rates.

4276. Is that the whole remedy?—I think that the whole matter of rates wants revising. The burdens on the land are, in my opinion, too high.

Estate in Lincolnshire.

4277. (*Mr. Little.*) I understood that the Lincolnshire Estate was chiefly fen land?—That is so.

4278. There you have little sign of depression; that is to say, a moderate reduction of rent has sufficed to keep on the farmers?—Yes.

4279. That is very good fen land, is it not?—It is.

Freedom of sale.

4280. Do you allow the tenants to sell mangolds and other roots?—We put clauses into our leases saying that they shall not sell, but they have only to apply if they wish to do it, and we do not raise any objection in the case of a good tenant.

4281. Do they apply each year, or do they assume until they are pulled up that they may do it?—I am continually going about, and as long as I see a farmer farming tolerably I do not interfere.

4282. They are able to grow great crops of mangolds and other roots in East Lincolnshire?—Yes.

4283. It is particularly good fen land?—Yes.

Estate in Norfolk.

4284. Then the land in Norfolk, which is entirely of a different and very inferior character, is the estate which is in hand; that is the Methwold estate?—Yes.

4285. That is a very inferior property. Did I understand that part of the high land in Methwold was in hand?—Yes.

4286. That is thin land on the chalk?—Yes.

4287. And both descriptions of land are those where the produce in the best of seasons is only comparatively small?—That is so.

Expenditure on fen land.

4288. Your fen estate has been the subject of enormous expenditure in the last 40 or 50 years?—Yes.

4289. It was rough grass and then an engine was erected for drainage, and it was turned into arable land some time in the present century?—That I could not answer. Some of it probably was so.

Farm buildings.

4290. And buildings were erected and farmhouses?—Yes.

4291. And those farmhouses are at the present time either occupied by labourers or empty?—They are all occupied.

4292. By labourers?—Yes; foremen.

4293. You have attempted to clay the land?—Yes.

4294. I believe there is no clay under the land, but you have to cart it?—There is clay under part of it close to the surface.

4295. But for a considerable portion there is no clay?—That is so.

4296. Did you attempt to improve it by carrying clay on to it?—We did.

4297. You have also had great improvements made in arterial drainage, or attempted it at any rate?—That is so.

4298. You have done a great deal in the way of roads?—I believe so.

4299. And otherwise you have spent large sums on improvements?—Yes.

4300. And all this expenditure of capital is, as it were, sunk?—Yes.

4301. I suppose that if the fen land on that estate were put into the market to-day it would not realise anything like what has been spent on it in improvements during the last 20 years?—No.

4302. And not one-fourth of what has been spent in the present century?—I think you are possibly right.

Reduction in rents.

4303. (*Mr. Dalton.*) Have you any case in which there has been any reduction in rent owing to an increase of rates?—In making the valuation in 1877 we certainly took into consideration the amount of rates that the land paid. If the rates had gone up in the last year we should have reduced the rent accordingly.

4304. Did you find any case in which they had gone up considerably?—No, I think not.

4305. (*Mr. Lambert.*) Upon those estates that you have given us figures about, the reduction seems to me to be about 20 to 25 per cent.?—I should think so, probably.

4306. Does your experience go back prior to 20 years ago?—No; my experience is only since 1886.

4307. You could not say whether rents had been increased or decreased during the 10 years prior to 1873?—I could not answer that.

4308. (*Captain Thomas.*) Are your tenants satisfied with the reductions made?—As a whole, I think, yes.

4309. Have there been no complaints?—I think, on the whole, the Duchy tenants are satisfied with their landlord.

4310. Have you any knowledge of the neighbouring farms that belong to other owners?—Yes.

4311. How do your rents compare with those?—They are about the same, not above other people.

4312. Have they made the same reductions?—I could not answer that.

Conditions in the Duchy leases.

4313. (*Mr. Channing.*) I wish to ask one or two questions as to those leases; in the first place, I see you adopt the plan of a schedule as to the condition of each of the fields (*lease forms put in*)?—Yes.

4314. Do you adopt any plan of inventoring in any way the condition of the buildings and fences, or anything of the kind, or is that included in this schedule?—No, nothing more than you see there in the schedule.

4315. In the case of the buildings which the tenants are required to repair you do not schedule their condition in any way on entering?—No.

Sir G. Engleheart, C.B., and Mr. J. L. Bolden.

8 Dec. 1893.

4316. I want to ask you how the 20th section of the lease is to be interpreted?—Which one have you got, Lady Day or Michaelmas?

4317. A Michaelmas lease?—There is one for entry at Michaelmas and the other at Lady Day.

4318. This is that in respect to the defects of cultivation and wants of repair for which the lessee is liable, notice is to be given, as I understand, three months before the date of quitting?—Yes.

4319. Does that mean that you give up the right of further counter claims under the Agricultural Holdings Act?—No.

4320. It does not?—No.

4321. It is only with regard to the defects of cultivation and wants of repair, which are specifically provided for in the covenants?—That clause is "During "the lease to make good all such defects of cultivation "and wants of repair as the lessee is liable to make "good, and as shall be set forth in a specification fur- "nished by the lessor not less than three calendar "months previously." That is not to be produced on going out, but at any time during the lease.

4322. I understood it to apply to the end of the time. Then you reserve the general right of the landlord to counter claim in the usual way under the sixth section of the Agricultural Holdings Act?—Yes.

4323. I see that the freedom of cultivation, or rather the sale of produce, is linked to selling off half the hay or the wheat straw?—Yes.

4324. Do you think, considering the manurial value of straw now, and the commercial value of straw, that it is desirable to have those restrictions?—I think it is better to put it into the lease; if the tenant was selling more and farming well we would never object to it.

4325. Under the conditions of this year you perhaps might relax that?—Undoubtedly. (*Sir Gardner Engleheart.*) Those leases were drafted in 1886, and we had then the advantage of having Mr. Chaplin for our Chancellor, and it was under his superintendence that these leases assumed the form in which you now see them.

4326. (*To Mr. Bolden.*) I see further you substitute "fair and reasonable compensation" under the fifth section of the Agricultural Holdidgs Act for the compensation under that Act?—No, that is in addition to the Agricultural Holdings Act, inasmuch as under the Agricultural Holdings Act the man has to give notice two months before the expiry of the lease; but if he did not choose to give notice we should not take advantage of the lapse; we should refer it to arbitration if he wished.

4327. In the case of reference with regard to compensation, I understand that you substitute the President of the Surveyors' Institute for the Land Commission?—Yes.

4328. Why do you think that course more desirable?—I must ask you to ask Mr. Chaplin that. (*Sir Gardner Engleheart.*) We thought it more convenient on the whole, that clause not being in pursuance of the Act, that we should draft it in the way we have done. We thought it more convenient to ask the President of the Surveyors' Institute to name an arbitrator or umpire.

4329. Is that view based at all on an opinion that it is desirable that all these references should be conducted by specially skilled persons and not by the ordinary type of valuer that might be appointed by the County Court?—I do not know whether that was the actuating motive, but it was well considered at the time, and that was the decision that we arrived at.

4330. (*To Mr. Bolden.*) You would prefer the Surveyors' Institute as a very responsible corporation to the County Court for the selection of an arbitrator in these cases?—I should. (*Sir Gardner Engleheart.*) We consider that it would be more easily worked.

Estate in Staffordshire.

4331. (*Lord Vernon to Mr. Bolden.*) Would you tell me if the holdings in Staffordshire on your property remain pretty much the same in size and acreage?—Yes, I think there is no alteration.

4332. With reference to those that are small, do you find that they pay a better rent than the big ones in the dairy districts?—Yes, a little.

4333. Do you have many applications for the farms to be divided up at all, that is, to be lessened?—No.

Sir G. Engleheart, C.B., and Mr. J. L. Bolden.

8 Dec. 1893.

The Agricultural Holdings Act.

4334. Would you tell me one other thing: have you found the Agricultural Holdings Act perfectly satisfactory in the cases that you have had to deal with?—We have had very few cases under it, only two cases.

4335. Do you think yourself, from what you hear from the farmers, that it would be an advantage to simplify it at all?—Yes.

4336. You do?—Yes.

4337. (*Chairman.*) Do you frequently visit the Staffordshire, Lincolnshire, Yorkshire, and Lancashire estates?—Constantly.

Tenants' capital.

4338. And you say the tenants have capital sufficient to cultivate the land?—Yes, as a rule.

4339. They still retain their capital in spite of the bad times?—There are exceptions.

4340. But taking it generally, should you say that they have capital enough to do justice to the land?—Yes.

4341. There is every indication of it?—I believe so; there are, of course, exceptions.

Labourers' cottages.

4342. (*To Sir Gardner Engleheart.*) I am taking a general view of these properties. I observe in 1880, in answer to Question 1101, put to you by Sir William Stephenson, you said: "I am bound to say that the "Duchy estates are very badly supplied with cottages, "and we are gradually seeking to improve that state of "things, and we have been building cottages lately, "and for those we charge 4 per cent., and in one in- "stance 3¼ per cent." Has that been considered since then?—Yes, to some extent. We have lately built some cottages in Norfolk for one of the few farmers that remain as lessees, a man named Barker; we have built three cottages, I think.

4343. (*To Mr. Bolden.*) Taking a general view of the property what have you done?—Cottages have been built.

4344. Is there still a deficiency in that respect?—Yes.

4345. And more expenditure needed?—Yes.

4346. (*To Sir Gardner Engleheart.*) Have you found in consequence of the other demands upon you for capital expenditure that you have been unable to do as much as you wished in respect to the building of cottages during the last 12 years?—It is rather difficult to say that it is in consequence of other demands.

4347. You stated then that you were bound to say that they were badly supplied with cottages?—We have been building cottages, but not so fast as we might or ought to have done; we have improved the existing cottages very much.

Causes of the failure of tenants.

4348. I observe that speaking of the several estates in 1880 you attributed the failure of the tenants, so far as that had existed at that time to the want of energy on the part of the tenants?—Yes, I remember giving that answer.

4349. Has that been the cause of the subsequent failures or not in Norfolk?—We have gradually taken nearly the whole of Norfolk into our hands.

4350. I was pointing out that in 1880 you attributed the failures which had then taken place to the want of energy of the tenants?—I think that the farmers have not done what they perhaps might have done in all ways. I think they are not quite as thrifty, and their families are not quite as energetic as they might be.

4351. In that district?—You can hardly say in that district particularly, because we have taken nearly the whole of the district into our own hands.

4352. Would you attribute the failure on that estate compared with the others to that cause, or to the very serious depression of agriculture?—It is one of the minor causes. Of course, the weather is a far greater factor in the problem than the want of energy in the farmers.

Tithes.

4353. Since the Tithe Act have you paid the tithes on the property?—We have got very little tithe property; we are now taking the tithe into our own payment. I think that we have got a return. (*Mr. Bolden.*) All the tithe payable is 647*l.*—that is gross.

4354. The greater part of the property has been enclosed in recent years, and is not subject to tithes?—Yes; allotments are given in lieu of tithes, and extinguish them.

Sir G. Engleheart, C.B., and Mr. J. L. Bolden. Dec. 1893.

4355. Then it is a very unimportant question?—The total sum is 647*l.*, and of that the tenants pay 263*l.* The whole thing is very small.

4356. You have not recovered the whole of it from the tenants?—Some of it is on lease yet.

4357. (*Lord Vernon to Mr. Bolden.*) Your own expenditure on new buildings, drainage, and repairs is not very large on the gross receipts on your property, is it?—Something under 4,000*l.* a year for 14 years.

4358. 4,000*l.* a year out of 47,000*l.*?—On capital improvements.

4359. 4,000*l.* a year at least I make out on new buildings, drainage, and repairs?—Yes.

4360. About 4,000*l.* a year you have spent?—Not including repairs, it is more if you include repairs.

4361. The figures I have got come to a little more than 4,000*l.* a year on everything. That is only 10 per cent. on repairs, capital expenditure, and drainage?—But you must bear in mind that at that time and for some time afterwards, roughly speaking, nearly half the property was in beneficial holdings. Upon that, of course, we should not make any outlay. (*Mr. Bolden.*) Allow me to quote the figures. If you look at the tabular statement you will see our great expenditure has been made since 1887 (*see* Appendix A., XIV). Up to that time between 1880 and 1887 the expenditure was trifling.

Sir G. Engleheart C.B., and Mr. J. L. Bolden. 8 Dec. 1893.

4362. But even in the last year you only spent under 7,000*l.* on a total gross of 47,000*l.*?—That is true.

4363. Your expenditure is very small compared with that of the average English landlords, I imagine?—Would you excuse me, that 47,000*l.* is the total sum that we get for agricultural and residental property, beneficial leases, and cottages. (*Sir Gardner Engleheart.*) You are taking the house property as well, you see.

4364. (*Lord Cobham to Mr. Bolden.*) The strict agricultural rent is 19,800*l.*?—That is about it. It is on an income of under 20,000*l.*

4365. (*Mr. Channing.*) And these are agricultural repairs?—Yes.

4366. (*Lord Vernon to Sir Gardner Engleheart.*) I wanted a sort of idea of what the average per-centage per annum upon the agricultural land is?—It is nearly 4,000*l.* a year on improvements without counting repairs. (*Mr. Bolden.*) But we have spent a great deal more than that on the whole estate. The figures I have quoted refer only to the agricultural land.

The witnesses withdrew.

Lord Wantage.

LORD WANTAGE called and examined.

Lord Wantage.

4367. (*Chairman.*) You are owner of very considerable estates in Northamptonshire, Buckinghamshire, and Berkshire?—Yes.

4368. And you have been kind enough to lay before me a table showing in respect of the Northamptonshire and Buckinghamshire estates the gross rent and the net income of the estates for the last 20 years?—Yes, I have done so.

4369. May I ask what the total acreage of the estates is now?—I do not know that I can give the details of my statement. What I was proposing to do to-day was to touch more upon my Berkshire property, leaving that tabular statement to speak for itself so far as you find it on that paper. There are some very complicated figures in it, which perhaps you will excuse me going into to-day.

4370. You would confine your evidence to the Berkshire property?—Yes, to the Berkshire property.

Acreage of Berkshire estate.

4371. What is the acreage of your Berkshire property?—The acreage that I have under cultivation myself, which I perhaps would speak about more generally, is 4,427 acres.

4372. That you have in hand?—Yes.

4373. And how much have you got under tenancy?—I must have, taking it all round, counting in down land, which is extensive, 18,000 acres of land in Berkshire.

4374. Besides the 4,000?—Including the 4,000.

Acreage in hand.

4375. And you have taken that 4,427 acres in hand at various times during the last 20 years?—Yes, I have taken it about that; I should say somewhere about that period.

4376. Have you taken that large portion in hand in consequence of the tenants leaving?—In point of fact I do not think I have ever dispossessed a tenant. In every case it has been a tenant who has for purposes of his own, generally on account of depression, thrown up his farm; and in some cases the farms have been thrown on my hands on account of death, and I have taken them bit by bit in that way.

4377. Does it mostly lie in a ring fence?—Yes; the 4,427 acres which I am now speaking of lie entirely in two parishes altogether, I may say very well within a ring fence.

4378. How long have you had the greater portion of that in hand, for some years, I suppose?—Yes, I have had it some years, but I have had additions made to it within the last four years. From time to time I have had a new farm, or new areas thrown in up to within the last three years.

Result of farming land in hand.

4379. And what has been your experience of farming on that largish property?—My experience is very much like that of everybody else: it is, I will not say disastrous altogether, because on my farm I have great advantages. The land lies very conveniently, there is a railway at one end; there are roads traversing it from end to end; there is a slice of down land, which is very convenient for young cattle and sheep; and in the centre there is good barley and wheat land; and at the lower end, which is next the railway, there is very good pasture, I suppose as good as any that can be met with. There has been a considerable amount of capital laid out upon it in improving the buildings and making the roads. I should say that I have treated myself with liberality, by lowering my rents considerably, I charge myself with a moderate rate of interest, and under the circumstances as I will show (if you ask for those accounts) that it has resulted in a profit over the whole area averaging from about 800*l.* to 1,000*l.*

Profits.

4380. That is to say, after paying all expenses, paying reduced rent, which I suppose you have calculated according to other reductions?—Yes.

4381. And somewhat low interest upon your outlay? Yes.

4382. (*Lord Cobham.*) Is that the average profit per annum since you took the farms in hand?—Yes, taking six years. I took that period as convenient.

4383. (*Chairman.*) An average profit of 800*l.* a year?—800*l.* to 1,000*l.* a year.

4384. And what rate of interest do you charge yourself with?—I charge myself with 5 per cent. interest.

Rent of land in hand.

4385. And what rent do you charge yourself with?—I charge myself a little under 1*l.* an acre.

4386. A little under 1*l.* an acre?—Rather less.

4387. What reduction have you given yourself for the purpose of your accounts, that would be a fair indication of what you consider the fall in rents in your district has been?—I have reduced myself certainly 40 per cent.

4388. Then the rent at one time when you began this system was considerably over 30*s.* per acre?—Yes.

4389. Now before we go further with regard to your farm experience, I think it will be well to enter upon the other part of the property which is let to the tenants?—Yes.

Condition of tenants.

4390. What has been your experience on your Berkshire property in that respect?—My experience has been discouraging. Most of the farms, as gentlemen know very well, in that district, are large, and the tenants there are men of capital, or rather were men of capital; and I think owners, whose property lies in such land as that have been hit harder than others, and I may say that my reductions have been over 50 per cent.; this year I have had farms, or rather tenants offering to stay on at a rent which is, in my opinion, not adequate, I mean offering to stay at a rent reduced from 800*l.* a year to 300*l.* a year.

Lord Wantage. 8 Dec. 1893.

4391. When did the depression begin in your district?—I think it began during the bad seasons towards the eighties; the price of wheat in 1875 was 63*s.* per quarter for good wheat, and barley was then 50*s.* per quarter.

Commencement of the depression, 1879.

4392. And then 1879 was a very disastrous year in point of produce, coupled with lower prices, I think?—Both lower prices and bad seasons.

4393. From that period dates the commencement of the bad seasons, I suppose?—Yes, I think you might fairly say that was the beginning of the bad times.

The season of 1887.

4394. After that was there any period of rather better times, or not?—Well, there was a very good year that I daresay you remember, the Jubilee year, that was within recent times, I think, in 1887, which was a very favourable year for stock growers and sheep owners and corn growers. It was a very fine season, and we had most exceptional rains, which fell early in June, and carried us through an otherwise dry, fine, warm year, and that year was known in my part of the world as a very productive year.

4395. (*Sir Nigel Kingscote.*) Did not you mean to say "corn" growers in the Jubilee year?—Yes, it was a good year for corn growers.

4396. But you said "stock" growers?—Both; the stock sold well, it was a good grass year, and my accounts show on that year that the sale of stock was advantageous.

The seasons of 1892-3.

4397. (*Chairman.*) Then last year and the present year have been extremely bad?—This year is a very bad year.

4398. What was last year?—A very bad year.

4399. You have had two successive bad years?—Yes; two bad years, owing to the seasons, I think owing to the seasons and the prices, although, of course, this year is not quite completed yet, since the months of September, October, and November, the season has been better; but it was bad; there were no turnips at one time; the turnips have grown better since, and as to the hay, we hardly grew any at all.

Reductions of rent.

4400. When did your reductions of rent begin?—I should think when the seasons began to get bad, they were in 1878 and 1879, that was the time that the rents began to tumble down.

4401. And they have been tumbling down ever since?—Progressively tumbling down to this year, which has been the worst year that we have had, as far as my experience goes.

4402. What has been the average reduction of rents upon your estate?—I should say from 40 to 50 per cent.; nearer 50 than 40 per cent. I am talking of those big sheep farms, which have been so disastrously hit. I am not talking of small farms which I think have been able to stand the brunt better.

4403. You speak of sheep farms, including a large amount of down?—Yes, of down and of corn land.

4404. And it is in respect of those that the main reductions have been experienced?—Yes.

Expenditure on improvements.

4405. Have you, besides the reductions of rent been able to make a large outlay in improvements on that estate?—Yes; I have gone on doing more than landlords used to do. I have done more than they used to do in the bad times, and than I did in the times that were prosperous. One great object has been to keep the tenants on their legs by giving them anything that they asked for in the way of reasonable demands.

Reductions in rent.

4406. Then besides the permanent reductions, I suppose there have been temporary abatements?—I have made temporary reductions from time to time, but those reductions are now permanent. I have not done as some persons have done by keeping the old rent on, but I have made permanent reductions and further temporary reductions on the permanent ones.

4407. The permanent reductions have followed very slowly upon the temporary ones?—Yes; precisely.

4408. Of course, in some cases, temporary reductions have been kept on for some years?—Yes; and at last confirmed.

4409. You have made the reductions permanent very quickly?—Yes; I thought of, and the tenants generally urged, that being done on account of getting a better position on the rate book.

Large and small farms compared.

4410. You said just now that the large farms have suffered very much more severely than the smaller ones?—Yes; that is my experience.

Lord Wantage. 8 Dec. 1893.

4411. Have you found an increasing demand for small farms of 50 and 100 acres?—Yes; I find that small farms of the size you mention are readily taken up.

4412. Is that from the larger tenants falling back into smaller farms, or fresh tenants coming in?—I have not noticed that the larger tenants have fallen back to smaller farms.

4413. But have you not had a class of small farmers taking smaller farms?—I think that it is the man who is ready to work himself and to bring his sons and his nephews in, in fact a man almost of the labouring class that comes in now.

4414. He does not suffer from the labour difficulty?—He is not hit by the heavy labour bill.

Competition for small farms.

4415. Have you found that men of that type have been more willing to pay rents than the larger class?—I think the small men of that sort are better and more punctual. I had occasion the other day to let a small farm of that size, and my agent told me that he had eight or ten competitors for it. That was a farm of 120 or 130 acres.

4416. What was the rent of that?—It was a farm which was let upon the reduction. I should say probably 25*s.* per acre, or something of that sort.

4417. Was it a fair rent?—A fair rent. I should perhaps say 22*s.*

4418. And for that farm you had a dozen competitors?—Yes; eight or ten.

4419. Were they men with sufficient capital?—They were men who were ready to take the farm. They must have had some capital, but they belonged to the working class of tenant.

4420. (*Mr. Everett.*) How large a farm was that?—About 120 acres.

Sub-division of farms.

4421. (*Chairman.*) Have you spent any money in sub-dividing the large farms for the purpose of inducing the small tenants to come in?—Yes, I have done that to a certain extent, in some cases not very much because some of the farms that I have been associated with have been originally small farms.

Expenditure on buildings.

4422. Where they have been consolidated, the first process is now taking place?—Yes, it is now going back again. There must be money spent upon it. It cannot be done without spending money. My experience is that small farmers are less exacting than the large ones. They do not want such costly buildings. I might be allowed to say that landlords have spent too much upon buildings. I think, as has been proved, there has been too large an outlay upon buildings. Less solid buildings would have answered the purpose as well as some of these very much more expensive buildings.

4423. In converting the large farms into small ones has there been a sacrifice of capital in that respect, that the large farms were provided with unnecessarily large buildings, which were not available for the small farms?—Yes, on some of those big buildings the money spent upon them has been proved to be too much. The small tenants do not want those buildings.

4424. Looking at the districts around your property, do you say that landlords have been unable to break up large farms into small ones owing to the want of large means to effect any operations of that kind?—I think landlords can do nothing in many cases, their means are crippled, and the small outlay necessary is almost too much for them to make such moderate changes as I spoke of.

4425. You think there has been great difficulty in that respect in turning the land to the best advantage owing to want of capital on the part of the landlords?—I would generally say that the landlords have been unable to make any further outlay upon their land, and they are rather indisposed to do much more. My clerk of the works says that a wooden building with oak posts, and wood treated with carbolineum, put upon a brick foundation, and with a corrugated iron roof, can be put up for about 20*l.* a bay: that would be 80*l.* for four bays; contrasting that with brick walls, and timbers, slate roof, the same size building would come to 80*l.* a bay, or 300*l.* for the total outlay.

4425*a*. (*Lord Cobham.*) There would be some difference in the cost of maintenance?—Yes, especially the corrugated iron. The question is whether the difference between 80*l.* and 300*l.* would not be sufficient to warrant the lower outlay.

Lord Wantage. 8 Dec. 1893.

4426. (*Lord Vernon.*) Is not 300*l.* rather expensive for that; had you your bricks handy?—I think it is high; Landlords have had a tendency to do the work very well, very solidly.

Loans for carrying out improvements.

4427. (*Chairman.*) Do you consider that it would be expedient that the State should advance money by way of loan to landlords with a view of facilitating improvements, and the sub-division of farms?—I should like to see it. I have not, of course, thought out a scheme, but I sent my agent round only yesterday, to ascertain what possibility there was of obtaining money for the purpose, and he reports to me that there are three companies now in existence for the special purpose of lending money for improving estates. There is the Land Improvement Company in Great George Street; the Land Loan Enfranchisement Company, and the General Land Drainage and Improvement Company. Those companies lend money upon the security of the land at 4 per cent. interest, repayable in 25 years, and for any sum lent over 500*l.*, the rentcharge is 6*l.* 7*s.* 4*d.* per annum. In the case of all the companies there is in addition a commission of 5 per cent. upon the amount expended, and also in one case the usual surveyor's charges for the preparation of plans, and the superintendence of the works, but the cost generally speaking, of those companies comes to 6 and 7 per cent. if you borrow money, repaying it at the end of 25 years.

4428. (*Mr. Lambert.*) Does that include the sinking fund?—It includes the sinking fund, 4 per cent. is on the money borrowed, and the remainder goes towards the sinking fund. Then I believe in the year 1847 a sum of four millions was voted for drainage of land, which was lent at 4 per cent. interest repayable in 22 years at 6*l.* 10*s.* a year; but none of this money is now available.

4429. (*Chairman.*) And I presume you would consider, having regard to the precedents under which money is lent to Irish landlords and Irish tenants that something considerably less than 4 per cent. should now be charged?—Decidedly.

4430. By spreading the repayment over a somewhat longer period, the charge to the owners would be considerably reduced?—It would be considerably reduced. I think it would be a very great convenience if it could be done.

4431. And in your district the landowners would avail themselves of it, you think?—I believe so.

Small holdings.

4432. I think before Mr. Chamberlain's Committee on Small Holdings, three or four years ago, you gave evidence as to the advantage of small holdings?—Yes, I did.

4433. And I think you expressed an opinion that it would be very desirable to encourage small holdings as far as possible?—That was my opinion then, and I am quite of that opinion now.

Small farms' Company.

4434. Have you had any experience in the interval on the subject?—I have been associated with a company for providing small farms in which the tenants have been hit just the same as the other tenants, but they are all on their legs and paying their rents, and declaring themselves fairly satisfied.

4435. That company, I believe, has been formed for the purpose of purchasing estates and letting them out in small holdings?—Yes.

4436. And selling them to the holders when possible, and spreading the purchase money over a term of years?—Yes.

4437. These operations have not been extensive in the selling of those farms, have they?—No, they have not.

4438. There are very few cases in which the persons who have become tenants of the holdings have done so upon the understanding that they are ultimately to be purchasers, I understand?—Very few.

4439. Mainly they have been small tenants?—The fact is that their position is so good as tenants that they have no wish to be turned into landlords. But there are some who have purchased portions of the land. What they like to do is to buy an acre or two acres on which to put their buildings and their house, and rent the rest. That is their inclination, and that anchors them to the land, and also makes it difficult for anybody else to take the land away from them.

4440. Of course, practically, the operation is that of a company becoming a landlord of a considerable number of small holdings?—Yes.

Lord Wantage. 8 Dec. 1893.

4441. Has it been advantageous to the company?—It has paid very little per-centage. I do not know what. I think it is 3 per cent. It has not been advantageous to the shareholders.

4442. It has not been advantageous to the shareholders?—I am afraid not.

4443. I think, if I am right, you yourself contributed largely by giving them an estate?—I started them with a wretched property; it was abandoned by everybody, nobody would touch it, it was a sort of sheep farm and over-sheeped, and that was what they began with; but they have turned this farm, which as I tell you was a very poor one, into much more fertile land than it was before.

4444. Are many of the tenants on those properties which have been bought by this company living wholly by the land, or are they generally people with other occupations?—They have occasionally something else to do; those who have done best.

4445. What are the sizes of those farms?—They run from about two acres to 30 acres; some of them are blacksmiths and village tradesmen of different sorts; those men find it very convenient.

4446. They find it a great convenience?—Very convenient.

4447. But there are not many of them who could live wholly by the land?—I think that they chiefly live by the land, but they throw in some extra assistance, and in some cases they themselves work; they go out and work on the adjoining farms, or on the roads.

4448. Those are cases of agricultural labourers, or almost in the position of agricultural labourers?—Yes.

4449. Who take small holdings, and who supplement their profits from that by working as labourers?—Yes; when they have an opportunity.

4450. Has your experience of the company led you to believe that their example might be followed by landowners?—It is better not to have too many of these small holdings together. Landlords might with advantage have a certain number of them on their estates.

4451. Of course the company is formed for the purpose of letting the whole estate in this way?—Yes.

4452. And in that way they have got a community of small holdings together?—Yes.

Experience of small holdings.

4453. But on the whole it hardly answers?—I do not think it does as a financial investment; but in a village there is always room for a very fair proportion of men, who would be very glad to take a little farm of moderate size.

4454. Have you endeavoured to encourage a class of that sort on your own property?—Very much.

4455 Have you succeeded in doing so?—Yes; I have.

4456. You have increased the number?—I have increased the number living in villages who are taking land, some grass, if possible, they always are most grateful for grass lands.

4457. Do they pay a fair average agricultural rent?—They pay rent very readily.

4458. (*Lord Cobham.*) Do they reside on the farm?—They reside on the farm.

4459. In all cases?—Yes.

4460. (*Chairman.*) What tenure do you give them?—The usual tenure of other tenants; I give no other.

4461. A yearly tenancy?—Yes. They have never asked for anything more.

4462. I presume they expect to be treated in a generous way?—They like an honourable understanding better than a lease infinitely.

4463. What is the honourable understanding?—As long as they pay the rent they will never be disturbed; and even if they fall into arrears they will not usually be disturbed.

4464. And they continue those rents, and it is almost equivalent to a lease?—As good and better, I should say. But there is great difficulty, as you will perceive, in the process of letting land in small quantities in villages. The small holders generally want the best

Lord Wantage. 8 Dec. 1893.

bits of land, and you have to take it away from the large tenant farmer, who does not like giving up the best land on his farm. The landlord also often fails to see why land should be taken from a large tenant to be given to a small tenant, more especially as the latter does not usually recognise the fact that land is of value in proportion to its proximity to the village, and must therefore be paid for proportionately. The process is at best a slow one, and can only be done by degrees, and it will often take two years. I am now in process of doing it. I am persuading the tenant to give up some land, and the tenant says, You must give me the usual notice, and it, practically, is two years. It takes time before you can accommodate those little people, and they are very anxious that it should be done directly, and they do not perceive that small holders as well as allotment holders must be prepared to pay enhanced prices for accommodation land.

Small Farms' Company.

4465. In the case of the company that you spoke of does the company provide money for the improvements and buildings or is it done by the small tenant?—No, the company has done what is needed.

4466. The outlay must be considerable?—Yes, it is.

4467. And such as landlords generally would be hardly able to undertake?—Yes, I think so.

4468. If it is done on any scale?—It costs money decidedly.

4469. I presume doing it in the way you suggest on your property by degrees many small holders would live in the village in houses already built?—Very often, and perhaps in houses which belong to them, or are hired independent of the land.

4470. Therefore, when undertaken in this kind of tentative way it may not involve much expenditure on the part of the landlord?—I think not, and the less expenditure the better.

4471. But if done on the scale that has been attempted by this company it would involve a large outlay?—It would cost money. I do not know whether it would be a large outlay, because, as I say, those men are easily satisfied. They do not want much, and a wooden shed seems to them a sort of act of Providence; if you give them a shed they very often will do something to keep it in order themselves.

Land in hand in the district.

4472. Has there been much land taken in hand in your district by the landowners?—Yes; my neighbours have been compelled to take land very widely in hand, as I have done myself. My adjoining neighbour, who is the member for Berkshire, has had farm after farm thrown on his hands.

4473. Does he farm the land himself, or has he bailiffs?—He farms it himself with bailiffs.

Farm management.

4474. Have many of the tenants become bailiffs?—Yes, I think so, it has been the practice to put the tenant in as bailiff, and I think it a very good plan too if he is a man of capacity.

4475. How do you manage your own considerable farm of over 4,000 acres; have you several bailiffs?—No, only one bailiff, who superintends the whole thing, to whom I give an adequate salary; he buys everything and sells everything, and under him there are only foremen, who have nothing to do with the management of the farm, but only work with the other men. They are labourers with a small addition, perhaps 2*s.* above the others, and they act as foremen.

4476. Do you think that the favourable results of your experience are due to the fact of so large an amount of land being in one hand, I mean that it is conducted on so large a scale?—I should say that on the whole it is not a misfortune to the country to have land so farmed. I think it is an advantage to have areas of land farmed by landowners. I think in the first place that you get a superior sort of agriculturist to manage the land. A better man in knowledge and in training and in capacity than the neighbouring farmer; but then you must pay your manager adequately, and you must make his position a good one. Many gentlemen who farm their own land have put men in as bailiffs on salaries quite inadequate. You do not get the best man, and his pay is not much better than a second-class clerk, and his position is not a particularly good one. If you are farming a large tract of land, you can afford to get a man of superior quality, and he comes in with practical knowledge, and also with theoretical knowledge, which is essential, and that man sets an example, perhaps, to the whole country round, and farmers see the work much better done on a gentleman's farm than in their own places, and the labourers also are not slow to find it out.

Lord Wantage 8 Dec. 1893

Large and small farm compared.

4477. Would you say that your success, so far as it has been so, has been due to farming on so great a scale; for 4,000 acres is a considerable area?—I think so, in farming on a large scale there is a great economy; you grow a better sample of corn on a large field than in a little one; you get a higher price in the market for it; there is less tail; the quality is better; and you can use machinery more advantageously on a large farm than on a little one, and you can diminish the number of horses and the number of labourers. In fact, it is more economically worked in every way. I employ 60 horses on my farm, while my predecessors on the same area employed 90.

4478. You spoke of there being less difficulty in letting small farms than in the case of large farms?—Yes.

4479. Is that because would-be tenants have not sufficient capital?—There are no candidates for large farms.

4480. It is for want of capital, then, that you have not the candidates for the large farms?—It is want of capital.

Co-operative farming.

4481. Would you say that with sufficient capital the tenants could make the land pay?—I think so. It is more capital that is needed. I would say they might combine together.

4482. You think they might combine together?—Yes, they might put their capital together to take a large area. I am told that some of the banks now are running farms with their own capital, and putting in a tenant of exceptional ability, and they are farming tracts of land such as I spoke of myself. Large farms, which are beyond the means of one man, might be farmed with company money.

4483. In other words they form a combination?—Yes, a combination, something of that sort.

4484. And you think we may look forward to some combinations of that kind, in the way of easing the difficulty?—I think that is as good a remedy as anybody can suggest. Nobody can lay down a remedy as far as I can see; but under the circumstances it does appear to me that something of the sort offers the best chance, where you have farming by means of a syndicate in fact.

4485. Then it would rather tend to this, that we may look forward to very large and very small farms?—Yes.

4486. And that the medium sized farms would be rather reduced in number, being broken up into small holdings?—There is a saying which is very true. It is, that the man of capital, and the man of labour, are the only two people who are going to make farming answer.

Yearly agreements.

4487. Is your Berkshire estate, or any part of it let on lease, or do the tenants hold it by the year?—By the year. I do not think I have any leases at all.

4488. The tenants will not take leases?—No, they do not want them; they would rather not have them.

4489. That is mainly on the ground of the uncertainty as to the future?—That is so.

Profit-sharing with labourers.

4490. In the case of the land you have got in hand, I think you have tried a system of profit sharing with your labourers?—Yes.

4491. Will you explain that to the Commission?—I will. I should state that the arable land is 2,344 acres, and the meadow land 1,833 acres, and the down land 250, making up the total which I have just mentioned of 4,427. The profit sharing I started in 1887, and the first bonus distributed was in 1888.

4492. On what principle is the bonus founded?—The system is to pay, first, the rent; the interest on capital, which is 5 per cent.; labour, and the purchase of stock, and working expenses; in fact, everything; and then allot a proportion of the surplus of profits as bonus to the employée.

4493. How much is devoted to that?—The number of people employed on the farm is from 178 as a maximum to 154 as a minimum, that includes women; and roughly speaking about 100 men receive the bonus.

4494. Are they the permanent men in your service?—Yes, they are men who have worked two years on the

farm; it is limited to those; they come on after two years.

4495. Assuming that there is profit after paying rent and interest on capital, how much is distributed among the men?—We distribute the bonus on the shares, so many shillings each; roughly speaking, the farm manager gets at the rate of ten shares, and the foremen at the rate of two shares, and the ordinary labourers one share, and the boys half a share.

4496. Is the whole of the profits, after paying rent and interest on capital, distributed in this way, or only a proportion?—Only a proportion, one-fourth.

4497. I presume if there are no profits or losses, no deduction is made from their wages; they simply share the profits and not the losses?—Quite so. In order to meet that difficulty, which is a very great difficulty, I have had to average the profits over a series of years. Of course, farming must be estimated, the losses and the gains extending over a series of years, and as the employées do not bear any proportion of the losses in bad years, it follows that the bonus must be calculated on a varying basis.

4498. What period of years would you calculate it upon?—I have taken a period of six years, and I have estimated the profits from 800*l.* to 1,000*l.*

4499. And one-fourth of that has been distributed?—Yes, in the way I have described to you.

4500. As I understand it, it is a voluntary arrangement on your part, it is not a special contract?—No.

4501. And therefore it would not entitle them to call upon you for an account?—No.

4502. And it is a voluntary arrangement which you have of your own will conceded to the men?—Quite so, and for that reason I call it a bonus.

4503. You do not show your account to the men?—I have never shown the accounts, but I have told them, I do not think that they take much notice of it, that they may see the certified accounts, the balance sheet as audited by the auditor.

4504. I think you stated that this began in 1887, and 1888 was the first year in which you paid any bonus?—That is so.

4505. Was that taken on the average of six years?—That was paid on that year.

4506. When did you begin the system of averages?—Well, the first year which was a profitable year, I paid them 60*s.*, which was the highest a man received, It worked out something between from six to seven per cent. upon his wages.

4507. In that favourable year?—That year I could have given a little more, because that was a good year, and the year where I had made a very considerable profit, the Jubilee year, I did not distribute more, feeling quite certain that the profit would not keep up, and I only distributed what I thought would be probably the average profit, and that I put at 1,000*l.*, and it has worked out rather short of that.

4508. Last year and the current year have you been able to distribute a bonus, owing to estimating profits on an average of years?—I gave them a bonus, but it was a very much diminished one. I gave a bonus out of the surplus which I had put aside, a certain sum out of previous profit years and the bonus came to a very small sum, only 10*s.* per man.

4509. Then it has ranged from 60*s.* to 10*s.*?—Quite so.

Effect of profit-sharing scheme.

4510. What in your opinion is the effect of this system upon the labourer?—I think it has a very good effect, it associates him with the profits of the farm, and it stimulates him to do his best to aid and assist in bringing out a profit. It is a subject of interest to him. It is a matter of agreeable conversation between me and the men when I meet them as to the possibility or probability of the bonus, and they appreciate it. Those last two years I have called them all together and I have explained to them that the farm had made a very considerable loss last year, and again this year, which they quite comprehend. I think the labourer very often thinks that the farmer is doing very much better than he is doing; he is under the impression that the farmer is making a profit when the fact is that the farmer is losing money.

4511. And you think by this association of the labourers in the profits of the farm, and not with the losses that they are stimulated to greater exertion and take a greater interest in the tillage of the farm?—I think so, my personal experience of it is in favour of it, it has not come to a very large sum. I hope it will improve.

4512. But I presume you would hardly think of making it a matter of legal contract?—No, I do not think it would answer.

4513. Therefore it must be in the nature of a voluntary arrangement?—Quite so.

4514. At the will of the farmer or landowner?—Quite so, and I do not think that the labourer expects anything else except that.

Valuation of stock.

4515. In making up the accounts of the farm for the year I presume there is a valuation of the stock?—Yes.

4516. Is the increase or decrease of that stock taken into the profit or loss account?—Yes, it is. I have a neighbouring agent well known in Oxfordshire, Mr. Franklin, who has for years valued my stock. Soon after the 1st October he values the stock and takes the current price of the day, or the market price, whatever it is. He counts heads, and then values the stock.

4517. A comparatively small rise of value of the stock might make a very important difference in the annual profit or loss without being a substantial one, because you keep year after year the same amount of stock?—That is so, no doubt it does and some people find fault with that system because they say that it is only an estimated loss or an estimated profit; but it is difficult to see how you can devise any better plan. Of course the valuation of the stock on the farm is of great importance in letting you know what your losses or profits have been, so far as relates to the unsold stock in the farm.

Co-operative stores for the sale of produce.

4518. Do you have anything in the way of co-operative stores for the sale of produce in the neighbourhood?—Yes, I have. I think it brings a much better article within reach of the labourer. He has a market which is probably a better one than he could have obtained if he was to deal with a small tradesman.

4519. Have you a co-operative bakery on your own estate?—Yes, I have a co-operative bakery and a co-operative butchery, and a co-operative grocery, and all carried on on the principle of the Rochdale co-operative system.

4520. And I suppose they buy their materials from the farm?—Yes, the butcher buys all his material from the farm. The baker obtains his wherever he can find it most convenient. The agricultural labourer is a bad marketer, he never knows what to buy, and when he has bought it he does not know how to make the best use of it.

Wages.

4521. Do you pay the same wages?—Yes, the same wages all round as are paid in my neighbourhood, 10*s.* a week. I pay the same price as the neighbouring farmers.

4522. Have they risen or fallen of late years?—They have rather fallen.

4523. What was the maximum rate a few years ago?—Perhaps 1*s.* or 2*s.* more. I think the wages are rather lower than they were; I have known 12*s.* per week.

Cottage rent.

4524. (*Lord Cobham.*) Do they pay cottage rent out of that?—They pay cottage rent out of that.

4525. What do they pay?—The maximum is 1*s.* 6*d.* per week.

Rural depopulation.

4526. (*Chairman.*) Do you experience the same kind of thing in your district as is found elsewhere, namely, that the best labourers are gradually going off the land and going into large towns?—I think the young ones certainly do, and I do not see that anything can stop them going away. But the married men, the good married men, remain. The man marries and gets a comfortable cottage and good garden, he is anchored to the land, and I do not think that he goes away. But the whole aim and object of those men when they have brought a boy up and taught him something in the village school is to make him something better than an agricultural labourer, either on a railway as a porter, or a policeman, or a gardener. Whatever you may do for them, however comfortable you may make their homes, these young lads will go, and I do not think you can stop them from going.

Quality of labour.

4527. Do you see any deterioration of labour in your district on that account?—I think not. I think the labourers are quite as good as they were. I do not

Lord Wantage.
8 Dec. 1893.

think that there is any appearance of deterioration amongst them. I think a good cottage and a garden is a great inducement to a married man to stay.

Labourers' cottages.

4528. I think you have done a great deal in the way of building and improving cottages?—Yes, I have restored a great many and built some, but mostly they have been restored.

Rates.

4529. With regard to the local rates, what is your experience with regard to them?—I have not got very much to complain of with regard to rates. Of course the last two years I have been paying rates out of nothing. I have made no profits at all, and all the time I have been paying a rate of 2*s.* in the pound. I am speaking of myself as a tenant now. I have been paying my rates not out of profits, but in spite of losses.

4530. Your rates are now 2*s.*?—A little over 2*s.* in the pound.

4531. Have they risen or fallen of late years?—I do not think they have risen.

4532. Taking a term of years, I suppose it is about 2*s.*?—I think so. The education rate has risen, and there is a special sanitary rate now; I have not seen that in my own individual case, but that I believe is a new rate which appears to be coming on.

4533. Taking the aggregate of rates, have they remained about the same?—About the same.

4534. There is no school board?—No school board.

4535. Has the assessment of your land been reduced in proportion to the rent?—It has been reduced.

4536. What has been the reduction?—I suppose it has very much corresponded with the rent.

4537. Then if the rate in the pound remains the same you derive some benefit from the reduction of assessment?—Yes, but I do not suppose that that is the case. The rate has remained about stationary, and the rental has fallen off, so that the proportion between the rate and the rental would show a rise.

4538. But I understood it was about 2*s.* in the pound now, and it has remained at that rate for some years?—That is my experience.

4539. Then if the assessment of your land is reduced your aggregrate payment must be less than it was?—It would be less.

4540. And generally would you say that farmers in your district have had their assessment reduced in proportion to the reduction of the rent?—Certainly.

4541. Have they benefited to that extent?—Yes. I think the rates have not grown. They have rather diminished. The number of people receiving poor law relief is much less than it was.

4542. It all turns upon whether you are accurate in your statement that it remains stationary at 2*s.* in the pound?—Quite so.

4543. If the assessment is reduced it necessarily follows that the actual burden is less than it was?—Yes, and that has turned out to be the fact.

Estate in Northamptonshire.

4544. Turning now to the Northamptonshire property without going into the details of those figures which you have been good enough to lay before us, and which may be useful to us, the result shows a very large reduction upon your net rates, does it not?—Quite so. (*See* Appendix A., XVII.)

Acreage.

4545. (*Sir Nigel Kingscote.*) May we ask the acreage?—I do not know whether it is here, but I know the acreage of the whole area is something like 28,000 acres.

4546. (*Chairman.*) Is that the present acreage?—Yes, that is so.

Reduced rental.

4547. The present acreage is about 28,000 acres, and the present gross rent is 29,800*l.*?—Yes.

4548. Showing a little over 1*l.* an acre?—Yes.

4549. And I observe from the figures that about 20 years ago the gross rent on this estate was 61,800*l.*?—Yes.

4550. From that there has to be deducted about 7,600*l.* a year, owing to changes in the aera?—Yes.

4551. Some 7,000 acres went away from the property?—Yes.

4552. And on the other hand, there has been some addition, and according to the account on those two items, the comparison would be between 54,000*l.* 20 years ago and 29,800*l.* at the present time?—That is about right.

Lord Wantage.
8 Dec. 18.

4553. And reducing the deductions in the same proportion it would seem that the net income has been reduced from about 44,000*l.* or 45,000*l.* a year to 12,000*l.* a year?—Yes.

4554. Therefore there has been a heavy reduction of the gross rent?—Yes, that is so.

4555. And inasmuch as the outgoings appear to have rather increased than diminished, the net result is a very unfavourable one?—In point of rental it is, indeed.

Expenditure on improvements.

4556. Apparently, during that period you have found it incumbent upon you to spend very large sums of money in buildings?—Yes.

4557. And apparently the expenditure on buildings under the somewhat reduced area has increased from an average of 4,000*l.* or 5,000*l.* a year to 8,000*l.* or 9,000*l.* a year?—That was a good deal owing to increased cottage property, cottages, in fact.

4558. That is in the way of improvement in the estate; it is necessary to have them in order to help the farmers to keep their best men?—Yes. I have always been under the impression that it is better than reducing the rent, if a farmer gives an option between reducing the rent and building him a cottage, the wiser course is to give a cottage which permanently improves the land, rather than to reduce his rent.

Reduced rental.

4559. I have been taking just now the comparison between 1872 and the present year. But really the comparison ought to be made between 1877 and the present year?—Yes, because of the reduction of the area.

4560. No, apparently the rents have reached their maximum, and therefore the true comparison would be the net income of 47,000*l.* a year and 12,000*l.* a year; in other words, the net income is reduced by one-fourth of what it was?—Yes.

4561. The gross rental is after the deductions from the reduced area from 63,000*l.* to 29,000*l.* a year?—Yes.

4562. And therefore the gross rental is reduced rather more than 50 per cent.?—It is 29,842*l.*

4563. You deducted 7,000*l.* a year from the 70,000*l.* which was the rent in 1877; that would be 63,000*l.* a year, and the present rental is 29,800*l.*, call it 30,000*l.*; therefore there has been a reduction in the aggregate rent of rather more than 50 per cent.?—Quite so; I follow those figures.

4564. And apparently the reductions began in the year 1884, and have been continuing ever since?—There were temporary reductions in 1879. In 1884 there were further reductions, and it has been going on progressively since then.

4565. And since then I think it is that the property of 7,000*l.* a year has been let away?—Yes, that is so.

4566. Have you observed any difference between the reductions of rent in the different parts of the country where these estates lie, or are they about the same?—Perhaps in Buckinghamshire, where I have some property, I think dairy farms, have been rather less, but as a rule when reductions have been made, I have not discriminated.

4567. You have given it over the whole property?—Yes, all round.

4568. What has been the result upon the tenants of those large reductions; have those large reductions enabled them to get over this period of difficulty?—Yes, they have.

Changes of tenancy.

4569. You have not had many changes of tenants?—Most of the old tenants are on their farms still; there are some changes.

4570. But not more than the normal number?—Out of the whole estate I have only got one farm in hand.

The letting of farms.

4571. When a farm is vacant have you been able to let it?—Yes.

4572. Have you had many applicants for vacant farms?—For the small ones, perhaps more than the large ones.

4573. Not for the large ones?—There has been more difficulty with the large ones; but still I have by constant concessions been able to keep the tenants.

4574. I observe fron this return that the cost of maintenance of gates and fences has largely increased?—Well, the tenants are very unwilling to do it.

4575. And the repairs of buildings apparently are large?—There was one item which I had to concede, that is the painting. In the old-fashioned days the tenants did the painting, and now I do not know whether they can do it, but they will not.

Reduced rental.

4576. Taking it generally the reductions have been very considerable and the net rental is very seriously reduced?—I am in hopes that they will go up next year. I am in hopes that this 12,000*l.* will go up next year. On the top of previous reductions I reduced them 17½ per cent. this year.

4577. Each of the last two years?—Yes.

4578. Then that 29,000*l.* or 30,000*l.* in the last year is the result of not only permanent reduction but also of temporary abatements which you hope will not be permanent?—I hope they will not be permanent. I do not anticipate that they will.

4579. And you think that those great reductions and temporary abatements practically saved the tenants?—Yes, I think so. The proof of it is that I have every farm let, and as far as I know I do not anticipate having farms thrown on my hands.

4580. Do you think that the tenants retain their tenants' capital or not?—I think they do. I rather think so—some do.

4581. Are the farms well-stocked?—They are well-stocked and in good condition.

4582. And there is no appearance of bad cultivation?—No. This year I am bound to say that it looked worse than ever it did before. I have had four or five tenants who without giving notice have said that they cannot go on.

4583. This year has been a very bad year from the drought?—It has.

4584. You have had a combination of bad prices and bad seasons?—Yes.

4585. And low prices?—Yes.

4586. Do the tenants on those estates also hold on yearly tenancies?—Yes, the same as yearly tenancies under the Agricultural Holdings Act.

4587. Do any of them have the game on the holdings?—I have a concurrent right with the tenant for the shooting.

4588. Both winged game and ground game?—Everything.

4589. In fact you have carried the principle of the Ground Game Act to other game?—Precisely.

4590. Then they cannot let the shooting I presume?—No, they are restricted from letting it.

4591. (*Lord Cobham.*) You have the shooting on your own farm?—Yes, on my own land of course.

4592. (*Chairman.*) Is there any other point which I have not asked you about to which you wish to draw the attention of the Commission?—I was going to say something about milling, about the extraordinary number of little millers who disappear from the face of the earth. It is an industry which has been knocked on the head; a little miller is knocked out of time by the big miller, but at present the big miller is knocked out of time by the still bigger American miller. It is a village industry which has gone.

4593. Do you observe that other village industries have gone owing to the concentration of manufactories in large towns?—I am rather inclined to think that the little shopkeepers will disappear as well. I am a very great believer in the advantage of co-operation. However sorry we may be to see the little shopkeepers knocked out of time I think the time will come when they will be overpowered in the same way as the small tradesmen in cities have been displaced by the stores.

4594. Is the small publican likely to go with the increase of clubs?—I should like the small publican to go, and I think it is highly probable that he will.

4595. You have village clubs?—Yes.

4596. And do they sell beer?—No. We have generally had a good public-house where the men assemble. We have clubs, but we have never allowed beer to be sold there.

4597. (*Mr. Little.*) You put your own manager in, did you not?—Yes. The public-house in my locality is conducted by an old soldier who has a salary of 100*l.* a year, and he has no interest in the sale of the beer at all?—He takes his salary, and all the profits which are made are carried to my agent who in point of fact runs the public-house.

Reduced rental.

4598. (*Lord Vernon.*) You have spoken two or three times about the progress of the fall in rents?—Yes.

4599. Do you not think that if there has been a fall since 1884 the fall ought to have practically taken place before, that it was only that the farmers were hanging on with the hopes of times changing enabling them to pay the old rent when they could not afford to do it?—I think the bankers kept them on their legs in a great measure.

4600. They went on paying, thinking the times would change, and hoping to pay the old rents?—Yes.

Estate in Berkshire.

4601. That estate that you have turned into a sort of co-operative works was not an entailed estate, I suppose?—No; I bought the property; it had nothing to do with me. It was a piece of land which I purchased.

4602. But even if it had turned out to be an advantageous scheme if the estate had been entailed, you would not have been able to work it in that way?—No, I could not. I could not have sold it to begin with; and the principle of those small farms is to encourage the tenants to buy by deferred payments, although, as I explained to the Chairman, we have not found that the tenants have availed themselves of the power of purchase; they do not seem to want to have anything except a small portion, they like to take a bit.

4603. The Law of Entail would be a great detriment to anybody who was desirous of selling on the purchase hire system or working on a co-operative farm, such as you mentioned?—I suppose he could sell bits of land under Lord Cairns's Act.

Graduated small holdings.

4604. Do you not think that the best system of farming is having holdings of different sizes, so that a man can grow into a bigger farmer as he saves his capital?—I think it is a very good plan that there should be an opportunity given to the labourer of having a little farm and to grow up gradually, although I think he would be too much inclined to take a bigger farm than he could cultivate by himself and his own family.

Leases.

4605. You said you thought that an understanding was almost better than a lease, did you not?—Yes.

4606. That is to say, as long as you are alive, but it might be a very poor arrangement if you happened to be succeeded by a man who did not understand the duties of property in the way that you do?—But I submit to you whether leases are not broken every day. A tenant agrees to pay rent, that rent is the fundamental part of the lease, he goes on and tells you he cannot pay his rent, and the value of the lease is gone. It has disappeared.

Expenditure on improvements.

4607. Except from the love of seeing things in order, there would not have been a sufficient inducement for you to lay out the sums of money that you have done on your property from a business point of view, would there?—I think my experience is similar to that of most landlords who have the means to do it. The tendency I think of a man who owns a property is to desire to put it in the best condition and best order that he can, perhaps not entirely with the view of making simply a profit.

4608. But if you had to raise the money from the Lands Improvement Company and if you had the risk of the burden of the debt to be paid in the future, you would not have launched out quite so readily?—I should not; certainly not.

4609. You said that you thought it would be a good thing to have loans from the State at a cheap rate of interest, and I understood you to say that you would spread it over rather a longer term of years?—I said 25 years; I would not go beyond 25 years, I think I would not. What I meant was that I would not like to have the Agricultural Department dictating to me what sort of buildings I should put up. I believe the Agricultural Department always has plans submitted to it. Supposing a company lends you money, the Agricultural Department requires that the plans of the buildings should be submitted to them to see whether they are sufficiently permanent. I should like the Agricultural Department to be very lenient.

Lord Wantage. 8 Dec. 1893.

4610. I understood you to say that the average was between 6 and 7 per cent. that was charged for the loan including the repayment of capital?—Yes.

4611. I have carefully got out what it cost, and I find that with the surveyors and the commission, and the per-centage which the Lands' Improvement Company claim, it came to considerably over 7 per cent. Do not you think that if there were less restrictions on the landowner in laying out the money that he borrowed, the cost to the landowner in putting up the buildings would be also less in consequence of not having so many surveyors?—Quite so.

Small Farms' Company

4612. (*Mr. Channing.*) In addition to the Lambourne Estate, your company had estates in Wiltshire, and two small estates in Cambridge, and also one in Essex near Colchester?—Yes.

4613. Had you approximately the same demand for these small holdings and the same readiness to pay a fair rent for them, and did you have the same experience as to the tenants getting on fairly well and paying their rent on all these estates?—No, we did not. Cambridge was disastrous.

4614. The Histon estate of course was?—Yes.

Experience of small holdings.

4615. The demand for small holdings and the general success was pretty much the same as on the estate that you referred to?—I think it was.

4616. May I ask whether you find in the case of those small tenants that they have done fairly well and been able to pay their rents on the whole?—Yes, I think so.

4617. You have expressed an opinion that on small holdings the tenants themselves can carry out the buildings more cheaply than the landlord can?—I did not intend to convey that.

4618. I do not mean in your evidence now, but I think you expressed that opinion in an article in one of the Reviews?—If I did I should rather revise that. I should not advocate it. I do not think it would lead to good results.

4619. You do not think that they could run up the sheds and the small accommodation for stock that you have referred to more cheaply with their own labour in their own way than if you did it for them?—I think they might do it more cheaply, but there are other obvious objections which certainly occur to me. Do you mean allowing the tenants to put up permanent buildings themselves on small holdings?

4620. Under 50 acres?—If I ever did express that opinion I should reconsider it. I should not advocate it.

Loans to tenants for improvements.

4621. It has been suggested by one of our witnesses here with a view to permanent improvements and buildings and so on that it would be desirable to allow tenants as well as landlords to borrow money and have a joint security. Have you any opinion as to the practicability of that?—I do not think it would answer.

4622. Have you any opinion as to the possibility of introducing the German Agricultural Loan Banks into England with a view to helping in these matters?—I have not considered it.

Quality of labour.

4623. You say that the labour has not deteriorated in your neighbourhood?—That is so.

4624. And I suppose you attribute that somewhat to the profit-sharing?—I think that is an element in the matter, and better houses and better homes and more garden accommodation and allotment. These things altogether have produced that effect.

4625. The men work very much better under the profit-sharing system?—I think it stimulates them, certainly.

4626. As you are aware I had the advantage of seeing one of your experiments in a parish where I lived for a number of years. I do not know whether you would like to refer to that?—What is it?

Profit-sharing with labourers.

4627. The working of one of the farms or two of the farms which were in your hands in Pytchley parish in Northamptonshire, they were worked one or two years under this system?—I have had no profits on that farm. I have offered a share of the profits in a particular farm in Northamptonshire, the Pytchley farm, and I believe this year there will be something to be distributed; I am told so by the bailiff.

4628. You do not think your land in Berkshire is more suitable to it?—No, I think that the Northampton farm would suit very well, I hope so. In fact, I should adopt the system on any farm of any size which I was cultivating myself.

Lord Wanta. 8 Dec. 18

4629. And you think it would pay farmers to adopt it, and that they would get better work out of their labourers?—I think they would; it would give the farmer perhaps a little trouble. Farmers, as you know, keep very little accounts. In many cases they do not keep any accounts at all.

4630. So that they would not be capable of carrying out this scheme?—No.

Co-opera farming.

4631. You spoke of syndicates of farmers working farms more satisfactorily in the future?—Yes.

4632. Is there any co-operative farming on your Berkshire estate?—There is a large farm which I believe is carried on in the neighbourhood of Savernake which is farmed by a syndicate. Perhaps some members of this Royal Commission may know something about it. I know the man's name. He is carrying on a large farm of over 4,000 acres.

4633. Is that successful?—I am told it is.

Wages.

4634. (*Mr. Everett.*) I have only one question to ask with regard to men's wages. You spoke of 10*s.* per week as the current wage, but they earn a good deal extra in harvest and hay time?—Certainly.

4635. And the cottages, setting any fair interest on their money value, are really worth 1*s.* or 2*s.* a week more than they pay?—No doubt they are.

4636. So that the 10*s.* does not at all represent the actual position of the men as compared with men's wages in London?—No. The Sub-commissioner to the Royal Commission on Labour (Mr. Cecil Chapman) has reported upon the district where I live, and he brings out that the weekly wages of the labourer come up to 14*s.* or 15*s.* a week taking into consideration the hay and corn harvest, and the turnip hoeing, and the various things done by piece-work.

Basis for fixing ren

4637. (*Mr. Lambert.*) Upon what basis do you value your farms, upon the tenant's or the surveyor's estimate, when you give a reduction of rent?—I take it upon the value of similar land which is let in the neighbourhood. Do you mean in estimating the rent that ought to be paid?

4638. No. I mean upon your estate, presuming that the tenant asked you for a reduction, how do you arrive at an adequate amount that his rent should be reduced to?—I have done it wholesale all round. I have not been able to inquire into each man's case, and I suppose, like most other landlords that I am aware of, the reduction has been made a general reduction, you arrive at it partly from your experience of what the year has been, and partly by what you hear; and a general reduction is made which applies to all the tenants, whether they are dairy tenants, or corn-land tenants. I have not been able to inquire into each man's case.

4639. You think that the reductions are adequate to enable the tenant at the present rent to live in a fairly comfortable and prosperous way?—The best answer to that is that they have done so.

4640. You would have no objection to let a farm on a fair valuation made by an impartial capable valuer?—I should like to know the man first. I would rather trust myself and my agent than any valuer.

4641. Of course I meant an impartial capable valuer?—I should say that the person who is letting the farm would probably be able to come to a decision as to what rent he should ask better than any outside person.

Competit for small farms.

4642. You mentioned that you have many applicants for small farms; how would the rent be fixed in that case, where you have a dozen applicants applying for one farm?—I think it would be fixed on a sort of system of what the farms have previously let for, and taking into consideration the reduction made.

4643. You would not take the highest tender I presume or would you take the highest offer?—I do not think I would. I should like to know something about the man; of course if it was a farm of any size, I should want to know if he had got means to carry it on; I would not take the highest bid irrespective of the man's character or means.

4644. Would it be in your opinion fair where there are a large number of applications for one farm to take the highest bid?—I do not see how the fairness comes in.

ord ntage. c. 1893.

4645. Do you think it would be advisable or likely to promote good farming and to promote the interest of agriculture?—I suppose farming is like other things, there is a certain amount of bargaining between the man who lets and the man who hires; there is a certain higgling of the market which comes into consideration, but qualified by so many other considerations, such as the character of the man.

4646. But would the would-be tenant competing with a dozen others be in a position to make a fair bargain with an owner who had to let a single farm?—Whether there are a number of farms or one farm it would be the same thing.

4647. I mean to say a dozen applicants for one farm; take the case of a landowner who had to let one farm for which he had a dozen applicants would those applicants be placed in a position to make a fair bargain with the landlord in taking that farm; which do you think would have the best of the bargain, the landlord or the would-be tenant?—I can hardly follow the point of your question, you assume a good deal which I do not quite admit, but if I could understand your question a little more I would try and answer it; I do not see how the point comes in exactly.

4648. Which would be in the best position to make the best bargain, the one man who had a dozen applicants for his farm, or the man who is competing with a dozen others for it?—I suppose you are pointing to the fact that the landlord is in this particular case in a much better position than the tenant.

4649. Yes?—Then I suppose the landlord. I do not think land is generally let in that way. As a mere commercial business the landlord would take the best offer which was made to him. All other things being equal, that is how it strikes me it would be done.

4650. But the two men would not approach the subject on equal conditions?—If I had two men offering me to take my farm and both were equally good, I should naturally say Mr. A. should have the farm because he offers me better terms.

4651. My point is this: that the landlord and the would-be tenant would not be in the same position as regards the bargain?—Perfectly the same, there is no difference.

4652. I should have thought that where there were a dozen applicants for a farm, those applicants would compete one after another, and would endeavour to rush the price which they could not pay merely for the sake of getting into the farm?—Presuming that they are honest men, which you must always presume, they would only offer what they could honestly pay.

4653. Have not tenants in order to keep in the farms, especially in the more prosperous times, offered rents which they could not pay?—I do not think so; they are very short-sighted men if they take a farm which they could not possibly pay the rent of, and I cannot suppose a man to be so silly as to do that.

4654. In the tabular statement that you have been good enough to place here, I see the rents have increased from 1872 to 1877 by 8,400*l.* a year; could you give us any return or any statement showing the amount of rent paid from 1860 up to 1873?—Outside that table?

4655. Thirteen years before this table?—I have not got the information here.

4656. You could not give it to us?—Probably not, it was rather a stretch to get this. I do not think I could go back 30 years, because the clerical staff was rather different to what it is now.

4657. (*Lord Cobham.*) 1876 was probably the maximum year?—Probably.

it-shar- with urers.

4658. (*Mr. Lambert.*) Would you recommend profit-sharing with labourers as a general practice in agricultural operations?—On the principle of the bonus system I would.

4659. If it was not a voluntary arrangement?—It must be voluntary, it is impossible to make it a matter of business.

4660. But it would be advisable to make it a voluntary arrangement; do you think it would be wise for the farmer to make it a voluntary arrangement, what I mean would be to introduce the system of profit-sharing?—I do indeed.

endi- on rove- ts.

4661. (*Mr. Little.*) Mr. Long has asked me to put one or two questions to you with regard to the buildings and improvements on farms, does that not only mean immediate outlay, but also a continuous increased outlay?—It does.

Lord Wantage. 8 Dec. 1893.

4662. And as rent has shown a continual tendency to decrease, there has been a great discouragement to landlords to make outlay upon buildings?—For farm buildings. I do not know that that would apply to cottage building, because that distinctly helps the tenant.

4663. The question was with reference to farm buildings?—I have no doubt that he has a larger bill for the up-keep.

4664. It is only possible to have small farms where there is either good pasture or a mixed soil?—Yes.

4665. They could hardly become general where big sheep farms and down land exist?—They could not.

4666. They could not take the place of large farms in those districts?—I do not think they could.

Co-operative farming.

4667. What is in your opinion the prospect of such land as I have been describing which now is in large corn farms and downs attached?—You cannot farm a big sheep farm without capital, there is the crux that you gentlemen have to decide, namely, how to bring capital on to the land. I do not see how it is to be done. I venture to suggest, not with any confidence, but still as a possible means of doing so, that a syndicate might be able to raise money on better terms than individuals.

4668. Such a system as the syndicate that you spoke of?—Something like that. I do not put it forward as a remedy that I have any decided confidence in, but it may be possible that what is done in the commercial world dealing with quick returns and small profits on a large scale, and which has succeeded so well with those big shops all over England and abroad, might in the same way be applied to land.

4669. Arising out of that answer and your former answer, may I take it that with your experience of farming in the last six years, you think that a farmer entering upon the land at the reduced rent and on the conditions that he can now enforce, has a fair opportunity of farming at a profit?—I think a skilful man can; he gets his rent down; his labour bill must be reduced; his labour is cheaper than it was, and my impression is that the labourers' work is in some cases better than it was. I think he may be able to farm at a profit.

4670. In the case of small holdings where the rent is apparently considerably higher than that of surrounding farms, is it not generally the case that the land is composed of specially valuable land, either in regard to situation or something else?—Yes.

4671. A comparison is often made between the rental of small holdings—small farms—and the rental of larger farms?—Quite so.

4672. Would not the greater rental be partly due to the special value of the land?—Yes, it would.

4673. You said that farmers sometimes object to give up a piece of land which would be very suitable to the small holdings and allege that it is a bit of the best land and generally the most convenient?—That is so.

4674. It is sometimes near the village, sometimes the home field?—Yes, and therefore more valuable.

Profit-sharing with labourers.

4675. As to the system of profit-sharing, do you think that there is an equivalent in value for the trouble that the farmer has, and that he gets out of his man a sufficient return to pay him for that extra trouble?—I think so; I think the trouble ought not to come into consideration at all; the trouble is nothing compared in my estimation with the advantages which are to be got by it. As I tried to point out, the profits are to be taken on an average; if you had a good year you could only give the labourers a share of a good year; you must average your profits over a series of years and that entails account keeping.

4676. I think that your bonus is only given to those who are regular labourers for more than two years?—Yes.

4677. The casual labourer would not benefit at all?—No.

4678. One result might be to induce labourers to stay upon a farm longer?—I think it would be.

4679. Have you observed a tendency among the labourers to shift too frequently?—No, I have not seen that at all.

Lord Wantage.
8 Dec. 1893.

4680. Are your labourers hired by the year, or simply engaged for the week or the fortnight?—They are villagers.

4681. But they are not hired by you?—No.

4682. They are free to go when they please?—Quite so.

4683. And they occupy cottages in the villages?—Yes.

4684. Is there any condition that they should labour on the estate?—No, it may be implied, but there is no condition.

Effect of the profit-sharing.

4685. I observe that in the two parishes with which you are more immediately connected, there has been an aggregate increase in population in the last 10 years, while the population of the whole union has decreased. Do you attribute that at all to your system of bonus sharing?—Yes, I do; I have not a doubt about it that the best labourers are on the look out to come in, and to be settled on the property where they have such advantages.

4686. The efforts that you have made by co-operative stores, and clubs, and bonuses to labourers, have, in your opinion, arrested the flow of labour to the towns to some extent?—I think, as far as the married people go, certainly.

Loans for carrying out improvements.

4687. Now with regard to the advances of State loans; first of all, may I ask as regards the expense of applying to one of these companies. Where an application was made to a land company for a loan, it was generally by a life tenant of an estate, who desired to charge the estate?—Yes.

4688. And in that case, there was some reason for appointing as it were, a guardian for the remainder man?—Yes, no doubt.

4689. And the State assumed that position?—I suppose so.

4690. And required to be satisfied that the outlay was judicious, and not of a temporary character?—I think so.

4691. Would you think this unnecessary in the case of the advance of a State loan?—I think it would be necessary within a certain scope.

4692. So long as the property was an adequate security for the charge, and if the charge were made a first charge, the landowner might perhaps have greater freedom than he has had?—Yes. I suppose this borrowing from companies only applies to persons having limited properties; a man whose property is his own, who is an unlimited owner need not go to one of these companies at all.

4693. (*Lord Vernon.*) But it takes precedence of all other loans, that is the advantage?—I see.

4694. (*Mr. Little.*) You said, I think, that you found out that the charge was 6*l.* 7*s.* 4*d.* per cent. in borrowing from these companies?—Yes.

4695. Are you aware that the Government lend to the authorities in Ireland for the purpose of building cottages at 3¼ per cent.?—At the same time paying off within a certain period.

4696. 3¼ per cent. is the basis of the loan, but by an annual payment of 4*l.* 9*s.* 2*d.* the sum can be redeemed in 50 years. Would it not be an advantage to the landowners of England if they were advanced money on the same terms?—I think it would.

4697. And do you think that the difference would be sufficient to induce them to spend money on the improvements that are required?—I think it would encourage them.

4698. (*Lord Cobham.*) Would it not be a loss to the landlords who would not get 5 per cent. out of the cottages?—It would be a loss; they would not get 5 per cent.

4699. How much do you think you would get?—I do not think you would get 2 per cent.; about 2 per cent. I should think.

Horse-breeding.

4700. (*Mr. Gilmour.*) I think you have a large and valuable stud of shire horses; do you keep them on this farm in Berkshire?—Yes.

4701. Does anything in connexion with the stud enter into the accounts of that farm?—Yes, it does.

4702. The profits and losses of that are shown on the accounts?—Yes, they are all shown on the accounts of profits and losses, and the purchase of the horses.

4703. Would the periodical sales be included?—Yes, but I have not had a periodical sale yet.

4704. But in the year that that periodical sale would come the profit would be naturally very much greater than in the other years?—Yes.

4705. And that would appear in the average of the six years for your labourers?—That would have to be averaged.

4706. Although they have nothing to do with the stud in any way?—They have a good deal to do with the stud, they look after the horses. I should say this case would be eminently one which would show the advantage of the bonus system, because a man may very soon do your horse an injury if he is not very careful; the man who takes care of and exercises your horses should have a share as well as the ordinary farm labourer.

4707. You intend to let all the profits and losses come into this account?—Averaged.

4708. I understand. Does your bailiff at all find that these men, having nothing whatever to do with the buying and selling, make any trouble about the buying or selling, or about the fancy prices for the stock?—Not a word.

4709. You consider it better to give a cottage rather than a reduction of rent?—Yes.

4710. Does not that tend to show that the farm has not had sufficient accommodation before?—It would, I think, certainly.

4711. You would hold that a tenant should have full and ample accommodation?—I think that he ought to have good cottage accommodation.

4712. To return for a moment to that profit sharing. I was going to ask if it is true, as it is put before us constantly, that there are no profits made by the general tenant farmer who carries out agriculture on the general basis, what inducement would there be for labourers to join in the profit-sharing?—None at all, if there were no profits they would have no share in them.

4713. With reference to this weekly wage that seems to be current in your district, is it in your opinion sufficient for a man to live upon, and bring up a family properly, in your part of the country?—The proof of it is that they do live, and do bring up families very respectably.

4714. And live in a comfortable state?—In very great comfort; but I am pointing out that every able-bodied labourer can earn a good deal by piece-work. I have alluded to that.

4715. But I understood that those men were the men working on this farm?—Yes.

4716. They do a good deal of piece-work?—They bring their wages up to 14*s.* and 15*s.* per week by harvest work, and hay harvest, and hoeing, and various other things.

Horse breedin

4717. (*Mr. Whitehead.*) May I ask whether the profits on your Lordship's estate are considerable?—The sale which is alluded to by the honourable Commissioner has never taken place; I have never had a sale, but I am going to have one.

4718. Are there any profits at all?—Well, there are. I have got a stallion which I bought out of the farm profits, and anything which is earned by the stud of shire horses is carried to the account of profit on the farm.

4719. And therefore they would make the profits of the farm larger?—They might or might not, but I hope they will.

4720. Have they done so?—Yes, I think they have fairly done so; when you have a sale it is the accumulation of some years; you accumulate animals.

4721. I was going to point out that it would put your Lordship in a better position than that of the tenant farmers around?—I heard a case of a tenant farmer having sold three yearling shire horses, and he realised 400*l.* for them.

4722. And it is usual for tenants in your district to do so?—Yes, good cart horses are not much bred in my district yet.

4723. They have the same advantages as you have?—It is not a good horse-breeding district, far from it; I wish it was. At the agricultural shows I give a prize for the best mare, and I allow the tenant farmer

who wins the prize to put the mare to my shire horse free. I may say that gradually the farmers are taking to cart horses, they pay better than bullocks, as far as I can see.

4724. With regard to the small holdings which you have established in your parishes, I think you said that the size of those varied from 20 to 50 acres?—That is the Small Farms' Company; that has nothing to do with my estate.

4725. May I ask whether the profits of those farms have been greater than those of larger farms around?—No, I think something like about 3 per cent. has been paid upon the whole transaction of the Company.

4726. I meant the profits to each individual holder, whether they were larger than that of any other tenants round about?—You mean the profits to the holders themselves?

4727. Yes?—I can only judge it by what they do. They go on, we may conclude that they go on successfully.

4728. And they manage to live?—Yes.

4729. And they do the labour themselves?—Yes, we never have a farm vacant. As soon as a farm is vacant it is taken up by someone else.

4730. And as to the allotments in the same parish, they are not connected with that company?—This Small Farms' Company has nothing to do with allotments.

4731. Do you find that the labourers rise to those larger allotments?—Yes, I think there is a tendency for an allotment of an acre; I know a good many labourers who like an acre of land. Some people think that they are not wise, but my experience is that they do it well, and with advantage to themselves.

4732. (*Lord Cobham.*) They have allotments besides gardens of their own?—Yes, they grow a little corn.

4733. (*Mr. Whitehead.*) What I wanted to ask was whether the labourers from their allotments rise to larger holdings?—I could not say, I have not seen that they have. I do not think that they could, because their whole capital is in their own labour; they cannot lay by anything; at least not out of the profits of the allotment.

4734. They would have the opportunity?—Yes, I suppose that there are cases of their taking larger holdings.

4735. (*Sir Nigel Kingscote.*) You have expressed the opinion that labour about you has not deteriorated. But have you found any want of skilled labour for the purpose of thatching and trimming hedges, and things of that kind, which require skilled agricultural labour?—Well, thatching has so much gone out of fashion with us, and straw is such a valuable article, that it is not much used.

4736. You put up hay barns?—Hay barns.

4737. And you have all the latest improvements in that way?—I have not all, but I have got some.

4738. As regards the co-operative stores in your village, do you take any leading part in it, or do you let the labourers form their own committee and manage it themselves?—It is managed chiefly by my agent, or rather, I should say, supervised by him, but the management is entirely in the hands of a salaried officer or manager.

4739. And anybody outside may join those stores?—Anybody may purchase at them. Anybody may buy, and the only profits that we share are the profits which are distributed amongst the buyers after paying 4 per cent. upon the original capital.

4740. Does the store deliver goods?—Yes, they do; we have got three or four horses which are constantly on the road carrying.

4741. May I ask are those subsidised by you?—No; all the accounts are kept perfectly separate.

4742. It is a self-supporting institution?—I contribute in no way to it; I buy at it.

4743. Are all your properties under the Agricultural Holdings Act?—Yes.

4744. Have you had to bring any of the tenants into court?—I have never been in court.

4745. Has it worked well on your estate?—Yes, I think so, I have never had any differences.

4746. On your farms do you sell your stock by weight or by auction?—I sell it by weight to the co-operative store; the butchery takes my stock, and I sell all that by weight.

Lord Wantage.

8 Dec. 1893.

Sale by live-weight.

4747. May I ask how it is valued?—At the current newspaper price of the week, whatever the weekly price is as given in the papers so much per lb.

4748. (*Lord Cobham.*) To elucidate the return you have furnished I want to ask a question. Where do the repairs come in, under "buildings," or under "agency in general"?—Under "buildings."

The estate accounts.

4749. You have the new buildings and repairs in one column?—That is column 3.

4750. That includes maintenance and wages and the sum spent on fences?—Yes, that is the next column.

4751. Is the column for woods and plantations, and also brick and tile yard, a net or a gross return of expenditure?—No, that is the money expended taking woods and plantations, the gross money spent on that paricular department.

4752. And the receipts will come in under "annual gross income"?—Yes.

4753. And the same with the brick and tile yard?—Yes.

4754. That had dwindled down to 28*l.*?—I suspect I found that it did not answer, and I knocked off the brickyard.

4755. Have you any explanation to give as to the enormous increase of voluntary payments, the local subscriptions, I presume?—My explanation is that in the previous time they did not appear.

4756. It is a new item brought in?—These voluntary payments were not charged to the estate, they were paid out of some other source.

4757. And the tithe rentcharge would come under the rates and taxes?—Yes.

Price of wheat and straw.

4757A. (*Chairman.*) Have you found that the increased price of straw has to some extent made up for the lower price of wheat?—In answer to this I give the present price of straw and the present price of wheat. The present value of wheat straw is 4*l.* per ton, free on rail. The cost of delivery to the nearest station would be 6*s.* per ton, tying and carting. The manurial value of one ton of wheat straw is 10*s.*, or, in other words, it could be converted into two cart loads of dung at 5*s.* per load. 1 ton 5 cwt. is the average weight of wheat straw grown per acre, although as much as two tons per acre is often grown. Wheat straw last season was only making 30*s.* per ton, free on rail; the expense of delivery being the same as now. About 30 bushels of wheat is grown per acre. The average price of best white wheat now is 3*s.* 9*d.* per bushel, 5*l.* 12*s.* 6*d.* per acre. Supposing straw keeps up at the price at which it now is, the enhanced price would to some extent make up for the lower price of wheat. It must be remembered, however, that land is deteriorated by the sale of straw.

Condition of farmers.

4757B. Do you consider that the condition of the farmers on your Northamptonshire and Berkshire estates has deteriorated?—The condition of the farmers is less good than it was: their capital is diminished. On the other hand farmers are meeting their difficulties by more economical management and greater attention to business.

Changes in system of farming.

4758. Do you consider that the tenants might have done more to meet the difficulties of the last few years by striking out into new lines and by giving more attention to poultry, vegetables, fruit, &c.?—In some cases I think they might: but poultry, vegetables, and fruit-growing can only be carried on advantageously in favourable districts and in proximity to markets. Such industries generally succeed better on small farms than on large ones. Tenants can alter their system only by degrees. For many years corn-growing was the most remunerative business, and to this their whole attention was devoted: land is now being extensively laid down in grass, but it is not all land that is suited to it. Where the soil is favourable for pasture I think more might be done in dairying. Those who have visited Denmark with the view of studying the system of butter-making there, report that England is five and twenty years behind it. The import of butter into England amounts to ten million sterling annually. Some at least of this ought to be secured by our English farmers.

The witness withdrew.

Adjourned to Thursday next at 12 o'clock.

Tenth Day.

Thursday, 14th December 1893.

PRESENT:

THE RIGHT HON. GEORGE JOHN SHAW-LEFEVRE, M.P., IN THE CHAIR.

Viscount COBHAM.
The Right Hon. BARON VERNON.
The Right Hon. HENRY CHAPLIN, M.P.
Sir ROBERT NIGEL FITZHARDINGE KINGSCOTE, K.C.B.
ROBERT GIFFEN, Esq., C.B.
CHARLES ISAAC ELTON, Esq., Q.C.
FRANCIS ALLSTON CHANNING, Esq., M.P.
JOHN CLAY, Esq.
CORNELIUS NEALE DALTON, Esq.
ROBERT LACEY EVERETT, Esq., M.P.
GEORGE LAMBERT, Esq., M.P.
WILLIAM CUTLACK LITTLE, Esq.
CHARLES WHITEHEAD, Esq., F.L.S.

HERBERT LYON, Esq., *Secretary.*
R. F. CRAWFORD, Esq., } *Assistant*
FREEMAN THOMAS, Esq., } *Secretaries.*

Mr. W. J. Harris.

14 Dec. 1893.

Mr. WILLIAM JAMES HARRIS recalled and further examined.

(For previous evidence *see* page 95.)

Disadvantages to the English farmer.

4759. (*Lord Vernon.*) I believe you wish to make a slight correction in your previous evidence?—Yes. On looking at the notes of my evidence I find that I have added the figures up wrongly. It is in answer to Question 3438. It should be: "I consider the disadvantages that English farmers suffer, compared with foreign farmers, amount to 102*s.* per acre"—not 82*s.* per acre—and that the advantage which the English farmers gain, as against the foreign farmers, amounts to 65*s.* instead of 55*s.* That is in answer to Question 3440.

4760. 102*s.* as against 82*s.* is one. What is the other?—65*s.* against 55*s.* In the latter part of my answer to Question 3438 I say that I have put the short yield at 40*s.* per acre, that is as against the foreigner; that is in yield, the average short yield; but it ought to be nearly 50*s.* per acre, because 14 bushels to the acre, at the present price, would come to nearly 50*s.* instead of 40*s.*; that is to say, the English farmer produces more to the acre, and pays less in carriage to market, and that gives 65*s.* in the one case as against 102*s.* in the other, and that being so I have had to alter your Lordship's allusion to it in Question 3439—"(*Lord Vernon.*) 82*s.* to the acre you say?"—102*s.* to the acre I have made it in that question. I may mention that in No. 3438, I have altered it, in my answer, to 102*s.*, and I have altered the 40*s.* into 50*s.* Those are the only corrections. I just wanted the consent of the Commission, because I gave the evidence rather hurriedly, and I had to alter this. But that is the only material point I have to alter. (*Note.—These questions and answers were confined to corrections made in the witness's previous evidence, which were allowed by the Commission.*) I thought I could save a good deal of the time of the Commission if I were to give as quickly as I can the cost of production in the various countries that I have visited.

Cost of production in the Colonies.

(*a.*) South Australia.

4761. If you will do that we shall be obliged?—It will save a good many questions, and any necessary questions could come afterwards equally well. In South Australia, when I was there the Government gave me free passes and other facilities, and I went from one end of the colony to the other.

4762. When was that?—About six or eight months ago, in the month of April, I think. In South Australia wheat has been more largely grown than in any other of our Australian colonies. The system has been simply one of exhaustion. The yield per acre has decreased with every crop, and the greater part of the good wheat land has been reduced from giving 20 to 30 bushels at first to an average yield now of 6 or 7 bushels. A system of rotation farming, including the fattening of sheep, could be adopted, which would gradually restore fertility. Already Professor Lowrie, at Roseworthy College, has shown that he can grow 20 bushels to the acre by this means on land no better than that producing 6 bushels to the acre. I saw a great many instances where the sheddings of one crop were left to make another. The practice of harvesting by means of a stripper requires that the grain should be very ripe; the consequence is that there is often a good deal of grain shed *during* and previous to the cutting. The heads are cut off and threshed as the machine moves along. The standing straw is burnt, the land is either scratched with a harrow or shallow ploughed with a 3 or 4 furrow plough, and all the operations cost no more than 10*s.* per acre, or say 1*s.* 8*d.* per bushel for a 6 bushel yield. The cost of sending this to the shipping port, bagging up, &c., is about 6*d.* per bushel. Thus 8 bushels, making 1 quarter, cost about 17*s.* free on board. The freight and insurance to England is about 7*s.*, and thus the net cost is about 24*s.* for what, at to-day's value, brings 28*s.* here. A yield of 8 to 10 bushels may be obtained from spending more on the preparation of the land, but the crop seldom costs more than 20*s.* per acre. These figures show how a very inferior crop may be grown in a hot climate, and shipped at present prices, with the result of robbing the soil, a practice which cannot be copied by English farmers. A change will, no doubt, take place in the system of farming in South Australia. Alternate crops will be grown for fattening good breeds of sheep, and I look for a large supply of mutton at very low prices within a short period of time. The wheat yield per acre will then be much larger than it is now.

(*b.*) Victoria.

Then I come to Victoria, which is, next to South Australia, the largest wheat-producing colony in Australasia. The system I have described as not unusual in South Australia, namely, that of harvesting without sowing is sometimes practised in Victoria. The land, however, has not been cropped for so many years and retains more of its original fertility. Moreover, a large breadth of the Mallee country (which extends over 8,000,000 acres) is now being broken up for wheat. This land was a few years ago considered valueless on account of the difficulty of clearing it from the Mallee scrub. That has been overcome, and the land can now be cleared at something under 5*s.* per acre. The scrub is burnt, and the ashes act as a manure. I saw one field which had been cropped with wheat for nine years in succession. I brought samples home from this field. The top soil is described by Dr. Voelcker as

Mr. W. J. Harris. 14 Dec. 1893.

undergoing exhaustion, but the subsoil he still describes as being "rich and not deficient in any of the "main elements of fertility." The cultivation and harvesting of an acre of the Mallee country costs about 23*s*. The yield may be calculated at 12 to 14 bushels, costing, say, 1*s*. 10*d*. per bushel. The cost of conveying to port and shipping, including cost of bags, is about 8*d*. per bushel. Thus at 20*s*. per quarter the wheat can be put on board ship, and the freight and insurance of 7*s*. per quarter make it cost very nearly the current price here. Any profit to the farmer must be from the work that he and his family do, for at present prices there can be little left for rent or sinking fund, and as the mode of culture is gradually producing sterility, this is an important drawback. If wheat were 1*s*. per bushel dearer the greater part of the Maller district would probably come under cultivation. I apprehend that alternate cropping and the fattening of large numbers of sheep will be more generally followed as time passes; but I believe that wheat will be produced as cheaply then as it is now owing to the increased yield, and the alternate crop will pay as a mutton producer.

Price of corn.

(*c.*) New South Wales.

Now coming to New South Wales, I have already in my previous examination before this Commission given some account of the rich lands I visited in the Murrimbidgee district. I described one paddock which had been cropped with wheat for over 20 years. Since then I have had a letter from the farmer with whom I stayed; he writes as follows: "The crops every-"where look well. On the paddock where 22 crops "have been taken off it looks this year over 20 bushels. "My son has a beautiful crop on his newly turned "land. He expects on an average 25 bushels." As I said in my previous evidence, I believe there are nearly 50,000,000 acres of land of similar quality to this in New South Wales and Queensland, with a sufficient rainfall, say from 16 to 22 inches, which only requires an extension of the present railway system to bring it into communication with the shipping ports. The land has hitherto only been used as a sheep run with trifling exceptions. The cost of clearing was considered the great bar to its cultivation, but what was supposed some years ago to cost 10*l*. per acre is now found by the system of ring-barking and burning to cost only 10*s*. The expense of cultivating for wheat after clearing is about 23*s*. per acre. Taking the yield at only 18 bushels it thus costs about 1*s*. 4*d*. per bushel, which includes cost of bags. The carriage to the shipping port and expenses is about 6*d*. per bushel. Thus one quarter of wheat costs 14*s*. 8*d*. The freight and insurance at 7*s*. brings this up to 21*s*. 8*d*. net, with no profit at all either for the grower or merchant. You must bear in mind that all these prices that I am giving are the exact net cost; there is nothing left for deterioration of land or even rent of land. The value in London to-day is 28*s*., cost, freight, and insurance. This profit is quite sufficient to encourage cultivation. I brought samples of the soil home with me, and I hand in Dr. Voelcker's Report. If the Commission would like it they could have it put in the Appendix (*the Chairman assented*). (See Appendix A., XI.) I would particularly call attention to his report of the soil taken from the surface of the field which had borne 22 crops in succession. I do not believe there is any large extent of better wheat land in any other country of the world. Mutton is likely to be exported in large quantities, and also dairy produce.

(*d.*) New Zealand.

Then I come to New Zealand. New Zealand is farmed more as we farm in England, but the expense of manuring is thus far only incurred to the smallest possible extent. As a rule, the land is far more easily tilled than ours, and the difference in expenditure on these accounts may amount to 40*s*. per acre in the cost of an acre of wheat. In some parts the yield is so large that it pays to grow wheat even at present low prices. I will give an instance. Near Asburton, in the Province of Canterbury, there is a farm of 15,000 acres called Longbrach, belonging to Mr. John Grigg, a Cornishman. For the production of wheat and mutton I doubt there being a better farm in the world. When I was there Mr. Grigg had just harvested 4,600 acres of wheat, yielding 37 bushels to the acre. The cost was as follows:—Ploughing by contract, 5*s*.; rolling, 10*d*.; disc harrowing, 10*d*.; tine harrowing, three times at 9*d*., 2*s*. 3*d*.; drilling, 1*s*. 6*d*.; seed, one bushel per acre, 3*s*.; spring rolling, 10*d*.; harvesting, contract price, 14*s*.; threshing, 2*d*. per bushel, 6*s*. 2*d*.; carriage to port and loss on bags, 15*s*. 5*d*., making a total cost of 2*l*. 9*s*. 10*d*., equal to 1*s*. 4½*d*. per bushel, or 10*s*. 10*d*. per quarter of eight bushels; then adding freight and insurance, 7*s*. 6*d*., makes it come to 18*s*. 4*d*. for cost, freight, and insurance. Thus Mr. Grigg could ship wheat without absolute loss at 18*s*. 4*d*. per quarter to England; but his land had cost him at least 1*l*. per acre in interest of money and taxes, and he would have commission and risks which together would be equivalent to about 5*s*. 8*d*. per quarter, making the cost of this fine white wheat 24*s*. per quarter. The value to-day in England is 26*s*.

Mr. W. J. Harris. 14 Dec. 1893.

4763. You have got to add the freight to the 24*s*.?—No; I have added the freight. 10*s*. 10*d*. is the price free on board.

4764. (*Mr. Chaplin.*) Where is this farm?—In New Zealand.

4765. (*Lord Cobham.*) That is on Canterbury Plain?—Yes, you may know Mr. Grigg. The cost per acre is 2*l*. 9*s*. 10*d*.; the yield is 37 bushels to the acre, and that works out at 1*s*. 4½*d*. per bushel, or 10*s*. 10*d*. per quarter of 8 bushels, and with freight and insurance, 7*s*. 6*d*., it comes to 18*s*. 4*d*. Thus, as I have said, Mr. Grigg could ship wheat without absolute loss at 18*s*. 4*d*. per quarter to England; but his land had cost him at least 1*l*. per acre in interest of money and taxes, and he would have commission and risks which together would be equivalent to about 5*s*. 8*d*. per quarter, making the cost of this fine white wheat 24*s*. per quarter. That is reckoning so much upon every quarter for the rent, all the expenses of his land, improvements, and also commission that he would naturally have to pay on selling the wheat. The value to-day in England is 26*s*. On farms further south, where oats are principally grown, the yield is from 60 to 100 bushels per acre. The cost of cultivation is about 30*s*. per acre. The oats can be put on board ship at 9*d*. per bushel, or 6*s*. per quarter, and the freight and insurance at 6*s*. 6*d*. per quarter would enable the farmer to ship good oats to England at 12*s*. 6*d*. to 13*s*. without actual loss. These oats are so fine that to-day's value in England would pay nearly 10*s*. per quarter profit. This would, however, leave nothing for rent or interest on outlay in New Zealand. I must explain that I have given only the cost with a very good farm and very good yields. I had better, perhaps, also say that there is also a good deal of bad farming in New Zealand, and that most of the farmers are only just struggling along, and therefore I am only endeavouring to put before this Commission the very lowest price at which the best farmer, and on the best land, can produce his goods.

Price of corn.

4766. What rate of interest do they pay for their money?—I should think about 6 per cent. I do not know for certain, and therefore I would rather not say. There are a great many farmers in the hands of the Bank of New Zealand, and it is the usual thing for a bank to undertake that sort of business. New Zealand mutton can be produced at 2*d*. per lb. with a considerable profit to the producer. The advantage over English farming in the production of mutton consists in the absence of fly first, the suitability of most of the land, the mild climate, and the large farms—any of you gentlemen who keep sheep know how much better sheep do when they have a great number of changes of land suitable for them—that is the advantage which Mr. Grigg and other large farmers in New Zealand have over our own farmers.

4767. (*Mr. Giffen.*) What part of New Zealand?—On the Canterbury Plain, between the mountains and the sea. A crop of turnips or rape can be produced at considerably less than 20*s*. per acre. The amount of food on a 500-acre paddock thus cropped to be fed off by sheep is something enormous. A paddock in New Zealand is larger than the majority of English farms; taking the cost of mutton at 1½*d*. per lb. and the cost of freight and refrigeration and commission in London at 1·65*d*., the best of mutton can be sold in London at 3·15*d*., without losing money. Dairy produce is very profitable to the New Zealand farmer at present prices.

(*e.*) Manitoba, and the North-West Provinces.

I go next to Manitoba and the North-West of the United States. My investigations in Manitoba led me to the conclusion that wheat could be grown and harvested by farmers accustomed to the country at a cost of 28*s*. per acre, and that an average yield of 20 bushels might be depended upon. The grain, therefore, would cost nearly 1*s*. 6*d*. per bushel delivered to the nearest railway station, and the cost of delivery to the shipping port on the Atlantic or in the St. Lawrence amounts at present to 20 cents a bushel, say 10*d*., making the wheat cost without any profit or

Mr. W. J. Harris.
14 Dec. 1893.

commission 2*s.* 4*d.* per bushel, or 19*s.* 2*d.* per quarter; but the freight and insurance would add 2*s.* to 2*s.* 6*d.* per quarter. Thus the net cost, including freight, and insurance to England would be 21*s.* 6*d.* A farmer living in Manitoba or Dakotah, or any of the North-Western Provinces, would hardly remain there unless he makes a fair profit, and I do not believe that the present price of wheat in England will largely stimulate further production. It is quite a different thing living in Australia and New Zealand, where one seldom sees ice or snow, to living under a temperature below zero. There is a large amount of ranching done, and no doubt a fair export resulting therefrom may be expected in the shape of beef. I feel sure that neither the United States nor the Provinces of Manitoba or Alberta will ever seriously compete with Australia and New Zealand in supplying mutton.

(*f.*) California.

Then I go to the Pacific Coast. California claims to produce nearly 14 bushels to the acre on the average at a cost of 20*s.* or 22*s.* per acre. The freight is about 6*s.* per quarter, and the cost, including freight and insurance to England, and carriage from the farm to the shipping port, including cost of bags, would bring it up to 23*s.* or 24*s.*, cost, freight, and insurance. The present London price of 28*s.* may be sufficient to keep up and perhaps to increase the cultivation. In Oregon a larger yield is obtained, and the average is stated at 20 to 25 bushels. The charges are very little higher than in California, and the production of wheat will probably largely increase even at present prices. The same remarks apply to the Walla Walla wheat.

4768. (*Sir Nigel Kingscote.*) Were you in those countries, and when?—I was not through California or Oregon, but I went through all the others in the earlier part of this year. I arrived home on the 25th July, and I went with the sole object of examining into agricultural matters from beginning to end. I wanted to satisfy myself. When I gave evidence before the Duke of Richmond's Commission some of the Commissioners seemed to think I took a good deal upon myself in doubting Messrs. Reade and Pell's report as to the cost of wheat in America. I there gave evidence that what they said could only be imported at 42*s.* could be imported at 35*s.* or 36*s.* I would have gone further, but I took a rather modest view of my own opinion in opposition to such experts as Messrs. Reade and Pell. Some of the Commissioners assumed because I had not been and seen for myself that I was going too far. I happened to know what it could be imported at, because I am the head of a firm which does a very large business in the import of wheat, and has correspondents all over the world, but I may tell you I was very much taken to task on that occasion, because I had not been and seen for myself, and I made up my mind, as I had taken up the question of agriculture rather earnestly, before I spoke positively again I would see for myself what could be done.

Price of wheat in India.

I next come to India, and I think as Mr. Everett is very much interested in the question of silver, perhaps it would be more satisfactory if he would address questions to me on the Indian wheat. I may say that I have not been in India; I was only as far as Ceylon; but I have gathered a good deal of information from the firm, which I believe knows more about these matters than any other firm in the United Kingdom, and that is from the firm of Ralli Brothers in London, who have establishments all over India.

4769. (*Lord Vernon.*) Did you travel in India yourself?—No; I have not been further than Ceylon.

4770. I do not think that this Commission would care to have figures at second hand which really could be obtained from statistics provided elsewhere, and which are open to anybody?—Those statistics that I should give are not generally known.

4771. Then put it as shortly as possible?—The great question is, does the Indian grower consider that he is getting as much for his wheat as he did 20 or 30 years ago. Messrs. Ralli Brothers, who have correspondents at all the points in the interior, and buy more wheat than any other firm in India, in 1888 sent round to their different houses the following question, "Does "the ryot obtain a better or worse price for his "produce now than he did years ago?" That question was answered as follows. I append against each the corresponding gazette price of wheat in the earliest year mentioned by each correspondent. The average price in England for the last six months of 1887 was only 31*s.*

Mr. W. J. Harris.
14 Dec. 1893.

District.	Does the Ryot obtain a better or worse price for his produce than he did years ago?	Over what period does your information extend?	Gazette prices of English Wheat in the earlier date named.
Patna	Better	1878-87	English wheat 1878, 46/5
Jahebgunge	„	1872-87	„ 1872, 57/
Buscar	About same	1879-86	„ 1879, 43/10
Cawnpore	Perhaps worse	1876-87	„ 1876, 46/2
Jubbulpore	Probably worse	1866-87	„ 1866, 49/11

Sukkur	„	1877-87	„ 1877, 56/9
Ferozepore	„	1868-87	„ 1868, 63/9

Exchange value of the rupee.

4772. How do they account themselves for that, that they should have got a better price? I suppose it is from the demand in consequence of the railways being made?—They get a better price mostly from the fact that you can get more rupees for a sovereign than you could formerly; whereas you could only get 10 rupees for a sovereign 20 years ago you can buy 17 rupees for a sovereign now. Therefore you can give to the Indian farmer fully the same price in rupees that he had 20 years ago, notwithstanding the heavy fall in the sterling price in England.

4773. You might give the same but most of them would see better. I do not see how the price would have risen in consequence of obtaining more rupees for a sovereign than they did years ago?—At that time the fall in wheat in England had not been so great as the fall in silver, and therefore they were getting rather more rupees for their wheat than in the previous periods mentioned by Messrs. Ralli Brothers' correspondents.

4774. (*Mr. Everett.*) The essence of the matter, is it not, is that during all the time that the price has been falling lower and lower here they in their own money have been receiving the same price?—The same price. Even up to now they are receiving at least the same price. I have the prices with me for many years.

4775. And owing to the rise in the value of gold they are able to sell their produce in so much less of our money?—Yes.

4776. (*Mr. Chaplin.*) What you meant to say, if I understand you, is this: that although the gold price of wheat has fallen very largely in this country owing to the fall in exchange in India the gold price that they obtain now will exchange for as many or more rupees than they obtained before?—So as to leave the rupee quite as valuable to them as 20 years ago.

Indian land tax.

4777. You further mean, I apprehend, that these rupees when they are received by the Indian grower will purchase for his purpose as much of any Indian commodities as they purchased before?—His rent is the same. I think all evidence goes to show that the Indian Government has not raised what is called the land tax, which is really the rent. The rent fixed in India would amount to 5½ per cent. on the gross value of the produce of the soil. You will find this information in the Famine Commissioners' Report, Part II., page 90, presented to Parliament in 1880. The land tax of India has only risen since then by the amount of fresh land brought into cultivation.

4778. (*Mr. Whitehead.*) You did not answer the question as to the purchasing power of the rupee being the same?—I quite agree with Mr. Chaplin.

Wages in India.

4779. (*Mr. Elton.*) Owing to the change in the value of gold and silver, I understand that some years ago a large grower of wheat was making a profit by the sale of wheat from India, because partly the ryot was taking low wages and did not notice the value in the silver?—

Mr. W. J. Harris.
14 Dec. 1893.

Quite so. The wages have had a very slight advance only in some places.

4780. I suppose the wages were 1½*d.* or 2*d.* per day, and there was not sufficient movement in that minute market in India for the labourer to make any claim in the advance in wages, whilst at the same time the merchant might be making a large profit owing to the difference in the value of the metals?—I think the merchant has all along got about the same profit, but I believe the wages have risen very slightly.

4781. That is what I was coming to, and as the ryot has found out the margin in profit, I believe, between England and India he is now claiming a share in it?—I have a book of wages here. The evidence goes to show that in most cases wages have slightly risen, but only very slightly, for agricultural wages. Some other wages have risen more. In some places, on the other hand, they have either remained stationary or fallen; but I believe on the whole there has been a slight rise in wages.

4782. But it was consequently noticed in this country, was it not, that the agricultural wages of the ryot did not rise at all for a very long period?—That argument has been used certainly, but I believe there is a slight rise.

4783. Now?—Yes.

Indian land tax.

4784. (*Lord Vernon.*) The land tax is really a sliding scale?—It is a fixed amount, and fixed for 30 years, I think, but the Famine Commissioners, when they made their report, computed what it would amount to as a per-centage on the produce of the land, and they came to the conclusion—I have got their reports here—that it would amount to from 3 to 7 per cent., and they stated the value of produce, and the amount of taxes, and the taxes represent to the value of produce in the aggregate exactly 5½ per cent.; there is a provincial cess which is similar to our local taxation which amounts to another one per cent. Therefore the Indian grower, under British rule, for rates, taxes, and rent, all three combined, only pays 6½ per cent. on the value of the produce of the soil which he grows. The paper currency countries are even more decidedly assisted by a currency bounty than are the silver currency countries.

4785. I do not think it is worth while to go into that?—My object is to give the price of wheat in foreign countries.

Price of wheat and sheep in Argentina.

4786. (*Mr. Chaplin.*) Which countries?—Argentina and Russia. With regard to Argentina, there has been lately issued by the Foreign Office a report by Mr. Gastrell, which is a very valuable report indeed. I do not know whether the Commissioners have read it, but I could not put the state of things there in better words than Mr. Gastrell does. That is a published report. There is no doubt that wheat can be imported from the Argentine Republic at 20*s.*, and that the grower of that wheat would think that he was getting a remunerative price. At the present time the price of a sheep at Buenos Ayres is 8*s.*, and buying five sheep for 2*l.* of British money, the man who sells the five sheep receives 32 dollars for them. It is not likely that he does not appreciate the fact that those dollars are not quite so valuable as they were many years ago, but I fancy he arrives at the conclusion that they will have a good deal more purchasing power than we think, and he is very glad to take them.

4787. Can you show us where that is shown in Mr. Gastrell's report?—Not that particular information about the price of mutton; that is my own information.

Price of Russian wheat.

4788. (*Lord Cobham.*) Is not it necessary to have good wheat to command the highest English price?—The Argentine is fairly good wheat, and it commands as much as good Russian wheat. This wheat would not be worth so much as the English wheat of this last harvest, but generally English wheat is not so good; it would be worth quite as much or more than the average of English wheat. In Russia they have the paper rouble, which is now worth 24½*d.* I remember when it was worth 38*d.* in the exchange, and the Russian peasant values the paper rouble exactly as he did before. He is paid his wages, which are very low wages indeed, in these paper roubles. The wages are from 1*s.* to 1*s.* 7*d.* per day in our money at the present exchange, but they would appear more to him.

4789. (*Mr. Chaplin.*) Are you aware that it is a fact, which has been quite recently reported to me, that Russian wheat has been sold quite lately in Bristol for delivery in February, March, and April at 22*s.* 6*d.* per quarter?—Not first-class Russian wheat. My firm are buying these cargoes every day, and therefore I know. We have bought good Russian wheat at 24*s.* for shipment at Odessa and Azof for next April and May, which is an investment extending over a good many months.

Mr. W. J. Harris.
14 Dec. 1893.

4790. It was described to me as sound, dry Russian wheat?—Yes, I daresay some of a somewhat inferior quality you have been told about, but not really the best quality. We have bought good Russian wheat at 24*s.* within a day or two—many thousand quarters.

The Russian rouble.

4791. And you have been able to take that extremely low price owing to the depreciation of the rouble?—Yes. I do not think that they would take the same price if they did not value the rouble quite as high as they used to do. The paper rouble even now is more valued than the silver one.

4792. Is it not based on silver?—They have forgotten what the silver rouble is in Russia, and the paper rouble is positively worth more than the silver rouble, although four or five years ago it was worth less; but the fall in silver has not communicated itself to the paper. I should be a bi-metallist myself if it was not that these paper currencies are not dependent in any way on the value of silver.

4793. Will you continue your remarks about the other countries?—I mentioned Chili, which is much the same as Argentina.

Import duties.

4794. (*Lord Vernon.*) And they are practically the same. In answer to Question 3448 I asked you what remedy you proposed, and you said "Nothing but "protection of some kind." What kind of protection would you propose that could possibly stimulate the growth of English wheat when wheat can be grown in Russia and imported into this country for 24*s.*?—I should not attempt to make wheat dear. I would rather raise a revenue from moderate import duties, so as to encourage the growth of wheat in England with the proceeds.

4795. What do you mean by moderate duties?—I mean raising a revenue by moderate import duties.

4796. On wheat?—On wheat and other articles, especially flour.

4797. It would have to be a very high duty?—Not necessarily very high. I think we ought to encourage the growth of wheat in this country for political reasons and for our national safety. I think too that we are making a great mistake in not cultivating more corn of all sorts.

Bounty on wheat.

4798. Do you mean you would give a bounty?—Yes, out of a duty charged. I would put a sufficient duty on to make a difference in price, but I would not raise the price excessively, as some propose; and, moreover, I would not place any duty upon the corn coming from the colonies for this reason, that those countries afford a splendid outlet for all our working men to emigrate to and live as comfortably as in our own country.

Farming contracts in Australasia.

4799. (*Mr. Elton.*) Perhaps I missed what you said about New Zealand. Is there a plan in New Zealand in your experience of speculating sometimes; that the whole of the labour of getting crops is done by a gang of agriculturists undertaking to grow the wheat and pay themselves out of the crop?—Payment by piece-work is general in Australasia, and it is a mode of labour which is very good, and I believe it will some day be more generally adopted in England. It costs less and more work is done for the money although the daily rate of wages is high.

4800. Does not a band of labourers go to an estate to work it and pay themselves out of the crop?—They will do the ploughing at so much an acre on thousands of acres, and they will do all the shearing of the sheep.

4801. I daresay you have heard of a case. I have heard of one—where they undertook to raise the wheat crop and pay themselves a deferred charge out of the crop when it grows?—I have not heard of that.

4802. You have not heard of a case where a person had a very large rent to pay?—I have not heard of it; but the prices of farming operations I have given are all contract prices.

4803. What you mentioned tended in that direction?—What I mentioned would be only a development of that. There is clearing the bush, and that is also done by contract.

Mr. W. J. Harris.

14 Dec. 1893.

4804. But I suggest a long contract. uch as that I have mentioned?—No, I have not heard of it.

Barley growing in the United States.

4805. The one I have heard of turned out disastrously. Can you tell me about the Red River Company, why they do not export their barley? Is there any reason as distinguished between wheat and barley?—There is not much barley grown yet? They are growing barley, but what they do grow goes mostly to Canadian and United States brewers; notwithstanding the United States' duty, I think that the Canadian barley is so much better than that grown in the Union that they import some of it.

4806. Is not there a disagreeable weed that grows with the barley that makes it difficult to get a value for it—an oniony weed?—Garlic—I have not seen it.

4807. No, because it is not exported; it does not come to England at all?—We have had barley from Canada, but it is not an article of regular import.

Indian wheat.

4808. The Indian wheat that you deal in does not stand on the same footing as English wheat; it has to be mixed before it is used?—Nearly all wheat is mixed in England. The Indian is very suitable wheat for mixing with the English, especially when the English crop has more moisture than usual in it.

4809. It is a very hard wheat?—Yes, it is very suitable; both wheats are improved by the mixture, that is to say, the Indian wheat absorbs the moisture of the English wheat, which it lacks itself; and the English wheat gets the benefit of the extra dryness in the Indian wheat.

4810. Therefore it is a suitable article for the mixture of English and Indian wheat, and is an object of great importance in that trade?—Yes.

4811. India you would include in those countries which you would not try the restriction upon?—Certainly. I do not know whether any duty could be put upon silver so as to make the conditions more equal between India and the rest of our colonies. I have proposed that course.

Produce of wheat per acre in California and New Zealand.

4812. The Californian slope, and the best New Zealand bits of land, of course, grow as much wheat to the acre as any land in the world?—I should think they did. I know that in New Zealand there are patches of land which produce 80 and 90 bushels of wheat to the acre.

4813. And so there are some very select patches in California?—I daresay they are equally good.

4814. They are then three or four times better, speaking roughly, than the land outside those selected bits?—Yes; there is a great deal of poor land abroad as well as good land. I have only been telling you what the good land will do when I have spoken of large yields.

4815. But the ordinary arable land in those countries you are speaking of would be more like 12 bushels to the acre?—A great deal of it, and some less than that.

4816. Some of the Western States gave up growing corn when they only produced 11 bushels?—Quite so.

Wheat growing in India.

4817. (*Mr. Everett.*) With regard to India, you were asked if there was any alteration in the rate of wages in India; can you tell me whether the people who grow wheat in India employ labour? Is not the wheat mostly grown by the farmer?—It is mostly grown by the farmer himself without any employment of labour, and therefore the difference in wages is not an important matter.

Rate of exchange with India

4818. Twenty years ago, that is prior to 1873 in the bi-metallic time, England and India had practically the same money, had they not?—Practically. A rupee was equal to a florin.

4819. Gold and silver were exchanged at a nearly uniform rate?—At the respective prices that we valued them in England.

4820. The gold and silver did not fluctuate to more than a very minute extent?—No.

4821. We had practically the same money, I understand you to say, in India and here; and if it had not been for the dislocation between silver and gold money; that is, if we were in the same place with regard to money as in 1873, Indian wheat could not be sold here now lower than 20 years ago?—Unless the farmer took a good deal less profit now. I consider that he is making at least the same profit as 20 years ago, but if the price of silver went up again he would be making a very much lower price.

Mr. W. J. Harris.

14 Dec. 1893.

4822. That does not follow at all, because if I understand you aright, the price of wheat measured by silver has not altered in the last 20 years appreciably?—It has not, but if silver were back to the previous price of 5*s.* per ounce, the Indian ryot would not get so many rupees for his wheat.

4823. Does he get as many rupees?—He does.

4824. The same as 20 years ago, when silver was at a fixed value with gold, and was worth 5*s.* an ounce? But the silver prices have not altered, and if we had the same money, Indian wheat could not be sold here for any less than it was 20 years ago?—Well, for instance in 1867 the Government statistics give the price of Doodiah wheat from 3 rupees 2 annas down to 2 rupees 12 annas in that year; that is I see the lowest quotation, and the price in 1893 of Doodiah wheat was 3 rupees 4 annas and 9 pice. That is according to the Government returns.

4825. We must take it generally that measured by silver, prices in India have stood still during the last 20 years?—Yes, if you look through this book you will find that that is so. In January last they were rather higher than in January 1867.

4826-7. When the exchange falls the effect is not to add to the price in India, nor for long to add to the merchant's profit, but it finds its effect in a fall in the gold price here?—That is to say, if Indian wheat is a very large article of import it would cause a fall in the price here, but if Indian wheat only takes its fair share of the imports, I imagine that the Indian ryot would be getting a larger profit than he expected during the exchange falling. That is to say, the supply of Indian wheat would not be sufficiently large to affect the price of our whole supply.

4828. But we have the fact from your evidence that prices in silver have stood on the whole steady during the last 20 years, and we have also the fact known to all of us that in this country, measured by gold, prices have been continually falling?—Yes.

4829. And that falling we also know has substantially followed the fall in exchange. The question I wished you to answer was, whether it is not the case when the fall goes further that the effect of that is not to add to the price of the Indian grower, not to add to the profit of the middleman, the merchant, but to enable the merchant to sell that wheat at a lower price in England?—There is no doubt that the fall here has resulted from such circumstances to a great extent, but I could not say that immediately the sterling value of the rupee went down it would make the price of the whole wheat supply over all parts of the world to England lower. The price of wheat in India has varied; in 1890, three years ago, it was 2 rupees and 12 annas, whereas in 1892 it was 3 rupees 7 annas and 6 pice, according to the Government returns.

4830. (*Mr. Chaplin.*) May I ask one question, where are those prices; are they average prices, or from any particular part?—They are average prices. This is for Doodiah wheat from Calcutta. I believe it is an Indian Government price. It is taken from an official report called "Prices and wages in India compiled in the "Statistical Branch of the Financial and Commercial "Department of the Government of India." I do not prefer Government returns myself, I prefer private ones, because the Indian ryot as a rule has a great suspicion of any question that is sent to him by the Government, fearing that the land tax will be raised against him if the circumstances seem to warrant it, and therefore the replies given to an official would probably lack truth more than those given in the course of business.

4831. (*Lord Vernon.*) I suppose that what you mean is that the fall in the rate of exchange has stimulated production more than altered prices in India?—It has just the same stimulating effect on production as it had 20 years ago, when I suppose the price converted into sterling was 15*s.* and 20*s.* per quarter higher, delivered in England.

4832. (*Mr. Everett.*) You will see there is not a rise in price in India, and so there is nothing to stimulate production there; the whole effect of the exchange has fallen upon us?—According to these statistics I think that this year's price in India is quite as high as the average, extending over 15 to 20 years.

Mr. W. J. Harris.
14 Dec. 1893.

4833. So far as you know, is there any evidence that the value of silver in India has fallen at all?—I do not think there is; I believe there is a great deal of evidence to the contrary.

Import duties.

4834. (*Mr. Channing.*) Do you include India with the colonies in your reply that you did not wish to apply protection to the colonies?—I think we ought to treat the colonies as we treat our own country.

4835. But do you include India in your suggestion?—Of course it is one of our dependencies.

4836. That would mean about one-fourth, I understand by the last agricultural returns, of the imported wheat and flour?—No, not so much, India does not send us one-fourth, at least I think not.

4837. The total imports of this country are about 19,000,000 quarters?—Yes. More; over 22,000,000 quarters.

4838. And the imports from India and the colonies are about 20,000,000 cwts.?—Yes.

4839. The question I wanted to base upon that was, what effect would you expect from your moderate duty; would you expect a great expansion of wheat-growing in the colonies and India?—I should expect that all the wheat that the colonies ship would come here, whereas now it does not all come to this country; the colonies now ship a great deal of wheat that goes to other countries.

4840. Do you think that the result would be an acceptable rise in the value to the English farmer?—A moderate rise, not a very perceptible one. Supposing you put on a duty of 5*s.* I do not think that the rise would be more than 2*s.* 6*d.* or 3*s.*

Cost of producing home-grown wheat.

4841. (*Mr. Lambert.*) At what price do you consider wheat could be grown in this country at a profit?—It varies very much in different parts of the country, but I have a statement from a Hampshire farmer that I brought with me. This is heavy Hampshire land, and I daresay that there are many places in England where it could be grown cheaper, but he has sent me the total of the charges that he has to pay. He does not debit himself with rent, and he makes his cost 7*l.* 10*s.* 3*d.*; but I believe wheat can be grown in many parts of the country at considerably less.

4842. I know that. Are these figures reliable?—They are reliable for the part of the country they come from. In all my calculations I have taken what I considered an average cost of the wheat culture in England.

4843. That is what I want; the average?—About 6*l.* an acre would produce the wheat, and thresh it out, and deliver it to the nearest railway station probably.

4844. Is that including rent?—No rent; I do not consider that there is much wheat land in England worth much more than 10*s.* or 12*s.* 6*d.* per acre at the present time. Of course most of it is not worth that; at present prices I think no one could produce it at a profit with no rent at all on most of the land devoted to it.

Import duties; effect on rents.

4845. Presuming that an import duty was placed upon wheat, would it not result in an immediate rise in rents?—I think not; and I will tell you why. The whole rents of the United Kingdom have not followed the price of wheat at all in the past. Of course as regards land that was only suitable for wheat growing, it would be ridiculous for me to say that that land would not get some advance in rent if the growing of wheat was stimulated, and the wheat was saleable at a higher price. But what we have to look at is the whole rent in the country. I do not see why one set of landowners should be ruined, and another set not injured at all. If you take the total rent of England at different periods, you will find that when wheat was very high the rents were not so high as when wheat materially declined. I believe the rents in Great Britain, or England and Wales, at all events, were highest when wheat was about 40*s.* per quarter.

4846. But presuming that the farmers were able to make more profit, would not that result in their paying more rent, owing to the natural competition between them for farms?—I do not think they have got their rents down sufficiently yet in many places. If they went on with something like the same rent as last year's returns, the landowners would be receiving quite as much as they did under protection, except in those soils suited for wheat growing only.

Mr. W. J. Harris.
14 Dec. 1893.

4847. You do not think that rents have been reduced enough to enable the farmer to live?—They have a bad living of it recently.

4848. (*Mr. Elton.*) You are speaking of arable land?—Mr. Lambert knows as much as I do about land in Devonshire, and he knows that a good deal of grass land is not less valuable now than it was years ago.

4849. I quite believe it, but my point is this: presuming that a rise in the price of the article produced took place, that must immediately result in a rise of rent, and it would make no difference to the tenant farmer?—I think the nation, if it was going to give a great sop to the agricultural industry, would have a right to name its terms, so as to prevent a material rise in the rent.

Court for fixing rent.

4850. What terms?—I would have a court of appeal with regard to any advance of rent, and that appeal would go before surveyors who would examine the farm, and see whether it was justified or not.

4851. You have no objection to an outside court?—I have not; that is to say, if it is fairly constituted.

4852. You have no objection to submitting your farm to a fairly constituted and impartial tribunal?—To well-known surveyors of the county in which it is situated, who understand what they are about.

4853. You do not think that it would have any effect upon the relations between landlord and tenant?—I do not think it would have a bad effect.

Bi-metallism.

4854. Presuming that bi-metallism was in force would it affect materially the import of wheat into this country?—I think not. I think if you could get all the world to adopt a silver standard instead of a paper currency, then it would raise the prices all round. But the paper currency countries are more important as regards the import of wheat than the silver currency countries.

4855. You could not have any "paper metallism" or anything like that?—No; I do not think so. Paper has no intrinsic value.

Import duties and alleviation of burdens on land.

4856. How much would you consider ought to be raised to encourage the growth of wheat in this country; have you given attention to this matter?—I do not believe that a duty of 10*s.* per quarter would raise the price sufficiently to encourage it very materially; but it might be done by putting an import duty on and collecting sufficient to take off the burdens which now exist on agricultural lands in this country, which are most iniquitous. I calculate that the burdens of tithe, rates, and taxes, amount to 13 per cent. of the produce of England and Wales. In our colonies all the charges that fall upon the farmer do not amount to 1 per cent. of the produce.

4857. (*Mr. Everett.*) You say rates, taxes, and tithes?—Yes; they amount to 13 per cent. on the produce of England and Wales.

4858. (*Mr. Channing.*) Taking the whole country?—Yes, England and Wales; they are not so large in Scotland or Ireland.

Effect of increased prices.

4859. (*Mr. Lambert.*) If you raise the price of wheat, it would of course raise it to the consumer?—It would in the long run.

4860. Would it be preferable to raise it in the form of an income tax?—That I cannot say. I cannot go into that question. But there is one thing that I have observed, and that is, that the poor have never yet got the full advantage of the low prices that they ought to have got; bread has not gone down as much as wheat has.

Increased foreign consumption.

4861. Do you think that the increase of population in other countries will tend to increase the consumption of agricultural produce?—No doubt.

4862. Do you think that it will materially affect the imports?—I think in time it will, especially in the United States. The increase of population will have some effect, but the quantity of virgin soil is much greater than the increase of population is likely to absorb for a very long time.

Import duties.

4863. (*Mr. Dalton.*) What amount of duty did you think of putting on; was it 5*s.*?—I thought about 5*s.* per quarter would provide a suitable sum.

4864. Have you calculated how much it would provide?—Of course the imports would increase from

Mr. W. J. Harris.
14 Dec. 1893.

the colonies, and decrease from other parts, and therefore it would not provide a very enormous amount, perhaps 6,000,000*l.* or 7,000,000*l.* on our corn and flour imports at first; I do not remember the exact figures; that would gradually decrease; but I would put an import duty upon everything we import except raw materials.

4865. You have not calculated to what extent the wheat would cease to come from some of those countries, if you put 5*s.* on?—No.

4866. Would not it be prohibitive?—I think they are bound to go on cultivating as long as they get anything like cost price. In Argentina a 5*s.* duty would have very little effect; they would go on paying the 5*s.*

4867. Do you think the result would be a rise in the prices of 2*s.* 6*d.*?—I think it would.

4868. You make it 13*s.* 6*d.* an acre for the rates, taxes, and tithe?—No; I said 13 per cent. on the value of the produce.

Effect of tithes, &c., on the cost of production.

4869. But is it right to take tithe as one of the burdens; is not tithe part of the value of the land?—I simply go on this; that if I have a farm given me in England, and a farm given me in America, I pay a tithe before I produce in the one case and not in the other.

4870. Because you have nine-tenths of the original farm given you in one case, and you have the whole of it given you in the other. But is it not a question of separate ownership; it is not a burden on the land?—I do not want to enter upor that question; I have every respect for the law of the land with regard to tithe, but people have to pay tithe as they have to pay anything else, and therefore there is no good in saying that they have not. I think Dr. Giffen, before the Duke of Richmond's Commission, explained where the burdens came in to be paid by the tenant, that it was just on the verge of land going out of cultivation.

4871. (*Mr. Giffen.*) I should like you to give me a reference?—Certainly; this is it, Question 64,876. "That is the point I was making, that the only cases "in which rents, or rates, or tithes, would enter into "the question of the cost of production at all would "be just those cases where there was a sort of question "whether the land would be cultivated at all or not." I quite agree with Dr. Giffen about that. I have a good deal of land myself, which I could leave as it is and get more rent for it as a cattle run than I could by letting it to a farmer; and therefore if a farmer applies to me to take that land, he would naturally have to give what the land was worth for other purposes, and thereby he would be paying the rates, tithe, and taxes, in taking that land for cultivation. That is what you mean, Dr. Giffen, is it not.

4872. I do not think that Mr. Harris should examine me just now. That is a question we must leave?—There are points with regard to the price of wheat upon which I think we have been very much mistaken in this country. Even John Stuart Mill says that the price is always regulated by the most difficult conditions under which the article is grown. That is distinctly negatived by recent years, and I notice that Dr. Giffen, before the Duke of Richmond's Commission, in answering Question 64,840, agreed with Mr. Stuart Mill to this extent, when he used these words—"the price is always regulated "by the most difficult conditions under which the "article is grown." We must upset that portion of our political economy there is no doubt. There is a great deal founded on that argument in the political economy of Mr. Mill.

4873. (*Mr. Chaplin.*) You have had great experience in the corn trade?—Yes, I have been all my life in the corn trade; ever since I was a boy.

Exports of wheat from Argentina.

4874. Can you give me from which of the countries you have named can wheat be sold in the English market at the cheapest price?—At present that is Argentina.

4875. Do you know what the amount of export of wheat is at present?—The export is likely this current year to be nearly 6,000,000 quarters.

4876. What are the total imports of wheat into Great Britain?—About 22,000,000 quarters; rather more than less last year.

4877. It is a considerable proportion of the whole?—Yes.

4878. (*Mr. Giffen.*) You do not mean to say that Argentina is likely to send 6,000,000 quarters to this country?—To all the world it has an available export of 6,000,000 quarters; if no other country can take it it will come here.

Mr. W. J. Harris.
14 Dec. 1893.

Imports from countries with depreciated currency.

4879. (*Mr. Chaplin.*) Can you tell me what proportion of our total wheat imports come to this country under the circumstances that you mentioned, namely, from countries with a depreciated currency?—I have not looked that out carefully, but I think that those countries have the effect of making the prices for the whole, and that is perhaps the answer to that question. I think those currency countries have the effect by their prices of reducing the price of the whole supply.

4880. And you say that it is the fact that their currency is depreciated which enables those countries to take the present low prices in England?—I am sure of it.

4881. Do you think that is a state of things which is likely to continue in the future?—I am afraid it is. It has been a very long time in operation in Russia, and it seems to make no difference.

4882. If it does continue, what do you anticipate will be the effect in this country?—I think we shall continue at these very low prices, and if the premium on gold were to go still higher (in Buenos Ayres it might easily go higher than now), prices might be lower still, otherwise, I think we have got pretty nearly to the bottom of prices, if no other countries obtain these same advantages.

4883. But has it not often been the opinion among gentlemen of experience in this business, like yourself, that we had touched the bottom of prices before?—It has not been my opinion, but I remember that the Chairman of this Commission, Mr. Shaw Lefevre, in a speech before the British Association in 1879, predicted that we were then at the lowest point.

Effect of decline in wheat growing.

4884. What I wanted to arrive at was your opinion as to what will be the effect in this country if this state of things continues or becomes worse upon the wheat industry of Great Britain?—I think that the acreage under wheat must decline still further. There is a certain acreage of land which will grow wheat even against present prices, and produce something to the owners, the productiveness being so great; but there will be a much smaller acreage than is now grown.

4885. But with the exception of the best land that points to the extinguishing practically of the wheat-growing industry in England, does it not?—A very great reduction; a still further reduction of great importance.

4886. Apart from the national question that that would raise what, in your opinion, would be the effect of the cessation of the wheat-growing industry upon agriculture generally in this country?—I think it would intensify the depression in employment. I do not think that wages have gone down so very much, but it would keep up the congestion of the towns to a still greater extent, and I think that the working classes would be highly dissatisfied.

4887. What you mean is that it would affect the rural population in the first place by depriving them of the opportunities of employment?—Yes.

4888. And being deprived of their employment they would have to seek elsewhere for it, and that would add to the congestion of the towns?—Yes.

4889. Does what you say with regard to wheat apply to other articles of produce coming to this country?—Certainly.

Imports of dairy produce and meat.

4890. What articles in particular do you refer to?—All farming articles I mean, even dairy produce, and especially mutton and beef.

4891. You take mutton to begin with?—Yes, especially mutton.

4892. And the price of the mutton to be sent here from those countries?—I do not know whether you were here when I gave the evidence as to New Zealand. I gave the particulars you now ask for then.

4893. You say that even dairy produce could be sent here?—Large quantities from New Zealand and Australia is very suitable; in South Australia they are giving a bounty of 2*d.* a lb. on butter to stimulate the export; and the United States and Canada already send large quantities.

4894. Then if you are right in your anticipations, am I justified in assuming that in your opinion the prospect of British agriculture is very grave?—Very grave indeed. I have been saying so for a long time.

Mr. W. J. Harris.
14 Dec. 1893.
Reduction in rents.

4895. On the best lands that you speak of I suppose the reduction of rents or a cessation of rent might enable our growers of wheat to compete with the growers of wheat in the countries you speak of, even under the present circumstances?—I think there is a fair acreage that is so fine that it would compete even under present conditions, especially if you allow the sale of the straw, or a portion of the straw I will say—a man can hardly be allowed to sell the whole.

4896. But on the average on the poorer lands no reduction of rent would have that effect?—I think not; if you gave the land to the farmer he would lose money in producing wheat.

4897. And the average farms and the poorer lands are the very great majority of lands in this country?—Certainly.

4898. Do you agree with the evidence that has been given that in many cases the reductions of rent have been very great?—Very great indeed, and looking at the state of things I think that the landowners have behaved remarkably well to their tenants; I have not a word to say against landowners, except a few of them.

Catch crops.

4899. Are you able from your experience of agriculture to suggest to the Commission the growth of any other kinds of produce as substitutes to meet this very serious competition from other countries?—I do not think we grow enough catch crops in England.

4900. What do you mean by catch crops?—Vetches and that sort of thing, which might be made into good ensilage for instance; tillage might be a little helped by that means.

4901. But that would only be to a very limited extent?—I should think not to a large extent; I am trying it myself, that is why I mentioned it. I think there are many other parts of the country which would grow crops of that kind.

4902. Would you look to that as at all able to take the place of the production of wheat and mutton and beef?—It might help the production of beef and mutton but it would not replace the tillage of wheat by any means; besides mutton and beef are nearly as bad as wheat is just now.

Remedies to alleviate depression.

4903. Well then, that being the case, do I understand that you have any remedies to suggest, and if so what are those remedies?—I propose a duty on imports, and to take all the taxation off agricultural land, and if necessary to give the farmer a bounty so that he should produce corn of all sorts; and I believe it is absolutely necessary to produce wheat at home. My interests are that wheat should go out of cultivation and then we should import all the more.

4904. That is because of your business?—Yes, my business. We would like to import all the wheat that is consumed.

4905. Then your own personal interest would be very much against the remedy that you suggest?—No doubt it would. At all times our interest would be that land should go out of cultivation and go to grass.

4906. Upon what kind of imports would you propose a duty; are you limiting the proposition to agricultural articles or all imports?—I should say everything; a duty on all manufactured goods, and everything that competed with home industry except the raw material for manufacture. I would not tax wool or maize; those are the only agricultural products I would leave out.

4907. And in addition to that you would take what you describe as all the burdens off land, and if necessary to give a bounty to the growers of wheat?—I would propose a bounty on tillage, to compensate owners of land for those burdens. It is exceedingly difficult to interfere with the tithe, which is a claim which has been in existence quite as long, if not longer, than the claim of the landowner himself; and the very difficulty of that makes me suggest a compensating allowance to the tiller of the soil, which will have the effect of making tillage profitable, and thus drawing labour to the soil.

4908. Generally speaking, those are the remedies which you recommend for the existing depression in agriculture?—Yes.

4909. And without those remedies, do I understand you to be of opinion that a continuance or an aggravation of that depression is what must be expected?—Certainly a continuance; I hope no aggravation, I am sure.

Mr. W. J. Harris.
14 Dec. 1893.
Duty on barley.

4910. Have you ever considered the question of a duty on foreign barley?—I should put a heavier duty upon the heavy barleys, and a lighter duty on the lighter barleys, because the lighter barleys are used by the cattle feeders, and the heavier barleys are only used for malt.

4911. Would an increase in the price of barley enable the growth of barley, to any material extent, to take the place of the growth of wheat?—Barley land is barley land, and wheat land is wheat land, that is what I have found. I have always found that there is a limited amount of barley land that will grow really good barley.

4912. So far as you are aware there is no very great opening for a large increase in the growth of barley?—Not of the finer quality; you may grow the common barley on a larger acreage.

Small holdings. Rents.

4913. (*Mr. Little.*) I should like to ask for some particulars of the small holdings that you spoke of. Can you give us the rent of them?—From 5*s.* per acre up to 2*l.* 10*s.* per acre.

4914. Five shillings would be moor land?—Pretty nearly; enclosed moor land.

4915. But brought into cultivation by the occupiers?—Some of them have brought it into cultivation, and others keep it as a run for cows.

4916. How does the rent for those small holdings compare with the rent of farms in the neighbourhood?—It is exactly the same; what a surveyor would value it at.

4917. Do the rents include dwelling-houses?—No, they are let separately.

4918. Are buildings included?—Buildings are added where required at a very low rate of interest. I do not think I get more on the average than 3 or 4 per cent.

4919. The rents do not include the rent of the dwelling-houses?—No, they are charged separately.

4920. It is easy to compare the value of naked land, but the moment you get dwelling-houses and buildings included it is extremely difficult to compare it?—It is extremely difficult; people do not know how much those buildings cost.

4921. That is frequently an element of confusion when people are comparing the rents of small and large holdings?—It is an element of great confusion.

Condition of small holders.

4922. Mr. Bear gives an account of your small holdings in a book that has been recently published?—Yes.

4923. And he took a very favourable view of the position of the small holders?—I think he did.

4924. Rather more favourable than your evidence the other day conveyed?—Yes, I think he did.

Small holders and outside employment.

4925. I think you said that they had done very well, but their condition was not so good now?—In the list which I have just handed in I have put a cross against certain names of those who are more or less dependent upon wages; and if the tillage of land becomes utterly unprofitable in England those men would probably have to leave the neighbourhood.

4926. The point that I wished to make was this: that a number of them were dependent upon wages for their success, and that the laying down land to pasture must have diminished the power of earning wages?—Quite so.

4927. And in consequence many of them would not be able to hold on?—I am not prepared to say that they will have to leave at once; I am improvising a considerable amount of extra work on my estate with the object of keeping them going; but if that failed as well as the tillage land they would have to leave undoubtedly; but I hope to keep the experiment on longer yet.

4928. The change in cultivation would jeopardise the position of the small holders?—It would very much.

4929. They depend to a considerable extent on wages?—Those I have marked depend almost entirely upon wages.

4930. (*Lord Cobham.*) What sized holdings are you speaking of?—420 acres amongst 25 holders.

4931. Are the holders of 40 acres dependent upon wages?—I think when you are going to establish small holdings you would not get up to 40 acres at first. I established those holdings on a small scale, and the holders gradually added to their land as they got on. On the first establishment of these small holdings a

Mr. W. J. Harris.
14 Dec. 1893.

labouring man of the neighbourhood would take what he could reasonably manage for the benefit of his family, and which would not materially interfere with the work of the farm if he was engaged on day work.

Cost of production in Australia.

4932. (*Mr. Clay.*) You have given us some very important statements about the increase of production in Australia and different parts of the world; are not those exceptional cases?—I said that I believed that there were 50,000,000 acres still under the bush in Australia, which has sufficient rainfall to be treated in the same manner. Even when Sir Charles Dilke wrote his book, he calculated the cost of clearing land at 10*l.* an acre—it looks as if it would cost 10*l.* an acre, but by this ring-barking and burning they can do it for 10*s.* per acre or even less; and I expect millions of acres will be cleared and cultivated.

4933. Have they been able to pay rent or mortgages upon the property at the price at which they can sell wheat?—A great deal of property is not mortgaged at all. It is taken on a very low rent from the Government. Some is bought at from 1*l.* to 2*l.* an acre. I daresay there are some heavy mortgages. Of course the Australians have been paying a good rate of interest, but on 1*l.* or 2*l.* an acre it does not amount to very much as a rent.

4934. What they do pay in the shape of rent is to the State?—In some of the colonies there is a great deal of land let by the Government, but I think most of the Governments prefer selling it outright. A good deal of the South Australian land is let at 2*l.* per square mile, that is 640 acres for 2*l.* a year; but that is under a deficiency of rainfall, and that land would not be suitable for growing wheat; at all events it would be very uncertain and precarious.

Drought in Australia.

4935. In Queensland is not a drought a very important factor in realising the money out of the land?—The drought overtakes them when there is not sufficient rainfall, and it is very troublesome all over Australia at times. It is a very troublesome thing for the sheep in New South Wales, but wheat is a plant that will stand drought against anything else.

4936. Both for wheat and for cattle and sheep, water is a very important element?—It is a very important element, but they can always make storage places. It is the fault of the Australians that they have not supplied themselves with sufficient storage places.

4937. Although Australia has been prosperous for many years, when these droughts come it causes ruin amongst the farmers?—It has in the past, but I think it has been largely owing to want of precaution on the part of the farmers.

4938. That is a very dangerous state of things, is it not?—Very dangerous for the sheep.

4939. Is not that a thing to calculate upon as a basis as to whether it is profitable or not to cultivate wheat?—I think it is a good country for the growth of wheat undoubtedly. Wheat is not a plant that requires that great amount of rainfall that would be necessary for grass and it is not grown at the same season of the year. The sheep will starve in the middle of the summer, and that is the time when the grain is being harvested. The rainy season always comes in the winter. It is in the summer that the sheep starve; in the autumn you till the wheat and you get the benefit of the rainy season.

Wheat growing in America.

4940. Regarding wheat in America, you said that the wheat farmer had made it profitable?—Up to recently undoubtedly it has been profitable.

4941. The American farmer has been making money?—Yes.

4942. In wheat growing?—Yes.

4943. (*Mr. Whitehead.*) Up to when?—Up to two or three years ago—it has been a fair living.

Mortgages on American land.

4944. (*Mr. Clay.*) Have not the mortgagees lost their money who have lent it on the land?—It is monstrous to lend money on those farms for more than five or six years. A good deal of the land is run out in five or six years; and if you lend money expecting to have interest for 50 years, the man who farms wheat will go on producing crops of wheat until the land is exhausted, and then he moves away and the gentleman who has lent the money may go and seek for it. I am not surprised that in a great many cases they have foreclosed.

Rent in America.

4945. I am not questioning the absurdity of the Englishman lending his money, but I will ask you this; can the American farmer pay rent out of his land at the present prices?—In some places, yes, and in others, no.

Mr. W. J. Harris.
14 Dec. 189

4946. Is it a rule?—I should think two-thirds of them can pay the rent very well, and the others perhaps are in difficulties with the present prices. There is no doubt that those who can only produce 10 or 11 bushels per acre must have the greatest possible difficulty in paying any rent.

4947. I asked that question because I made a report in the State of Iowa on 60 to 70 landlord tenants, and found that 90 per cent. of them were not able to pay interest on their remaining mortgages?—Yes, that is the fault of the whole system in those countries that they farm exhaustively, and when the man comes down to making no profit out of his land, he generally takes advantage of the mortgagee.

4948. But this farming is the same as in England and Scotland, and most of them are Scotchmen farming with the same rule and not exhausting at all; and at the price of wheat they have been utterly unable to meet any interest on the money in the shape of rent?—I have not seen those farms. I did not know that there was much farming on the rotation system in the western States of America.

Catch crop

4949. What do you mean by saying that the tenant farmer should grow catch crops; do you think that that would meet the difficulty?—I do not think that it would—but it is a suggestion.

4950. Do you think that catch crops would in any way enable the farmers to get out of the difficulty?—I think it would help the farmers a little.

4951. To what extent?—Very little.

4952. I should think you are right?—But it is a suggestion at all events.

4953. (*Mr. Lambert.*) Have you carried it into effect on your own holding?—Yes.

Taxation in foreign countries.

4954. (*Mr. Giffen.*) Do I understand you to represent that there are no taxes on land, imperial or local, in New South Wales?—Yes.

4955. And that in the other countries that you have referred to, in the Colonies and America there are also no taxes upon land?—I consulted the Compendium of the Census of the United States, and by eliminating the towns and so forth, in some of the more western States I found the amount of taxes came to about 3 per cent. on the produce of the soil. Our Colonies are much less. In Manitoba I met a farmer with 240 acres, who was paying 16 dollars a year. If the produce of that farm was worth 400*l.* a year that would be less than 1 per cent.

4956. But you have no exact figures about taxation; you have not inquired into that specially, have you?—Yes, I have gone into that particularly, and in New Zealand too they have a graduated tax, and on large farms like Mr. Grigg's the taxation is rather heavy.

4957. In New Zealand the taxation is rather heavy?—The taxation of very large farms. All small farms are exempt or very nearly exempt from all Government taxation. A small farm is considered to be 640 acres of good land, or 2,000 acres of second-class land. This 640 acres is sold by the Government at 1*l.* per acre; the buyer is exempt from taxation up to 500*l.*; and there is no taxation upon improvements, a very important point, and a point that we ought to adopt in England. There is no taxation whatever upon improvements either in New Zealand, or South Australia, or Victoria. There is none now on improvements in New Zealand even on a large farm. When I was in New Zealand I had a long interview with Mr. Ballance the Premier. I endeavoured to show him that improvements should not be taxed because large owners were then paying a taxation on their improvements minus only 3,000*l.* exemption, and I showed him how very seriously it acted against the outlay of money, and he promised me in the next session that a Bill should be brought in exempting all improvements; he died before he had time to fulfil the promise, but the Bill was brought in and I believe all improvements are now exempt in New Zealand, therefore the taxation of land remains at the rate of one penny in the pound upon the original value of 1*l.* per acre, unless some outside circumstances raise the value of that particular holding.

4958. In what way is the local expenditure in a place like New Zealand and New South Wales met?—In New South Wales the Government tax nothing, the only local tax is for killing rabbits, for which the farmers

Mr. W. J. Harris.
14 Dec. 1893.

make a voluntary tax upon themselves. It is a very important question for the farmers that the rabbits should be killed. I stayed with a man in New South Wales who had 40,000 acres, and he told me that that was the only tax he had to pay, about 20*l.* a year.

4959. For the purpose of exterminating rabbits?—Yes.

4960. But at the same time, the Government in New South Wales get a good deal of income out of the land?—They sell the land—the land belongs to them, and they are constantly selling it and getting rents; they either sell it or get the rents.

4961. There is nothing that you call taxation—the Government gets what is called rent?—Rent, yes but very small rents compared with what we pay in England.

4962. But still there is something of that sort?—I should call it rent, because a man can either buy the land or pay the rent. I should hardly call it a tax.

4963. But if rates themselves are in the nature of rent, I do not see that it makes much difference?—Well, the man can take possession of the land as soon as he gets the money and then it is his own freehold, and he does not pay any taxes. As soon as it is his own freehold he has no taxes.

4964. With regard to the United States, is it not the case that there is a very considerable local revenue in the United States very largely arising from taxes upon property including land?—No doubt; but the property is valued in a very careless manner, and a great advantage is given to the native owner of agricultural land, and to the farmers.

4965. If my memory serves me aright, I think the local revenue in the United States amounts to something like 70,000,000*l.* or 80,000,000*l.* sterling per annum?—I think you are wrong in that.

4966. Well, it is very considerable. Of course, that includes the local revenue from town as well as agricultural places?—From Excise, probably also.

4967. No, I speak of the local revenues, the taxes upon property; I do not think any Excise taxes are raised for local purposes?—Perhaps not,—personal property is taxed there you know.

4968. I know it is supposed to be taxed, but it is not. The property which they can tax is real property which cannot run away?—There is, of course, a great deal of real property taxed, as well as personal.

4969. You will find a great deal to that effect. I wish to know whether you have gone into the subject very minutely, or not?—I took the exact taxes that a certain State paid. You will find full particulars in the Compendium of the Census for 1880, you can get the exact amount of taxation in States, and I took a certain State, mostly devoted to agriculture, and I took off a certain per-centage of what I considered would belong to the towns. The taxes which fell only upon the towns are given separately from those which fall upon the State; those falling upon the State include towns also, but the towns have to pay taxes for many things that the country districts would not have to pay for.

4970. But they have county taxes for the administration of justice, and things of that kind?—There are such taxes no doubt, but all of them are lumped together in the Compendium of the Census. The value of the crops is also given for each State. Taking some account of extra receipts from cattle, I found the taxation amounted to 3 per cent. on the farmers' receipts calculated in the manner I have indicated. I took one-fourth part of the whole as belonging to the towns.

4971. The common rate of taxes I believe is 3·3 per cent., or thereabouts, on the value of the property assessed?—I went my own way about it, and I took it upon the value of the produce. What the farmer has to look to is, how much his produce is taxed; if his produce is taxed heavily, it goes against the production of it; but if it is only lightly taxed, it does not make much difference.

Imports of dairy produce and meat.

4972. You said that you think mutton is likely to be exported in a large quantity, and also dairy produce from New South Wales?—I think so.

4973. Are you quite sure about the mutton?—Yes, New South Wales has more sheep than any other country in the world.

Mr. W. J. Harris.
14 Dec. 1893.

4974. I was led to understand in New South Wales two or three years ago that the quality was so inferior that they were not able to send it?—Up to recently they had only bred the merino breed of sheep, because of the price of wool; the trade in wool has been the principal trade in New South Wales up to quite recently, and now wool is so low in price, that they are forced to go into a different breed of sheep, and these different breeds are being imported and crossed with the merino quite rapidly. I received a letter two or three days ago, saying that my friend who owns the 40,000 acres was preparing 5,000 wethers for the London market, and many more will do the same. It is a new departure, and there is scarcely any limit to its increase.

4975. That is what I wish to bring out, because that is a new fact within the last year or two?—Yes. That land is quite as capable of breeding sheep and competing with us in mutton as in the wool of the merino sheep.

4976. I understood that the want of moisture was a great obstacle, apart from other obstacles?—The want of moisture in the districts of New South Wales and Queensland to which I allude is not so great as it is in South Australia, not anything like it.

4977. But as compared with New Zealand?—As compared with New Zealand, there is no doubt a want of moisture in New South Wales, New Zealand is very moist.

4978. I was speaking of New South Wales?—I think that New South Wales will be a large exporter of mutton—very large in time. The storage of water has not been attended to in the past; it is more attended to now.

Sheep farming in New Zealand.

4979. With regard to New Zealand mutton, do you think that that will continue to increase in quantity?—I think it will be very large indeed.

4980. How many sheep have they now?—I think 18,000,000.

4981. How many sheep could New Zealand support?—Double that number. New Zealand is as large as Great Britain.

4982. But is not the land pretty well occupied all over New Zealand?—No.

4983. What part of New Zealand is not occupied?—A great deal of it. There are 10,000,000 acres belonging to the Maories that has hardly come under cultivation at all.

4984. That is in the North Island, is it not?—That is in the North Island; and there is a great deal of the uncultivated up land which will hold sheep. I consider that in New Zealand the land is quite as good, and some a great deal better than the land of England, and ultimately it will hold as many sheep as England, or perhaps more.

4985. Do you hold that they could support about double the number of sheep in New Zealand?—New Zealand is not so suitable for beef as for mutton, and nearly all the land is suitable for sheep—very little of it is unsuitable for sheep.

Wheat exports from Russia.

4986. I think Mr. Clay has put some questions to you upon this; but I should like to ask you with regard to other countries than the United States, whether it is not the case that Russia, for instance, is sending wheat at prices which are not remunerative in Russia?—I cannot say whether they are remunerative or not; it comes in enormous quantities; and they get higher prices than would appear because they are satisfied with the paper rouble in payment.

4987. But is not the Russian Government using various expedients to keep the market?—They have lent the money, and guaranteed the banks for enabling the farmers to carry on their crops.

4988. So that to some extent there is some foundation for it?—Yes.

4989. So that there is depression not merely in agriculture here but there?—Undoubtedly there is depression in prices even with them. Wheat can be grown in so many different parts of the world; it leaves no profit in many places although the land is suitable for the cultivation. The prices are lower or appear lower in some cases than in others, and in some the farmer cannot live. I have only endeavoured to put before you the cost of the operation of growing wheat under various conditions.

Mr. W. J. Harris.
14 Dec. 1893.

4990. Take the cost of the operation at the lowest and the sales under the best conditions, would not you say that the average is quite as good?—The instance I gave in New Zealand was the best farm I have seen anywhere, I consider. I do not wish to frighten the farmers in England by suggesting that the cost is everywhere so low.

Wheat growing in India.

4991. With regard to the question of Indian wheat, you say that, so far as the rupee is concerned, the Indian producer gets as good a price now as what he got 20 years ago?—Yes.

Railway extension in India.

4992. What I should like to put to you is this: India sends us so much more wheat now than it did 20 years; what is the change that has enabled India to do that?—Before 20 years ago they had only inferior means of sending the wheat here, and now the railways have been made it has largely altered the conditions, and wheat is shipped with greater facilities as to freight, and that also has extended the wheat growth.

4993. Then the real change is the extension of railways as far as India is concerned?—That is a very important point in the extra production, because of course a certain district of land might have been so far removed from a railway that it would not pay to grow wheat at all.

4994. It is not merely the fall in the gold price, which operates it is assumed disadvantageously to other producers, but it is the extension of railways in India?—And the low freight as well. You see the low freights make a very considerable difference there. These circumstances, together with the extraordinary fact of their getting rather a higher price in rupees, have helped to increase their export.

Effect of appreciation of gold on wages in England.

4995. Then with regard to the difference in the price in India in rupees and the money price of wheat in English gold I should like to ask a question whether it is not the case that the real wages of labour in England have increased in the last 20 years. I am not speaking of the money wages, but of the value of food and clothing and other things that the labourer gets?—I have a workman on one of my farms who was there 50 years ago. He lived in the house 50 years ago as a farm servant; the farmer gave him all his food and gave him 15*l.* a year. I have some men in the house now living with my hind or manager; and they live in the same way, getting all their food and from 12*l.* to 15*l.* a year. In that case there has been no rise in wages; but where I employ men outside, who are living in cottages near at hand, I give them 12*s.* per week. Those men used at that time to work for 8*s.* or 9*s.* a week. There is therefore a rise in that case, and the rise in that case has been caused by the necessity under which the men labour of sending the children to school.

4996. I am afraid that is going rather away from the point of my question. I am rather taking the time 20 years ago, and your evidence, as to the money wages and agricultural wages compared with a period 20 years ago, is that they are about the same now, or just from 10 to 15 per cent., less in money. Is that a statement with which you would agree?—I do not think that my wages are any less than they were 20 years ago.

4997. And being paid in money, as far as they are paid in money, and the purchasing power of gold having risen, the labourer here gets more than he did 20 years ago?—It is not everything that is cheaper. One of my men was telling me that he paid 14*s.* 6*d.* for a pair of boots, and he used to give for the same kind of boots 9*s.* 6*d.*

4998. Has not the purchasing power of gold increased?—I think generally it has, but there are a great many exceptions.

4999. Because I think that is what Mr. Everett was driving at, that the purchasing power of gold has increased?—I believe the wages of mechanics and artisans have increased considerably, but I doubt whether the average wages of a farm labourer have increased nearly as much.

Comparison between wages in England and India.

5000. Assuming that the real wages of labour in this country have increased perhaps 20 to 25 per cent. in the last 20 years—the real wages—would it not be the case that the English farmer is disadvantageously placed as compared with the Indian farmer, because he has really got to pay his outdoor labourers 20 or 25 per cent. more—he pays the labourer in sovereigns which have so much more purchasing power?—There is no doubt that as compared with the Indian farmer wages go very much against him because of course the wages of the latter have not risen materially.

Mr. W. Harris.
14 Dec. 18

5001. Supposing the purchasing power of the sovereign had not increased, but that the real wages of the labourer in the last 20 years in this country had increased, would not the effect on the English farmer be exactly the same as what is alleged now, that he would be placed at a disadvantage compared with the Indian farmer?—Of course the wages that he pays his men is a very distinct charge upon his industry; there is no doubt about that. No one could get out of that question.

5002. Is it not the case that in 1850 and 1870 when prices rose rather than fell, there was at the same time a great rise of wages and income all over the country; now between 1870 and the present time we have had no rise in wages; you have had them rather stationary, or in agriculture slightly falling?—Perhaps.

5003. But you have had a much greater fall in the price of commodities, and therefore the labourer is very much better off even now than he was then. The question I am putting is this: Supposing the price of commodities had not changed further to produce the same state of things now, you would not have had a rise in the money wages of labour?—I expect you would have had some rise.

5004. It is not the difference in money between India and this country which places the English agriculturist at a disadvantage, but it is the fact that during the last 20 years you have had the rise of the real wages in England, and not a rise of the real wages in India?—I do not quite agree with you in that. I think that wages only form a portion of the cost of production. The cost of production is not made up entirely of wages; it is made up by labour-saving machines and so forth as well, and also by various other expenses. Rent has probably gone down in this country a great deal more than wages have risen.

5005. Still the labour is a material element?—A material element; but the men who live in the house on my farm, and who are kept by the manager of the farm, receive exactly the same wages as they did 50 years ago.

5006. Still I am putting the case quite generally, not with reference to particular experience, but with reference to the general facts which have occurred?—You will find that a number of the agricultural labourers do live in farmhouses throughout the country, especially in a county like ours—Devonshire.

5007. Would you say that the scale of living is quite the same now as it was 20 years ago?—They live just the same in the farmhouse, but not in the cottages—I think they will live better in the cottages now.

5008. Then you suppose there is a rise in wages outside your house, and no corresponding rise inside?—I think so, for this reason: I think that previously all the children of the men who lived in the cottages earned small wages, and therefore the labourers' family altogether did not earn so much less than they do now, whereas now the children are compelled to go to school, and the labourer finds it necessary to get more for his own labour.

5009. He does get more then?—He does get more.

5010. That is just the point; there has been a rise of labour in this country, and there has been no corresponding rise in India?—There has been a small rise in India

5011. The question is whether that would not have had the same effect apart from the change in money upon which so much stress has been laid?—I do not think it would have the same effect, it is not a sufficient quantity.

Import duties.

5012. I do not think it will be necessary to go into the question of protection, but for the sake of making it clear I should like to ask whether you propose to confine import duties to articles of food and manufactured articles, excluding simply what you call raw materials?—Yes.

5013. And you think that a strict division can be made between raw material and other articles?—I think it could. There might be some little difficulty, for you must have experts to find out where a little injury is done, and how it can be remedied.

Mr. W. J. Harris. 4 Dec. 1893.

5014. Would not there be very great difficulties?—I think the advantages would far counter-balance the disadvantages and difficulties.

5015. But I am speaking of the doing of it all?—I think it could be perfectly easily done, just as they do it in other countries.

5016. The French tax some raw materials and exempt others?—They manage it somehow, and I do not see why we should not when all other nations in the world can do it.

5017. (*Mr. Whitehead.*) I think you are the head of a firm of corn merchants in Liverpool?—London and Liverpool.

Commercial gambling.

5018. Would you tell the Commissioners whether there is a custom in the corn trade known as a system of options and futures?—That is especially so in America.

5019. But it is this country I am speaking of?—It is not widely spread; it is done in Liverpool, but not very largely. In America it is done enormously.

5020. It is asserted that a very large proportion of contracts for wheat never have actual wheat tendered against them. Would that be at all correct?—No, I think not. There is some portion of the wheat which never has a tender against it. My own business is a very genuine one in that way. We simply buy and sell cargoes of corn on commission.

5021. Such a system would tend to reduce the price, would it not?—I think it would have the opposite effect, for this reason, that a farmer has the opportunity of selling wheat forward against his crops, and I think it would help the farmer rather than not. At the same time, I do not believe, that unless farmers gained something by forward sales, it would have the remotest effect on prices.

5022. Then the system does not prevail to any great extent, and if it did prevail, you say it would have the opposite effect?—It does not prevail to that great extent to which it is carried in the United States. I am sure in the United States they sell 20 quarters where we sell one in that way; it does exist in Liverpool especially, but I do not think that it makes any difference in price.

Mr. W. J. Harris. 14 Dec. 1893.

Court for fixing rent.

5023. (*Sir Nigel Kingscote.*) In the course of your evidence you expressed an opinion that there should be some authority to come between the landowner and the tenant?—I would rather call it a Court of Appeal. If there was an advance of rent, a surveyor of the county should be called in, or at any rate the farmer should have the power of calling him in, as is the custom now in settling between the outgoing tenant and the incoming tenant, but the sitting tenant is the real person to consider—the sitting tenant is more to be considered than the outgoing and incoming tenants.

5024. But I want to know as regards the incoming tenant?—Whether his rent should also be subject to appeal?

5025. Are you of opinion that generally speaking in England or Great Britain, the landlords and tenants cannot settle their own business, and that it requires a Land Court to appeal to?—I think there are very few landlords and tenants who cannot settle their own business, but there are some, and it is no hardship, to make the bad landlord do what a good landlord does.

5026. Therefore it is exceptional?—Yes. I would not establish land courts unless it was decided to give some great advantage to agriculturists. I would not establish them under the present circumstances. Supposing that Parliament decided to reduce the burdens materially on agriculture, and give some bonus by which arable agriculture would be stimulated, then I would have a court of appeal as a guarantee to the nation that the landlord could not seize that which was intended for the tenant and labourer, or at all events could not seize more than his fair proportion.

5027. (*Lord Cobham.*) Would you have confidence in umpires by popular election as has been suggested?—No, I should leave it to the county council.

The witness withdrew.

Mr. G. Murray.

Mr. Gilbert Murray called and examined.

Mr. G. Murray.

5028. (*Chairman.*) You are a land agent, residing at Elvaston Castle in Derbyshire?—Yes.

5029. What extent of properties do you manage?—About 20,000 acres.

5030. All under Lord Harrington?—Yes.

5031. Do you manage for any other landowners besides?—Only small properties.

5032. Has the property in that district all suffered severely from depression?—It has suffered from low prices.

Reductions of rent.

5033. Has there been considerable reduction in rent?—Yes.

5034. What have the reductions amounted to?—20 to 25 per cent.

5035. Are those permanent reductions, or only temporary?—They are permanent reductions.

Character of cultivation.

5036. What is the general character of the cultivation, is it grass land?—A good deal of it is grass land.

5037. Are there some arable farms?—They are mixed farms.

5038. But largely pasture?—Yes, grazing dairy land.

Demand for farms.

5039. With that reduction of rent have you found it possible to get tenants for the land?—I have no difficulty in letting them.

5040. Is there a demand for farms in the district?—Yes.

5041. And with that reduction the farms are taken up, are they?—Yes.

5042. Have you got men with sufficient capital to take the farms?—Yes.

5043. But you have no difficulty in letting the farms?—There is a little difficulty about capital.

5044. Do you find greater difficulty in respect to the large holdings than the small ones?—No. I think the large farmers are the best; we have no really large farms, nothing over 400 acres.

5045. What is the average acreage in your district?—About 200 to 250 acres.

5046. Therefore you have no really very large farms?—No.

5047. But farms between 350 and 400 acres. Do you find that the tenants are prepared to take them with capital?—Yes.

5048. Then I presume that in your opinion the reductions of rent have been sufficient?—Yes, up to now.

Decrease of arable land.

5049. Has the growth of wheat in your district been abandoned?—No.

5050. Has it been reduced considerably?—Yes, it has been reduced, but not to a very great extent; Derbyshire never was a wheat-growing county; the quantity of wheat is only about 17,000 acres, so that the wheat growing is very small.

5051. In the whole of the county?—Yes.

Condition of agriculture.

5052. The depression in agriculture has not reached the point in your county of causing the land to go out of cultivation?—No.

5053. Or of seriously impeding the letting of farms?—No; mixed occupations are mostly in demand at the present time—mixed with a certain proportion of tillage land—not altogether grass.

5054. You are prepared to suggest remedies, but those are remedies for other parts of the country rather than your side?—Rather for the whole country, I should suggest.

Rates.

5055. What are your suggestions?—Well, the question of rates is one very important matter.

5056. What do you suggest there?—I should like to see all rates merged in income tax, and collected in one sum.

5057. And spread over the whole country?—Yes.

Mr. G. Murray. 14 Dec. 1893.

5058. Do you consider that the local rates should be divided between the owner and occupier?—I should, if you go on on the same system that we are going on now.

5059. If the system of local rates is maintained, then, in your opinion, the rates should be divided between landowner and tenant?—Yes.

5060. But you would prefer some general system of taxation for taxing all property over the country?—Yes.

5061. Would not that involve getting rid of local management to some extent?—To some extent. My point is to spread taxation over much larger bases. There are some things not taxed at all at present to local rates.

State loans for carrying out improvements.

5062. Then I see you think that money might be lent by the State for improvements on property?—Yes.

5063. What is your recommendation there?—I should recommend 3 per cent. or 3½ per cent. at the outside. That would be quite sufficient.

5064. Are there a considerable number of improvements in your county which might be made if capital was lent by the State?—Yes.

5065. Are we to take it that the properties are in want of improvements in that respect?—There is a certain amount of improvements, the extension of stock breeding and feeding, which entails very considerable extra outlay on buildings, and there are still some lands undrained.

5066. Is there a great deal undrained?—There is some; and cottages are wanted too.

5067. And there are covered yards and barns required?—Yes; hay barns and covered yards.

5068. You think in consequence of the reduction of rents landlords are unable to meet that expenditure, is that the case?—Yes; and you might let them have money at a cheaper rate.

5069. Do you think much might be done in that respect?—Since I have been at Elvaston, 26 years, I have spent 40,000*l.* on 6,000 acres in buildings and drainage entirely out of income.

5070. (*Lord Vernon.*) Is that apart from reductions?—Yes.

5071. (*Chairman.*) On that one estate?—On that one estate of 6,000 acres.

5072. How many years?—26 years.

5073. Then on that property is there much remaining to be done?—Very little.

5074. But it is in respect of large properties in the neighbourhood that you speak?—Yes.

Improvement of stock.

5075. You think that greater attention should be directed to the improvement of stock on farms?—Certainly.

5076. Is there room for that?—Great room.

5077. Has anything been done on the estate which you manage in that direction?—Yes; there has been something done more in the way of horse breeding. Lord Harrington is a horse breeder, and keeps several stallions for the use of his tenants, both in Cheshire and Derbyshire, at a very low fee.

5078. Have the farmers benefited in that direction?—I think they have.

System of cropping.

5079. With regard to tillage lands, do you consider that the rotation of crops should be extended?—I do.

5080. What would be the effect of that?—It would decrease the cost of labour, and I think without lessening the produce. I think quite as much might be grown upon a lessened area, as there is now on the greater area.

5081. Has that been done on your estate at all?—We are giving the tenants a pretty free hand in the way of rotations. We do not confine them to fixed rotations, or the four-course system, or anything of that kind.

5082. They have availed themselves of that?—Some of them. It is coming more into use I think.

Protection.

5083. What is your opinion with regard to protective tariffs?—We do not want protection.

5084. You do not want it?—No.

5085. You consider that the value of feeding stuffs is very great to the farmers?—Yes, we are very much larger buyers than sellers of cereal produce, and the lower prices are certainly of great benefit to us.

5086. The farmers buy a great deal of cheap feeding stuffs for their cattle?—A great deal.

5087. And therefore any protective duty would be against their interest?—Of course it would.

5088. Do you come here representing the Farmers' Association?—No.

5089. Do you come here recommended by the Chamber of Agriculture?—No, as an independent witness.

Land Courts.

5090. What is your opinion on the subject of courts for the determination of rents?—We do not want any courts. I think we can manage our business without Land Courts.

5091. Do you know what the opinion of the farmers in your district is upon that point?—Some of them have expressed a desire that they would like Land Courts—I do not say many, but a few. I think the generality are pretty well satisfied as they are.

5092. You think they are pretty well satisfied?—Yes.

Reductio of rent ar rates.

5093. Have the rents generally in your district been reduced in the same proportion as on the property that you manage?—Yes.

5094. Have the tenants derived the advantage of those reductions in the reduced assessment for the local taxes?—Certainly. I make out the assessments on the whole estate for the Commissioners, and for the Poor Law Unions as well. They are all made exactly to a penny on the rentals.

5095. On the agreed rent?—On the agreed rent.

5096. Have local rates been raised or lowered?—Raised, very considerably.

5097. Since when?—Within the last 16 years, I think.

5098. How much have they been raised?—In the next parish to Elvaston they have been raised from 1*s.* in the 1*l.* to 2*s.* 8*d.*

5099. That seems to be a very heavy rise. What is that due to?—Part of that has been developed for building land, and they have a local board, and school board, and of course they want all the latest improvements of sanitary science, and water-supply and those things.

5100. And it is mainly for sanitary purposes that the increase has taken place?—No, not altogether.

5101. Does the whole of the increase fall upon the farms?—Yes.

Small holdings.

5102. Are there many small holdings in your district?—No, not many.

5103. Do you consider it desirable that there should be an extension of small holdings?—It depends on the extent. With small holdings of 10 or 15 acres, I do not think a man can live upon them. I think if you have farms of 50 or 60 acres, then they would work, but the effect of the cost of the buildings equipment of a small occupation of 10 or 15 acres puts it out of the question altogether; I have never yet made a valuation where the small man did not complain that the value was too high, although I have always valued the land at the same rate as for the big farm. They say, compare my rent with John Smith's, my next neighbour, it is 10*s.* an acre more. In common fairness you must put a value on the buildings and the houses, generally putting a low one, but if you have to build them from the commencement, the 15-acre farm would entail an outlay of at least 500*l.* 500*l.* borrowed from the Financial Company at the present rate of interest would amount to a rather heavy sum. I do not think any man could work it.

5104. Then adding the interest upon the capital which was required for equipping a small farm to the agricultural rent it makes the rent too high, compared with other farms?—Yes, more than a tenant could pay.

5105. What is the smallest acreage for a small holding that you would consider desirable?—I think there are a few small holdings of an acre, if you call them small holdings.

5106. They are rather in the nature of allotments, but I want to know about holdings where a man would live mainly by the land; what is that?—10 acres.

Mr. G. Murray.
14 Dec. 1893.

5107. One of the difficulties of the increase of small holdings is the difficulty of providing capital for their buildings?—Yes; unproductive capital it would be too.

5108. Have you broken up any farms under your management for the purpose of making small holdings?—No, we have plenty of allotments.

The Agricultural Holdings Act.

5109. Then with regard to the Agricultural Holdings Act; what is your opinion about it?—My opinion is that the Agricultural Holdings Act wants very little amendment. I think it is as well drawn as it possibly could be. The only thing that I would suggest would be compensation for home-grown corn, and striking out clauses 1 and 2 of the first schedule.

Permanent improvements.

5110. What would be the effect of that?—It would keep tenants from spending their capital on putting up permanent erections or permanent improvements on another man's property. I have always set my face against it. If the landlord cannot or will not do the permanent improvements, I think it is no business of the tenant's, and I have found in many cases where I have been engaged in valuations and tenant right valuations, that this always leads to unpleasantness in the end, because a man spends a lot of money in building or drainage, and he gives notice and leaves at the end of a few years, and then he thinks it is very hard. Even where they have full compensation for the money spent, I have found it work very unsatisfactorily.

5111. Then I gather from you that as a system between landlord and tenant, it is better not to encourage tenants making improvements of a permanent character?—I think much better.

5112. In your view those improvements should be provided by the landlord and not by the tenant?—Yes.

5113. And therefore you would improve the Agricultural Holdings Act rather by cutting out those portions of it which aim at stimulating the tenant to make those improvements?—Yes. I think that the Agricultural Holdings Act as it stands is very fair. It goes upon the principle the value of an improvement is to an incoming tenant. I cannot imagine anything more fair or reasonable than that.

5114. I presume your evidence upon that point is rather from the point of view of the agent than that of the tenant. Do you know what the views of the tenants are in your district?—Well many of the tenants know very little about the Act. Of course they hear what the agitators say and they fall in with their views that the Act should be amended. I cannot see it.

5115. Do you know whether the subject has been discussed by the tenants in your district?—Not exactly in our district, but it has been all round the neighbourhood.

5116. Are they generally clamorous for the amendment of the Act or not?—Well, I think they are pretty well divided about it.

Dairy factories.

5117. Has there been an increase of the factory system of dairying in your district?—Yes.

5118. When did that commence?—It first commenced in 1869. The late Lord Vernon and a few others set about improving the quality of the cheese; creameries were established at a subsequent date. At that time people were making a great noise and the country was being deluged with American cheese. A few Derbyshire men contributed a guarantee fund and they engaged two men from America and started these factories. Of course they met with a great deal of opposition at the commencement, but they have gone on ever since. Last year there were 27 factories going in Derbyshire and part of Staffordshire—the northern part of Staffordshire, and three of those are butter factories, and the others are cheese factories. They make cheese for about seven months in the year, beginning about March and April, and they sell the milk in the winter. The butter factories go on the whole year.

5119. Has the result been a general improvement in the quality of the cheese and butter sent to market?—Yes; there is a great improvement in the cheese and butter too. Taking an equal number of cows where the milk is manufactured at the factory, and the same number of cows where milk is manufactured in farmhouses, the factory beats them a long way. I think there are a few individual farmhouses where they make as good or better cheese as the factories, but they are a very small number.

5119*a*. And the average has very much improved?—Very much. I may say that this year the factories began selling their cheese at 60*s*. per cwt., the Derbyshire cwt. is 120 lbs.; then they came down about the middle of the year to 55*s*., and finished off at the end of the year at 61*s*., and that point is the ruling price in factories.

Mr. G. Murray.
14 Dec. 1893.

5120. Is there still room for further extension of the principle in your district?—Yes.

5121. Do you think it is gradually being extended?—Yes. I think the general system of butter and cheese factories the best and the most profitable system. Lord Vernon's, at Sudbury, is the largest factory in the kingdom.

5122. Has there been any reduction in the number of labourers in your district?—Yes; there has been a slight reduction.

Wages.

5123. Not anything to speak of?—No; and the rate of wages has increased considerably.

5124. Since when?—During the last 15 years. The rate of wages of the locality is lower at Elvaston. I think that it is a good plan to keep them down rather below the farmer's, because when they are getting higher wages than the farmers give the best men want to come to us. Wages are nominally below the farmers' but we have this rule, that if a man is ill he receives half his pay, so that it is made up in that way. Our rate of wages is 16*s*. per week, the general rate with the farmers is 18*s*. up to 21*s*. per week. There are plenty of cottages in the place; there is not a cottage over 1*s*. 6*d*. per week; they generally run about 1*s*. 3*d*. per week, and they all have a garden and pay their rents half yearly.

5125. What has the rise of wages been as compared with 15 years ago?—I think the rise in wages would be about 3*s*. per week.

5126. Then, having regard to the reduction in the price of food, the labourer must be a great deal better off?—Very much better off. In addition to that, we have a clothing club in the parish to which Lord Harrington contributes; each member pays 1*s*. per fortnight to which Lord Harrington adds 4*d*.

5127. Then this considerable rise of wages in your district must have made it more difficult to pay the same rents as formerly?—I do not think it has made so much difference.

5128. Why is that?—The use of machinery is very much more general.

5129. They have saved in the number of labourers about the same amount as the wages have increased?—Yes, the machinery has saved them a great deal in many ways, in mowing machines and self-binders. A very important matter to the Derbyshire farmer is the conversion of his hay and straw into chaff—that is done now at a very small sum indeed. When the threshing machine and engine comes, it finishes the threshing, and when it is finished the whole stack of straw is cut into chaff stored in a building, and is ready for use when required.

The drought of 1893.

5130. Has the district suffered much from the drought of the present year?—The southern districts of Derbyshire, taking a line from Alfreton on the east and coming through Ashbourne to Belper, have all suffered considerably from the drought.

Hay crops.

5131. Well, then, as to the north?—The hay crops were late owing to the grass being fed late in the spring; but on the whole the oldest inhabitant can scarcely remember a more productive year than they have had in North Derbyshire this year. In the southern division, so far as I can make out, the produce of milk has dropped about 30 per cent.

5132. Have there been abatements of rent in the southern division in consequence of this?—No.

5133. But in the northern division you say that the quantity is greater than ever before for a great many years past?—Yes.

Store stock.

5134. And the farmers have done well?—Store stock has been very low, and they have suffered thereby. I never knew the price of store stock so low as it has been and is now.

5135. That is, I suppose, on account of the exceptional drought, and the difficulty of getting food for the cattle?—Partly that. There was a scare with the light

Mr. G. Murray. 14 Dec. 1893.

hay crops, and every young animal with a spark of meat on it was slaughtered instead of being kept for next year; this not only reduced the number of store cattle but depreciated the value of beef.

5136. They all went into the market, at the same time?—Yes. I look upon it that all kinds of stock will be very dear next year as we are very much below our average number of cattle. The Agricultural Returns do not show anything like the depreciation in the number, because there have been a great many killed since the returns were sent in.

5137. Next year, if there is an average production, you say there will be a dearth of stock?—No doubt.

5138. And therefore for that reason you think it will rise in price?—Yes.

Rent on a sliding scale.

5139. Have you any opinion on the subject of a sliding scale of rent?—Yes.

5140. What is your opinion upon that point?—A sliding scale is the only thing that would carry us through.

Revaluation of holdings.

5141. What is your opinion upon the subject?—I should make a valuation of every holding in the kingdom, and fix the rent according to the value of the produce to-day. That would be the starting point. The first thing I should ascertain would be the productive power of the soil, by going over every field and taking them separately, and estimate the average produce; I should not altogether fix it according to the state of the cultivation at the present time. I should try to arrive at a medium, the farm being in the high state of cultivation, and worth more and would produce more at the present time than an average price of produce, I should not take it at that. I would take it at the average or normal rate.

5142. Is it your opinion that the landlords and tenants would adopt that?—I think the landlords would; the tenants are opposed to it.

5143. Your impression seems to be rather a valuation of all the land?—Yes.

5144. And fixing the rent, and thereafter the rent should rise or fall according to the scale of prices?—Exactly, and then a man cannot come and say, "I am "paying you rent on my own improvements." It does not matter how he increases the production by skill and outlay; he increases it to his own advantage, and not to the advantage of the landlord, whose rent is based on the price, not on the produce.

5145. Is it your proposal that this should be made compulsory on landlords and tenants?—I think it would be a good thing to do.

5146. To make it compulsory?—It would settle the land question for the next 50 years.

5147. And no tenant should be allowed to hire a farm at less, or a landlord to let a farm at less rent than that?—No. Then there has been a good deal said about continuous occupation. I do not think anybody wants continuous occupation, but if they do, I should be quite willing to grant them 21 years' leases, with a break at 7 years and 14 years; this would simplify the Agricultural Holdings Act to a very great extent. When a man enters on a farm he would know exactly the value of it when he starts, and if he goes on for 7 or 14 years, and increases the value of his land so much per acre, I would pay him the capitalised value of it, whatever it was. This would be the measure of his tenant right.

5148. What is the practice on the Elvaston Estate; have leases been given?—No; they will not take leases.

5149. Are they tenancies from year to year?—They are all from year to year.

Land courts.

5150. I think you told me earlier in your evidence that you were opposed to the establishment of Land Courts to determine the rent of land?—So I am.

5151. But you now recommend a sort of universal determination of the rent of land?—No, I think not. The rents would rise and fall with the prices.

5152. Is not that your last proposal of a State valuation of all the land of the country, once and for all?—Yes.

5153. Well, that looks very much like a Land Court on a great scale, not to be appealed to in individual cases, but to determine once for all what should be the rent of land; I only wish to know what your views are. Is that your proposal?—I think that would be a fair thing. If the tenant has a 21 years' lease, I am quite willing that he should give the landlord a year's notice before the end of the first seven years, and then the landlord gets possession of the land.

Mr. G. Murray. 14 Dec. 189

5154. That is another part of the proposal, namely, that the tenant should have the option of having a 21 years' lease, but your first proposal was that it should be a general valuation of all the land of the country with the view of determining rent?—Yes.

5155. (*Lord Cobham.*) Based upon the present rent?—It would have nothing to do with the present rent.

Rent on a sliding scale.

5156. (*Chairman.*) There is to be a re-valuation of all the land by a Government department, and that should be the measure of rent as between the landlord and tenant; is that your proposal?—No, that is only the starting-point. When the price goes up, the rent goes up, and when the prices go down, the rent goes down.

5157. I understood you to say that you would not allow a landlord to receive a higher rent or a tenant to pay a less rent?—No; you commence with that as a starting point whatever it may be; but the rents would fluctuate according to the price. You cannot expect a man to pay more than the land is really worth. The rent fluctuates with the price. We do not know what the value would be next year; next year it might not be worth so much. A man might say, "My farm is too "dear, and you must help me." A land court fixes a hard and fast rent, under a sliding scale the rent varies with the market value of the produce.

5158. The point I wish to arrive at is whether in your view at first starting, this valuation is to form the rent as between landlord and tenant?—Yes, to start with.

5159. It seems to me somewhat inconsistent with the other answer you gave, namely, that you are against a land court, because this in fact is a land court for saying what the rent should be?—I do not think you would establish a land court in that way.

5160. (*Mr. Elton.*) You have a sliding scale which may go up and down?—Yes.

5161. (*Lord Vernon.*) Your idea arises from the fact that farms in Derbyshire for many years were always let according to the value of the cwt. of cheese?—Yes.

5162. You imagine that it would fluctuate from year to year?—It is exactly on the same principle as the tithe commutation.

Land courts.

5163. Surely the difficulty would be the first commencement, you would have as the chairman says, to have a land court to fix the basis?—You must have a valuation, but I do not admit the idea of a land court.

Revaluati of holding

5164. (*Chairman.*) I understood you to say that the valuation would be made field by field for each farm?—Yes.

5165. I presume that would be taken into account?—Yes.

5166. The only point on which I am not quite certain as to your views is as to the initial point of this new departure, whether this valuation is to be compulsory on both landlord and tenant?—That is the whole thing in detail (*handing in a document*). (*See* Appendix A., XVIII.)

5167. Whether the initial point of starting this new plan, this State valuation, is to be compulsory both on landlord and tenant?—It hardly struck me as being necessary to make it compulsory.

5168. (*Lord Cobham.*) How about buildings and other improvements if the rents are to rise and fall automatically?—The landlord has to keep them up now and he would have to keep them up then.

5169. They would come into the valuation?—That is a point I should take into consideration in fixing the starting point, the state of the buildings, if a certain amount of building is required for the farm I should make an allowance.

5170. Supposing the landlord lets them down when the prices rise what would the rent be then?—He would not be likely to do that.

5171. (*Mr. Dalton.*) What would happen if no tenant would take advantage of this?—The landlord would farm it himself.

State loan for carryi out impro ments.

5172. (*Lord Cobham.*) You are in favour of cheaper money for estate improvements, but what you would suggest would only represent about a saving of 1 per cent. of the present advances by the Lands Improvement

Mr. G. Murray.
14 Dec. 1893.

Company, 3 per cent. with a sinking fund for repayment in 25 years would mean about 5½ per cent. or rather more?—I am afraid you cannot get it at 5½ per cent.

Revaluation of holdings.

5173. (*Mr. Chaplin.*) Your plan I understand is that there should be a re-valuation of every field in the country made by some Government department?—I have not in my mind a Government department.

5174. Whom have you in your mind?—You on your own farm could select a valuer, and your tenant could select another, and they would fix the valuation—that is my idea.

5175. It should be done then by a voluntary arrangement between the two?—By a voluntary arrangement.

5176. Then you withdraw what you said as to this being compulsory on the part of the State?—Yes.

5177. By whom would the cost have to be borne?—By the landlord as now, it costs 1*s.* per acre.

Rent on a sliding scale.

5178. When you have established this initial value, the prices I understand are to rise and fall according to the price of produce?—The rent has to rise or fall.

5179. The rent?—Yes.

5180. How often would you value the rent?—Every year as the prices varied.

5181. Who do you contemplate would fix the scale according to which it would rise and fall, the two parties between themselves?—Yes, it would be a very simple matter.

5182. On what produce are these prices to be based, on certain kinds of produce, or all kinds of produce?—All kinds of produce.

5183. You would schedule all the different produce of the country?—Yes.

5184. But I understood from you that in your opinion the tenant farmers would greatly object to this?—Yes, a great many of them would.

5185. Why would they object to it?—Holding under a large landowner they would rather be as they are.

5186. Because then they think they would get better terms?—Because they know that the landlord does not take advantage now; landlords never have done and they would not now.

Causes of depression.

5187. Now with reference to another matter, what in your opinion is the chief cause of the present depression of agriculture?—Well just at present all kinds of farm produce are at such a low price.

Improved prices and reduced rates.

5188. And the only remedy is an improvement in the price?—Yes, an improvement in the price, and a reduction of the rates and taxes.

Cattle disease.

5189. I imagine that in your county cattle disease would be very serious?—Yes.

5190. Have you ever had pleuro-pneumonia or foot-and-mouth disease in Derbyshire?—Not in my time, but it was very bad before my time.

5191. Do you attach great importance to the disease being kept out of the country?—Very great importance.

Slaughter of cattle at port of debarkation.

5192. Are you in favour of what has been suggested by many other witnesses that all cattle and stock imported into this country should be slaughtered at the port of landing?—Every one of them.

State loans.

5193. (*Lord Cobham.*) I was asking you how you make out that you get cheaper loans in the way you suggest. You say it would only involve a reduction of about 1 per cent. in the charges at present made by the Land Improvement Companies?—I think I have got some of mine here; I can give you a case; it is only a small one that I was interested in, 1,933*l.* 0*s.* 3*d.* The preliminary expenses were 90*l.* 13*s.* 9*d.*

5194. Will you give us the general result?—The yearly repayment was 132*l.* 12*s.* 6*d.*

5195. What per-centage was it?—That was one farm, about 6¾ per cent.

5196. But 3 per cent. on a sum and a sinking fund for repayment in 25 years would certainly come to 5½ per cent.?—I am quite willing to spread it over a larger number of years.

5197. Up to 50 years?—40 years.

5198. You think that the drainage should last as long as that?—If it is well done it would, and the buildings too.

5199. The rates you would merge in a general income tax?—I would.

Mr. G. Murray.
14 Dec. 1893.
Rates.

5200. That you think would be a considerable relief from the pressure of rates upon the land?—Yes, it would bring in a very large additional income which is not rated at all, and I think it was the original intention that these rates were to be levied on means and substance, and I shall bring that down as low as 100*l.*

5201. You say that your rates are only another name for rent?—So they are.

5202. Then your remedy would be a relief for the landlord only?—If it were a relief for the landlord he could afford to relieve the tenant.

5203. In that way a great advantage would be given to agriculture generally?—Yes.

5204. Through the landlord?—Yes.

5205. You would not say that in every case the advantage would reach the tenant?—Almost in every case. In my experience the most suffering man at present by agricultural depression is the man with about 2,000*l.* or 4,000*l.* a year—it is quite heart-rending; they have to leave their homes, and many of them have to let or sell their property and household goods, and leave the country. Those are the men who suffer most keenly. Even in our part of the country such cases are numerous.

5206. Do not you think that some part of the relief would go in increased luxury of living or would otherwise remain with the landowners?—I do not think so.

Small holdings.

5207. (*Sir Nigel Kingscote.*) You gave 10 acres as a small holding on which a man could live?—Yes.

5208. Would it be all arable?—He would not want more than an acre of arable.

5209. He would have to live on that?—He would have to exist; he would be no better and not so well off as an agricultural labourer; if he had 16 acres he would keep four cows, and he would occupy his whole time, and would not work to earn any rent outside his own occupation.

5210. But would he not be able to employ his children?—Partly, some of the younger ones.

Improvement of stock.

5211. I think you said that one thing that was required was to have better stock?—Yes.

5212. Surely stock in the last few years has very greatly improved?—Vastly; you mean the quality of the stock?

5213. Yes. Is it the quantity or the quality that has improved?—The quality has not improved in the dairy counties.

5214. It has not improved?—Certainly not.

5215. Surely the pedigree cattle and bulls are cheap enough now for the tenant farmer to buy them?—So they are; but the tenants of dairy farms have a strong prejudice against pedigree stock. I have been arguing that point all my life, but it has had very little effect. Another thing that has tended to decrease the quality is the milk trade; a man does not care what kind of bull he uses so long as he rears stock.

5216. That is a mistake?—Yes. Every farm should be self-supporting in its stock.

5217. He ought to rear his cattle as well as sell his milk?—Yes.

5218. And therefore you would say there is no necessity for the importation of cattle from Canada or elsewhere?—I do not think so; I think we could supply all the store cattle required, the only protection we want is protection against foreign disease. We want no other protection.

5219. Would not that tell in another way, that they would rear a good deal more stock, and the land would not be run out by milk?—I do not think that the land has been run out by milk. My experience is quite the contrary. When I came to Elvaston there was not 20*l.* spent on the whole property in the purchase of manures and feeding stuffs. Since then, to my knowledge, they have spent a sum equal to the rent of the land, and purchased food, so that the land has not suffered. Those who are in the milk trade keep up the winter supply, and they cannot do this without the use of purchased food.

Rates.

5220. (*Mr. Whitehead.*) Are not rates a great burden to agriculturists; have the rates increased in your district?—Yes, they have.

5221. In what proportion have they increased within the last 20 years?—I gave the sum of 1*s.* to 2*s.* 8*d.* in the pound.

5222. (*Mr. Long.*) That was the next parish; what is it in your parish?—That is in the parish.

5223. (*Lord Vernon.*) That is, in a great measure, owing to Derby having extended?—In our parish they have doubled.

5224. (*Mr. Whitehead.*) May we take it that in the whole of the district the rates have increased?—Considerably increased.

5225. In the strictly rural districts?—Yes.

Fruit farming.

5226. I think you have encouraged fruit farming on your estate?—Yes.

5227. Would you say how that has answered, in your opinion?—I think it will answer very well, and has, as far as we have gone.

5228. Does the landlord find the trees?—The landlord finds the trees and the tenants plant them. I could see some difficulty if the tenant found the trees and made the orchard and planted it. Some day or other the landlord would have to pay compensation, and compensation on an orchard in full bearing is rather heavy, so that we have no tenant right in orchards that we have planted.

5229. In your opinion should fruit planting be encouraged?—Certainly.

5230. In places of course where it was suitable?—Yes.

Rent on a sliding scale.

5231. (*Mr. Giffen.*) With regard to the sliding scale: after the sliding scale was established the rents should rise and fall proportionately with the price of the produce; that is to say, when produce rises 10 per cent. rents are to go up 10 per cent., and if produce falls 10 per cent. the rents are to go down 10 per cent.?—It would not be exactly a per-centage. It might not be a per-centage to that extent. However I think it would work out as you say.

5232. I wish to know the working of the idea?—If the value of this produce goes up, the rent goes up in the same ratio.

5233. Would not you have to fix it beforehand, to go up exactly the same or not? If prices go up 10 per cent., that rent should go up 20 per cent.?—No.

5234. What should the proportion be?—That would be ruled entirely by the value of the produce.

5235. That is, if the value of the produce goes up 10 per cent., rents go up 10 per cent., and if the produce goes down 10 per cent., the rent goes down 10 per cent.?—I put it that the average produce of this farm is 6*l.* per acre; that is the average produce at the starting point. The produce may go up in one instance; the price of corn may go up, the price of beef and mutton may go up, and it does not affect the others; and only to a small rise; it only raises it equal to the sum that is added to the 6*l.*; you might increase the value of the produce, you might increase it from 6*l.* to 6*l.* 5*s.* 0*d.*

5236. All that I want to know is what your idea is, because if it is to be proportionate to a general rise or fall of agricultural produce, the next question I was going to put is this: whether it would be quite fair?—I do not think it would.

5237. We have evidence as to a fall of 20 to 30 per cent. in prices, and you have had a fall of 60 to 70 per cent. in rents?—Yes.

5238. So that that would not be the idea?—Yes, that is so; rents at the present time, I am sorry to say, are very peculiar. I know plenty of farms that I consider are rented much under their value; at the same time I know other farms which I consider let above their value.

5239. But it would not work out quite fairly to make rents go up and down exactly in proportion to the rise or fall of prices?—Yes, I think so; I do not see how you can do it in any other way, to make it equitable between the owner and occupier.

5240. You do not admit that there have been cases lately where prices have gone down from 25 to 30 per cent., and rents have gone down from 60 to 70 per cent.?—I am quite aware of it.

5241. That might happen again?—Not under the sliding scale.

5242. How are you sure about that?—It is impossible.

5243. Is it not the case that the rent being only a portion of the gross produce, if you make the rent come up and down in proportion to the rise and fall of the gross produce, the change in rent does not correspond to the change of what the tenant could pay? If prices go up 10 per cent., the tenant is able to pay 20 per cent. more rent, and if prices come down 10 per cent., he might get 50 per cent. in his rent to make him where he was before?—No; you start at the average price. It is exactly the same as the tithe; you understand the tithe commutation; it was on the same lines exactly.

5244. But the rent is a much bigger thing than the tithe, as a matter of fact, in proportion to the outgoings than the tithes, and the point I am putting is that if you make it exactly in proportion you would have in this case, that if prices go up, the tenant would pay less than he ought to pay under different circumstances, and if prices go down, the tenant does not get the relief in the form of rent that he would get by this plan that you propose?—I am happy to say that I do not know any landlords who are not willing to take the value of their land, and I cannot see any other way of getting the value of the land than taking the value of the produce.

5245. I am just trying to show that as prices go up the rent ought to go up in a larger proportion to be quite fair?—No.

5246. And as prices go down, the rent should also go down in larger proportions. That is just the point. You do not agree with that at all. You think that your rule would work?—I could not agree to that.

5247. The next point is this: whether the change in rent is to take place uniformly upon every farm of the country, according to the average change in the price of all agricultural produce, or whether, when the change takes place, you are to have regard to the productions of the particular farm?—Yes.

5248. Or rather to have regard to the productions not the particular farm?—Yes.

5249. Then you must settle that the prices have to vary according to a sliding scale; and also as regards each particular farm, what the produce is to be considered to be, and how much importance is to be given to each kind of produce for that farm?—Yes, that is exactly what I do. I take each kind of produce separately, and I estimate its value to-day. Well, you have the milk, and meat, and corn, part of the lands is tillage crops; it is worked under the six-crops system; and the value of six crops, taking the average of the six crops, would be a factor. Then you should take the meat and the milk; this farm produces so much milk, and so much store stock, and then bring them all in the calculation.

5250. That is just the point; you would have a sliding scale for each farm?—No; the sliding scale would be the same, but the value of the produce would be very different.

5251. You would have to fix for each farm how much effect the change in the particular kind of produce was to have?—No, the farm produces so much milk, meat, and so much store stock, and the average of the six crops will amount to so much in that way; and then I take the whole of the outgoings to arrive at the average rent, the rent, the rates, the tenant's interest on capital, and allowance of so much for his labour and superintendence, tradesmen's bills, insurance of stock, and the whole outgoings, and deduct it from the gross produce, and this shows the net rent. I should let all the land tithe free and rate free.

5252. That applies to the standard, but what I am speaking of now is the variation according to prices?—It would not affect it in the least; each class would be ruled to what it was—each farm.

5253. But you must fix in each farm how much effect the particular change, say, in the dairy produce, or price of wheat is to have upon the net rent?—No, take it according to the market.

5254. Because in applying it, and working it out, after five years' time the farm may not be producing the same kind of things as when the rent was established, but you have got to fix beforehand what the effect is to be of each change in price?—You could not

Mr. G. Murray.
14 Dec. 1893.

look forward to the change in prices; you must take your chance in the change of prices. What you would have to do is to take a fair price.

5255. What I am asking you is how it is to be applied, how to put it into form because you must settle beforehand, if the wheat goes down 20 per cent., how far that is to apply to the produce of a particular farm?—I put it in this way. I think it is rather wasting time to go into it or else I have got the whole details here.

5256. I should like to have some idea of what you mean?—I will give you a practical illustration: This is a farm of 260 acres in the Midland counties, consisting of 60 acres tillage, 50 acres feeding land, 100 acres of good dairy land, and 50 acres ordinary store pasture. Now the tillage land I work on the six-course system, and it works out at 6*l.* 17*s.* 4½*d.* the acre. That is the average produce of the tillage land. I take that as one factor, that comes out to be 412*l.* Then as to the feeding land, the 50 acres of feeding land produces a certain quantity of beef at a certain price, and that comes to 243*l.* The 100 acres of dairy land produces so much milk at a fixed price and that comes out at 525*l.* The 50 acres of store pasture produces so much increased weight of store cattle, 162*l.* 10*s.* The whole amount is 1,342*l.* 12*s.* 6*d.* That is the gross produce of the 260 acres.

5257. (*Mr. Channing.*) At present prices?—Yes, at present prices if you like to put it so.

5258. It is not the average of six years but present prices you are taking. Are not you taking the average of years?—I am taking the market price for one year on the 260 acres; that gives you 5*l.* 3*s.* 3½*d.* per acre. From this the following deductions must be made: Cost of manual labour, horse labour, seeds, and plants, tradesmen's bills, insurance of stock and crops, the interest of capital embarked.

5259. (*Lord Cobham.*) What is the total of the outgoings?—3*l.* 1*s.* 6*d.* deducted from 5*l.* 3*s.* 3½*d.* leaves 2*l.* 1*s.* 9½*d.* to cover rent, rates, and tithes, which is not a fixed quantity.

5260. (*Mr. Giffen.*) What is the total rent out of the gross produce of 1,340*l.*?—The gross rent is 2*l.* 1*s.* 9½*d.*

5261. How much in the total does that make? How many acres? The rent appears to be 40 per cent. of the increased produce in this case?—That is the gross rent, but the tithe would be 5*s.* probably an acre, and the rates would be 3*s.* per acre, and that is to be deducted from the 2*l.* 1*s.* 9½*d.* Then you get at the net rent.

5262. But I am afraid that that is a little away from the questions that I was putting which were with reference to how that sum of gross rent was to vary according to the price of produce, how much each price was to affect the thing?—If the 60 acres of tillage land made less than 412*l.* there would be a reduction in the rent; if it made more there would be an increase.

5263. Would you have to make an account out for each kind of land for each particular farm?—You have got it when the valuation is made out of that in four lines.

5264. How would you ascertain in subsequent years what the gross produce is to be?—You have nothing to do with the gross produce.

5265. (*Lord Cobham.*) You take the market price?—Yes.

5266. (*Mr. Giffen.*) You would have to start with wheat first to enter into the scale, say, to the extent of 20 per cent., and dairy produce to the extent of 30 per cent., and so on. You would have to fix that at the beginning?—I do fix it—every one. I will tell you what they all make. The 60 acres of tillage is 412*l.*

5267. We have to assume that after the sliding scale is in operation the price of wheat and butter and cheese were all to have the fixed per-centage untouched, they were to enter as regards the variation in prices?—Oh, no.

5268. (*Lord Cobham.*) Will you put that paper in?—Yes (*handing it in*). I think it is simple enough. It is clear enough anyway, whatever the alterations might be, it would not affect the rent either up or down. You have no new calculations; all that you have to ascertain is the market price.

5269. (*Mr. Giffen.*) You have got to settle once for all whether the price of wheat is to affect the rent to the extent of 20 per cent. or 30 per cent., what it is to be?—You quite misunderstand me.

Mr. G. Murray.
14 Dec. 1893.

5270. Under the tithe commutation I suppose you are aware that the prices of wheat, barley, and oats, each of them, affect the changes in the tithe average to the extent of one-third?—Yes, so they would here.

5271. Supposing you have 20 articles there, how much does each affect the change in that plan of yours?—But you have not 20 articles; you have only five in the whole farm of 260 acres.

5272. You tell us to take the price of agricultural produce?—You have the prices of all agricultural produce.

5273. Are there only five articles produced?—You have the tillage land of 60 acres as follows:—Oats, wheat, roots, barley, seeds—two years of seeds—and these are worth so much an acre each.

5274. But you have cattle as well?—I have told you that—what quantity of beef the feeding land will make and what it is worth per lb. I have told you what quantity of milk the land will produce per acre at a fixed price.

5275. Excuse me. You have enumerated more than five articles already of which the price would have to be ascertained?—Well, you have in the six courses, but not when they are brought together—six on the tillage land, and four besides that; the six on the tillage land I bring into one.

5276. I want to know what weight you have for each article, and how you are going to vary it for every farm in the kingdom?—The weight and the market price.

5277. Then a further question: How are the prices to be ascertained?—Very easily.

5278. Who is to fix what the prices are to be according to which the rent is to be paid?—I should be quite satisfied with the Government returns of the market.

5279. But there are no Government returns of meat?—I think so. I should be quite satisfied with the market returns.

5280. You have only Government returns for wheat, barley, and oats?—I have for milk, and meat, and live stock, and the whole thing every week.

5281. I think not?—I am sure I have it.

5282. You have only got it in the shape of wheat, barley, and oats, which would be available for a scheme of that kind?—No.

5283. (*Mr. Clay.*) You gave us the gross receipts of the farm?—Yes.

5284. And the rent?—Yes.

5285. What is the amount of the rates and taxes?—I have taken that off. I have told you that.

5286. What does it amount to?—3*l.* an acre, or something like that.

5287. And how do you get at the base for beginning this calculation of charging rent?—3*l.* 1*s.* 6*d.* is the expense; that includes everything in respect to capital allowance to the tenants for supervision and labour, and I have given you tradesmen's bills, insurance of the stock and crops, and interest on capital. I have given you the whole thing, and it amounts to 3*l.* 1*s.* 6*d.* per acre, following that six-course system.

5288. And have you allowed for deterioration of stock and implements, and other things?—I give you the insurance. I think that is enough.

5289. What does the insurance come to?—That is rather an unusual thing to include, tradesmen's bills and insurance of stock and crops and interest on the capital embarked.

5290. Insurance of stock; is that against fire?—Well, you would not insure live stock against fire. I insure them against accident.

5291. What I want is the deterioration of stock, implements, and other things?—They are included.

5292. In the fire insurance?—They are included in the interest on the capital embarked, and the interest on the machinery and implements on the farm would be put at a fixed sum to cover the interest of them.

5293. What is the sum you have put down?—I have given you the gross sum.

5294. They would be separate sums?—I can give you the separate sums, but I have not got them here.

Mr. G. Murray.
14 Dec. 1893.

5295. If you have a bad year, and you are losing stock and a horse or two, no insurance will meet that?—Of course you can insure every head of stock.

5296. What is the sum that you have allowed for that?—I do not know what it is. I have not got the details here, but it is so.

5297. On what basis would you begin to name the rent? You say the price of the produce?—Yes.

5298. How would you get at it?—I would take the market price.

5299. But is not there a deal of produce that never reaches the market?—The value of it is ascertainable.

5300. Is it not like damaged corn that never sees the market?—But that would not affect you in the slightest.

5301. But if you charged for 10 quarters and only seven quarters went to market, and three quarters were left at home that would be damaged corn, and perhaps light corn; that would not bring the same price as the seven quarters?—No.

5302. I think that is an important element; how are you going to begin the basis?—Easily enough; it is very easy. I have not the slightest doubt about commencing on a basis. Then when prices get up and you are making a lot of money while the prices are up, you cannot afterwards come to me when the prices go down and say, you are charging me a rent upon my improvements. If the value of this is so much per acre to-day, and by your good management and skill and capital you increase it beyond that you do not pay 1*s.* extra.

5303. You have no right to traffic on a person's extra ability?—I do not want to. But you have no right to say to me, You are charging me on my improvements, when if you make improvements you get the value out of it.

5304. There is a second value?—There is no second value. How can you apply it every year, and this is the starting point?

5305. I understand the sliding scale?—This is not a new valuation; it does not entail a new valuation. You mean that the valuation of the produce is 4*l.* per acre to-day, and then 4*l.* per acre over the whole term is to last 50 years.

5306. (*Lord Cobham.*) You do not want a re-valuation?—No.

5307. (*Mr. Clay.*) Granting that you are right, which I do not think you are, say you have got a bad year and prices go up, and your wheat crop and barley and oats and cattle and sheep are deteriorated by certain things which we have come across in this country, what would happen then?—You can take it in any other way. You are a tenant under a 20 years' lease; how do you meet the bad seasons? You might go to your landlord and say, I want 20 per cent. reduction. You are a tenant farmer, and you know.

5308. I am not saying what I am. I want to know this. You are going to put a certain price, and you have got nothing to regulate it in bad seasons, because in seasons like this your farm per acre is reduced 33⅓ per cent. Are you going to pay the rent on the high rate; can you answer that question?—It is only a quibble; there is nothing in it.

5309. Is not the tenant a loser?—How would he be a loser when he is a gainer.

5310. That is not the question I am asking you. I suppose you do not give an answer to that question?—I could answer it, but it is not worth while.

5311. (*Mr. Little.*) Your proposal is roughly a produce rent?—Yes.

5312. You would have a part of the produce returned, not in actual produce, but in the market price of the produce of the day?—Yes.

5313. So many cwts. of beef, so many quarters of wheat, so much cheese, and so much milk; that is the principle of it?—Pardon me for a moment. I took milk and everything sold. I included milk, and I took milk to be one calculation; it comes to the same thing.

5314. You took certain representative products, and you did not take it in money at all, but it comes to the same thing?—Yes.

5315. You fix the original basis of rent according to the productive capacity of the soil?—Yes.

5316. You would have to take into consideration some other things such as buildings?—Yes.

Mr. G. Murray.
14 Dec. 18

5317. The situation?—Yes, certainly.

5318. And circumstances might change?—Yes.

5319. The land might be detached from the building, that is possible in changes of property?—Yes.

5320. Some portion of the land which has had its value fixed for 50 years might become detached from the buildings?—Yes.

5321. Therefore you would have to consider how much of that which produced rent was represented by buildings?—Yes.

5322. Again with regard to the situation, it might be changed by the introduction of a railway, or by some such means?—Yes.

5323. And the value of the land might be increased?—Yes.

5324. Would your original valuation take into account these circumstances?—No. I do not see how you can provide for unforeseen circumstances of that kind; but they could always be met.

5325. Certainly; but I rather look at it as a fixed sum settled for 50 years between landlord and tenant, which may require change frequently?—Yes.

5326. You did not give Dr. Giffen what I should have liked to have heard from you, the proportionate part which each article should bear, that is to say, would you fix one-third of the rent on wheat, and two-thirds on meat, or any definite proportion?—No; I take the land as I find it.

5327. Just the proportion that you think that the particular farm might grow at the time when the valuation was made?—Yes.

5328. If any change took place the rent might be an unfair one?—Yes.

5329. If the tenant changed his method of farming, he would be paying rent on the value of the produce which he had not got instead of that which he had got?—Yes.

5330. In the case that you stated you put the average produce at 5*l.* 3*s.* 3½*d.*, and the expenses at 3*l.* 1*s.* 6*d.*, leaving 2*l.* 1*s.* 9½*d.* for rent, tithe, and rates?—Yes.

5331-2. The land might be tithe free?—Yes.

5333. But we need not regard the question of tithe, except that with tithe-free land the rent would be so much more of the 2*l.* 1*s.* 9½*d.*, supposing that the expenses increased and the produce came down, would you still give the landlord the same amount?—I do not see if the produce came down that it would be the fault of the tenant.

5334. I mean the value of the produce?—I mean the value of the produce, the rent goes down.

5335. But you are allowing the landlord what is left after the expenses are taken off the value of the crop?—Certainly.

5336. But supposing the expenses increase, there would be less rent?—Yes.

5337. But the tenant would have to pay the same quantity of produce, because this rent is fixed?—No, the rent is not fixed, but fluctuates with the price.

5338. Therefore all the increase of expenditure would fall upon the tenant?—No.

5339. If the labour increases 50 per cent. that 3*l.* 1*s.* 6*d.* would be increased, the 2*l.* 1*s.* 9½*d.* would be diminished; but the tenant would still pay 2*l.* 1*s.* 9½*d.* in produce?—Yes, but the cost of labour per acre has not increased.

5340. And that you think would be satisfactory. You said you would give continuous occupation, and you talked of a lease for 21 years, but that is scarcely continuous, because after the 21 years it comes to an end?—Yes.

5341. And what would be done at the end of the 21 years?—There would be a new lease.

5342. On a new rent?—Then I would settle up the whole thing. If the sitting tenant has increased the value of the land, I would pay him what was due to him for the increased value, and then start with a new rent.

5343. You would have to fix your basis of rent again?—It does not want any fixing.

Mr. G. Murray. 14 Dec. 1893.

5344. But surely if the landlord compensates the tenant for improvements, you said he was to recoup himself out of the increased rent. The landlord has to compensate the tenant at the end of the lease for his improvements?—Yes.

5345. And to recoup himself by raising the rent?—Yes.

5346. You must have a fresh valuation?—Why should I?

5347. To get the increased rent?—Of course you would have to make a fresh valuation to know what was due to the outgoing tenants.

5348. At per acre?—Yes.

5349. In money?—In money or produce, or divided.

5350. In the proportion orginally fixed?—Not in the proportion originally fixed.

5351. Yet some proportion. I do not mean to say the same quantity of produce, but in the same proportion originally fixed?—Yes.

5352. Then the valuation would not last 50 years?—I have made a wrong impression, my intention was not 50 years; it is not going to continue 50 years, or perhaps 20 years; I said it would settle the land question for the next 50 years; but it was not my idea that it was to be unalterable.

The Agricultural Holdings Act.

5353. You have had considerable experience in the administration of the Agricultural Holdings Act, have you not?—Yes, I have.

Permanent Improvements.

5354. Have you found any practical difficulties in the working of the Act?—None at all; the only difficulty I have found is in the permanent improvements—1 and 2 of Schedule I.

5355. No practical difficulty in securing compensation to the tenant for ordinary improvements has been noted?—Yes.

Freedom of cultivation and sale.

5356. With regard to agreements, I think I understood from you that the conditions in the agreements on the estates under your management have been relaxed as regards cultivation?—Yes.

5357. Have they been relaxed as regards the sale of produce?—Yes.

5358. Do you think that tenants generally now have by agreement sufficient freedom as regards cultivation and sale?—Yes.

5359. By agreement?—Yes.

5360. Not simply by sufferance?—No, by agreement.

Form of agreement.

5361. Have you introduced an entirely different form of agreement?—Yes, some years ago.

5362. Might I ask what terms you make with regard to the sale of produce?—Well, the late Lord Harrington was a very liberal-minded man. When he came to the property the manure belonged to the landlord, and he gave the manure to the tenants in every case, and he had a new agreement prepared that the hay and straw belonged to the tenant, except that he should leave at the end of the tenancy one-fourth of the hay and one-fourth of the straw for the incoming tenant to be paid for at full value; the whole of the manure belonged to the tenant. That has continued so. I am sorry to say that I have changed my mind very much about it. If I had the money I would buy all the manure; the manure ought in every case to belong to the land, it increases the valuation very considerably, and in these times when capital is not very plentiful, it is very important for the incoming tenant. We have plenty of valuations where the tenant right is 2*l.* and 3*l.* an acre. Now this money is locked up as long as the tenant remains in occupation. We want to reduce the amount of valuations as much as we possibly can in every way. The tenant can sell hay or straw or anything else.

5363. Unconditionally?—Yes.

5364. (*Mr. Dalton.*) You fix the rent by what the produce is, and what the outgoings are?—Yes.

5365. You take the produce on one side?—The value of the produce.

5366. And then you take the expenditure that has been made in getting that produce?—Yes.

5367. What do you do with the remainder, fix it as the rent?—Yes.

5368. What does the tenant get?—He gets interest for his money; he gets interest for his labour.

5369. He is paid so much interest?—I give him so much interest on his capital.

Mr. G. Murray. 14 Dec. 1893.

5370. (*Lord Cobham.*) You give so much for interest and supervision?—I put it in the shape of allowance to the tenant for the supervision.

Rates.

5371. (*Mr. Dalton.*) Then as to the question of rates you propose to raise everything by means of an income tax?—I do.

5372. How do you propose to spend it; through the Government?—Yes.

5373. Then you would abolish local authorities altogether?—To a great extent, we are going to have too many local authorities.

5374. Do you do away with them or keep them for certain purposes?—Oh, for many purposes, such as roads and parish business.

5375. Have you to take the money from the Government out of a common purse?—Not what they require, but a certain allowance.

5376. But supposing the allowance is not sufficient?—They would have to make it sufficient.

5377. How would you distribute it to them? I understood you proposed an income tax, so much in the pound, and the Government would have to distribute it to the different localities?—I think the support of the poor costs 14,000,000*l.* at present.

5378. No?—Well, then, 9,000,000*l.*

5379. Of which 22 per cent. is paid by the Government. I do not quite understand then how you manage your local expenditure. At present the local authorities incur the expenditure, and they raise all the rates that are necessary to meet it?—Yes.

5380. But are you going to abolish the local authorities?—No, I would let the local authorities still go on with the work, but they must have their funds from the Government.

5381. However much they may require?—I should not say that.

5382. How are they to do it?—They know what it costs at present.

5383. But the expenditure varies year by year. The Government are to raise certain sums, I understand?—Yes.

5384. Is every local authority to dip into the common purse for what it requires?—Certainly not.

5385. To what extent?—To the extent they have spent hitherto.

5386. Supposing they have not enough to meet that expenditure, would they raise it by rates?—No; the income tax would be laid according to what they required.

5387. They would get whatever amount of expenditure they incurred back from the Government?—Yes.

5388. However much it was? Supposing that they incurred a very heavy expenditure, much higher than they incur at present, how would that be met?—They could only meet it by increasing the income tax.

5389. Then they would get it from the Government?—Yes.

5390. Would not that encourage a great deal of extravagance?—I do not think so.

5391. You say that the rates in the next parish to yours have risen from 1*s.* to 2*s.* 8*d.*?—Yes.

5392. That is owing to a great many building operations in the parish?—Yes.

5393. I suppose property in the parish has gone up in value in consequence of building operations?—I do not think so; there are a great many houses in the parish not let.

5394. You do not think the building has been remunerative?—No.

5395. Most of the additional expenditure has been for sanitary works?—Yes, the sanitary rate and the road rates have increased.

5396. But the agricultural land has not paid its full value to the sanitary rate, it is rated at one-fourth?—But the general rates are much higher; we are getting up now the same as in the towns, about 6*s.* 8*d.* in the pound on property.

5397. In this parish?—It has nothing to do with the land.

Mr. G. Murray.
14 Dec. 1893.

5398. But in this parish it has risen from 1*s.* to 2*s.* 8*d.* in the pound?—Yes.

5399. How much of that 2*s.* 8*d.* does the land bear?—The 2*s.* 8*d.*

5400. What do the houses pay?—6*s.* 8*d.*

5401. In that particular parish of Elvaston?—No, Alvaston.

Remedy for depression.

5402. (*Mr. Lambert.*) What would be your remedy for the agricultural depression?—Well, for the agricultural depression a higher price is the readiest remedy.

5403. You have expressed yourself against protection?—I have, except protection against imported diseases.

5404. But that is practically secured at present, is it not?—Yes.

Slaughter of animals at port of debarkation.

5405. You said that you would slaughter animals at the port of debarkation?—I should.

5406. Well, I am a grazier; would you prevent me from buying my grazing animals in the cheapest markets if the animals were free from disease?—But you are not sure that that they are free from disease.

5407. If they are free from disease, then would you prevent me from buying them?—I would not allow live cattle to be brought into this country. We can supply the live cattle.

5408. Do you think it would be fair to make me buy as a grazier in a dearer market when I could get cattle cheaper elsewhere, when they were free from disease?—I am not quite sure; you might get them cheaper, but I am not quite sure that they would pay you better.

5409. You must leave that to me?—I know something about it.

Rent on a sliding scale.

5410. You advocate a sliding scale for rent?—I do.

5411. I suppose you think it is necessary to alleviate agricultural distress?—I think something is necessary. We want something more done than we have at present.

5412. You said it would be a good thing to make it compulsory between landlord and tenant?—No, I have not said it would be. I do not say compulsory.

5413. You withdraw it?—Because the landlords and tenants are quite capable of managing their own business.

5414. But if it is a good thing, why should not it be compulsory?—I should not go so far as that.

5415. Why not?—If the landlord thinks, or the tenant thinks, it is not to benefit him, let him take his chance.

5416. But supposing the one thought it would benefit him, and the other that it would not, would you make it compulsory?—No.

5417. Would you let things go on as they are?—No, I should not; I should establish the sliding scale, and it would not be very long before everybody would adopt it.

5418. But if you think it desirable, do not you think it would be wise to make it compulsory?—No; it is going a little too far, I think.

5419. But surely it is very desirable if it would settle the land question for the next 50 years?—Yes; it would be very desirable.

5420. Do not you think it would be wise to make it compulsory?—To make it compulsory not to fix that.

Land courts.

5421. Why do you disapprove of land courts for fixing the rent?—Because the landlords and tenants are quite capable of doing their own business. What do we get from the experience of Ireland. They have had a land court, and they are now going to have a new valuation, which will cost a very large sum of money.

5422. I will not go into the question of Ireland; there is a question of dual control, but this would not involve the question of dual control, but only the fixing of a fair rent?—Quite so.

5423. Do you think that would be inadvisable?—Yes.

The fixing of rents.

5424. How are the farms let?—At their value.

5425. How is the value arrived at?—By men who understand the value of land; not by a man walking along the road and looking over the hedge, but by practical men.

5426. Do the farmers go and offer a certain sum of money over their competitors?—We do not let the land in that kind of way in Derbyshire, but if the farm is to to be let it is so much, and if you go and apply for it, and you do not like to give the rent, there is no higgling about the valuation.

Mr. G. Murray.
14 Dec. 1893.

5427. You fix the rent?—I fix the rent.

5428. And if the farmer thinks it is too high, you do not let the farmer have it. How do you know that it is not too high?—I know sufficient of my valuation.

Competition for farms.

5429. I suppose you have plenty of competition for farms?—Yes.

5430. More farmers than farms?—Yes.

5431. There are?—Good landlords have never any trouble.

5432. There are more farmers than farms? If you had to let a farm you would get two or three applicants?—Yes; I know a farm at liberty, and I believe I will get twelve applicants for it.

5433. Do you think those twelve applicants competing for one farm would not be induced, in the desire to get into a holding, to offer possibly more rent than they can afford to pay?—They would; no doubt of it; plenty of them.

The fixing of rent.

5434. Would not it be a good thing then to have a fair rent fixed?—The fair rent is fixed already.

5435. Then you fix the rent yourself?—I do. I do not put them up by auction.

5436. That is equivalent to a fixity of rent?—You are speaking now of putting them up by auction, and giving the farm to the highest bidder. We do not do that.

5437. I want to put this point. Supposing that 12 men are competing for one farm, do not you think that those men are apt to give more than they could actually afford, merely for the advantage of getting into a holding?—It is not a question of giving more. The rent is fixed.

5438. And therefore you have constituted yourself a land court?—No, I think not.

5439. But if you fix the rent you must have?—It is not a land court. I think nobody knows better the value of the property than the owner.

5440. You are an experienced man, and I have no doubt that you make a very fair valuation of farms in your neighbourhood. In fact I believe you do let them by your own valuation?—I do.

5441. Supposing then you constituted the referee yourself, do you think you would fix any more than the fair rent?—I think not.

5442. Would any other man fix more than a fair rent?—I do not think so.

5443. Therefore there is not much objection to the outside court?—Yes, very great objection.

5444. You are the court at present?—What good would it be to appoint a court? I think you come from the West of England. If you were to bring a man from the West of England, or from London, to Derbyshire, to fix the rent in Derbyshire, he would not know anything about it.

Reduction of rent.

5445. I would say a competent, experienced man in the neighbourhood; no official valuer would be other than that. You say that rents have decreased 20 per cent.?—20 to 25 per cent.

Decrease in agricultural produce.

5446. How much has agricultural produce decreased in the same term in proportion?—I cannot tell you that.

5447. You cannot tell me how much beef, mutton, and wheat have decreased in per-centage?—I do not think mutton has decreased very much.

5448. Mutton has not decreased?—I think not.

5449. Has beef decreased?—Very little.

5450. How much has wheat decreased?—Derbyshire is not a wheat-growing county.

5451. Therefore you have nothing to complain of?—Not as far as wheat goes. We do not want free trade.

5452. That being the case with beef and mutton; and you do not grow wheat?—We depend on milk.

5453. How much has the price of milk decreased?—About 20 per cent.

Farms highly rented.

5454. You said just now that some farms were let over their value?—Yes, plenty.

Mr. G. Murray.

14 Dec. 1893.

5455. What do you mean by let over their value?—They are let over their value.

5456. By what system?—They are old tenancies, and very likely the rents have not been lowered to meet the times.

5457. Why?—I cannot answer that.

5458. The want of application from the tenant?—I suppose so.

5459. (*Lord Cobham.*) Is that largely the case?—Not largely.

5460. (*Mr. Lambert.*) But in this case do not you think it would be fair that a farmer, a sitting tenant, who has farmed for many years, and if the landlord has not given him a reduction, he should take him to a court of appeal whereby he could get that reduction?—What do you want with a land court? I will give you a lease of 21 years in Derbyshire, and if you are tired at the end of seven years, or at the end of 14 years, you or I shall have power to give notice to quit, and pay for improvements.

5461. Certainly; but is it not a fact that farmers do lose money on changing farms?—But that is not always the landlord's fault, is it?

The Agricultural Holdings Act.

5462. Is the Agricultural Holdings Act in force in your district?—Yes.

5463. It is?—Yes.

Permanent improvements.

5464. Why do the landlords not make the improvements necessary on the farms?—They do, a great many of them.

5465. Are there any that do not?—A few, and there always have been a few.

5466. If the landlord did not make the improvements, what then?—Why, they ought to go undone.

5467. Undone?—Yes; why should a tenant who has not got money to cultivate the land spend his money in permanent improvements.

5468. But supposing he has got money enough to spend on permanent improvements?—I should not allow them to do it then nine times out of ten, and particularly drainage.

5469. Supposing it is done well?—But it is not very often done well.

5470. Supposing it was done well?—I would agree to it. If I was umpire when the tenant left, and I did not think the farm was in good order, I should not give a penny.

5471. Presuming that the landlord has not money himself, would not you give a tenant who has plenty, and who is desirous to make quite necessary improvements, power to do so?—I should not. It is not a part of his business.

Scheme for fixing rent.

5472. (*Mr. Channing.*) I wanted to ask you, have you any farms let on your estates on the scheme which you have suggested?—No.

5473. I think you said it was not very favourably received?—Not at all.

Sliding scale on corn rents.

5474. You are aware of the experiment tried in the way of a revival of the corn rents by Lord Tollemache in Suffolk?—Yes.

5475. And perhaps you are aware too that that has not worked very favourably in this very bad corn year?—No, it was not likely to. No system of sliding scale could work unless it was on a broad basis, and included the whole produce of the farm. A sliding scale on corn rents would not be of any use.

5476. You attribute the dissatisfaction which I understand is felt by the working of farms on leases to its being confined to the corn averages only?—Yes, I do not think it could work on the corn average.

5477. But in carrying out your scheme, is it not obvious that you have not official figures enough in the market prices to settle a scheme satisfactorily to start with?—No.

5478. For instance, in England you have not, as in Scotland, the feuar's system?—Would not that be easily obtained from the Board of Agriculture?

5479. What I want to ask you is this, whether you do not think that a great deal will have to be done in the way of shaping the universal sale of corn by weight, the sale of cattle by weight, and other reforms before you get statistics sufficiently accurate?—Quite so.

Mr. G. Murray.

14 Dec. 1893.

5480. I understand you to say in answer to various questions of Mr. Lambert about rents, that you do not put up your farms to auction?—No.

The fixing of rent.

5481. Do you fairly assess what you consider to be the agricultural value, taking it year by year, of the produce to be got off those farms?—Yes.

5482. That is the system upon which you let them?—Yes.

Compensation to outgoing tenants.

5483. You are willing to let them on a 21 years' lease, with a seven years' break, and a valuation at that time of what may be due to the tenant for his improvements whether he quits or not?—If it is under a sliding scale, but not without.

5484. If you begin with your fair valuation to begin with—I quite understand you to mean that?—Yes.

5485. But you spoke of paying the sitting tenant a capital sum. Would you also accept the suggestion of Sir James Caird that the payment to the sitting tenant should be by a proportionate deduction in the future rent?—I should be willing to do that. It would come to the same thing so long as you ascertain the amount due to the sitting tenant or the flitting tenant, at the expiration of the tenancy—it would be immaterial.

The Agricultural Holdings Act.

5486. You have had experience of valuations under the Agricultural Holdings Act?—Yes.

5487. For both sides?—Yes.

Claims and counter-claim.

5488. What is your opinion as to the universal allegation that putting in counter-claims frightens tenants from using the Act?—I do not think so.

5489. In your opinion it is not so?—I think myself that the notices are very important to both sides. It does not matter what the amount is that is sent in. It does not bias the umpire, or whoever settles the matter, in the slightest degree.

5490. By "notice" you mean claims?—I mean notice. The tenant sends in his notice of claim, and the landlord sends in a counter notice. That does not bias the settlement of the valuation. I have settled a great many of those kind of cases.

5491. As a matter of fact you are aware that a great many of those landlords' counter-claims in references under the Act are very largely cut down?—And so are the claims on the other side.

5492. Would you be in favour of restricting the counter-claims made by the landlord, either by the terms of the lease, or by some specific proof of the actual damage caused?—No, I think the valuer is the man to settle the amount of claim of both sides. If two valuers are appointed, and they do not agree, they appoint an umpire.

5493. I do not think you appreciate my point. The tenant is tied down to the specific terms of the schedules by the Agricultural Holdings Act, whereas the landlord is perfectly free to make all the claims that can be made out of the general principles of law as to waste?—Yes, he has a perfect right. Why should his property be deteriorated and the tenant escape?

5494. Would not it save litigation, and also be fairer to both sides, if the actual state of repair, the condition of the fields, and the condition of repairs of buildings and fences, and so on, were scheduled at the beginning of the lease, so that the counter-claims may be limited by this sort of inventory of the farm?—You limit them now. You cannot go beyond four years.

5495. But a good deal may happen in four years. Could not you schedule the condition of the buildings, and the fences, and everything about the farm, by an inventory at the beginning of the tenancy, and then limit the counter-claims to specific losses or damage from that point of view?—I do not think so.

Time-scale for valuing improvements.

5496. Do you approve of a time-scale for valuing tenants' improvements under the third part of the schedule?—A scale?

5497. The time-scale for the exhaustion of improvements?—Well, I do not altogether approve of it, though it is generally carried out, because it is an easy system, but in nine times out of ten it is the incoming tenant who is the sufferer, not the outgoing man—he almost invariably gets more than belongs to him, and is too apt to get back more than the unexhausted value of his improvements. I think Sir John Lawes pretty well settled that question that the unexhausted value is not so very much after all. The way that we do—we have a very large association in the Midland counties—we

Mr. G. Murray.

14 Dec. 1893.

take the two last years of the tenancy, and allow one-fourth for cake, and allow an eighth for meal.

5498. What do you allow for manures?—It depends upon what they are.

5499. Have you a time-scale for all the manures?—Yes.

5500. Then you do apply the time-scale in your association?—Yes, we take it as a maximum.

5501. Could you put in your time-scale?—Yes.

5502. It would be desirable to have it—the Norfolk scale is known?—Quite so.

Low prices.

5503. (*Mr. Everett.*) You told Mr. Shaw Lefevre that the low price of corn was a benefit to the Derbyshire farmers?—I think it is.

5504. Then why is it that your rents have had to be put down from 20 to 25 per cent? It is not the high price of corn—it gets lower and lower?—The low prices of dairy produce.

5505. The fall in prices on the whole has hurt trade?—Yes, and the owners of store stock have been hit hard.

5506. And the lower price of the other produce on the farm has hurt you more than the low price of corn has benefited you?—Yes.

Rent on a sliding scale.

5507. With regard to those produce rents, your idea is that rents should be based, to begin with, on the natural capacity of the land and to rise or fall with the altered prices of produce?—I think it is the fairest way.

5508. Are you aware in the second quarter of this century produce rents were exceedingly common in England?—No, I did not know that. They were common in Scotland.

5509. They were in the eastern part of England?—But they did not go far enough. They were confined to cereal produce. We have got beyond that point now; you must include everything.

5510. And those produce rents all went out in the good times of farming. From 1853 to 1873 both tenants and landlords preferred to be on a money rather than on a produce basis, but now they are coming back to produce rents?—They are coming in, are they?

5511. Yes. Lord Tollemache's estate has set such a system in operation. I might point out that when those produce rents came into fashion in the second quarter of the century, it was when we were experiencing a great fall in produce from the first part of the century, similar to what we have had in the last 15 years, and produce rents went out again, when prices were looking up the landlord was quite content then with a lease, because at each renewal of the lease he let his land at a higher price and the farmer too, because as prices rose he could pay his rent more easily; and now we have come into a second great period of fall, and the farmer cries out "Don't fix me "in terms of money now; I do not know where I am; "I would rather have the value of my produce as my "rent than have a fixed money term?"—Yes.

Mr. G. Murray.

14 Dec. 1893.

Improvement in stock.

5512. (*Lord Vernon.*) You say greater attention should be devoted to improvement of the stock on the farm?—Yes, by using better bulls, and rearing more stock.

5513. Who is to provide the bulls?—The landlord should provide some of them.

State loans.

5514. Then you spoke of cheaper money. You say that advances should be made by the State at 3 per cent., do not you?—Yes.

5515. Do not you think it would be much simpler in cases where they could do it if trustees were allowed to advance money for improvements which they raised?—I should be quite willing to do that.

5516. It would be an improvement on Lord Cairns' Settled Estates Act, do not you think?—Yes.

5517. You mean, instead of being applied to the sale of property to realise money for improvements, they should be allowed to raise money for improvements for themselves, and might so save all the unnecessary expense that they would be put to by the Lands Improvement Company?—That would meet my views.

Valuers.

5518. Well then I am not going to the question of a sliding scale for rents. Do not you think that both for the working of the Agricultural Holdings Act and even for such a scheme as you have proposed, it would be a good thing if surveyors or valuers for England should be appointed by the Board of Agriculture, who have vast experience?—I think so.

5519. In fact you think the surveyor or valuer could settle the arbitration under the Agricultural Holdings Act without having two men?—Yes.

Income tax

5520. Do not you think it would be advisable that landowners should pay income tax after having deducted a certain per-centage for repairs on their property, instead of paying on the gross income, that they should not pay it on the gross income but on the income they receive after deducting money spent on repairs?—Yes, I think so. That is one point I missed. The best landlords, the men who spend the most in improving their properties, suffer very much from that very thing, because by spending a lot of money on drainage and buildings they enable the rents to be kept up, and they have to pay income tax, property tax, and rates on the higher rents, so that they are the men who are paying on their own improvements, that is the liberal landlords.

5521. That is what I mean. Although you say that you do not approve of abolishing the law of entail, at the same time do not you think that there are too many restrictions upon the tenant for life?—Yes.

The witness withdrew.

Adjourned to to-morrow at 12 o'clock.

Eleventh Day.

Friday, 15th December 1893.

PRESENT:

The Right Hon. HENRY CHAPLIN, M.P., in the Chair.

Viscount Cobham.
The Right Hon. Baron Vernon.
Sir Robert Nigel Fitzhardinge Kingscote, K.C.B.
Charles Isaac Elton, Esq., Q.C.
Francis Allston Channing, Esq., M.P.
John Clay, Esq.

Cornelius Neale Dalton, Esq.
Robert Lacey Everett, Esq., M.P.
George Lambert, Esq., M.P.
William Cutlack Little, Esq.
Walter Hume Long, Esq., M.P.
Charles Whitehead, Esq., F.L.S.

Herbert Lyon, Esq., *Secretary.*
R. F. Crawford, Esq., } *Assistant*
Freeman Thomas, Esq., } *Secretaries.*

Mr. James Rankin, M.P., called and examined.

Mr. J. Rankin, M.P.

15 Dec. 1893.

5522. (*Mr. Chaplin.*) You are the member for the Leominster Division of Herefordshire, are you not?—Yes, that is the northern portion of the county.

5523. You are well acquainted with the agricultural condition of that county?—I am.

Uncultivated land.

5524. Is there widespread depression among agriculturalists in Herefordshire?—Yes, I may say that there is.

5525. In all branches of agriculture?—Not so much in the cattle branch as in the arable, the corn-growing districts.

Depression in Herefordshire.

5526. What is the general character of the agriculture in that county?—Some years ago it was very nearly half and half arable and pasture, pasture upon the whole predominating; now pasture very largely predominates in a large portion of the county. The Ross district was very productive arable land, very good wheat and clover land. It is now considerably out of cultivation, or rather high cultivation, and there is a great deal of depression and of course distress. The northern portion of the county, especially the land by the sides of the rivers, is mostly rich pasture land, and has not suffered nearly so much.

5527. In the arable cultivation is much wheat grown?—Yes, there used to be a considerable amount of wheat land and a certain amount of barley, but wheat was the larger crop.

5528. That is the case at the present time?—Yes, the proportion of wheat is still the larger.

5529. And there is a considerable amount of wheat grown still in the county?—Well, I think I may say considerable, but it is declining very much. I think during the last 10 years there has certainly been a decline of between 20,000 and 30,000 acres of grain growing.

Fall in prices.

5530. It is in those districts where arable cultivation prevails that you have found the distress to be greatest?—The fall in rents has been much the greatest in those portions.

5531. When farms are vacant are there difficulties in getting new tenants?—Generally speaking there are. Of late years great difficulty.

5532. Is any of the land in the hands of the owners?—A great deal of it now is in the hands of the owners. I have had myself during the last 10 years two or three farms beyond my own home farms constantly in my hands.

5533. Where the land is being cultivated by the owners themselves is it because they are unable to get the tenants at all, or is it because they cannot get the tenants at the rent they desire?—Both those causes, no doubt, operate, but in my case very frequently I could not get a tenant at all.

5534. In fact when you have had a vacant farm you had no offer at all for it?—No offer at all.

5535. Is there any land that you are aware of in the county that is out of cultivation altogether?—No, I think not. I am not aware of any land that can be said to have gone out of cultivation altogether, excepting so far that some land has been planted with larch and other trees and withdrawn from arable cultivation.

5536. But your general description of the condition of agriculture in that county would be that it is one of great depression?—It is; but I would qualify that by saying that I do not think that the depression in Herefordshire is as great as in many other counties in this country.

5537. What is your opinion as to the cause of that depression?—The fall in the price of wheat and in other cereals. Up to 1882 the price of wheat was almost constantly above 40*s.* per quarter. It is in Herefordshire under 30*s.* per quarter at present.

5538. Are the prices of other agricultural produce depreciated in that district in anything like the same proportion?—In nothing like the same proportion. In fact the prices of cattle have been very fair until the last two years. In the beginning of last year there was a sudden fall in the price of cattle which was very bad for producers of cattle in the county. Up to that time the producers of cattle were fairly remunerated. This is a cattle-breeding county; there are very few brought into the county, but a great many are sold out of it, and they have been doing fairly well as far as their cattle is concerned. The well-bred Herefordshire cattle have always commanded good prices.

5539. And to what do you attribute the fall in the price of grain?—To foreign competition almost entirely, and to the lessening of freights which is also produced by competition in tonnage.

Foreign competition and freightage.

5540. Are there any peculiarities in the depression of Herefordshire that you would wish to refer to?—I do not think there are any peculiarities, except that the distress in Herefordshire has, in my opinion, been ameliorated by the fact that they have a breed of cattle which until recently they have easily been able to dispose of at fair prices. They have also had a considerable number of hops which have saved farmers in bad years very frequently; and also that it is a great fruit-growing county, which has given a value to land which would not without it have had a value. For instance, this year I find upon my own farm that I have had about 30 tons of apples. Prices, no doubt, have been very poor—about 1*l.* a ton—but nevertheless that means 30*l.* produced over 12 acres of orchard. That is in itself 2*l.* 10*s.* per acre, which helps to make the rent and profit.

Fruit growing.

Mr. J. Rankin, M.P.
15 Dec. 1893.

5541. Where this fruit cultivation is carried on, I understand that the position is less unfavourable than where it is not?—Much more so. Of course that applies to a larger extent to small holdings, and even to the cottage gardens, than it does to the large farms. The proportion of fruit grown upon the small holdings, the cottage holdings, is nearly always greater than in proportion to large farms.

Small holdings.

5542. As to the small holdings, are they numerous in the county?—Yes, they are.

5543. Do they form a substantial feature in the agriculture of the county? They do.

Allotments.

5544. Will you tell us your views about allotments and gardens; are the cottages well supplied with gardens as a rule?—They are almost invariably well supplied with gardens, so much so that there is no demand for allotments, or almost no demand for allotments. When I speak of allotments I use it in the technical term, under one acre. I have offered my tenants any number of allotments they chose to take. I have not got more than half-a-dozen applications, but the reason is that the good gardens attached to their cottages are the most convenient kind of allotment.

5545. (*Lord Cobham.*) How large are the allotments? —They vary from half an acre; but they are generally three-quarters of an acre.

5546. Is that general throughout the county?—I cannot say, positively, throughout the county. Probably throughout the county the gardens are, as a rule, less than half an acre, but that is as much as a labourer can conveniently work.

Fruit growing.

5547. (*Mr. Chaplin.*) And in those gardens which they cultivate, do many of them grow fruit?—That is very generally the case.

5548. And that helps them very greatly?—It does. One of my cottage tenants told me that he had sold in one year 20*l.* worth of fruit from his garden; that is an obvious help, for it is equal to 8*s.* per week.

5549. What is the size of the garden?—That is but a small one, barely half an acre, but there the fruit included small fruit, such as strawberries.

5550. Could that fruit-growing, as far as you are able to judge, be extended?—Yes, I should say that it could. There is still a large market for almost all fruits, except perhaps apples. In a plentiful year, such as we have had this year, apples are a drug in the market. They could not be disposed of at a higher price on the ground than 1*l.* a ton.

5551. Do the fruit-growers also suffer from foreign competition?—Not in the county, but of course it tells upon them if they send their fruit, which they mostly do, to the large centres. Birmingham is a very common centre for sending the fruit from Herefordshire, and Cardiff is also a market, and in those cases they do suffer to a certain extent from foreign competition.

5552. In spite of foreign competition there is still fruit-growing, but is it considerable?—Yes.

5553. Are not they liable to great loss from unfavourable seasons; does that often occur?—Not very often; of course, the price improves when the crop is small.

5554. It is sometimes the case, is it not, in the fruit-growing country, that an unfortunate frost at a bad time of the year is very prejudicial indeed to the crop?—Certainly. Three or four years ago, I forget exactly which year, the crop of apples in Herefordshire was entirely destroyed by the winter moth, the female of which crawls up the tree and deposits its eggs in the branches, and these are developed into the caterpillar in the spring, and in that year they entirely destroyed the crop.

5555. As far as you are able to give information to the Commission, is there any considerable hope of agriculture in the direction of fruit growing in other counties with which you are acquainted?—I should say there is to a considerable extent.

Condition of the labourer.

5556. Can you tell us how the labourers have been affected by agricultural depression in that county; has it led to a reduction of employment, or to a reduction in wages?—It has led to a very small reduction in wages. A very considerable rise in wages took place in Herefordshire, and, I believe, all over the country in 1872 and 1873, owing to causes which I daresay I need not go into, and that rise has, with a very small decrease, been maintained ever since. But there is one special reason, I think, which has affected Herefordshire, and I daresay some of the border counties of Wales, and that is the extraordinary prosperity of the mining works in South Wales during the last six years, up till this last year. The prosperity which came to South Wales has undoubtedly drawn away a great many of our labouring class to Monmouthshire and Glamorganshire, where they have had good wages, and that, of course, has reduced the number of labourers in the county, and that has been the cause of the maintenance of higher wages.

Mr. J. Rankin, M.P.
15 Dec. 1893.

5557. Now what have been the effects of the depression on tenant farmers?—A loss of their capital has been one effect—making them take farms with insufficient capital; and a consequent loss of profit has been the result.

Condition of tenants.

5558. Have there been any reductions of rent to meet this?—I should say, upon the whole, there has been from 25 to 30 per cent. reduction in rents. Upon my own property the reduction is, on the whole, a little over 20 per cent., but that also includes the cottages, and some of the smaller holdings, which have not been so much affected.

Reduction in rent.

5559. To that extent the landlords in that part of England have been injured likewise?—Certainly.

5560. Have you found it to be the case, or generally the case, that in addition to the reduction of rent they have been called upon to make greater outlays on the estate for improvements and additions?—From personal experience I cannot say that there has been any lessening of it; the same demands, and greater demands, have been made by the tenants, and to get satisfactory tenants the landlords have been obliged to make those little outlays.

Expenditure on improvements.

5561. At the same time, with this considerable reduction of rent, there has been an increased demand for outlay on the part of the landlords?—I should say that was the case generally.

5562. Is there anything in your view which could be done to lessen the cost of production on arable land?—Well, I really cannot suggest that anything can be done by the farmer; that is to say, to lessen the cost of production. Of course I am not now speaking of what the State might do for him, but what he himself can do.

Cost of production.

5563. Have you any suggestions to make with regard to the State, of what might be done by the State?—The only thing that I can suggest is, that the State might give a little more help in the way of the charges which now fall upon real property, and the one thing I should like to see done by the State more than it does now, is to help the establishment charges of our Poor Law system. I would not recommend the State giving any grant for indoor paupers, because that would militate directly against my view of the Poor Law, I should not like to do anything to induce the guardians to put paupers in the unions when they otherwise would not do so. But the establishment charges, which are pretty well fixed charges, whether the workhouse is full or half empty, I should like to see aided to a greater extent than is done at present, by Imperial funds. I also think where there is a school board that some help might be given to that rate. I think the Merchandise Marks Act might possibly be extended to foreign meat, and other things, and I think also (but of course this probably will be called a fad of my own) that an old age pension system might be introduced, which ought, to some extent, receive help from Imperial funds. I also think that bi-metallism, if introduced, would to a small extent help the farmer and the landlord.

Suggested remedies to alleviate depression.

5564. Those are what you are now suggesting as remedies for agricultural depression?—Yes, as remedies, but I do not wish to be misunderstood. I do not think that any of them, or all of them put together, would have any very great effect.

5565. What, in your opinion, would be the real remedy for this depression?—Well, from the farmer's point of view, and the landlord's point of view, of course nothing short of a Protective Duty would be an efficient remedy.

Import duties.

5566. Your view is this, I gather then; that the real cause of agricultural depression has been the fall in prices, and the real remedy for it would be a rise in prices?—Yes, certainly, from the farmer's point of

Fall in prices.

Mr. J. Rankin, M.P.

15 Dec. 1893.

view. I am not now speaking from a national point of view.

Tenants' capital.

5567. Have you anything to tell us upon the subject of tenants' capital in Herefordshire. Are the tenant farmers usually supplied now with adequate capital for the purposes of their farms?—No, in my opinion they are not. The farmer's capital, I am sorry to say, has decreased very largely, and now the tenants have not got 5*l.* an acre of capital, whereas they had formerly very nearly 10*l.* an acre.

5568. A portion of their capital, in the course of a series of bad years, has gradually disappeared?—It has gradually disappeared.

5569. In the case of tenants who take new occupations, they have not usually adequate capital, is that so?—I do not think they have, but landlords have to take them, or farm the land themselves.

5570. They have to take them with insufficient capital, because they cannot get tenants who have enough?—Yes.

5571. And that is a great hindrance to successful cultivation?—Undoubtedly.

Tenure.

5572. Under what tenure do farmers in your district of Herefordshire usually hold their farms?—Almost always by yearly tenancies.

The Agricultural Holdings Act.

5573. Under the Agricultural holdings Act, or under agreement?—Very largely now, I believe, under the Agricultural Holdings Act. There is hardly any agreement, except that as to the rent, and the conditions are those implied by the Agricultural Holdings Act. The tenure is nearly always from the 2nd of February, Candlemas, and the farm is taken with a year's notice.

5574. Do you find any complaints of the Agricultural Holdings Act, or any demands for greater security than that given by it for compensation for improvements?—I have never had one from a tenant farmer—never one. To show how little that Act is in operation, I made the inquiry of the County Court judge, and I find in two years he has only had one case in his circuit, which is Circuit 27, and which includes Herefordshire and parts of Shropshire, and only one case under this Act has been brought into his court.

5575. Then I understand that farmers, as a rule, hold their farms under agreements which are partly based upon the Act?—That very likely is the case; but I think the reason is, that they find they could make better terms with their landlords when going out than under the terms of the Act, and perhaps also it is the fact that owing to the notice that has to be given, which I think is two months' notice, before they quit their tenancy, some of them neglect to give that notice, and then find that they are out of Court, but I do not think that the Act applies very much. I think it is a fact that they make much better terms with the landlord than with the Court.

The law of distraint.

5576. Have you found any tenants asking for alteration in the law of distraint?—I think occasionally in years gone by you heard expressions of that kind, but I do not think the farmers find it a hard law upon them. Other creditors besides the landlord sometimes might do so, but the farmer himself is not affected by it.

5577. What is your opinion as to what would be the effect of the abolition of the law of distraint; would it be advantageous or prejudicial to the interests of the farmer?—It certainly would be prejudicial, especially nowadays, in the case of unsubstantial tenants, because the landlord would have to demand rent in advance. In Herefordshire there is a custom which is not altogether usual throughout the whole of the county, of the outgoing tenant being allowed to plant one-third of his arable land with a crop of wheat, and this, of course, is to a great extent security for the landlord, so that if he does leave the farm without paying the last half-year, or year's rent, there is some security left upon the ground, and it is a custom which both landlords and farmers seem to like and find beneficial.

Restrictions in agreements.

5578. Now, with regard to the disposal of the farm produce crops, is it customary in Herefordshire for restrictions to be imposed upon its disposal?—With regard to straw it is so. There I think that some arrangement ought to be come to, for straw, as we all know, is a mere vehicle for manure, and has not a very high manurial value in itself, and therefore it does seem to me rather a pity that a commodity which at the present time is realizing some 3*l.* a ton should be obliged to be used only in a way which greatly depreciates its value.

5579. You would apply that observation especially to those cases where there are great facilities for its disposal in the neighbourhood of towns?—Certainly; and of course with the stipulation that some manurial value should be put upon the farm.

5580. Are these restrictions usually rigidly enforced at the present time, or have they been in a great many instances relaxed?—I do not think they are relaxed as far as the agreements are concerned; I know of several instances where a remission has been made in the terms of the agreement.

5581. In practice then the restrictions are relaxed?—Yes.

5582. Although the agreements have not been altered?—No.

5583. Is there anything else you would like to say?—I do not know that there is.

Size of farms.

5584. (*Lord Cobham.*) I do not think you told us what the ordinary size of a farm in Herefordshire is; between what limits would they run?—Very few farms are over 500 acres, most of them are from 150 to 200 acres; but there are a large number of farms under 50 acres. I find on my own estate, which is about 3,300 acres, that I have about half and half; half the number of holdings under 50 acres, and half the number of holdings over 50 acres, and I do not think there is anything peculiar in that.

Small holdings.

5585. What sort of people occupy the smaller holdings; people who live entirely on the farm, and by the farm?—People who live entirely by the farm; and the work is done by themselves and their families, but of course that does not apply to holdings when they get down to less than 10 acres. Then, of course, they are held by small tradesmen, or they are taken by a man who goes out hedging and ditching, or he is a drainer.

5586. These would be agricultural labourers' holdings of from 5 to 10 acres?—Yes; there are a great many held by agricultural labourers, but I think the majority are not agricultural labourers, strictly so called, they are more job men.

Fruit growing.

5587. Do you consider that orchards are generally managed with intelligence?—I am afraid I cannot say that I do think so. But we have instituted technical classes there upon that subject, and other subjects. I happen to be the Chairman of the Technical Education Committee, and I am glad to say that lectures upon the management and pruning of orchards, and providing the best kinds of apples to plant, are now receiving a great deal of attention, and I have not the slightest doubt that if intelligence is brought to bear upon these matters, that the fruit growing possibilities and potentialities of Herefordshire or any county will enormously increase.

5588. Are there many orchards in a shocking condition?—There are many in a shocking condition.

5589. Do you teach the making of cider as well?—Yes; that is also a branch of learning that is taught.

5590. When Mr. Chaplin spoke of a heavy loss in connexion with the apple crop, I suppose you meant the crop itself is liable to become a total loss?—Yes.

5591. You would not say of the apples, as of hops, that a very large loss is involved in the cultivation?—No; because for the most part there is no money spent upon the cultivation at all. There is nothing spent upon the orchards very often.

5592. As a rule the orchard is generally in a pasture?—Yes, in a pasture. There are many arable orchards, also.

Tenants' capital.

5593. Would you say, compared with 10 or 12 years ago, that a farmer should have the same capital as he needed then?—Yes, to farm in as efficient a manner I should say that he ought, and of course as most farms are being put down to more grass, he requires more money to stock them properly, or he requires quite as much money.

Payment of compensation.

5594. Would you say that since the depression began, the amount ordinarily paid to the outgoing tenant has increased or diminished?—You mean by the incoming tenant to the outgoing tenant?

5595. Yes?—I should say, upon the whole, it has decreased.

5596. Very largely, probably?—Yes.

Mr. J. Rankin, M.P.
15 Dec. 1893.

5597. To that extent the farmer's need for capital is diminished?—Quite so.

Competition for farms.

5598. As to the fixing of rents where there is only one competitor for a farm, practically the rent in that case is almost fixed by the competitor?—Almost. I need hardly say to gentlemen who must be so well versed in the matter, that it does not generally pay a landlord who has a farm thrown on his hands in a bad condition, for it takes two or three years to restore it to a condition to make it lettable.

5599. Have you not been able to get even one competitor for a farm?—Yes, very often.

5600. That is the case with many of your neighbours?—Certainly.

Uncultivated land.

5601. (*Sir Nigel Kingscote.*) I think you said a certain amount of land has gone out of cultivation. Is that upon the usually good soil of Herefordshire?—What, I think, I said was that I did not know of any land that has gone out of cultivation altogether, except in so far that a certain amount—I cannot give the exact acreage—has been planted by larch and other trees, which I should not call going out of cultivation. But a large amount of land has been put out of arable cultivation.

5602. And laid down to grass?—And laid down to grass.

5603. That would be because it would be more profitable to raise cattle than to grow corn?—Yes, but I do not think any land has gone out of cultivation.

Character of soil.

5604. I wanted to ask that question, because from my knowledge of Herefordshire, taking it generally, I know that the soil is very good, and that it has not suffered like a great deal of light land elsewhere?—That is quite true.

5605. But that the soil of Herefordshire is extremely well adapted for fruit growing, being a great deal on the red sandstone?—It is all the red sandstone epoch, except in some small part of it, which is the silurian. Some part of it is heavy clay, and other portions sandy loam.

Cattle breeding.

5606. And the Herefordshire farmer goes in for cattle breeding very much, as there is a demand for that kind of cattle; but is not the reason of that in a great measure due to the fact that they are not bred elsewhere?—That is so. During the early years of the last decade, 1882–3–4, the demand for Herefordshire cattle was very high indeed. I have got a few figures with regard to that from my own farm. I have had a very good herd of Herefords for many years. Taking 1885, the average price per head, and they were mostly yearlings, was 65*l.* 19*s.* 8*d.*, and the next year it had fallen very considerably, but no doubt that was owing to the fact of their being inferior animals. In 1888 and 1889 they had fallen to 43*l.* and 46*l.* a head, and this last year they were only 23*l.*, and this year only 18*l.* But, of course, those are only general figures, and only from my farm.

5607. But your herd is a pedigree herd?—Yes.

5608. And in good years you sold to the foreign market, to go to America and elsewhere?—Certainly.

5609. You cannot take that as a usual tenant farmers' price?—Certainly not; but still there are a great many farmers in Herefordshire with pedigree herds, and they have had those prices.

Hop growing.

5610. (*Mr. Whitehead.*) Do you think the hop industry might be extended in Herefordshire?—I should think it might. I am not a hop grower myself, and therefore my evidence is altogether second-hand. But I have never found any of my hop agricultural friends to be very sanguine about the question of hops. I have found in certain years, when other things had failed, the hops were very profitable, and they certainly have saved a great many farmers perhaps from utter bankruptcy.

5611. I think there are about 5,000 acres of hops in Herefordshire?—There are 6,797.

5612. And that acreage is extended in small plots over a great many farms?—The chief hop-growing area is between Hereford and Ledbury, and extends up to Bromyard. There is hardly any in the south, which is a sandy loam soil. There is a little up in the west, but the north-east of Herefordshire is where the hops are chiefly grown.

5613. (*Lord Cobham.*) Mostly in the valley of the Teme?—No, the valley of the Frome.

Mr. J. Rankin, M.P.
15 Dec. 1893.

5614. (*Mr. Whitehead.*) Have not the prices of hops been rather low considering the small crops grown in this country?—I find the average price this year is 5*l.* 17*s.* 6*d.* for Herefordshire hops, and the yield was 9 cwt. Well, that, of course, is a good yielding crop, and a good paying crop, for it fetched 52*l.* 19*s.* for the acre and the cost of cultivation is about 34*l.* per acre.

5615. Taking the country through, the crop was very much smaller than in your favoured district of Herefordshire?—I believe it was.

5616. Is it not likely that foreign competition will interfere with the price of hops?—That is very likely.

5617. Have your hop growers any special grievances?—Their grievance is the same grievance as the wheat growers, that they do not like foreign competition. I have never heard any other special grievance which could be applied to hops.

Cider making.

5618. With regard to cider making, have you any factories to which small growers can send their fruit?—Hardly any. That would be a very great improvement. We have not anything of that kind for cider; nor creameries where small dairy keepers can send their milk to. I believe it would be a very great improvement for the county if such were introduced.

5619. If you made a better kind of cider it would be saleable, would it not?—Yes, it would be a great improvement. The majority of the cider made is very poor stuff indeed; the best cider is first rate, and as wholesome and good a drink as can be found anywhere.

The Merchandise Marks Act.

5620. (*Mr. Giffen.*) I should like you to explain a little as to what you wished with regard to the Merchandise Act that you spoke of. What was the point of your remark?—Well, I am a little bit afraid of entering upon that question, because it has so many sides. I only put it forward as a suggestion. It has been clamoured for by the farmers themselves to a very large extent, but I have heard reasons on the other side which make me doubt very much whether it is a remedy of very much value. The remedy desired by the farmer is that the purveyors of foreign meat should have some distinctive mark to show that they were purveyors of foreign meat, and that foreign meat should not be sold as English meat. I have heard, on the other hand, that it might be, if the distinction was known to consumers and they found that the foreign meat was very often as good as the English meat, that the price of English meat might decline.

5521. My difficulty is that the contention would be, on the other side, that the Merchandise Marks Act in a sense already applies to foreign meat with false marks, and to bring it into this country with false marks of origin would be a breach of the Merchandise Marks Act; and what is contended for is something that may be in accordance with the principle of the Act but goes a little beyond it?—What I mean is that the extension of the Act should be made to apply so that there should be no doubt that foreign meat was being sold.

5622. That is to say, that you should compel the marking of the meat, not merely that the marks are true, but to compel the marking of all foreign meat?—Either the marking of the meat or that so-and-so sells foreign meat.

5623. But you doubt whether it would be beneficial to the farmers' interest, and you do not attach much importance to it?—I do not attach much importance to it.

Bi-metallism.

5624. In what way do you say that bi-metallism is to help agriculture—in what way would it help it at all?—That is a very large question, but I will take the bi-metallist view of this case, that the ratio is fixed at its old ratio. If it is not so fixed of course the value to the farmer would be gone; if the ratio went back to the $15\frac{1}{2}$ to 1 the remedy would have some effect as far as prices are concerned. But supposing that it would not be permitted to fix the ratio higher than the ratio is at present; then I would say that the change to the farmer would be of no value, because it would raise the present low prices. I am afraid I am a little obscure in my first sentence, but the way I think it acts at present is this: In India a man with 20*s.* in his pocket can buy now certainly more bushels of wheat than he could when the rupee was of the value of 2*s.* I was in India last winter and made inquiries and went into the prices of wheat, and I found that it was very much the same, or a little more than it was when the

Mr. J. Rankin, M.P.

15 Dec. 1893.

rupee was much higher. Therefore, it is obvious that the pound will buy more corn than it did formerly. When I say the pound I say the commodities which are represented by English money, and which have all gone up in value since the rupee has gone down in value. The freights being also very low at the present time, no doubt there is an inducement to Indian exporters to send their corn out of the country because labour is very cheap—it is still very cheap in India—and the power of production is very much the same, and the purchaser can buy more of the grain, and therefore can afford to sell it at a cheaper value in this country. But, of course, the depreciation in the value of corn, from a variety of other causes, is so great that it takes away a great deal of profit by the time it arrives in this country.

5625. What effect would the introducing of bi-metallism have at the present ratio?—Well, it would not be much use because the thing would be going on as now.

5626. And if the farmer was to benefit, you would want 15½ or something between that and the present ratio?—I think so. I do not think that the benefit of bi-metallism would come to the farmer unless the old ratio, or something approaching it, could be restored. He complains now, and therefore if it were stereotyped as it is now the complaint would go on.

5627. The effect of that would be to let him have nominally a better price for his produce than now?—Nominally.

5628. That is the real meaning of the change?—Yes.

5629. Would it not be that after a little time rents would get adjusted to this new condition of things, and the farmer in carrying on his business would be exactly where he was before?—Very likely. I say plainly I do not attach very much importance to it; I am only putting before you the view which is generally taken by the agriculturists as to the effect of this bi-metallism. I think it does, certainly at the present time, induce imports of corn from India.

Protection.

5630. If protection helped to raise prices it would alter the general level of prices, would it not, because if you alter the general level of prices permanently, after a time by the law of fluctuations, rent would be much more than it is now, and it would be no permanent benefit to the farming interest?—I do not think that rents would be raised in proportion to the increased value of the commodities raised by the farmers. I have no doubt they would be raised somewhat, and the landlord will get the benefit of that; but I do not think that they would be raised so as to take up the whole of the profit which would be obtainable from the increased prices. Of course, I would be most cautious that I, myself, as a politician do not advocate protection, because of course it is a selfish matter to the farmer and the landlord.

5631. I do not wish to bring in the general argument about protection, because it is rather against the feeling of the Commission that it should be introduced, but I should like to have it mentioned that in the days when the discussion between Protection and Free Trade was going on, the contention on the free trade side was that the farming interest did not benefit by protection?—Those days were long before I knew anything about the matter.

5632. That is what I wish to have on record, that you think it is a desirable thing in the farming interest that we should have protection, as it is the farming interest that we are now on?—Certainly.

Tenants' capital.

5633. (*Mr. Clay.*) You seem to say that the tenants have failed to a considerable extent for want of capital?—They have had a large reduction of their capital and that puts them at a great disadvantage.

5634. Would not that capital be decreased over and above the bad prices they get by the extreme rents they pay?—To a small proportion perhaps.

5635. In a small proportion only?—The depression or decrease in agricultural value has been far more than the mere difference between the rents that they have now and what they used to pay. But they have had a loss themselves.

Reduction of rent.

5636. If you had given the reduction to the tenants according to the prices by which they might pay their expenses, would not they be in a better position now?—That would, in most cases, entirely sweep away the whole rent of the land.

5637. And would not it be a wiser policy to have given the tenants larger decreases or abatements, and kept them, in a sense, going?—To give away the owner's income of course is hardly reasonable—it is not easy to say. Would it be a wise policy to do it?

Mr. J. Rankin, M.P.

15 Dec. 1893.

Land in hand.

5638. I am not pointing to the whole income; that is rather an extreme view of the case. With regard to the farms you have taken in hand—how many are there just now?—Only one besides my own now.

5639. Have you your balance sheet on that farm?—Yes.

5640. What has it been realising?—The farms that I have had on hand are not fair examples of my own farming. I would wish to say that they are farms which I have had to take because they were in bad condition, and, therefore, my balance sheet upon them would be a different thing if I had kept them on. But I may say, that I have never made any profit whatever out of a farm taken in hand, because I have had to put large expenditure upon it for the sake of bringing it into a condition again so as to command a tenant of any position at all.

The Agricultural Holdings Act.

5641. I believe you are correct in that point; in improving the farm you cannot expect a profit. With regard to the other part of your examination as to the Agricultural Holdings Act, they did not take on with it?—Not in court. I think it has had a large influence upon the general transactions of farming, but certainly they have not had many cases in court.

Payment of compensation.

5642. Has it been usual for the landlords to give compensation under their schedules?—Yes.

5643. May I ask you what is your schedule for compensation?—Those agreements that I have, and I have several now, are based upon the Agricultural Holdings Act. I give the same as in the Agricultural Holdings Act. Formerly I used to have a clause which made their claim for compensation a special claim in writing, and I considered every claim that was made, and we came to a conclusion over a special matter.

5644. Will you hand in the schedule of what you pay as compensation to outgoing tenants?—I cannot at this moment.

5645. Will you send it to us?—It is the same as in the Agricultural Holdings Act. I compensate on the same basis as that, but I may say that I very rarely ask for compensation.

5646. Perhaps your tenants are so poor that they are not able to apply cakes and manures to the land?—Yes, they do.

5647. Do not they ask for compensation for what they have laid out then?—They ask for compensation, no doubt, for the cake that they expend during the last year.

5648. What amount did you give for cake last year?—I gave half the value of the expenditure upon it.

5649. And what did you give the year before?—Well, usually there is no demand made. I do not think I can remember if any demand were made for cake the year before last.

5650. Do you think there is any unexhausted value for the second or third year before the lease goes out?—As a rule, the Herefordshire tenants put all their manure which they have made upon the land into their off-growing crop of wheat, and as they get a direct benefit there is not very much value which they do not get the benefit of.

5651. But you take all the cake and manure. Do you take it out in the first crop?—I do not say all.

5652. There is some left?—They remember this off-growing crop the year after they leave, and they put all the manure on to that.

5653. Do you take all the manurial value of the cakes used?—I do not consider that they take it all off, but I think they will take off half of it.

5654. You give half for that year?—Yes.

5655. But nothing is allowed for the year before?—I do not think that I can remember any. This is a point upon which I will not be quite positive, but I do not think that I have been asked for the value the year before the last.

5656. (*Mr. Little.*) Upon a question that Mr. Clay has asked you, is not compensation on the scale of one half of the last year's consumption rather a rough

Mr. J. Rankin, M.P.

15 Dec. 1893.

measure of the value from an average expenditure of previous years of cake?—Yes, it is.

5657. It is not given on the assumption that one-half of the last year's cake is positively remaining, is it?—Well, it is given on the assumption that the tenant has not got about half the value that he himself has been at the cost of.

5658. In some districts the custom is to give one-third of the last year and one-sixth of the previous year's consumption?—Yes.

5659. And in some cases the compensation is based upon the consumption of three years by a diminishing scale?—Yes.

5660. Those are all rough and ready matters to give a man some compensation for that which he has not been able to recover from the land?—Certainly.

5661. That is the substance of the old Lincolnshire custom, on which the Agricultural Holdings Act was based?—Yes.

5662. May I ask, as a matter of practice, whether the way-going crop is taken by the landlord or the incoming tenant, or harvested by the outgoing tenant?—In some cases, according to the custom of the country, the outgoing tenant has to harvest it himself. He has the right of the buildings, and has access to thresh it, and store it. But in my own case I always agree to take it in the month of August at a valuation.

Valuation.

5663. With regard to awards under the Agricultural Holdings Act, they only go to the county court judge in case of appeal?—Quite so.

5664. Or if one of the parties applies to the judge to appoint a referee?—I merely gave those figures to show how little litigious matter there was in respect of this.

5665. I understand that the Act is in operation, but the county court judge has not had to interpose?—That is my view.

5666. And, therefore, it has acted smoothly?—Yes.

Rural depopulation.

5667. As to the question of the depopulation of your county, the population has been steadily declining, and in the rural districts that decline has been considerable?—Yes.

5668. To what do you attribute that?—Well, of course, generally to the depression, but, as I said before, largely to the fact that the mining industry in South Wales has been so prosperous of recent years that a large number of labourers have gone away there to get positions of various sorts.

5669. You have given information, which I have before me, to the Labour Commission on the whole subject of the condition of the labourer?—Yes.

Effect of increased prices on rent.

5670. (*Mr. Long.*) I have one or two questions to put with respect to the examination by Mr. Giffen just now. I understood Mr. Giffen to indicate that if either of your suggested remedies, protection or bi-metallism, were to be adopted, and supposing the result were to be an increase in the price of agricultural commodities, the benefit of such increase would, by the natural rising of rents, pass entirely into the hands of the landlords?—I did not say entirely. I thought I had guarded myself that I did not mean entirely. I think some of it would, and, perhaps, a considerable portion of it; but I do not think the entire profit would go to the landlord. I think a great deal of it would be arrested by the tenant farmer.

5671. Is it your experience that farmers in the large majority of cases, whose occupancy has been extended back to the time when prices were much higher, contend that they would, while paying the higher rents, be much better off if they had the higher prices?—They do contend that.

5672. Is it not rather remarkable that the majority of the farmers hold this view, which is directly opposite to those who champion their cause, but who believe that the landlord would be benefited, and not the farmer?—It is remarkable.

5673. When it is suggested that any increase of prices would lead to any raising of rents, is not it the case that the fall of rents has been so great, and the difficulty to get tenants so extreme, that it would take a very long period of increased prices before there would be any attempt made to raise rents?—I think so.

5674. Would not it be rather a question of keeping the tenants and getting rents at all, and not of raising rents?—It would largely be so.

Mr. J. Rankin, M.P.

15 Dec. 1893.

Reduction of rents.

5675. Mr. Clay suggested that it would be better to keep tenants by giving a further portion of the rent to them, and your comment was that it would mean giving up income altogether. In the case where agricultural depression is really felt, where the land has gone out of occupation, would not this practically mean giving up the entire income of the landlord?—I should say so, in many cases, to make it profitable to the farmer.

Expenditure on improvements.

5676. If this income, or rent, call it which you like, be surrendered, how would you propose to carry out agricultural improvements, cottage buildings, buildings for the keeping of cattle, land drainage, road making, and any other necessary landlord's repairs, if the rent is to be given up?—It is only to be carried on, if at all, by State funds, or State funds covering the sums supplied by localities. Certainly, if the whole of the rent was taken away, the landlords would not have any money to do that.

5677. In other words, the State would have to step in and become the landlord?—Yes, if you swept away the whole income of the landlord, I should think so.

5678. You will probably agree that the suggestion that landlords should be abolished is impossible, that there must remain a landlord, whether it is the State or the individual?—I should say so.

5679. And somebody must carry on the permanent improvements now carried out by the landlord?—Yes.

State aid for workhouses.

5680. With regard to your suggestion about the poor law, I understood you to say that you recommended that the State should contribute, not to indoor relief, but to outdoor relief?—No, I said I would like the State to contribute towards the establishment charges of the workhouse, rather than by paying subventions for indoor paupers, and that a subvention of so much per head for indoor paupers would have the direct effect of stimulating the guardians to send people into the workhouse. That is a stimulus I should desire to avoid.

5681. Are you quite sure that your suggestion with regard to establishment charges would avoid that?—I think so, to a large extent. I do not myself doubt it would tend to that result.

5682. Have you calculated the proportion of establishment charges as charged to the poor rate, as compared with the maintenance of a pauper, either inside or outside?—I cannot give you exact figures at this moment, but the charges of establishment in many of the country workhouses vary between 200*l.* and 400*l.*

5683. The establishment charges?—Yes, for matron, and master, and doctors, and rations for the officers, and repairs.

5684. Is it not a fact that under some recent arrangements of local taxation, those charges are already met by State subventions?—I said that.

5685. What is your proposal?—Merely to increase that.

5686. If it is met already by State subventions, you cannot increase it. You cannot pay again what is already paid. The establishment charges are practically paid by State subventions?—I am not aware that they are paid altogether. I do not think that the salaries of the master and matron are paid.

5687. Is there any balance remaining which is not met by the grants in aid?—Of course, my suggestion would mean increasing the grants in aid.

5688. Your idea would be that there should be a relief to the fixed charges, and not any impetus given to putting paupers in the workhouse?—Yes.

5689. You hold the belief that paupers can be better maintained out of the workhouse than in it?—Well, it depends, of course, on the particular case, but my view is against unduly or artificially increasing the number of indoor paupers, when there is not a necessity for it in the case itself.

State pensions.

5690. Then would you be prepared, holding that view, to continue the present system of out-door relief?—Yes, with modifications. I could not suggest anything better, except that I should like to see, as you are probably aware, a system of national pensions established to which the State should contribute.

Mr. Rankin, M.P.
15 Dec. 1893.

5691. You do not propose to confine the State funds to those who are necessitous and indigent?—No, certainly not. Everyone would have to fulfil certain conditions. If they fulfil those conditions and obtained the State grant, then my view is that it would lessen out-paupers in any case.

5692. Would your State pension be confined to those now called paupers?—Oh, dear me, no. It would take the case of very few of them really, because those who fulfil the conditions which I certainly would place upon it, of having done something for themselves in the way of acquiring the pension, would probably be those who would not come upon the poor rate.

5693. In considering the State pensions, it is necessary to have in view the poor law administration. Do you believe that the establishment of State pensions would do away with the necessity of poor law relief?—I think so, to a considerable extent in course of time.

5694. It might diminish it?—It might diminish it.

5695. But it would not do away with it?—No.

5696. Whatever system you adopt, you must continue to administrate the poor law to those who are absolutely in want?—I have no doubt for years to come the poor law would have to exist.

ate aid
r work-
uses.

5697. (*Mr. Dalton.*) You were not thinking of any establishment charges other than those of salaries of officers?—Yes, I was—the salaries and the rations of workhouse officers, and the cost of repairs, and things of that sort.

5698. There was a Union Officers' Grant given by the Local Government Act, which covered the whole cost of salaries and rations of officers as fixed on a certain day before the passing of the Act. It was fixed on past expenditure, so that no encouragement was given to increase the expenses. But the whole amount of salaries and rations up to that date is met now by a Government grant?—I had forgotten that it had been altogether provided for. I knew large subsidies had been given, but I did not think that it had been altogether covered; at all events, such charges as repairs to buildings are not met.

ncreased
rants for
chools.

5699. You think there should be some further subventions in aid of schools?—That is a suggestion.

5700. You have no specific proposal as to the form in which you should get the additional grant for school board purposes?—Well, it would have to be an increase of the Imperial grant, as I have said before, if it is to do any good to the land.

5701. Given on the same principle as at present?—On the same principle as at present.

tates.

5702. Have the rural rates risen or fallen of late years in Herefordshire?—Fallen. The Local Government Bill of 1888, and the subsequent relief which came to us under that Bill, has made a difference of between 4*d.* and 5*d.* in the £ upon our rates.

5703. And you do not think that they have conduced to extravagance on the part of the local authorities?—I think I should answer that in the negative, but of course county councils have not been going long enough to make me certain how to answer it.

Railway
rates.

5704. Have you heard of any grievances in the disposal of fruit in Herefordshire, from the high market tolls in any towns?—No, I have not heard in Herefordshire of any of those grievances. Of course the general grievances which I have heard very often is as to the high rates charged by railway companies upon local agricultural produce, that is a very constant source of grievance.

Reduction
of rent.

5705. (*Mr. Lambert.*) Reverting to one or two questions asked by Mr. Long, how much have rents been reduced in your district? I think you said 25 per cent.?—I should think between 25 and 30 per cent.

5706. Your own is about 20 per cent.?—Yes, but that is a calculation which I have made upon the whole property, which includes buildings and cottages of various sorts and kinds, which is not applicable to agricultural land alone. The farm land is more than that. I have one or two farms which are reduced 60 per cent.

5707. Do you know of any case where the whole income has been swept away?—No, I cannot say that I do in Herefordshire.

5708. The farmers were anxious to revert to the conditions about 1872, I think you said in reply to Mr. Long?—I do not quite follow you.

5709. The farmers wished to revert to the conditions which were ruling from 1870 to 1880?—Well, the farmers were doing pretty well in the years 1872 and 1873 up till 1878.

Mr. J. Rankin, M.P.
15 Dec. 1893.

Protection.

5710. But were those days of higher prices the times that farmers wished to revert to?—Yes; the answer to Mr. Long's suggestion was this: That the farmers preferred higher rents and the higher prices, more than the low rents and the low prices.

5711. Were not these conditions under free trade?—Certainly.

5712. You have not heard any farmers who would wish to revert to the time before the Corn Laws were removed?—I know many farmers would wish to do it; whether it would be wise or not I will not say, but many farmers would like to do it.

5713. Would they be wise in your own opinion?—Personally I think that they would for themselves. I am not saying now for the nation.

5714. Was not agricultural depression as severe and as acute, even more so, prior to the abolition of the Corn Laws than it is now?—Amongst the labourers it was very much more so. But I do not think it was amongst the farmers. With regard to the labourers, it must be recognised that the price of commodities does not rule the price of labour, as it is very often supposed to do.

5715. Although protection would benefit the farmers, you would not advocate it as a national remedy?—No, I would not, not as a politician, certainly.

Low prices.

5716. Do you think the low prices that have been running of late have been brought about by those industrial disputes between the colliers and the masters?—As far as such disputes affect trade it has. Bad trade, of course, is bad for farmers as well as everybody else.

Land in hand.

5717. I think you said you had farms in hand. Could you give us the average rent of the one you have in hand?—The average rent of the farm that I have in hand at the present time is about 26*s.* an acre.

5718. Have you offered to let it?—I have let it now.

5719. So that you have really none in hand now?—After next Candlemas I shall have none in hand.

Condition of farms at end of lease.

5720. You said that your farms were usually given up in an impoverished condition. To what do you attribute that?—To the farmer holding on as long as he can, and keeping it as long as he possibly can have a chance of making a living.

5721. Possibly paying rent out of capital?—Nearly always, for the last year or two.

5722. Then if a reduction of rent had been given sooner, it would have benefited the landlord in this respect, that he would not have had his farm thrown upon his hands in an impoverished condition?—If the reduction was sufficient to make that particular man able to go on, but a great deal depends upon the man himself. One man can farm to a profit and another man cannot, because he is a poor farmer. The man that is wanting in energy generally goes to the wall.

5723. But, as a general rule, have farmers lost their capital?—I think a great many of them have lost a great deal of it.

Competition for farms.

5724. Prior to 1877 was there a good competition for farms?—Yes, very fair. It was in the decade of 1850 and 1860, however, that a considerable rise of rents took place, but that was before the heavy competition from abroad.

5725. There was a considerable rise in the rents at that time?—There was.

5726. How many applicants would you get for a decently fertile farm in 1877?—That very much depends, but I should say three, or four, or five for every farm.

Protection and competition farms.

5727. Presuming that we were to revert to this year's prices by means of protection, would not there be the same competition amongst farmers?—Yes, probably there would.

5728. And then, would it not in the natural tendency of things, be the case that most of the additional price would go in rent?—I have already said that some of it would unquestionably, but I do not think all.

5729. But presuming there was a strong competition for farms, then the natural tendency, of course, would be that most of the additional profits would go into the

Mr. J. Rankin, M.P.

15 Dec. 1893.

landlord's pocket?—No, I do not say most. Some of it would, but not most.

5730. You said a considerable proportion just now?—Judging from what did happen when rents were higher, I think that the larger proportion would go into the farmer's hands, if you take the fall of 10*s.* per quarter, upon land that would give on a very moderate average crop, something like 2*l.* or 3*l.* per acre. That raising of rent per acre would be an enormous rise. Whereas, supposing 1*l.* was raised upon the rent, it would still leave 1*l.* or 2*l.* more profit to the farmer.

5731. But would it not be the tendency, presuming there was a competition for the farms, that the farmers would give as much as they could afford to give?—Yes, but I am still of opinion that they would not give anything like as much or it would take away all their profits.

Tenure.

5732. How are farms let in your district?—Chiefly by yearly tenancy from Candlemas, with a year's notice.

5733. Would they be let by tender?—Mostly they are now let upon the conditions of the Agricultural Holdings Act of 1883.

The fixing of rent.

5734. And how would the rent be fixed?—Do you mean whether by arbitration or otherwise?

5735. I mean to say, how is it fixed now?—It is fixed now by arrangement between landlord and tenant. The landlord has to find out how much he can get, and fix it in that way.

Difficulty in letting.

5736. Is there any difficulty in letting the good farms in Hereford?—No. They still command a market.

Tenants' capital.

5737. To what do you attribute the estimated loss of the tenant's capital to 5*l.* an acre?—I estimate it in this way. Of course it is a rough-and-ready way, but I make the statement from the inquiries that I make when new tenants are taking farms, and from the statements they make to me. Very few farmers now offer to take a farm who have more than 5*l.* an acre of capital.

5738. They probably have lost a great deal of their capital during the past 10 years?—I have no doubt of it whatever.

5739. And they have paid a considerable deal of rent in the meantime?—They have paid some rent of course.

5740. And they have paid a good deal of rent out of the capital?—I am afraid they have.

5741. Do you think it is just to the tenant to pay rent out of his capital?—Well, if a man engages to do a certain thing, and to pay a certain amount of money, I do not think that it is unjust to ask him to do it. Of course, the landlord need not know whether it is out of capital or not, except from general inquiries.

5742. But tenants have paid a large amount of their rent out of their capital?—I think, no doubt, they have.

The law of distraint.

5743. As to the abolition of the law of distress, do you think it would be prejudicial to the tenant?—I think it would.

5744. Would not the policy of the law of distress act in this way: that the landlord is apt to take a tenant at a higher rent, because he is sure of having his money? I do not think it is so. I hardly think it has any effect of that sort.

Restrictions in agreement.

5745. You say the agreements are not altered, but the restrictions are relaxed?—Well, a great many farms have not any agreement, except as to the rent, and it has to be held under the conditions of the Agricultural Holdings Act.

5746. But you said there were some agreements in force?—Yes.

5747. But their conditions have been relaxed?—Yes.

5748. But those conditions could be put in force at the landlord's option?—Yes, unless there is some written agreement to the contrary.

The Ground Game Act.

5749. Would you advocate farmers having the right to kill ground game upon their farms as they please?—They have it now.

5750. Would you advocate their having it by law?—You are asking me if I disapprove of the Act of 1880. I think there is something to be said for it, but a good deal against it. I think it has created difficulties that did not exist before. At the same time, I fully sympathise with a man who has his crops destroyed by ground game, but he has a remedy now in his own hands, and as far as my observation goes, there is very little ground game in the county.

Mr. J. Rankin, M.P.

15 Dec. 1893.

5751. Is it your opinion that a farmer should have a right to kill ground game upon his estate as he pleases?—I prefer the system of mutual agreement as to the matter of control. I mention that I go in for compensation always for destruction by ground game, but I think that the farmer ought either to have the power of doing it, or compensation for the loss he sustains.

5752. And you would not support an extension of the Act to give him the right to kill ground game as he pleases?—I do not think he requires an extension. He has the right now.

5753. The present Act says he has only the right to kill ground game with, I think, one man, and to put traps in one position. Would you give him an extension of the power by sweeping away all those restrictions?—I do not know that it would make very much difference to the actual clearing away of ground game. They now employ men to catch rabbits for them, who get them chiefly by wires and by traps, no doubt placed in a particular position, and they shoot them.

5754. They are only enabled to have one gun, under the Act?—That is quite enough for them.

5755. Would you extend the liberty?—I do not think, if you ask me personally, that I should; I think their powers of destruction are ample at the present moment.

5756. (*Mr. Channing.*) I want to know whether in your experience that any type of farming would especially help the farmers, which you might recommend an extension of?—No. The cattle breeders have, as a rule, done well; also sheep farmers have done fairly well; and dairy farmers have done very well; and all those branches help. Fruit might certainly be a direction in which development might take place.

Fruit-growing.

5757. You are aware of the immense imports of dried apples from America and elsewhere?—Yes.

5758. Is there any effort to compete with the Americans in our own markets by combined action?—Not in Herefordshire. There has not been combined action. I think the suggestion which was spoken of this morning, about having some central place where apples might be sent, and cider might be made, was a very useful one, and one which I have often thought of.

5759. And those other industries, taking the drying of apples, might also be introduced?—Yes.

5760. As to whether there is any special tenure of these fruit farms, are the trees put in by the tenant himself?—No; nearly always by the landlord.

5761. So that the question of compensation does not arise?—Hardly ever. If it is done by the tenant there is nearly always a clause to compensate him for anything that he has done in that way.

The Agricultural Holdings Act.

5762. You spoke of the scale of compensation under the Agricultural Holdings Act. You were referring to the Act of 1875, which does provide a scale—the Act of 1883 does not?—The principle of the Act of 1883.

Payment of compensation.

5763. The principle of the Act of 1883 is rather to secure to the outgoing tenant the remaining value of what he has done to the holding, whatever it may be, irrespective of the number of years?—Quite so; but that is the principle that I was referring to.

5764. And that is the practice of valuers under the Act?—Yes.

Expenditure on improvements.

5765. Do you know of any case in which the tenants have wished to change the character of their farm; for instance, to turn it into a fruit farm, or exact improvements of a permanent nature, in which the landlords were unwilling or unable to pay for the improvements?—No, I do not think I do. Of course, landlords cannot always meet the whole wishes of the tenants, but I believe they do so to a very large extent.

5766. And buildings for extending dairy operations?—Yes.

5767. You do not know of cases in which legitimate grounds have been shown that the landlord has not met their views of improving the farm?—No, I cannot say that I know of any.

Reductions of rent.

5768. I do not know whether you said when the permanent reductions were made in Herefordshire, about what year it was?—They began chiefly about the year 1880. 1879 was a very bad year. The weather

Mr. J. Rankin, M.P. 15 Dec. 1893.

was exceedingly bad in 1879; the crops were poor, and the weather and the harvest was very bad; and competition began to be felt in that year more than previously; and the reductions undoubtedly began to be very marked in 1880.

5769. But they would be in the form of remissions?—Yes, and largely at that time; 10, 15, and 20 per cent. remissions.

5770. The permanent reductions were made five or six years ago?—The reductions were made whenever the farm changed hands afterwards.

5771. About the average reduction of rent, could you state what would be the usual percentage of repairs in Herefordshire on the owners of farms, the landlords' repairs, I mean?—I should say that they would vary very much indeed, but I think 20 or 25 per cent. would be about the figure of most estates.

5772. So that the reduction of rents and the percentage of the landlord's repairs, would after all be not the whole income, but half, according to that?—Not the whole income; I said I did not know a single case where the whole income had been swept away.

The Agricultural Holdings Act. Payment of compensation.

5773. You are aware that Sir James Caird suggested, with reference to the Act of 1883, that compensation should be given to the tenant whether he left or remained in his holding; that is, that at the termination of a tenancy, if a tenant wishes to renew the tenancy, and go on, he should have a valuation of what he did to the farm. Do you approve of that principle?—I see nothing to disapprove of in it; I think it is fair and just.

5774. The establishment of that principle is really establishing what is just to the tenant under the circumstances, that on the renewal of a tenancy he should have what he has done to the farm considered?—Of course he reaps the advantage, and therefore he would be much in the position of being able to benefit as well as the old tenant—he would reap the advantage of it.

5775. If it was not allowed him in the new rent to that extent, he would lose the remaining value of the tenancy?—But he, as an incoming tenant, would gain the advantage.

Land in hand.

5776. On your own farm, which you said you could make no profit from, the one in your own hands, were you allowing yourself a rent of 26*s.* per acre?—I was charging myself the same rent as before.

5777. That is 26*s.*?—On that particular farm; yes.

Fruit-growing.

5778. (*Mr. Everett.*) With regard to the apples that you spoke of selling, who paid for the gathering of them; the buyer or the seller?—The price I mentioned was for the apples in heaps upon the ground, which really would mean that the seller paid for the apples being knocked from the tree and placed in heaps, but no other expense.

5779. They were not gathered by ladders, and put into sacks to avoid bruising?—No.

Bi-metallism.

5780. As to the question of bi-metallism, that system prevailed, did it not, until 1873?—Well, in some countries.

5781. And, practically, while it prevailed, gold and silver, the world over, were one money?—I believe there was very little difference in the ratio of exchange.

5782. And at that time in many important nations, mints were opened as freely to silver as to gold?—Yes.

5783. And consequently the closing of mints against silver in these nations cut off part of the old supply of money?—That is so.

5784. And this artificial cutting off of the old supply, I understand you to say, has raised the value of money, so that we get less of it in exchange for produce?—It has raised the value of gold.

5785. I mean our money, which is gold?—I would guard myself by saying this: I would not attribute it all to one cause, but there is no question that gold is higher in value in relation to silver money than it used to be.

5786. And the cutting off of part of the old supply of money was naturally calculated to raise the value of that which remained?—Yes.

Effect of higher prices on

5787. Would you say now, as regards agriculture, is not price really the key to agricultural depression, or to agricultural prosperity; a higher price means agricultural prosperity, a lower price means agricultural depression, speaking broadly?—Speaking broadly only. Of course, we must recognise the fact that the gold valuations of things are less, and therefore gold in itself is more valuable. Therefore the less price in gold is more valuable now, with regard to other commodities, than it was before the time you mentioned.

Mr. J. Rankin, M.P. 15 Dec. 1893. the agricultural industry.

5788. Still, would you not say that agriculture is likely to be in prosperity when prices are rising, and in depression when prices are falling, if it continues over some period of years?—I cannot give a general assent to that proposition. It must be qualified with so many other circumstances.

5789. Is it not the prosperity of the farmer that makes higher rent possible, must not the farmer prosper before he will be willing to pay a higher rent?—Certainly.

5790. And in the present condition of things should you say that labour is able to get its fair share of any increased prosperity in our industry?—Yes, I should say so, as far as agriculture is concerned. The agricultural labourer has suffered very little in my opinion.

5791. And if our industry grows instead of falls, he would be able to get higher wages corresponding?—Not by any means. The price of labour does not depend upon the high price of commodities, but upon the amount of labour in the market. At the present time, and for some time past, there has been no glut of labour in the agricultural market. In Herefordshire there has been a difficulty in getting labour, owing to the cause that I have mentioned, and therefore the price has been kept up.

5792. And if the industry became more prosperous would not that make more demand for labour, and would not labour be able to get a larger remuneration?—Yes; if there is no more labour imported into it.

5793. Would it not be your opinion that in times of a rise in rents that it would probably be better for all classes connected with the land, better for the farmer, because he would not be able to pay them if he was not better off, and better for the landowner, and better also for the labourer?—Yes; that means to say that agricultural prosperity is a good thing, which I fully agree with, from whatever cause it may arise.

5794. And to all the classes connected with the land?—Yes.

5795. Are you acquainted with the history of agriculture in the early period of the century?—Well, I cannot say that I am specially acquainted with it.

Cider-making.

5796. (*Mr. Elton.*) With regard to cider, a great deal of cider is drunk by the labourers on the farms as an addition to their wages, I suppose?—It is generally made by the job.

5797. Do not the farmers give the labourers a quantity of cider to drink in addition to the wages?—Yes, to drink; that used to be the custom invariably until after the passing of the Truck Act.

5798. But you know that has been explained now, not to refer to those cases where the farmers give cider?—Anyway, they do in fact give it, but I have always disapproved of it and sold it to them at a low rate.

5799. But you know there has been a decision allowing them to give it?—Then that is very lately.

5800. Yes?—I did not know that.

5801. That disposes of a lot of the cider made?—Yes.

5802. And then a great deal of it goes to London, or some great centre?—I do not think much Herefordshire cider does go to London.

5803. I am asking for information. I come from a cider country, and I know that there is a demand for rough cider to be used in the manufacture of something, or for drinking in the towns?—Yes.

5804. Do you think that there is not such a demand from Herefordshire, so that you require to make an improvement in the manufacture of cider to stimulate competition?—My opinion is that the bulk of the cider made in Herefordshire is such that there is not much demand for it out of the county.

Mr. J. Rankin, M.P.
15 Dec. 1893.

5805. You see my point, that if there is a stronger demand for the rough cider, there is no use making the fine?—But I find a considerable demand for the good cider, and, possibly, if they made more of it they might sell it.

Increased state grants for schools.

5806. About the school board; you did not confine your observations to school board districts, but your answers would be applicable to other places?—To voluntary schools as well.

5807. You would not favour school board districts more than other districts?—No.

Fruit-growing.

5808. (*Lord Vernon.*) Have you heard any complaints from those men who have improved their estates by planting fruit trees, on account of their rates being raised unduly on their improvements?—Not recently. I have heard cases some few years ago when such complaints were made, but I have not heard of any recent cases.

Creameries.

5809. And you said that you would like to see creameries established. Have you any particular reason why you fancy that they would be more advantageous than dairying in farmhouses?—Not in large farmhouses. But there are a great many small holdings where the quantity of milk which is derived from one, or two, or three cows, is hardly enough to make it profitable.

5810. Really you think that creameries would stimulate the creation of small holdings?—I think they would.

Effect of higher prices on the agricultural industry.

5811. (*Mr. Chaplin.*) One question only. With regard to the effect of the increase in prices on the prosperity of the farmer you were asked just now whether, in the event of an increase taking place in prices, rents would not be increased in proportion, and that the position of the farmer would be exactly what it was before the depression began. When did agricultural depression begin?—Well, is it the recent agricultural depression you are alluding to?

5812. Yes?—I should date it from the year 1879.

5813. Is it not the fact that the year 1874 was one of great prosperity for agriculture?—Yes.

5814. It was about that time that it had reached the summit of prosperity?—I should have put it rather earlier than that, but up to the year before that farmers were doing very well.

Mr. J. Rankin, M.P.
15 Dec. 1893.

5815. You heard it mentioned that 1874 was the last really good year that the farmers had?—It was about that time.

5816. If the effect of bi-metallism was such as you have said in your opinion that it might be, it would be to make the farmer very prosperous again?—If you resorted back to the old ratio it might have the effect, no doubt, of raising prices.

5817. If it put the farmer back, as was stated, in exactly the same position that he was before the depression began; that position was one of great prosperity as compared with now?—Yes, it was; but I did not say that that was due to bi-metallism.

5818. No, no; but I am assuming it. I understand you to say that you thought one effect of that would be to raise prices?—Somewhat I think it would.

5819. Then if the effect of a rise in prices was to replace him in the position in which he was before the prices began to fall, that would be a condition of prosperity?—Yes.

5820. I think on that point the majority of agriculturists have no doubt?—But I do not go so far as some bi-metallists as to say that is the only cause, or the main cause. The difficulty I see in the matter is, that they would not be able to restore the old ratio.

Protection.

5821. You do not advocate protection as a politician, but, as a remedy for agricultural depression, I understand that you think it would be very beneficial?—Of course, because it would raise the prices.

Cattle-breeding.

5822. I understood that you looked to the development of the production of cattle as one partial remedy for depression?—Well, the farmers who have been rearing and selling cattle have been better off than those who had to rely upon corn; but unfortunately a great portion of the land in Herefordshire and elsewhere is such as will not grow grass without being broken up, and going through a course of tillage.

Slaughter of cattle at port of debarkation.

5823. For that purpose do you agree with what has been stated by various witnesses who have given evidence before us, that it is very important that all foreign cattle should be slaughtered at the port of debarkation?—With regard to the prevention of disease, certainly.

5824. You attach importance to it?—I do, for the prevention of disease.

The witness withdrew.

Mr. Maurice Holzmann called and examined.

Mr. M. Holzmann.

5825. (*Mr. Chaplin.*) You are Secretary, I think, to the Council of the Duchy of Cornwall?—I am.

5826. Since what date have you filled that position?—Since 1886.

Particulars of estates.

5827. I understand that you are prepared to bring up to date the various facts connected with the Duchy estates as they were laid before the Richmond Commission in 1880?—I have some figures here which correspond almost exactly to the two statements given in the Appendix to the evidence of the Richmond Commission. The first statement is one with regard to the outlay of capital both on buildings and on drainage. The second is a statement of the rack rents receivable during the year 1892 from farms of 40 acres and upwards held on leases and annual tenancies. (*The statements were handed in.*) (*See* Appendices A. XIX. and XX.)

Locality of estates.

5828. The Duchy estates, I think, are in seven different counties of England?—In seven different counties of England.

5829. Will you state what those counties are?—They are Cornwall, Devon, Dorset, Wilts, Somersetshire, Berks, and Lincoln.

5830. Would it be accurate to describe the estates as being, on the whole, purely agricultural?—In those seven counties almost exclusively agricultural. There are a few houses in Dorset and in Wilts, but principally agricultural.

Expenditure on improvements.

5831. Would you kindly state what is the effect of the first statement you have been good enough to hand in?—The first statement contains the outlay of capital in the different counties on buildings, amounting to a total of 91,562*l.* 11*s.* 9*d.*, and on drainage works on 2,171 acres, amounting to 14,423*l.* 12*s.* 4*d.*

Mr. M. Holzmann.

5832. Making a total of——?—Making a total of 105,986*l.* laid out from the year 1880 to 1892.

5833. (*Mr. Little.*) On how many acres?—That is a very difficult question. The acreage of the Duchy of Cornwall estates varies with every year, owing to there being a large amount of land still held on lives. In former years the whole of the Duchy of Cornwall estates were let on lives at nominal rents and on payment of fines. That system was discontinued, I may say, at the birth of the Prince of Wales, and was legally prohibited in 1863. There is still a large acreage, amounting to 4,944 acres, held on lives.

Tenure of farms.

5834. (*Mr. Chaplin.*) I think I will ask you questions about that a little later on. It will come in more conveniently then. Will you say what the effect of the second statement is?—The second statement gives the division of the holdings of 40 acres and upwards according to leaseholds and annual tenancies. A comparison with the statements handed in in 1880 will show that the leaseholds have very largely diminished, and the annual tenancies very greatly increased. I may say that within the last 10 years there have only been four new leases granted. The whole of the lands that have had to be re-let have been re-let, I may say, as annual tenancies.

5835. With the exception of a certain number of leases that have been let for lives again?—No, none have been let for lives.

Existence of depression.

5836. I will examine you on this part of your evidence directly, when we come to the question of the tenure under which the estates are held. But before that, I should like to ask you whether the estates generally are suffering from depression?—Very much so.

Mr. M. Holzmann. 5 Dec. 1893.

5837. Since what date?—Well, I can say that the depression has made itself felt in the receipt of rents since the year 1878, which was perhaps the best year; but from 1879 onwards the amount received in rents has decreased.

Acreage and rental.

5838. Can you give us particulars as to what was the acreage of the estates in 1878?—There is a statement which I have prepared which shows the acreage in 1878, with the rents receivable, and the acreage in 1892 with the rents receivable. I say *receivable* because those are the rents according to agreement. But they do not represent the actual rents as far as regards the Duchy, because there are remissions of rents. (*The statement was handed in.*) (*See* Appendix A. XXI.)

5839. I see the acreage in 1878 was 29,970 acres?—The acreage in hand.

5840. And the net rent in 1878 was 39,295*l.*?—That was after deducting allowances to tenants which were made for the year, also repairs paid for by the Duchy. Although all the holdings are let with an undertaking by the tenants that they will do the repairs, in many cases when the tenants are found not to be in a position to do the repairs, they are done by the Duchy in order to prevent the buildings falling into disrepair.

Expenditure on improvements.

5841. Then I find from your return that in 1892 the acreage of the estates was 38,160 acres, and the net rent was 29,352*l.*?—That is so, because there are the same allowances made as regards remissions of rent, payments for repairs, and the loss of interest on outlay from capital on permanent improvements. Up to 1878 the tenants used to pay interest on outlay for permanent improvements. Since 1880 there is probably not a single instance in which a tenant has paid interest on the outlay on permanent improvements. In the case of the Duchy of Cornwall, this falls very heavily on the owner in the first years. It amounts, in the first place, to the loss of interest on the capital invested, and in the second place to the repayment from revenue of instalments of one-thirtieth. If these instalments are re-invested, in that case, of course, the interest gradually increases again, and therefore I would not take 6⅔ per cent., as it is the loss on the first year, and only 3 per cent. in the last year; but, by dividing it over the 30 years in which the whole repayment has to take place, it really is repaid at 5 per cent. The annual loss is 5 per cent., and therefore I have taken, in this statement, which I may hand in here, the interest on outlay at 5 per cent. That is only the interest on outlay that has been made in the years from 1878 to 1892, not on what had been laid out before, although the repayments go on, so that probably the result might be even worse. In that comparative statement I have not included arrears, although very frequently arrears, when they accumulate, are discharged; but I have left them out of account. I give you figures, from which it may be seen that in 1878 the arrears accrued during that year amounted to 1,398*l.* In the year 1892 the arrears accrued during the year amounted to 2,733*l.* This does not mean that there was only 2,733*l.* owing, because there were other arrears from previous years, but I have only taken those which were actual additions.

Arrears of rent.

Acreage and rental.

5842. Your figures, then, as I understand them, appear to show that while there has been an increase of the acreage of the estates of something like 9,000 acres, the rental, on the other hand, has fallen by about 10,000*l.*?—That is so.

Tithe.

5843. (*Lord Cobham.*) Have you included tithe rent-charge?—In this second statement, in the margin, it will appear that the rents are exclusive of the tithe rent-charge. In 1878 the tithe was payable by the tenant. It now is payable by the landowner. But in order to make it clear I have deducted from the rent the actual amount of tithe paid by the Duchy, so that the figures are absolutely comparable in that respect.

Reduction of rents.

5844. (*Mr. Chaplin.*) What percentage of reduction of rent does that represent?—That represents upwards of 41 per cent. reduction in rent.

5845. Do I understand that is a permanent reduction?—No, a very small fraction is not permanent. It may be that something like 6 per cent. may be only granted in that year. I wish to give to the Commission the comparative results of two years—a year which we consider a good year, 1878, one of the best, and of a bad year, 1892. I may say that for the year 1893 the result will be even worse, because more remissions have taken place in 1893.

Mr. M. Holzmann. 15 Dec. 1893.

5846. But up to the year 1892 the general result is this, that as compared with the year 1878 there has been a reduction of over 41 per cent. of rents, of which all but 6 per cent. are permanent reductions?—Yes, during the next 25 or 30 years, because by that time the allowance on account of loss of interest on permanent improvements will come to an end.

farms.

5847. Now, you were about to tell us something about leaseholds, I think, when I interrupted you just now. I should like to ask you, in the first place what is the tenure under which the farms of the Duchy are held? Are they held still upon leases?—As I have shown in this statement, there is a number still held on leases, but comparatively few. The great majority, in fact I may say six-sevenths of the lands, are now held on annual tenancy.

The Agricultural Holdings Act.

5848. Are they held under agreement, or under the Agricultural Holdings Act?—They are held under an agreement which is based on the Agricultural Holdings Act of 1883. The operation of it was especially made applicable to the Duchy of Cornwall by section 37 of the Agricultural Holdings Act of 1883.

5849. Do you find that these agreements generally give satisfaction to the tenants?—They give entire satisfaction, as far as I am aware, because there has never been any dispute. That may be partly owing to not many changes of tenancies (owing to a tenant leaving) having taken place. Where a change has taken place we proceed under the Agricultural Holdings Act. Each side—the outgoing and incoming tenant—appoint their valuers, and they settle the matter between them, with the cognizance of the Duchy land steward. There has been no dispute of any kind, and I should say probably not more than five or six cases have occurred since 1883.

Conditions of agreements.

5850. In the case of farms which you have to let to new tenants, which I suppose has occasionally occurred during your time, do you remember any instances in which any requests have been made for changes or modifications in the agreement on the part of the new tenant, the applying tenant?—Well, we have an agreement, which is a printed form, but, as the circumstances of each farm vary, the form of the agreement is adapted to the circumstances of each farm, and, according to the wishes or to the requirements of the proposing tenant, that is modified. For instance, there might be a new agreement made by the same tenant, whose lease had expired, and who wished then to have an annual tenancy. Of course, in many cases the rent is reduced, but otherwise I could not say that any difficulty has arisen.

5851. And modifications are made in the agreement if the tenant desires?—Yes, if, of course, the Duchy Land Steward, who advises the Council, considers them acceptable. But I can only say there is no instance known to me in which a tenant has not been satisfied or has complained that he could not get what he desired.

5852. Do these agreements contain restrictions upon the sale of produce, such as hay or straw?—They do contain that; but, as regards the sale of hay, if the tenant applies for permission he is sure to get it.

Expenditure on improvements.

5853. Are the permanent improvements made at the expense of the Duchy?—They are entirely made at the expense of the Duchy—all those that are in the first Schedule, part 1 and 2, of the Agricultural Holdings Act.

Holdings let on lives.

5854. You were speaking just now of some holdings that had been held upon periods for lives?—Yes.

5855. What occurs in the case of those leases, when they come to an end?—When these leases come to an end, it is generally found that the buildings are in an extremely bad state. Then comes the time for laying out money on buildings, and frequently also on drainage. In many cases the occupying tenant who had held under a lessee for lives, as under-lessee or as sub-tenant, then becomes the direct tenant of the Duchy; but, as I have said before, since 1880, always on annual tenancy. The buildings then are entirely carried out at the expense of the Duchy, and under the superintendence of the Duchy officers. Plans and specifications are prepared at the expense of the Duchy, and the contracts are made with the Duchy.

5856. At the determination of a lease of that kind, do you ever find it necessary to divide the farms?—When these lands fall into hand, they are very rarely let as such, because whole farms will not fall into hand, or very often it happens that no buildings are on these

Mr. M. Holzmann, 15 Dec. 1893.

lands which fall in, and then they are either divided between the adjoining tenements, or they are added as a whole to another tenement. In some cases the lands are so intermixed—those that are in hand and those held on lives—that to leave them intact would make it absolutely impossible to deal with them, because there are no buildings whatever in some cases. Then comes the question of judging what is the most desirable mode of dealing with them—are they to be attached as a whole to the adjoining farm, if they are in one ring fence, or are they to be divided. That depends entirely upon the actual circumstances, which are judged of by the Land Steward, who furnishes reports.

5857. And you deal with them accordingly?—And then these reports are submitted to the Council and considered and decided by the Council.

Land in hand.

5858. Do I understand that some portion of the bstates is in the hands of the Duchy itself, and farmed ey them?—None, only the woods and waste lands which are not fit for cultivation; there is no agricultural land in the hands of the Duchy.

5859. It is all let?—All let.

Difficulty in letting.

5860. Do you find difficulty in getting tenants in case of a vacancy?—Occasionally we do. I remember a recent case where an effort had been made to find a tenant, but no satisfactory tenant being obtainable, tenders were advertised for, when 12 tenders were sent in, the highest of which involved a reduction of 20 per cent. on the previous rent receivable, but the previous tenant had had remissions in former years, so that virtually it came to the same rent. But in such new tenancies there are always buildings or drainages required, so that a new tenancy in every case, without exception, I may say, means outlay of capital.

Reduction of rent.

5861. So that you have every possible inducement to avoid a change of tenancy if you can?—We have; and for that reason the most liberal remissions and reductions have been made. I may say, in that statement which I handed in, it is given as 41½ per cent. That is on the average of 33,000 acres. But naturally this land is not all of the same value. This is only an average drawn from the whole. We have remitted and actually reduced to more than 100 per cent. It sounds like an Irish bull, but it is a fact. We have let lands, in order not to let them go out of cultivation, at a rent which is not as large as the amount of tithe payable by the Duchy. In other cases we have reduced the rent by 50, by 40, by 30, by 20, and some by 10 per cent., only according to circumstances; but the greatest care has been taken in order to judge of each case on its own merits.

5862. In one instance, I understand you to say, that rather than let the land go out of cultivation you have let it on terms which involve an annual loss to the Duchy?—An annual loss.

5863. What county is that in?—I certainly remember two instances, one in Berkshire and the other in Somersetshire.

5864. (*Mr. Elton.*) Will you tell the Chairman the name of the parish in Somersetshire, if possible?—I would not, off-hand, say in which parish it was.

Rents in 1880 and 1893 compared.

5865. (*Mr. Chaplin.*) You manage estates in seven counties. In which of those counties do you find that the agricultural depression is most severe?—You will see that from this second statement, which gives the lettings per acre, and in Berkshire, where I think in 1880 the rent per acre was 33*s.* and 38*s.*, now it is 4*s.* 5*d.* per acre. (*See* Appendix A. XX.)

5866. In Berkshire?—Yes.

5867. I think that information would be very interesting about each of the counties in turn?—They are given in each county separately.

5868. (*Mr. Channing.*) Is the tithe specified with regard to Berkshire?—It is exclusive of tithe there in both instances. In 1880 it was exclusive of tithe, and this is exclusive of tithe also.

5869. (*Mr. Chaplin.*) The statement you refer to is the one of rents receivable during the year 1892?—Yes.

5870. And I understand, in the county of Berkshire, the rent is 4*s.* 5*d.*?—Yes.

5871. What was it in the year 1880?—For leaseholds 33*s.*, and for annual tenancies 38*s.*

5872. Can you tell me what it was in 1880 with regard to the other counties?—This printed statement is with regard to 1880. It is all given, and this is simply the same return as was handed in then, to bring it up to date.

Mr. M. Holzmann, 15 Dec. 1893.

5873. I think it would be interesting to have this upon the notes, and therefore I will ask you to take that and give me the comparison. I will take them in order. In the county of Cornwall I understand that the rent per acre on leaseholds for terms certain is 18*s.* 5*d.*?—Yes.

5874. What was it in 1880?—It was 22*s.*

5875. For annual tenancies it is now 15*s.* 5*d.*?—And it was 21*s.*

5876. Then, in the county of Devon, leaseholds are 15*s.* 9*d.* now?—Yes. They were 29*s.* in 1878.

5877. Annual tenancies are 20*s.* 4*d.*?—In 1892; and they were in 1880, 33*s.*

5878. In the county of Dorset the rent for leaseholders is 21*s.*?—Yes, and they were in 1880, 31*s.*

5879. Annual tenancies are now 18*s.* 7*d.*?—They were 31*s.* in 1880.

5880. In the county of Wiltshire the annual tenancies are now 14*s.* 6*d.*?—Yes, and they were in 1880, 25*s.*

5881. In Somersetshire the annual tenancies are now 23*s.* 6*d.*?—Yes, and were 37*s.* in 1880.

5882. The county of Berkshire is now 4*s.* 5*d.*?—Yes, and they were in 1880 for leaseholds 33*s.*, and for annual tenancies 38*s.*

5883. In the county of Lincoln the leaseholds are now 23*s.* 4*d.*?—Yes, and were 36*s.* in 1880.

5884. And the annual tenancies are now 21*s.* 1*d.*?—Yes; there were no annual tenancies in 1880.

Extent of depression.

5885. In the county of Berkshire you say the depression is greatest?—Is greatest. That is certainly owing to the unfortunate soil, on which no grass will grow for more than a year. Of course it is not bad for corn growing, but very bad for grass.

5886. And I understand from what you tell us that the reductions in rent in each county may be taken as a general indication of the extent of the depression in those counties?—As far as the Duchy of Cornwall estates are concerned.

Causes of depression.

5887. Are you able to express any opinion as to what is the chief and principal cause of this depression?—The low prices of all agricultural produce, and, to a great extent, bad seasons.

5888. And the remedy, therefore, I suppose, would be good seasons and an increase in prices?—An increase in prices.

Size and number of holdings.

5889. Have you anything else you would like to state to me on behalf of the Duchy before you are cross-examined?—I have here another statement, prepared to show the areas of the Duchy of Cornwall estates; how they are divided, in different acreages and the number of holdings. I have given here columns of over 500 acres, between 200 and 500, between 100 and 200, between 40 and 100, between 20 and 40, from 1 to 20, and below 1 acre. They are divided here according to the different counties, and all the estates are given, those in hand as well as those still held on lives. I may say there are altogether 1,570 separate tenancies, 786 below 1 acre, 458 between 1 and 20 acres, 99 between 20 and 40 acres, 114 between 40 and 100 acres, 57 between 100 and 200 acres, 45 between 200 and 500, and 11 above 500 acres. (*See* Appendix A. XXII.)

Comparison between large and small holdings.

5900. Could you supplement that by telling the Commission what class of occupations appear to have suffered the most?—Oh, decidedly the larger ones.

5901. You are of opinion that the larger the holdings, as a rule, the more they have suffered?—Yes, because they have had more capital to lay out in artificial manures, and in a bad season they have lost a great deal more than the others, who have not expended so much. Then, of course, I also think that the larger farmers employ more labour than the smaller farmers. Particularly in Cornwall, the farmers are a most hard-working race, and, especially when they have a family of sons, they can do with very few labourers, and as the price of labour has not fallen in proportion to the fall in the price of the produce, naturally the more outside labour is employed the greater will be the loss.

5902. In fact, it is upon farms of such a size that they can chiefly be cultivated by the family, that less

Mr. M. Holzmann.
5 Dec. 1893.

loss has been incurred?—The less loss has been incurred.

5903. And in the case of the larger farms, it is the men who have made the greatest outlay who have been the greatest sufferers?—They have been the greatest sufferers. Then in some cases I have indicated in the margin here, some of the great farms have had a good deal of down land attached to them. Particularly is that the case in Wiltshire. The down land there is worth probably only one-tenth of what the other land is worth. If the good land attached to it were taken away, two of the farms, certainly, would go out of cultivation altogether. I mention that because one question arises with regard to the allotments.

Allotments.

5904. Are you speaking of any particular county now?—Wiltshire. The Duchy have granted allotments for more than 25 years, wherever there has been any desire to have them. The Duchy has virtually only one parish in this particular county, and there are over 45 acres granted in allotments. If more were required, they could only be taken from some of these large farms, and the result would immediately be if, I will say, from one farm 40 acres more were taken, a farm of very nearly 1,000 acres would have to close, because these 40 acres are worth probably 3*l.* an acre, whilst the down lands are worth 5*s.* an acre, and they could not carry on their business with the down lands alone.

5905. Do I understand this to be a more or less typical parish?—No, this is an exceptional parish.

5906. I understand you to say, in the case of this parish in Wiltshire of which you are speaking, that if 40 acres was forcibly taken from the large farm in the neighbourhood, it would result in the whole of the remainder of that farm being put out of cultivation?—Certainly.

5907. (*Mr. Long.*) May we ask the witness when he used the term "exceptional case," did he mean exceptional as regards the Duchy or exceptional as regards the county.

5908. (*Mr. Chaplin.*) Would you kindly answer that question?—It is exceptional as regards the Duchy, owing to there being such a large extent of down land, and a comparatively small area of good land.

5909. (*Mr. Long.*) By that you mean only as regards the Duchy?—Yes.

5910. Not an exceptional case as regards the county?—I am perfectly sure, if there are other farms in the county under similar circumstances, where a great area of down land is occupied with a small area of good land, that if the good land were taken away forcibly then the farms would have to go out of cultivation altogether.

Mr. M. Holzmann.
15 Dec. 1893.

5911. (*Mr. Channing.*) And the thousand-acre farm, I suppose, belongs to the Duchy too?—That is so. In fact, I may say it has very nearly 800 acres of down land, and 200 acres of other land.

5912. (*Mr. Long.*) Will you kindly say whether this system which you have described is not the system almost universal in half the county of Wiltshire?—That I cannot say.

5913. (*Mr. Chaplin.*) Is there anything to make you believe that what you described to us with regard to this particular farm on the estate of the Duchy of Cornwall is in any degree exceptional in that county?—I have no knowledge of other estates in the county of Wiltshire.

5914. Have you anything further you would wish to say to me?—No.

5915. (*Mr. Long.*) I would like to ask the name of the parish?—It is Mere.

Acreage.

5916. (*Sir Nigel Kingscote.*) What is the acreage of the farms in Berkshire?—In Berkshire there are only two farms.

5917. What acreage?—The total acreage is 1,023.

5918. Any down land?—No.

Sale of property.

5919. (*Lord Cobham.*) Do you sell land at all?—Whenever it appears profitable, we sell land in the neighbourhood of small provincial towns for building purposes. We have done that in the neighbourhood of Dorchester, in Dorset, where the Duchy property surrounds the town of Dorchester.

5920. You sell it in the ordinary way?—We sell it by auction generally.

5921. Not to tenants?—In nine cases out of ten it is sold by auction.

5922. You have not sold land to tenants as a system? No, I am not aware of a tenant having applied to purchase.

5923. How much do you allow to remain on mortgage?—We cannot allow any mortgage; the full amount must be paid.

Expenditure on improvements.

5924. What fund do you take the money for permanent improvements out of?—That is from the amounts realised by sales of Duchy property generally. This is, under the Duchy Management Act, 1863, applicable for permanent improvements, for purchase of other estates, or for the redemption of land tax. Part of it is also acquired by repayments from revenue.

LORD COBHAM here took the Chair.

5925. (*Lord Vernon.*) Are you paid back any money spent in permanent improvements?—Within 30 years the total is repaid, in instalments of one-thirtieth each.

5926. That costs you 5 per cent.?—It is virtually 5 per cent.; in the first years more, and of course it gradually comes to nothing.

5927. But even at that rate you find that rather cumbersome?—That is so heavy that at the present time the Duchy have to pay back to capital 8,000*l.*

5928. Then if you were an English landlord, who had to borrow money from the Lands Improvement Company and pay back 7*l.* 5*s.* per annum, you would consider it excessive?—We find 6 per cent. or 6½ as it commences, rather heavy, because, owing to the peculiar circumstances, these improvements have to be made on estates from which the present owner of the Duchy may be said to have derived no profit whatever. On his coming into possession he has to expend the capital, on which he has to lose all the interest, and to repay the instalments.

Changes of tenancy.

5929. Have you had very many changes of tenancy?—Very few.

5930. By making reductions of rent you have kept your tenants?—In very bad seasons, and if one farm has been particularly seriously hit, there have been many occasions where a whole year's rent has been remitted; it is always according to the circumstances.

5931. Have you had many tenants who have expressed a desire to break their lease?—I do not think that there is any instance known that they wished to break their lease, because, whether they hold on lease or on annual tenancy, they get remissions and reductions of rent all the same.

Comparison between large and small farms.

5932. You say that the large farms have suffered the most. Why do you say that?—Because from the reports of the land steward, who knows them from personal inspection, we know that the circumstances are such that they require the largest remissions.

5933. You mean that you have been obliged to give the largest remissions of rents to those farmers who held the largest quantity of land?—Yes.

5934. (*Mr. Elton.*) Will you kindly tell me, for my information, where does that 30-year period of repayment come from; is it from an Act of Parliament?—Yes, the Duchy Management Act, 1863.

5935. It was not so at the beginning of the present revival of the Duchy of Cornwall?—It was not so, because the Duchy had no power to spend any capital before 1863.

5936. The Duchy, of course, was merged in the Crown?—The Duchy was merged in the Crown during the reigns of George IV. and William IV., and before the birth of the Prince of Wales.

5937. During all that long period you say there was no power to spend any capital?—There never was any attempt at it, because they had no power to sell except by special Act of Parliament.

5938. You mean, being Crown land it would be restricted from being sold by the Statute. I was not

Mr. M. Holzmann. 15 Dec. 1893.

speaking about selling. I was speaking about spending capital?—There was no capital fund at all. In those days all the lands were let on leases for lives, on payment of a fine.

5939. Then there came a period during which the Duchy was managed without the help of this Act of Parliament?—Oh, no; it has always been managed under Acts of Parliament. There was an Act of Parliament in 1844.

5940. And that enabled them to manage the affairs of the Duchy until the Management Act of 1863?—Perfectly so; and from 1843 I may say no leases for lives were granted.

The Duchy estates.

5941–50. You gave us a list of the Duchy estates, but I think you only gave the agricultural estates?—Only the agricultural.

5951. Of course it has got other estates?—Oh, certainly.

5952. For instance, an estate near London?—We have very large estates in the south of London.

5953. Kennington, for instance?—Yes, but that, of course, is not agricultural property, and I am not prepared to go into figures.

5954. I want to get any ambiguity off the notes. Then where was that great case, Sir William Clayton's case?—That is Kennington.

5955. Then there is mineral property, I think you said?—Mineral property.

5956. Is any of the Somersetshire property mineral property?—There is some mineral property. There are a few collieries.

5957. (*Lord Cobham.*) You have kept that out of your evidence altogether?—Certainly. I have not got up any evidence with regard to that.

5958. (*Mr. Elton.*) It seemed ambiguous as to whether they were agricultural estates. I only wish to show the extent of the Duchy property?—I have no objection to state from memory, but I would not be bound by any figures.

5959. I merely wish to show that the agricultural estates you mentioned do not include all the Duchy estates?—They do not, but I may say that the net income of the Duchy is very nearly three-fourths from agricultural property—well, perhaps that is too much.

5960. There is a very considerable lot of building land, is there not?—None, except in London.

5961. You have spoken, I think, of a little building land at Dorchester?—Yes; we have sold 100 acres round Dorchester within the last 13 years.

5962. You were asked, I think, whether you had offered it to the tenant; but that is, I suppose, not Fordington Field?—No, in Fordington Field all the rights were bought up by the Duchy, and now Fordington Field does not exist.

5963. Is it divided up?—It is divided up into four farms.

5964. How big was the field?—I could not say.

5965. More than 1,000 acres?—The four farms are 2,000 acres.

5966. Then there was a field, till quite lately, containing more than 2,000 acres?—I may say nearly all the fences are wire fences.

Cornish tenants.

5967. These farmers in Cornwall have got on very well in the small tenancies, you told us?—Yes.

5968. Partly, of course, as you pointed out, through having sons to help them, and being very bustling, thriving kind of people?—Yes.

5969. Also is it not a fact that the smaller farmers in that part of Cornwall are accustomed to have other trades as well, to have shares in fishing?—I cannot give any evidence on those particular matters. I can only speak on the reports which come up to the Duchy office.

5970. You do not know whether they have other businesses as well?—I do not know. I should say not, because in so many cases they are far away from the coast.

5971. It is said that Cornish people have a share in a fishing and a mine, and a croft of land. Now about the Scilly Islands, I do not think you mentioned them?—No, because that is not agricultural property as such.

5972. Market gardens, rather, the Scilly Islands?—Market gardens, yes, but they are not included in any of those statements. The Scilly Islands measure about 3,600 acres, and they are held under special lease, and they are not agricultural land.

Mr. M. Holzmann. 15 Dec. 1893.

The Scilly Islands.

5973. It does not follow because they are leases they are not agricultural land, but, as a matter of fact, they are leased by the Duchy?—They are leased by the Duchy.

5974. In one lump?—In one lump.

5975. And therefore they form a separate property?—Entirely.

5976. They would hardly come under ordinary tables of calculations as to management and so on?—No; and in this case it could hardly be included, because the lease at present held is one which was granted on the surrender of a lease for lives.

5977. I can believe so well that what you say is correct, because a lease of that kind does not come within the details of your management?—No.

5978. But at the same time you do know that there is that large property, as to which we ought to get separate testimony if necessary as to the condition of that island. These islands do not come under your rules of management. Do you manage them or not?—We do not manage them, certainly not. They are held under a special lease.

5979. What is the name of the lessee?—Mr. Dorrien Smith.

5980. (*Sir Nigel Kingscote.*) The Duchy has nothing to do with the management whatever?—No.

5981. (*Mr. Channing.*) The Duchy has not to pay any repairs, or anything?—No.

5982. (*Mr. Elton.*) Though it is Duchy property it does not come under their details of management?—No. I only spoke in all cases of what we call agricultural property in hand.

Expenditure on improvements.

5983. (*Mr. Channing.*) Mr. Elton has elicited that you get a rental from the Scilly Islands, and also from collieries, and estates, and houses, and so on, and I want to ask you whether you have to apply in the management of the Duchy lands, part of the proceeds of those other estates to the improvements and repairs on the agricultural land?—I may say that probably 80 per cent. of the capital spent on the agricultural land is derived from the sale of other property—not agricultural property, but I have no exact figures at hand.

5984. And from profits?—No; the repairs must be paid out of profits when the Duchy performs repairs, but the permanent improvements under Schedule I., Parts 1 and 2, of the Agricultural Holdings Act, are done out of capital.

5985. And they are not done out of the agricultural rents which you receive?—No; that is revenue.

5986. You have been asked about the 30 years, but there is also a limit of 30,000*l.* to the outstanding unpaid charges in respect of improvements. I want to know if that hampers you much?—That is in the Act of 1863, but was repealed in 1868, because in 1868 the 30,000*l.* limit which was originally allowed to be spent, was already then reached; and in 1868 that portion of the Act of 1863 was repealed, and the amount was made unlimited. I may state as a matter of fact 184,500*l.* have been spent by the Duchy since 1863 on permanent improvements to agricultural property.

5987–8. And the amount at any one time might be considerably over the 30,000*l.*?—As I say, it was reached in 1868 already, and then exceeded.

Dartmoor.

5989. I want to ask you a question about the farms near Prince Town on Dartmoor?—As to Dartmoor, I am not prepared to give any answers, because that can hardly be called agricultural land.

5990. You are not able to state whether the experimental cultivation of that land, which is bare moorland reclaimed, has been successful financially?—I cannot say. A considerable part of it is let to the Directors of Convict Prisons. There are other portions held by other people. But I am not acquainted with the results, except in so far that at Dartmoor also we have remitted some rents, and we have reduced some rents.

5991. (*Lord Cobham.*) To the Government?—No, not to the Government, but the Government hold probably 5 per cent. of the lands let.

Mr. M. Holzmann, Dec. 1893.

5992. (*Mr. Channing.*) My information is that that farm has been worked at a profit. I thought possibly you might be able to throw light upon it?—I daresay; because of course they have convict labour, and therefore you could not compare that in any way with agricultural land.

5993. (*Lord Cobham.*) It is not in hand?—It is not in our hands.

otments.

5994. (*Mr. Channing.*) Now, about the allotments. Are you letting allotments in other counties, or only in Wiltshire?—Oh, in all the counties. I can only give the number of allotment tenants in those cases in which we let them to the tenants direct.

5995. But in some cases perhaps you let them to associations?—We let them in different ways. We let them in some cases to a committee of gentlemen who superintend the letting of the allotments. In recent cases we have let them to local authorities.

5996. Have you any rule about that?—No, there is no rule whatever. The only difficulty is, we could not very well let direct in all the Duchy parishes, because the Duchy property is so dreadfully scattered. We have property in upwards of 90 parishes, and to appoint superintendents of allotments would be absolutely impossible.

5997. Are you able to state what the average rent of the allotment land is, as compared with the farm lands?—I should say where we have let it direct, and also where we have let it to a committee, we have reduced the rent there also. When the depression took place, when we reduced the rents on the farms, the rents of the allotments were also reduced by 20 per cent.

5998. My question was rather whether the allotment land was let at approximately the same rate as the farm land?—I cannot say that; because, of course, it depends entirely on the quality of the land, as I have pointed out before. In that case in Wiltshire one acre of land on one farm may be worth 3*l.* an acre, and another only 5*s.* The land of the Duchy varies enormously, and therefore in some cases we may let it at a rate, say, of 5*d.* per perch, and others probably for 4*d.* per perch.

5999. Take this Wiltshire parish that you referred to. If I understand you aright, there would be 40 acres which would be the best part of your 1,000-acre farm, and I suppose that would be a similar quality of land to the land let to the allotment tenants, would it not?—That I am not prepared to say, because I had simply an exceptional case in my mind, where we were applied to, to break up those 40 acres of permanent pasture—most valuable land—for allotments in addition to those already existing but probably with a view of giving up the allotments which they had at present.

6000. Which, presumably, were not such good land?—Probably so. In Mere, the allotments are held by a number of artisans. There is a silk factory, and some of these workmen are not very well acquainted with husbandry, and the result is the land becomes bad.

6001. May I ask you just this one question in conclusion? What is the rent of this 45 acres of allotments in this Wiltshire parish?—I speak without having the figures before me, but I should think that is let probably at 2*l.* per acre; I could not vouch for it absolutely.

Farms in Devonshire.

6002. (*Mr. Lambert.*) In what part of Devonshire are your farms?—In Bradninch, not very far from Bristol and Exeter.

Reduction of rent.

6003. And what reduction of rents have you in that parish?—I cannot say exactly. I have not divided them according to the parishes.

Mr. M. Holzmann. 15 Dec. 1893

6004. But you have not made anything like 20 per cent. reduction?—I think it is considerably more. The leaseholds were let for 29*s.* per acre and they are now let at 15*s.* 9*d.* per acre. The annual tenancies were let for 33*s.* per acre, and they are now let for 20*s.* 4*d.* per acre.

Dartmoor.

6005. You have a considerable amount of land on Dartmoor, I believe?—Yes.

6006. And that is taken together?—That is not taken into account because all those statements are exclusive of Dartmoor. Owing to its being such rough pasture you cannot compare it with any farming land in any way, because the estate on Dartmoor covers 56,000 acres, and I suppose we get 2,000*l.* a year from it.

6007. And what other parts of the county belong to the Duchy?—The manor of Bradford, which is close on the border of Cornwall.

6008. It is very poor land, I suppose?—Yes.

6009. How are your farms let—by tender?—When we cannot find a tenant by private arrangement.

6010. Do you get many applications by advertising when letting?—I can only, within my recollection, think of actually one farm having had to be let by tender, when we got 12 applicants for it.

Shooting rights.

6011. How about the game? Does the shooting belong to the tenants?—All the shooting belongs to the tenants. There is no reservation made of any kind.

6012. (*Mr. Dalton.*) You have no land unlet?—There is no land unlet except the woodland and waste land.

Concessions to tenants.

6013. How do you account for that? A great many landlords find it impossible to let their land?—As I have stated, the Council have found it desirable to avoid getting land into hand, and in consequence we have made the utmost concessions. As I have stated, in some cases rather than have land on our hand, we have let it without any rent.

6014. You would accept any conditions from a tenant?—From a good tenant.

6015. Rather than keep it in hand yourself?—Yes; we have good tenants owing to the considerate treatment they have received.

Cornish tenants.

6016. (*Mr. Whitehead.*) Cornish tenants are mostly small holders?—I would not say that.

6017. Are not they chiefly small holders?—There are a great many of them.

6018. And they are more prosperous than the large holders in other places?—If I might read a few figures out of this statement it will show you that in the whole of Cornwall, out of 20,000 acres, there are only three farms over 500 acres, 16 farms between 200 and 500 acres, 31 between 100 and 200 acres. There are, however, 44 between 40 and 100, 34 between 20 and 40, and 118 between 1 and 20 acres.

Market gardening.

6019. Is not the prosperity of Cornish small holders due to the fact that they cultivate a quantity of vegetables?—I would not venture to say that they are prosperous. I would say that they are hard working people, and they manage to make both ends meet by hard work.

6020. Is that by market garden cultivation?—I could not say what is their cultivation. I only take the figures as they are known in the Duchy office.

6021. You do not, as a fact, know that there is a good deal of market gardening in Cornwall?—I could not say.

The witness withdrew.

Adjourned to Thursday next at 12 o'clock.

Twelfth Day.

Thursday, 21st December 1893.

PRESENT:

THE RIGHT HON. GEORGE JOHN SHAW-LEFEVRE, M.P., IN THE CHAIR.

Viscount COBHAM.
The Right Hon. BARON VERNON.
The Right Hon. HENRY CHAPLIN, M.P.
Sir ROBERT NIGEL FITZHARDINGE KINGSCOTE, K.C.B.
ROBERT GIFFEN, Esq., C.B.
CHARLES ISAAC ELTON, Esq., Q.C.
FRANCIS ALLSTON CHANNING, Esq., M.P.
JOHN CLAY, Esq.
CORNELIUS NEALE DALTON, Esq.
ROBERT LACEY EVERETT, Esq., M.P.
JOHN GILMOUR, Esq.
GEORGE LAMBERT, Esq., M.P.
WILLIAM CUTLACK LITTLE, Esq.
WALTER HUME LONG, Esq.
CHARLES WHITEHEAD, Esq., F.L.S.

HERBERT LYON, Esq., *Secretary.*
R. F. CRAWFORD, Esq., } *Assistant*
FREEMAN THOMAS, Esq., } *Secretaries.*

Right Hon. Sir M. Hicks-Beach, Bart., M.P.

The Right Hon. Sir MICHAEL HICKS-BEACH, Bart., M.P., called and examined.

Right Hon. Sir M. Hicks-Beach, Bart., M.P.

21 Dec. 1893.

6022. (*Chairman.*) You, I think, gave evidence before the Duke of Richmond's Commission in 1880 and 1881?—Yes, I did.

6023. You then stated that you were the owner of 3,700 acres in Gloucestershire and an estate of about 8,000 acres in Wiltshire?—Yes.

Depression prior to 1881.

6024. And you gave evidence as to the depression which existed in that part of the country?—Yes.

6025. You then stated, I think, that the depression was mainly attributable to bad seasons, coupled to some extent with low prices—to the extent that prices had not risen in proportion to the deficiency of the harvests?—Yes, I think that was the general effect of my evidence.

6026. Since then you have had the further experience of 12 years, and I am afraid it has not been very much more satisfactory?—Matters are very much worse than they were then.

Reductions in rent prior 1881.

6027. Will you state briefly your experience in the interval between 1881 and the present time?—In my evidence before the Duke of Richmond's Commission, I made some general statements as to the fall in my rental between 1876 and 1880.

6028. 1876 was about the highest point, I think?—I do not know that I am quite prepared to say that rents had not begun to fall before that time.

6029. And between that year and 1881, when you gave your evidence, they had already fallen to some extent?—Yes, there had been a considerable fall, owing mainly to the season of 1879, which was, of course, a very bad one.

6030. Since then have the temporary abatements been made permanent and serious reductions of rent become necessary?—Perhaps we had better deal with the two properties separately, because of course the circumstances are not quite the same.

6031. Your property in Gloucestershire is on the Cotswold Hills, is it not?—Yes, on the eastern slope of the Cotswold Hills, sloping towards the Thames.

Reduction of rent in Gloucestershire.

6032. What has been the reduction of rent there?—I gave evidence to the Duke of Richmond's Commission to the effect that in the year 1876 with regard to six farms, the acreage of which I named at that time, the rents varied from 26*s.* 9*d.* to 20*s.* per acre. In 1880 they varied from 22*s.* to 14*s.* per acre, the 22*s.* per acre being the case of an exceptionally small farm of 200 acres; and in 1893, at the present moment, they vary from 12*s.* to 8*s.* per acre, the 8*s.* being an exceptional case, a farm of very poor light land to which I was also obliged to make a special allowance because the tenant, in the drought of this year, was left without water at all for more than three months, and had to draw it for 2½ miles.

6033. That would be a reduction of about 50 per cent.?—Rather more than that.

6034. With that reduction have you been able to keep your tenants?—My great object throughout has been as a matter of self-interest to keep my tenants, because where a man is farming well it is more important to keep a man of that class to let a farm at a higher rent to a man who would work it out in three or four years.

6035. Have you been able to keep your tenants with those reductions?—With one exception,—the case of a tenant in Wiltshire, who gave up my farm because he bought one for himself; he bought it with money made in his occupation as a large sheep-dealer,—I have kept all my tenants.

6036. Then in the Wiltshire property has the reduction been about the same?—Yes, I could give similar evidence with regard to a large property adjoining my own in Gloucestershire, if the Commission would like to have it.

6037. Will you state the details of that property?—That is a property of about 5,000 acres. A small addition has been made to it in the interval between 1867 and 1893. The rental of that property, taking the whole of it, not merely farms, but cottages and other occupations as well, was 25*s.* 10*d.* per acre in 1867. The rental in 1893, calculated on the same basis in both cases, deducting for land tax and tithes, is 11*s.* 7*d.* per acre, which shows a reduction of 55 per cent., probably about the same as my own. Then I may say that in 1867 the rents of those farms—I have got a list of their acreage here; they vary from one very large farm of 1,400 acres (which has since been divided into two farms) to farms of 687 acres, 662 acres, 441 acres, 487 acres, and 402 acres.—farms of that size in 1867 varied from 31*s.* 9*d.* to 22*s.* per acre. In 1893 they varied from 12*s.* 9*d.* to as low as 8*s.* 5*d.* per acre.

6038. Is this the Wiltshire property you are speaking of?—This is in Gloucestershire. This is not my property, it is a property adjoining mine. It was purchased by the present owner in 1867, and he has spent a very large sum of money upon it in improvements of all kinds, and that is the result.

Reductions of rent in Wiltshire.

6039. Now with regard to the Wiltshire property, what do you say?—In my neighbourhood, which is the hill country of Salisbury Plain, there has been an enormous reduction in the value of land during the interval of which I speak. I know an instance of a farm of about 800 acres adjoining my own property, including a very good house and garden, with some good water meadow and a number of cottages, and a larger proportion of good arable land than is usual on that class of farm; I have been told that about 30 years ago it was sold for 26,000*l.* and two years ago it was sold for less than 8,000*l.* The buildings and

Right Hon. Sir M. Hicks-Beach, Bart., M.P.
21 Dec. 1893.

cottages were in very bad repair, which of course reduced the value to some extent.

6040. Was it sold with the tenant or without the tenant?—It was tenanted when sold. It was purchased by the man I have already mentioned, who was a large sheep-dealer, and who gave up one of my farms when he had bought this one. The mortgagees had foreclosed, and that is how it came to be sold. Adjoining me on the other side is a very good sporting property of more than 3,000 acres which has been in the market for years, and without any result.

6041. What has been the reduction of the rents on your Wiltshire property?—Well, I should explain that the farms are rather peculiar ones in that country. They run in long strips from the River Avon to the Down, each has its bit of water meadow. Some better class arable and then at the upper end large pieces of down and light arable, much of which is now really worthless, so that the rent per acre is no more a fair test of the value of decent land in that country than it would be a test in a hill-farming district in Scotland or the north of England.

6042. The farm includes a great deal of down land, I think?—It includes a great deal of down land. I have here, for instance, a farm of 1,470 acres of mine, which includes 600 acres of down, and another of 973 acres including 500 acres of down, and another of 1,718 acres, with 660 acres of down, and so on, all that down land being valuable only as a sheep run, the value of which is always low. But in 1876 the rental of those farms such as I have described varied from 22*s.* to 14*s.* per acre. The higher rental of course was that of the smaller farms with less down land. In 1880 the rental varied from 16*s.* 9*d.* to 10*s.* per acre; in 1893 the rental varied from 10*s.* 6*d.* to 7*s.* 2*d.* per acre. In addition to that I have been obliged to make this year temporary allowances of 15 per cent., or in one or two cases a little more, which of course may or may not become permanent.

Causes of the depression.

6043. Was that due to the exceptionally bad drought of this year?—To the exceptionally bad drought of this year and the low prices.

6044. But apart from this year should you say that the reductions have been due to continuous bad seasons or to low prices?—I think to low prices.

6045. Then it differs somewhat from the position in 1881, when you gave evidence before the Duke of Richmond's Commission. At that time you held that the depression was mainly due to bad seasons?—At that time we only had experience of three or four years, and now our experience has extended over a much longer period, within which there certainly have been good seasons.

Expenditure on improvements.

6046. During that same period have you been compelled to make a considerable outlay upon your two properties?—For the last 35 years, ever since I have been in possession of my properties, I have practically spent my income upon them. About the time that I gave evidence before the Duke of Richmond's Commission I began to curtail my expenditure on account of the fall of rents, and ever since then I have been compelled to curtail it still more, so that now I am able to do very little beyond ordinary maintenance.

6047. Then up to lately you have spent the greater part of your income in improvements?—Yes, in improvements.

Burdens on land.

6048. And you could only limit it lately by the income having fallen in so much?—Yes. I should perhaps say with regard to the property in Wiltshire that the permanent burdens upon it are very heavy. I have two cases here out of the farms I have named; on one farm the tithe at the reduced value, and the land tax together, amount to five-elevenths of the gross rent which I have received this year.

6049. (*Mr. Lambert.*) What is the acreage?—It is a large acreage, but there is a large amount of down; it is 1,470 acres.

6050. (*Chairman.*) What is the rent?—Those two charges amount to five-elevenths of the rent. On another farm, a large acreage of more than 1,700 acres, the tithe and the land tax together are very nearly half of the gross rent, deducting the temporary allowances I have made.

Land in hand.

6051. You have got one farm in hand yourself, I think?—I have a farm in hand in Gloucestershire if the Commission like to hear anything about that.

Right Hon. Sir M. Hicks-Beach, Bart., M.P.
21 Dec. 1893.

6052. How long have you worked it yourself?—Well, I always had part in hand, the park and other grass land which I occupied with the house when I used to live in Gloucestershire. That was about 100 acres. Then in 1880, as I told the Richmond Commission, I had to take 370 acres of poor arable in hand, which had been rented by a tenant who had failed. That I farmed until the autumn of 1886 with fairly good results for about three years, until my bailiff, who was an old man, became ill and eventually died, with the result that the farm was left by him in anything but the condition that it ought to have been. In 1886 I was obliged to take another 280 acres in hand, being, so to speak, the top end—the poor end—of a large farm which I then divided. The farm was 77 acres, and it is now 435 acres. I left the 435 acres, the better part of the farm, with the tenant, and took the poorer part of it in hand; so that altogether since 1886 I have had 750 acres in hand. As I said in 1886 it was not in good order, and, of course, one lost money for the first two years; but the net result of my five years farming, up to Michaelmas 1892, has been that I have had 5 per cent. on the capital with which I stocked the farm, and an average rental of 250*l.* a year on the 750 acres. Of course I have had in addition the sporting value of the land, which is something, and I have kept a herd of 120 deer, in the deer park, so that up to 1892 I do not think I did very badly. Then this last year has been positively disastrous. We have had in that county two droughts, one up to the end of July, and the other after, I think beginning about the middle of August, with the practical result that we have had no hay and no aftermath, and we have been obliged to sell off a good deal of store stock early (which I intended to fat in the winter), at very low rates, and for the year ending Michaelmas 1893 I certainly shall make very little rent, even if I make the full interest on my capital.

6053. Then this last year has been very disastrous owing to the seasons?—This year is a disastrous one. I have separated it because it is not a fair thing to take it as a sample.

6054. Up to last year, as you have stated, you made interest on your capital and rent, though not a large one?—I should say that with regard to the land which I had in hand, with the exception of the 100 acres of old pasture, the principal part of it is the poorest land that I own.

Large and small farms compared.

6055. Are you able to say whether the large farms or the small ones have passed through this period of depression?—My experience is so much confined to large farms that I could not speak very much of smaller ones; but so far as it has come within my observation I have no doubt that the large farms have suffered most. In the last 50 years, until comparatively a recent date, all persons writing or speaking with regard to the improvement of landed property were unanimous in impressing upon landowners that they ought to throw their farms together in order to obtain tenants with large capital, and thus have the land better cultivated. I do not think that the result has been a success financially, and I am quite sure it has led to a good deal of ill-feeling between farmers and their labourers.

6056. The number of small farms by which labourers could rise to better positions has been enormously diminished, I presume?—Yes. In many parts of the country where small farms certainly existed in greater numbers than they do now—before the time of which I speak—there is really no opening for a labourer to take a small farm.

6057. This "opening" that you speak of is the cause of the ill-feeling between the labourers and the farmers?—There is no intermediate class.

Sub-division of farms.

6058. Do you think that there are many of these large farms in your district that might be broken up with advantage to the smaller owners?—Of course in a purely sheep-farming district—and both of the districts to which I have alluded may be called sheep-farming districts—of course Salisbury Plain is essentially so, you cannot have many small farms. Most of the land could only be worked through sheep-farming, and small farms and sheep-farming scarcely go together. But I have no doubt there might be more small farms than there are, because there were more 50 years ago.

6059. I presume one reason which militates against their being called into existence again is the one of capital outlay in buildings?—The landlords are in the position which I have described; they can hardly sell their property if they find themselves unable to keep

Right Hon. Sir M. Hicks-Beach, Bart., M.P.

21 Dec. 1893.

Expenditure on improvements.

it up properly, and they certainly are unable, if they retain their properties, to find capital to put up the necessary buildings for small farms.

6060. Is that the general condition of the landowners in the district?—I have no doubt in my own mind that, taking the whole of the hill districts of Wiltshire and Gloucestershire, not a single landlord, large or small, is in a position to improve his property now from the rent that he derives from it.

6061. The rents are so reduced as compared with what they were a few years ago, that the landlord has no longer any margin with which to make improvements?—Very many of them, I am quite sure, must have the very greatest possible difficulty in maintaining buildings and cottages.

6062. Have you borrowed for the purpose of improvements from the Lands Improvement Company?—Yes, I have to some extent, but it is a very expensive process. I have here the published terms of one of the companies, the Lands Improvement Company, and no doubt the Commission are acquainted with them; but perhaps I may shortly say that the loans are repayable in 25 years, an addition of about 7 per cent. has to be made in every case for the expenses of the Company, so that, to quote the instance they give, if you borrow 2,000*l.*, you have to pay 2,140*l.*, and the terms are for loans up to 200*l.*, 6*l.* 12*s.* 4*d.* per cent. per annum for 25 years; for loans between 200*l.* and 500*l.*, 6*l.* 10*s.* 8*d.* per cent. per annum for 25 years, and for loans from 500*l.* upwards, 6*l.* 7*s.* 4*d.* per cent. per annum for 25 years.

6063. Making it a somewhat heavy charge?—Making it a very heavy charge for the loan.

State loans for improvements.

6064. Have you considered the expediency of the State lending money at more reasonable rates for the purposes of improvement?—I made that suggestion long ago in my evidence to the Richmond Commission, and I have frequently repeated it since. I see no reason whatever why, when money is advanced for such a purpose in Ireland, it should not be advanced in Great Britain if it is needed, and under present circumstances it is needed.

6065. Would you give all the landlords in your district these advances, as they seem to be unable to afford any improvements at the present moment?—I do not say that, because of course there are many landlords in that district as in other parts of England, whose income is largely derived from other sources than the ownership of land.

6066. But where they are merely owners of land, and have no other property, do you consider them unable to spend all the money necessary for the improvements of their estates?—There is no margin in the rental for it.

6067. Have you considered what difference it would make if money were advanced by the State on the terms that the advances are made in Ireland?—Well, that is of course a matter of calculation. In Ireland the terms are under several Acts relating to the subject. The terms for advances to landowners would be 3½ per cent. interest, repayable within a period of 22 years, and in one class of cases that term may be extended to 40 years, which materially eases the repayment.

6068. How would that work out as compared with 6*l.* 12*s.* and 6*l.* 10*s.* that you spoke of charged by the Land Improvement Companies?—I have not the figures showing the difference. Of course there would be a material difference.

6069. A material reduction?—Not merely in the rate for interest, but also because, as I have pointed out, an addition has to be made in the sum borrrowed in the case of those companies in England for the expenses of the company; and the addition for similar purposes made in the case of advances by the Board of Works in Ireland is so trifling as to be almost nothing.

6070. Therefore there would be a considerable relief if money were lent by the State in the same manner as is done in Ireland?—Yes; a considerable relief. This brings me to a very important matter. I am serving now as a member of the Royal Commission on Labour, and being interested in agriculture myself, I have given special attention to the reports of the Assistant Commissioners whom we have sent about the country to inquire into the condition of the agricultural labourers, and particularly into the condition of their dwellings. There has been a very general consensus of opinion on the part of those Assistant Commissioners that, although very much has been done of late years to improve labourers' cottages in Great Britain, very much remains to be done; and I confess, under such circumstances as those to which I have referred, I do not see how it is possible for the necessary improvements in labourers' cottages to be brought about without some facilities of the kind are given to private landowners. I wish to point out in order to meet objections which have been made—it would be perfectly possible to provide, in return for such advantages, that there should be periodical inspection of the cottages built during the period of repayment, so as to secure that they would be kept in good order; that conditions should be laid down as to the rents at which they should be let; and as to the conditions of tenancy. The rents of cottages now built by large landowners are generally so low that I am quite sure there will be no real difficulty in making proper conditions of that kind. I think that the possibility of landowners, whether large or small, obtaining advances of the kind, should be a great inducement to small purchasers of land. I am sure there are many persons even in the position of agricultural labourers in the country who would be glad to purchase land, especially if land could be purchased by way of instalments, as it is now frequently sold by the Ecclesiastical Commissioners, and might be sold by ordinary landowners. I am sure that there are many labourers who would be too glad to purchase land in that way if they could obtain a loan for the purpose of erecting a cottage on it at a reasonable rate. I think that a great deal might be done to bring the labourers on to the land, so to speak, in the way I have indicated.

Right Hon. Sir M. Hicks-Beach, Bart., M.P.

21 Dec. 1893.

State loans for improvement of labourers' cottages.

6071. To give them fixity of tenure?—To give them real fixity of tenure; they would be freeholders.

6072. In the cases of the advances for labourers cottages in Ireland, if I recollect aright, the local authorities have power to buy the land compulsorily for the purpose, and then rent the cottages themselves?—Yes.

6073. And become practically landlords to the labourers?—They become landlords.

State loans for erection of cottages.

6074. I was going to ask whether you would advise that that process should be adopted of lending money to the landowners for the erection of cottages?—Please remember when I speak of landlords I do not speak of owners of large properties alone. I attach greater importance to advances to small owners than to large owners, But I want these things to be done. There is no doubt that labourers' dwellings require improvement to a very great extent, and I see no other way in which it can be done. I do not think that the system to which you allude has been a very great success in Ireland. I think the rate of interest charged by the State is in some cases as low as 3½ per cent., but if the Commission were to look at the reports which were made by our Assistant Commissioners to the Royal Commission on Labour on this subject, they would find that this Act has been by no means adopted throughout Ireland generally. It has been largely adopted in Munster and Leinster; hardly at all in Connaught or in Ulster; and probably in Connaught the state of the cottages is worse than anywhere else, but the unions were too poor to adopt the Act. The reports that I have mentioned refer to scamped work by the builders of these cottages, owing to the absence of proper superintendence, of course, on the part of the guardians. In other cases the cottages, when built and inhabited, are not properly kept, because the people are not civilized enough to keep them properly, and there is nobody to look after them, and the financial result has been anything but satisfactory. The rents charged are necessarily low, and are not by any means properly collected in several cases.

6075. I presume the local authorities find considerable difficulty in collecting the rents from a large body of small holders?—At any rate they do not collect them, and the whole transaction must necessarily result in a burden upon the rates, because no rents that could be charged would come up to the amount that would be required for repayment of the loans; but it results in a very much larger burden than it ought to because the rents are not properly collected. And further, we have evidence of a very dangerous demand—arising from those labourers who have not had the good fortune to obtain cottages of this class, that they should be supplied with cottages at equally low rents in a similar way, and the universal adoption of a plan of that kind would practically ruin the ratepayers.

Right Hon. Sir M. Hicks-Beach, Bart., M.P.
21 Dec. 1893.

6076. I rather gather that you recommend, in preference to the Irish case, that money should be advanced to owners of land, whether large owners or small owners, for the purpose of erecting these cottages, rather than that the local authorities should themselves become builders?—I think so.

State loans for constructing light railways.

6077. Do you think that a further example might be taken from Ireland in the case of rural tramways?—Well, the Commission are aware that very much has been done for Ireland in the matter both of loans of money and of grants of money to promote those means of communication in the poorer districts. Even in England there are districts now remote from railways in which some cheap means of communication of that kind would be of very great advantage, but which they certainly cannot provide for themselves, and which it would not pay an ordinary speculator to provide for them. The large railway companies naturally no more care than the large Irish companies did to promote extensions which would not pay their cost. I do not see why there should not be some means of making advances by the Government, of course under careful conditions to secure the proper working of such railways and their proper construction, in England as in Ireland.

6078. Would you say that the light railways should be undertaken by the local authorities or by the landlords?—I think that the example of the Irish light railways might be followed. The larger companies were invited to undertake them on certain terms, I believe, and that secures their proper construction and their future working.

Allotments.

6079. Is there much demand in your district on the part of the labouring men for small holdings?—There is a great demand for allotments, that is to say, allotments of an acre, and many of those who have obtained such allotments and work them satisfactorily, as I am bound to say is generally the case, desire more. I have let a considerable amount of land in the parish in which I am living now in small tenancies of that kind, ranging from 7 acres downwards.

6080. Are they taken by men who employ themselves as labourers in this way?—The larger ones would not be taken, of course, by men who are actual agricultural labourers, but I believe there are men, actual agricultural labourers, who are occupying as much as 2 acres, and doing it well.

6081. Is it with spade cultivation, or is much of the 2 acres in grass land?—They very often get it ploughed for them, and pay for its being ploughed.

6082. Should you think that could be extended?—I am sure it might be extended. Of course it would only apply to land near the village where you have cottages grouped together in villages, or to land within a reasonable distance of a cottage.

Major Poore's experiments.

6083. Has there been an experiment in this district by Major Poore?—Yes; I think that is a case into which the Commissioners ought to inquire. I can only speak generally of it, because unfortunately, although I have seen the place, I have not got the precise facts, but I may say generally it is situated at Winterslow, near Salisbury. The labouring population is not confined to ordinary agricultural employment, but many of them work in the winter in the large woods near the parish. Major Poore purchased at a very cheap rate, rather less than a 200-acre farm, which I heard was let practically for the payment of the tithe before he bought it. He then sold off the homestead and about 80 acres to an individual, leaving part of the money on mortgage, and sold off the remainder, about 112 acres, in small plots. It is rather a curious arrangement that he has made, and one of a rather complicated character, the purchasers of these small lots are in something like the same position as copyholders, and they are to pay the purchase money by instalments.

6084. I suppose the rest, as it were, is fined down by instalments to a point when the permanent rental will be very much less than the real rent and more like a copyhold payment; something of that kind?—I do not think there will be any payment after the lapse of a certain number of years.

6085. And that is an inducement to them to become owners, I suppose?—Yes. I saw myself that they had built a couple of cottages on two of those allotments, although the scheme was only started a year and a half ago, and there are some other buildings.

6086. At all events it shows a desire on the part of the labourers of that district to become permanently connected with the land?—Yes.

Right Hon. Sir M. Hicks-Beach, Bart., M.P.
21 Dec. 1893.

6087. Referring for a moment to your own farm, I think you said until last year you had not done badly in respect of your own farm; you had paid interest upon your capital and you had made a rent, although not a large rent. With that experience, do you think that the tenant farmers in the district may have had the same experience where their rents had been largely reduced?—I do not think the tenant farmers of the district, where their rents have been largely reduced, suffered very much until this year; but I do not think they made money.

Condition of tenant farmers.

6088. They held on?—They held on.

6089. Neither losing nor gaining much?—Yes.

6090. But of course this year has been a disastrous one for them?—Yes.

6091. But apart from that it would seem that the very large reductions of rent have met, to a very large extent, the difficulties of the position?—Well, they have kept people going who were actually on the land; but there is no inducement, so far as I know, in the present position of farming in that district to attract persons to become farmers. So that, of course, when existing tenants leave or die out, it would be no very easy matter to replace them.

Difficulty of letting.

6092. When farms have fallen vacant, have you found great difficulty, when you have had any vacancies in the last 12 years, to find tenants?—A farm in Wiltshire fell into my hands at Michaelmas 1892. It was the case of a light land farm, a down farm, 640 acres, which the tenant left because he purchased the farm of which I have spoken. The rent of it was only 250*l.* for 640 acres; but I never had a single offer for it, nor any suggestion from anybody that he would take it at any price. I had to take it in hand, and I have now succeeded in letting it on a long lease to an owner of racehorses, who has converted the buildings into a training stable, and I have undertaken to lay it down to grass myself, and then he will pay me the old rent.

6093. There are no competitors?—There are no competitors for farms of that class. That was a poor farm of light down land, which, of course, would be the worst.

6094. But in the case of the better farms, do you say that it is possible to let them, or not?—I think there would be very considerable difficulty with the larger farms.

6095. From want of men of capital, I presume?—Yes.

Assessment to rates.

6096. Have the tenants in your district got the full benefit of their reductions of rent in their assessment for local taxation?—Of course where the reductions have been permanent, they have.

6097. You think that they have had the full benefit?—I have no doubt of it.

Loans for improvements.

6098. (*Lord Vernon.*) In regard to this question of raising money for permanent improvements, do you not think it would be a very simple arrangement that the trustees should be allowed to raise money for permanent improvements themselves?—The life-owners of settled estates can obtain loans from the improvement companies for improvements of property.

6099. But I gathered from what you said that the rate from the Improvements Company is 6*l.* 12*s.* 4*d.*, plus, you said, 7 per cent. commission?—Yes.

6100. Therefore that works out, as I make it, to about 7*l.* 5*s.* 0*d.* per annum?—The 6*l.* 12*s.* 4*d.* is the rate for the smaller loans; the larger loans above 500*l.* are 6*l.* 7*s.* 4*d.*

6101. But working them out, the annual charge, as I make it out, comes to about 7*l.* 5*s.* 0*d.* on the actual expenditure?—Well, of course, I take your figures; they could only apply to 6*l.* 12*s.* 4*d.*, I imagine.

6102. If trustees could raise money, as they can now, at 3½ per cent., do you think there would be any objection to their raising money and the life tenant spending it in the same way as now, money resulting from the sales of property under Lord Cairns' Act?—I think there should be provision for repayment by annual instalments.

Right Hon. Sir M. Hicks-Beach, Bart., M.P.
21 Dec. 1893.

6103. Why more so than under Lord Cairns' Settled Estates Act?—I am not prepared to say that it would not have been better to have had such a provision in that Act, because after all those improvements, though permanent, are not everlasting.

6104. But the tenant for life in succession, keeps them in repair, or is supposed to, and practically does so?—Speaking quite offhand, without having considered the question, I do not quite see why any power given under Lord Cairns' Act should not apply.

6105. Because in that way the tenant for life could raise money at 3½ per cent., and only pay 3½ per cent., with the obligation of keeping them in repair, instead of paying 7*l.* 5*s.* a year?—Yes.

Small holdings.

6106. I think you said that it would be a good thing if land could be sold to small holders by instalments, and I think you said it was done in some districts?—It is done by the Ecclesiastical Commissioners, I happen to know, because I am one at the present moment.

6107. Does not the law of entail prevent the sale of land by instalments?—You mean that no settled property could be sold to a purchaser paying by instalments.

6108. Yes?—I am not prepared to answer that question; I do not know.

State loans for erection of labourers' cottages.

6109. I am given to understand that it is. Then you suggested that cottages should be built with money advanced to life tenants, and that they should be let at a low rent; is it not the fact that the cottages as a rule in England, in agricultural districts, are let at so low a rent that they not only yield no interest, but hardly enough to keep them in tenantable repair?—That, I think, is true of cottages belonging to the larger owners, not of those belonging to the smaller owners, so far as my experience goes.

6110. Then you said that the ratepayers would be ruined if the cottages were put up as they had been in Ireland?—I did not quite say that; I said that a demand had arisen in Ireland, according to the reports of the Assistant Commissioners of the Labour Commission, from labourers generally, that all labourers should be put in the same position as to having cottages provided for them at the expense of boards of guardians as those labourers who are now living in cottages so provided, and that if instead of the arrangement which was now only of course applied to a very small comparative number, all the cottages were so provided, the ratepayers must be ruined.

6111. Then in referring to this estate that you said had been cut up, you said you had seen cottages erected upon it, do you think it is advisable to attract labourers in that way to the land, unless you are almost sure that they can make a fairly good income of it?—I said that in that case the circumstances were peculiar. The parish is in the neighbourhood of some very large woods, where there is frequent employment, perhaps I might almost say constant employment, during the winter, and therefore those persons are not in the position of ordinary agricultural labourers. I do not myself think that planting the agricultural labourers on small allotments without a reasonable prospect of their being able to earn wages also, would be any good to them.

6112. It would not be much use unless they had some subsidiary employment, I suppose?—They must have some subsidiary employment or other.

Powers of tenants for life.

6113. (*Mr. Elton.*) I should be glad to hear your views with reference to what you said about the desirability of fixity of tenure of cottages. Would you consider that it would be a reasonable policy to adopt to allow tenants for life to grant small pieces of land at what you may call ground rents or chief rents, using the analogy that you used about copyholds? At present they can only sell for a fixed price at a lump sum, except with the leave of the court in special cases. But would you consider that it would carry out the policy which you mention to allow tenants for life to sell plots to cottagers at practically on a freehold ground rent?—You know much better than I do the powers of tenants for life.

6114. I assume that the tenant for life has not the power to do it now. But would it not carry out the policy you suggested if the tenants for life were able to do that?—I should be glad to give the tenant for life as full power as possible, consistent with the maintenance of the estate in trust.

Right Hon. Sir M. Hicks-Beach, Bart., M.P.
21 Dec. 1893.

6115. That is a complete answer. Then you have already pointed out that it would be a good policy for an estate to have agricultural labourers, and in certain cases attracting them by fixity of tenure?—I did not say "fixity of tenure." What I said was "conditions of tenancy."

6116. I thought you said "fixity of tenure"?—That was not my intention.

6117. Permanent tenancy is what I mean?—That was when I was speaking of loans to owners of land for the purpose of building cottages.

Loans for improvements.

6118. Of course what you said about the expense of those land improvement loans is taken subject to the fact that at present the trustees can apply what is called the land money or money to be laid out in land in redeeming those loans as at present?—Yes.

6119. So that that would reduce the interest at once in those special cases?—Yes.

6120. And therefore those charges may be redeemed, and they may also apply their money in permanent improvements in the way you mentioned?—Yes; of course you are speaking of cases where the trustees of the settled estate have money which they can so apply.

6121. Yes, land settled to be laid out?—But that is not by any means the case in every settled property, I am afraid.

6122. I put my question rather carefully, that what you said as a general rule is subject to the exception of cases where the trustees have not money which they can apply?—Yes.

6123. Do you know Mr. Squarey, whose works I have read?—I know him by name.

Sub-division of farms.

6124. I recollect reading a work by Mr. Squarey in which he said that the old tenure in Wiltshire consisted of small farms, copyholds in lots of about 40 acres with large rights of pasturage, and very old farmhouses and homesteads which are now generally consolidated into larger farms. Would that be at all correct in your experience?—I think the lifehold system was a very favourite system in Wiltshire. When I first came into possession of my property there were several cottages upon it which had been let out by my ancestors in that way, and the invariable result was that when the lives fell in the cottages fell in.

6125. It varies in different districts. Would those old homesteads and houses be practically available now towards reconstituting such small holdings as we have been speaking of?—No, because the buildings no longer exist, as a rule.

6126. I ask because I know a district, not in Wiltshire, where they are better built, and they exist still, and could be used; but that is not the case in your experience?—No.

6127. (*Mr. Channing.*) I think in your evidence before the Richmond Commission you spoke of the Wiltshire estates as having been valued in 1855 on the basis of the prices of the chief commodities then?—Yes.

6128. The prices given were 6*s.* for wheat, 4*s.* for barley, 6*d.* per lb. for mutton, 1*s.* per lb. for wool, 1*s.* per lb. for butter, and 6*d.* per lb. for cheese?—Yes; butter and cheese were practically inapplicable, because they are not produced in that district.

Reductions of rent.

6129. Your evidence shows that you made very substantial reductions within a very short period of the severe depression setting in. I think in your evidence in 1881 you stated that you had made very large reductions in both those estates, if I remember right?—Yes.

6130. And the reductions named to-day are still greater—very considerably greater?—Very considerably greater.

6131. The question I want to ask, then, is whether you have not, in fact, reduced your rents very considerably more than the fall in prices since the time at which the valuation was first made; it seems so to me? My rents are infinitely below the point at which they were fixed by the valuation of 1855.

6132. That is what I was inferring, and that you had really reduced your rents more largely than the mere fall in prices seemed to require?—Certainly; but then, of course, the fall in prices is not the only element. The rents which I gave as having been paid in 1876 were practically the rents of the valuation of 1855, with

ight Hon. Sir M. Hicks. Beach, art., M.P.

Dec. 1893.

ate loans.

two or three exceptions, in which new tenants had come in, and the rents had been increased.

6133. And therefore landlords had to consider a great many other questions besides the question of prices?—Yes.

6134. A question has been brought before us on which I should like to ask your opinion. You have expressed a very strong opinion that the State might with advantage to agriculture make loans to landlords and to small owners of land as well as to large owners of land at a low rate of interest. The suggestion has been made to us that in the present state of prices and the present want of capital of landlords with large estates, it might be advisable to extend the principle of loans to tenants also on a joint security; what is your opinion on that?—My experience as a landowner is certainly this: that no tenant wishes to spend a penny in permanent improvements, and very often it is quite as much as he can do to provide capital for the proper cultivation of his farm, and that he would not join in such security, if he did, his security might not be worth much.

6135. Under present conditions; but if the agricultural tenant had some form of security of tenure, with some greater certainty as to other improvements, do you think the position would be different?—Then I think you would deprive the landlord of the control over his property which he now has, and it would indispose him to spend money on it in any way.

6136. I think you said that you knew of many cases of labourers who were willing to buy land and also cottages, I think you said, if they could have loans at low rates?—No, I did not quite say that, because I cannot speak of individual cases. I have given you a case in which a farm was sold in that way to labourers, and taken up readily by them, and I have no doubt in my own mind that in other parishes there are labourers who would be glad of the same opportunity, but I could not give individual cases.

6137. I wanted to ask in that connexion, as a possible alternative to the system of State loans which has its disadvantages, as you have pointed out in Ireland, whether you have considered the possibility of loan societies, such as have been carried out very successfully in Germany?—No, I have not sufficient acquaintance with those loan societies to speak of them.

lousing of Working lasses Act, 890.

6138. Have you any information as to any board of guardians having tried to put in force the third part of the Housing of the Working Classes Act of 1890, which gives very nearly the powers of the Labourers (Ireland) Act? There is no case of boards of guardians taking it up?—No such case has ever come under my notice.

abourers Ireland) ct.

6139. What is the real advantage of the Labourers (Ireland) Act as compared with the third part of the Agricultural Holdings Act?—I believe that the Labourers (Ireland) Act gave very much larger powers than that as to obtaining land and as to building. I do not know precisely what the powers of the English boards of guardians would be to obtain money from the Government for that purpose.

'arming by ailiff and y tenant armer ompared.

6140. You spoke of your experience of this farm you had in hand; what inference do you draw from that as to the possibility of agriculture paying a tenant farmer in the present conditions of land such as yours?—I think it may be safely assumed that any result that I was able to obtain through a bailiff, who was a very good bailiff, ought to be beaten by a tenant farmer who looked after his own affairs. That is all I would say as to that, of course if he was possessed of sufficient capital.

6141. Then even on an estate like yours where you have to make very great reductions, you think possibly on an arable farm under good conditions of course, leaving out the present year 1893, taking the average of years, it is still possible to make a reasonable profit?—A great deal depends upon what you mean by "reasonable." You must have a sufficient profit to attract persons into a business or it will not do. I suppose that it would be considered that a farmer ought to be able to make 10 per cent. on his capital. I doubt if he can do that.

Tenants' capital.

6142. The capital of farmers has very much decreased, has it not?—Very much, I believe.

6143. How many years rental on your rents do you suppose it represents now?—The capital of my tenants, do you mean?

6144. Perhaps that was a question I ought not to put, but putting it generally, what do you say?—I am fortunate in my tenants, in one way I think that my Wiltshire tenants are men of capital, one or two of them are men of very large capital, and the question is not what rent they can afford to pay, but what rent they choose to pay.

Right Hon. Sir M. Hicks-Beach, Bart., M.P.

21 Dec. 1893.

Shooting rights.

6145. I understand that you generally let the shooting to the tenants, do you not? You have done so in a good many cases?—I have done so in a good many cases.

Tenants' capital.

6146. Where reductions were not made promptly such as you have made after the bad year of 1879, where heavy reductions were delayed for some years, you would expect the capital of the tenants to be seriously diminished, would you not?—It would of course be diminished to some extent if reductions were not made in time. But my experience of farming has convinced me that the rent bears a very small proportion to the total outgoings on the farm.

Low prices.

6147. (*Mr. Lambert.*) You attribute the depression of agriculture only to low prices?—Mainly to, not only to low prices.

Protection.

6148. Would you advocate any artificial increase of prices by placing a moderate duty on foreign produce?—Well, I came here to day rather to speak as an individual landowner than as a politician. I, as an individual landowner, would like such an attempt to be made, but I look upon it as impossible.

Co-operation.

6149. Do you attach any importance to co-operation amongst farmers for selling and buying their produce? I think you said you knew a sheep-dealer who had bought a farm with the proceeds of his profits?—I do not quite see how that bears upon co-operation. We have in that part of the country a few very large dealers, and the dealer in question is a man who sends many thousand sheep to fairs, which he purchases from different persons all over the country. It is a very large business, in which a large amount of capital is embarked.

6150. Do you think that money would be enabled to be saved by a small amount of co-operation by the purchaser being brought nearer to the producer?—I do not think that the class of business in which this dealer has made his money could be done by co-operation. Of course if it were possible, which I very much doubt, for farmers by co-operation to obtain the profits of the middleman, they would be better off than they are now.

Labourers' cottages.

6151. You spoke of giving to the labourers some permanent tenancy; do you think it is desirable to give them a permanent tenancy?—I do not think I advocated a permanent tenancy; what I advocated was an opportunity for labourers to become purchasers of land upon which they might build cottages, and practically become freeholders.

6152. What advantage would they derive from that?—I am not at all sure that their actual position in the end would be in many cases better than it is now. In some cases undoubtedly it would; it depends upon the man, but there is a very great desire on the part of the labouring class for something of the kind, I am quite sure.

6153. You would therefore remove all the artificial obstacles in the way of selling the land?—As far as I could.

6154. Why does the labourer attach any importance to being a freeholder or a small holder?—A desire for independence.

6155. Would you give the same facilities to tenant farmers?—Certainly, but as far as my experience goes, there is no desire among tenant farmers to buy land, least of all at the present moment.

Condition of tenant farmers.

6156. With adequate reductions of rent and average fertile seasons can the tenants prosper?—I am afraid that is a question which it is very difficult to answer. The worst of the present situation appears to me to be this, the steady declension of prices. I think years ago we thought we had seen the bottom, now nobody can see the bottom; that is the real difficulty.

6157. (*Chairman.*) I rather gather from you that two years ago if prices had remained as they then were, things had reached their level, and that the farmers rents had been reduced in proportion?—I forget exactly, but I think two or three years ago wheat went up as high as 48*s.* per quarter or even more, and many wheat growers, persons interested in the part of the country

Right Hon. Sir M. Hicks-Beach, Bart., M.P.

21 Dec. 1893.

in which I am interested, were extremely hopeful of the future.

State loans for erection of cottages.

6158. (*Mr. Dalton.*) About the advances of money to labourers for the purpose of building dwelling-houses, do you think they should be made by the State or by the local authorities? There was, I think, a Bill this year which was read a second time in the House of Commons, which proposed that the local authorities should advance the money?—Yes, I had not actually considered that point. I do not quite see the advantage of the advances being made by the local authorities except that it might be more easy in that way to secure proper inspection; there is an advantage, I think, in that.

6159. (*Mr. Little.*) I should like to ask if you can give us the exact terms upon which money is now advanced by the State to boards of guardians in Ireland?—Yes, I have them now in my hand. I find that in October 1885 the Local Government Board for Ireland announced that for the future loans for the purposes of the Labourers Dwellings Acts would be made under the following conditions as regards terms of years and rates of interest. For loans repayable within a period not exceeding 35 years, 3¼ per cent. shall be charged. For loans repayable within a period not exceeding 40 years, 3½ per cent. shall be charged. For loans repayable within a period not exceeding 50 years, 3¾ per cent. shall be charged. The annuities covering principal and interest calculated upon the periods chosen for repayment of the loans would be as follows:—For a loan of 100*l.* repayable in 35 years at 3¼ per cent., 4*l.* 16*s.* 6*d.* per year. For a loan of 100*l.* repayable in 40 years at 3½ per cent., 4*l.* 13*s.* 8*d.* per year. For a loan of 100*l.* repayable in 50 years at 3¾ per cent., 4*l.* 9*s.* 2*d.* per year, showing a very large difference between those terms and the terms which I have quoted as those of the Lands Improvement Company.

Remedies for depression.

6160. (*Mr. Gilmour.*) With reference to the recommendation of an advance by Government to proprietors, have you any other suggestion to offer which in your opinion is at all likely to lessen the present depression as to the difficulties of both landlord and tenant?—I am afraid that nothing can really lessen the present depression except increased prices. I do not see my way to secure such an increase, I wish I did, compatible with the general advantage of the community. What I have suggested does not I am afraid go very far as a remedy for the present difficulties, but I think it would be an advantage.

Labourers' cottages.

6161. Might I ask what would be the cost in your part of the country of a couple of labourers' cottages, say two houses built together, if that is the general way in which you build them?—I think in my evidence in 1881 I put the cost of a pair of cottages—we generally build them in pairs—at 350*l.*, or something of that sort.

6162. The pair?—The pair.

6163. What accommodation have you in a house of that value?—You have a kitchen, that is to say, a living-room, a pantry, a back kitchen, with wood-house and privy, and three bedrooms.

State loans.

6164. (*Mr. Clay.*) You talk about the lending of money for the relief of landlords and tenants at a small interest, what is the interest you would put it at?—I have read the terms on which the Government now lend money to boards of guardians in Ireland for the erection of labourers' cottages, and I have also mentioned the terms on which the Government now lend money to landlords in Ireland for the erection of cottages or buildings or other permanent improvements.

6165. What sum per cent.?—I read the terms. The interest is as low in some cases as 3¼ per cent. to boards of guardians, and 3½ per cent. to landowners.

Fall in prices.

6166. (*Mr. Giffen.*) Have you made any calculation yourself, or your fellow landowners, as to how long the present low state of prices is likely to continue. I think you have assumed pessimistic views upon the subject, but you have not explained your reasons at all for doing so?—I know that when the price of wheat was at 45*s.*, as I have said, high authorities in this country suggested that it was likely to go up to 50*s.*, as I believe it did in some individual cases, and even to exceed that. Since then we have seen it down to, I suppose, 25*s.* or 26*s.*, or something of that kind. My views may be pessimist, but I am afraid that similar causes may even bring it lower.

6167. But you are not aware of any formal examination of the question by authorities who have studied it, and who have published their views upon the subject. There seems to have been very little discussion as to what the course of prices is likely to be?—The whole matter appears to be one of speculation; I say that with all deference to you, but there are so many factors in determining the price at which wheat can be sold in this country, that although some of them may disappear so as to lead to an increase in the price of wheat, others may come in which may lower it again.

Right Hon. Sir M. Hicks-Beach, Bart., M.P.

21 Dec. 1893.

6168. Of course that is only one article. There are several articles concerned in agriculture?—Yes, but when I speak of the fall of prices, what I mean so far as my experience goes, is the fall in the price of wheat and the fall in the price of stock—sheep and cattle.

6169. What I am anxious to get at is whether there is any discussion amongst people largely interested in agriculture as to the prospect of prices, and whether the good speculative opinion, as I may call it, leans to the side that prices are likely to continue low or rather expects some improvement?—Of course, if we had not an element of hope in the matter, I suppose anybody at any cost would get out of the land that he owns or leave the farm which he occupies. It is only the element of hope that keeps things going in agriculture at the present moment.

6170. One thing which is obvious is that at present we are in a state of depression generally, and it has often happened that you have a general fall in prices after a crisis like the Baring crisis, and then after a year or two there is a sort of improvement. I wish to ask whether you think the present depression in prices is not to some extent a part of that periodical fluctuation which will be followed by some improvement?—I think an improvement in trade and business generally would be of advantage to agriculture, and might lead to an increased price certainly *cæteris paribus*, but there might be some other cause operating abroad just as the extraordinary harvest in the United States operated a year or two ago, which would tend to lower prices.

6171. There has been no formal investigation of the subject from that point of view, as far as you know, by people who are competent to form an opinion?—Well, I believe you have investigated the subject yourself.

6172. I must say that I have not investigated the subject fully, and my reason for asking is because I want to know whether there are any discussions on the subject that you are acquainted with amongst people who are largely interested in agriculture?—No, I know of none that I could quote.

Rates.

6173. (*Mr. Whitehead.*) May I ask whether the rates upon land have increased in your district for the last 10 years?—Up to a certain time ago, in 1881, the poor rate had decidedly decreased, other rates had increased; but I should say that since that time the poundage rate, which is, I suppose, what you mean——

6174. Yes, exactly?—Has increased because of the enormous reduction in the rateable values.

6175. And therefore, of course, assessments have decreased in proportion with the rent?—Where the reductions of rent have been permanent, no doubt that has been so.

6176. May I ask whether, in your opinion, the incidence of rates upon land is unfair and unjust in relation to other property?—That is a large question. I certainly think that it is so. I speak, of course, from the point of view of a landowner.

Labourers' cottages.

6177. (*Sir Nigel Kingscote.*) You gave evidence in 1881 to the effect that you could build a pair of cottages complete, fencing and all that, for 350*l.*; do you think you could do it now at as low a price as that?—I think probably there would be an increase now, but I do not think that there would be a very large increase. There has been an increase in my experience in the wages of carpenters and masons, but I do not think it has been very large.

6178. The materials are about the same?—That estimate applied, if I remember aright, to cottages in Gloucestershire, where I could find practically nearly all my materials except slates and stone, or tiles for flooring.

6179. (*Lord Cobham.*) Would those cottages have fireplaces in all three bedrooms?—There would not be a fireplace in every bedroom; there would be a fireplace, I think, in two.

6180. (*Sir Nigel Kingscote.*) We build rather cheaply in Gloucestershire, on account of the stone, generally

Right Hon. Sir M. Hicks-Beach, Bart., M.P.

21 Dec. 1893.

speaking, being close at hand?—Certainly. Cottage building in that part of Wiltshire to which my evidence relates is very expensive, because we are 9 miles from a railway station, and we have neither stone nor timber, and everything has to be brought.

6181. As regards the cottages on your two estates in Wiltshire and Gloucestershire, do you find that the tenants require you to build cottages on their farms?—Yes. The tenant must have a certain number of cottages for his yearly labourers. It is to the advantage both of the tenant and of the labourer that he should have. I think in Wiltshire the tenants have gone beyond that to some extent, and have insisted on cottages being let to them for other than yearly labourers; the labourers dislike that very much for obvious reasons, but tenants will not take farms without it. I have never let more than one cottage to every 100 acres to a tenant.

6182. That has been about the proportion?—Yes, in Wiltshire.

6183. You would not advocate a system which made the labourers entirely independent as regards the cottages?—I think there is a great advantage in the yearly hiring system for both persons, and where that is the case, as I have said, it is to the advantage of the labourer that the cottages should belong to the tenant, but I do not think that the tenants need have cottages beyond the yearly hiring.

Allotments.

6184. Do you find that the purely agricultural labourer, supposing he has an eighth of an acre or about that for his cottage garden, requires further allotments or asks for further allotments?—I find a difference in that respect between Gloucestershire and Wiltshire. I think the labourers in Wiltshire are very much more anxious for land than they are in Gloucestershire. When the family is large they would always desire some land, and would work it well too.

6185. Is it not the custom in Wiltshire for the tenant to give the labourers a certain portion of land for potato growing and so on?—No, I do not think that is commonly done; it is done often in Gloucestershire, but I do not think it is commonly done in Wiltshire.

6186. (*Lord Cobham.*) I think you said, taking one year with another, that your farm earned a rent and 5 per cent. interest on capital?—Yes.

6187. If that is so, do you think that an ordinary tenant farmer ought to be able to make the 10 per cent. that you spoke of?—I said that I consider my bailiff is a very good one.

Right Hon. Sir M. Hicks-Beach, Bart., M.P.

6188. But still he is at a great disadvantage in marketing, is he not, in a market when it is known that a man is not fighting for his own hand but represents a rich man; is that not so?—That rather depends on the system of marketing. In my neighbourhood in Gloucestershire all the stock is sold by auction, and I do not think that that tells quite so much against a landlord occupying his land as the process of selling by bargain.

21 Dec. 1893.

Farming bailiff and tenant farmer compared.

6189. Do you think that with your experience and capital you are pretty well on a par?—No, I do not think so, because a man must always look after his own affairs better than those of somebody else.

6190. You would not go so far as to say that if you have been able to earn 5 per cent., 10 per cent. ought to be earned by a tenant farmer?—I do not think my land could have been better farmed by a tenant farmer or more economically farmed than it has been, because, as I have said, I have a very good bailiff. I should hardly be prepared to say that a tenant farmer would make the difference between 5 per cent. and 10 per cent.

Land in hand.

6191. The rent that you fix upon your farm is that the rent at which you think you could let it in ordinary times?—Well, I should not let it at that rent.

6192. You could not get it?—I have not tried. I should prefer to keep it in hand, because there are other advantages; for instance, you have full control over your land. Part of this happens to be park land adjoining my house, which I have let to a tenant who rents the shooting also. There are matters of that kind which make it more convenient for me to keep the land in hand myself than to let it at so low a rent as that which I have named.

Rents.

6193. Taking the present range of rents in Wiltshire and your district, would you say that, apart from family and other changes, it is a living rent for the landowner and such as would enable him to do justice to the estate?—I suppose that an estate could hardly be found on which there are no family or other charges; but even putting those aside, I do not consider that the rents which I have named are living rents for the landlord.

The witness withdrew.

Mr. H. E. Raynbird.

Mr. Hugh E. Raynbird called and examined.

Mr. H. E. Raynbird.

21 Dec. 1893.

6194. (*Chairman.*) I believe you are agent to Lord Bolton's property in Hampshire?—I am.

6195. That consists of about 15,000 acres near Basingstoke, I believe?—Yes; in different parts of North Hampshire.

6196. How long have you been agent there?—Forty years.

Rent.

6197. Will you give to the Commission a statement showing the alterations in the rent of the property?—The reduction of rent on the poor land amounts to something like 50 per cent.

6198. What is the average rent now per acre?—It varies from 5*s.* to 25*s.* per acre. There is considerable variety of soil on the estate.

6199. Can you state what the aggregate rent is?—The annual rents received have varied from 9,000*l.* up to nearly 11,000*l.*, and now they are 7,400*l.* I have here a statement of each year's receipt of rent &c., which I will hand in (*handing in a statement*).

6200. This is a statement in each year of the rents received, the allowances made, and the arrears?—Yes. It shows that the allowances increase, and that the arrears increase also.

6201. Apparently 1877 was the highest point; then the rental received was 10,986*l.*, the allowances were 134*l.*, and the arrears 821*l.* In 1885 I see the rent was 8,000*l.*, the allowances were 303*l.*, and the arrears 2,174*l.*; for the year 1892 the rent received was 7,482*l.*, the allowances 962*l.*, and the arrears 4,227*l.*?—Yes; that is extracted from the estate books.

6202. (*Lord Cobham.*) I suppose in 1887 the arrears were mostly good, and in 1892 many of the arrears were bad?—No doubt of that.

21 Dec. 1893.

Description of soil and cultivation.

6203. What is the land; is it good land?—The chief part of it is on the chalk. Some part of it is good land, and some very poor.

6204. A good deal of it is on the chalk?—Yes; the greater part of it is on the chalk. Part of the estate is on clay soil—on the London Clay.

6205. I suppose the heavy land grows wheat?—Yes.

6206. Anything else; or is it mainly wheat that is grown?—Wheat is the staple crop—wheat and clover.

6207. On the chalk what is it?—Clover, sainfoin, wheat and oats.

Reduction in rent.

6208. Do you consider the reductions of actual rent have been about 50 per cent.?—I consider the average abatement of rent on the bad land is 50 per cent. and on the good land 25 per cent. There is a further temporary abatement of from 10 to 20 per cent.

6209. Is that not just for the last year?—For the last few years.

6210. That temporary abatement has not yet been made permanent, I suppose?—No.

Particulars of farms.

6211. Now will you give us particulars of one or two farms, to illustrate the condition of the estate?—I will give you particulars of Blackland's Farm. It is at Old Basing. That is a farm on the clay. It is a farm containing 162 acres of arable land, 78 of pasture, and 4 of wood. It is a good farm. The elevation above the sea is from 210 feet to 250 feet. It is well watered by the River Lodden; the arable land is part strong

Mr. H. E. Raynbird.
21 Dec. 1893.

loam and part gravelly loam. The meadows are partly irrigated.

6212. You need not go further into detail; what has been the result?—This farm was held in the same family for about two centuries; the rent paid from 1853 to 1886 was 230*l.*, the tenant paying the tithe of 72*l.*; in 1886, in consequence of the low prices of produce, he gave up by arrangement paying up the arrears, which then amounted to 301*l.*

6213. Then you relet the farm at 200*l.*?—The farm was not let, but was kept in hand for one year, and then let at a rental of 200*l.* at Michaelmas 1887, the tenant paying the tithe. In Michaelmas of 1892, the rent and arrears, in consequence of the low prices of produce, and injury to crops, and bad seasons, had accumulated to 649*l.*, and the tenancy was discontinued by arrangement. The tenant is now employed by Lord Bolton as a farm manager. The farm was relet from Michaelmas 1892, at a rental of 250*l.*, to a Devonshire farmer, the landlord paying the tithe. A grant of 20 per cent. has been made this year.

6214. Now take another case?—I will take the case of the Sherfield Farm. That is a farm on the clay. That is a very similar farm to the last one. The area is 290 acres; the elevation above sea-level 187 feet to 212 feet; it has a good water-supply; it is an excellent farm.

6215. Do you put in the statement of the various farms that has been laid before us?—Yes.

6216. Have there been many meetings held in Hampshire by the farmers of your district with reference to the depression?—There have been meetings. We had a large meeting at Winchester, and we have had small parish meetings in Old Basing.

6217. What conclusion do they come to?—I think a petition has been presented to the Commissioners, which I have before me now.

6218. (*Mr. Chaplin.*) Is that the petition from Basing?—Yes.

Causes of depression.

6219. (*Chairman.*) What were the points alluded to?—It was resolved—"(1.) That Mr. Charles Hoare and "Mr. W. W. B. Beach, M.P. (having expressed themselves willing to act), be nominated as representatives to give evidence before the Royal Commission on Agriculture; (2.) That in the opinion of the committee of the Old Basing Association agricultural "depression is caused by the excessive cheapness of all "produce, the burdens of rates and taxation, and the "severe competition of foreign produce; and the remedies are (1.) an increased use of silver for currency "purposes, by agreement with the civilised powers of "the world, England's part being the introduction of "20*s.* and 10*s.* notes, based on silver, to be a legal Remedies for depression. "tender up to 10*l.*, and to be payable in silver at all "Post Office money offices in the United Kingdom, and "at the Bank of England in gold and silver at the "option of the Bank; (2.) The State to give greater "borrowing powers for redemption of tithe, land tax, "and other charges, including mortgages, by applying "some of the Post Office Savings' Bank deposits and "other funds for the purpose, loans being made at "3 per cent., with ½ per cent. sinking fund." Personally I should go farther than that, and advise State loans for estate improvements.

6220. (*Mr. Chaplin.*) Up to what amount was silver to be made legal tender in England—up to how much?—The resolutions say, "the introduction of 20*s.* and "10*s.* notes, based on silver, to be a legal tender up to "10*l.*"

6221. (*Chairman.*) Are those your own views or the views of the committee that you speak of?—My own views and the views of the committee. My views would extend beyond those.

6222. They extend beyond those, but they include all those?—Yes. The next resolution was, "Further re"duction of rates for paupers, lunatics, roads, and "education, by increased contributions from the Consolidated Fund."

State loans for improvements.

6223. Now, you said your own views go beyond; in respect of State loans, what do you consider should be done?—I think there should be State loans, the interest on which should not exceed 3 per cent., with ½ per cent. sinking fund for improvements, such as the erection of cottages and farm buildings, planting, draining, water supply, road-making, and fencing.

6224. Is there much opportunity in your neighbourhood for the expenditure of money on improvements of these kinds?—I think so. *Mr. H. E. Raynbird.* 21 Dec. 1893.

6225. Is that the case on Lord Bolton's estate; is there much room for improvement there?—There is room for a certain amount of improvement in that way.

6226. Has there been much done in the way of breaking up large farms into small ones?—Not very much.

6227. Would it be desirable that that should be done?—I do not think the large sheep farms are adapted for breaking up into small farms, but I think there is a slight demand for it at the present time. We are doing it in one or two cases.

6228. Would the advance of money by the State for improvements and for buildings facilitate it?—I think so; I think it would give employment to the labourer.

Extension of woodland.

6229. You spoke of planting; is there an opportunity for doing much in that direction?—I can put in a statement that I have prepared as regards the planting, if you would allow me to do so.

6230. If you please?—I have here a statement of the receipts and expenditure from 1854 to 1892, on 1,860 acres of woodland, that is, underwood and timber. I put that in as evidence of the income derived from the woodlands of North Hampshire. I believe an extension of the area of woodlands on the poor clays, and on the chalk soils, would be an advantage. There is a large number of skilled workmen employed in the woods during winter. They work on the farms during summer, and are a great help to the farmer. These 1,860 acres of woodland give employment during the winter to about 200 men.

6231. You think an additional amount of land in the district might be planted?—I think so. The return I make of the receipts and expenditure on this 1,860 acres of woodland from 1854 to 1892 shows receipts amounting to 53,151*l.* against an expenditure of 24,344*l.* I would ask to be allowed to contrast this income and outlay with land which has been held in hand for a considerable number of years which would show that a larger income can be made on this class of land from timber and underwood than can possibly be made from growing corn.

6232. What do you consider the initial cost per acre of planting?—From 3*l.* to 5*l.* perhaps, or 50*s.* to 5*l.* Lord Bolton has planted about 200 acres during the time I have been his agent.

6233. Has Lord Bolton done anything himself in that direction?—Yes, he has planted about 200 acres.

6234. (*Lord Cobham.*) What with?—Chiefly with larch, spruce, beech, ash, and oak. Some of the plantations are bringing in an income now that were planted during my 40 years.

State loans or redemption of tithe and land tax.

6235. (*Chairman.*) Then I understand you consider also that money might be lent by the State for the redemption of tithes and the redemption of the land tax?—Yes.

Rates.

6236. Then with regard to local rates, what have you got to recommend?—I think the rates press heavily on the land and that they should be borne more generally by the public, especially those with regard to roads. The people who use the roads, I think, should pay for them.

6237. Especially then with regard to the roads you think that greater relief should be given?—I think so.

Roads and bridges.

6238. What other recommendations have you to make?—I would recommend a further reduction of rates for paupers, lunatics, roads, and education by increased contributions from the Consolidated Fund and by the increased use of steam power for cultivation and transit of produce. For this it will be necessary that the roads and bridges should be made of sufficient strength to carry traction engines with safety. There should also be a better water supply. The roads and bridges I should recommend to be in charge of one authority. I think the road material should be consolidated by rolling and that the present barbarous system of wearing in the metal (to the serious loss of the farmers and others using the roads by damages to carriages, horses, and loss of time) should be discontinued. Further I should recommend the more practical education of the rising generation in the rural village schools and that the attendance of lads after they leave the village day school at the evening schools should be compulsory up to the age of 18 or 20 during

Education.

Mr. H. E. Raynbird.
21 Dec. 1893.

Relief works.

Diseased animals.

the winter evenings. Further I should recommend the employment of surplus labour in relief works, in such improvements as making better roads, better water supply, draining the wet valleys, and restoring the abandoned canals for the transit of goods. Further I should recommend that penalties should be enforced against the exposure of diseased animals at markets and fairs and on the public roads, and that wherever contagious disease appeared a sufficient "infected place" (not a circle or area) should be declared out of which no animal should be removed except for slaughter. This would isolate disease and would interfere to the least extent with trade.

6239. (*Lord Cobham.*) Are you in favour of preventing the importation of live stock from abroad?—I am not in favour of it.

6240. Nor the committee that you represent?—No.

Slaughter of cattle at port of debarkation.

6241. What is your opinion as to the slaughter at the port of debarkation?—I think that would interfere with trade.

6242. You are against the slaughter at the port of debarkation?—Yes.

Farms in hand.

6243. With regard to this estate generally, have there been many vacant farms?—There are about 2,500 or 2,600 acres in hand now.

6244. Is that the maximum quantity that you have had in hand?—Yes, that is the largest quantity.

6245. You find an increasing difficulty in getting tenants?—Yes.

6246. Is that owing to the want of capital or to the want of supply of farmers?—It is owing to the want of supply of farmers and because the business is not profitable.

6247. Do you wish to give any evidence as to your experience on the home farm?—I have here a statement of receipts and expenditure on lands in hand relinquished by the tenants from the year 1866 to 1892.

6248. Could you select a few years?—Previous to 1866 there was rarely if ever any land in hand; in 1866 there were 140 acres; they had increased in 1879 to 1,443; and from 1879 to 1892 they increased to 2,734 acres. That is about the quantity in hand at the present moment.

6249. Have you made out the profits or losses upon the farms in hand?—I have a return here from the estate books of the receipts and payments for those years. The summary is: receipts 62,864*l.* and payments 71,114*l.*, showing a very considerable loss.

6250. Of 9,000*l.*?—Nearly. Against that is the stock on hand, but there is no allowance for rent, or rates, or tithe.

6251. As a rule, I presume those farms came on to your hands in a very bad condition?—They were given up by arrangement, because the tenants were unable to keep them on, and they were certainly not in a good condition.

6252. You have had to bring them into good condition?—We have kept them in cultivation, and those that we have in hand are somewhat improved at the present time, but they have not been extravagantly farmed in any way.

6253. Has there been a home farm in addition to those farms thrown on hand?—No.

Causes of depression.

6254. Have you anything to add to your evidence that has been overlooked?—I might add this, that I consider low prices for a continued series of years is the cause of the depression, and that one remedy is the increase of the currency.

6255. You are against any protective system?—Yes.

Labour.

6256. Is the supply of labour well maintained in North Hampshire?—Fairly well.

6257. Is the quality as good as it was?—Some of the work is not done so well as it was in former years.

Wages.

6258. Now as to the wages, are they kept up?—Wages up to a certain point had increased, but there is a slight decrease now in the last few years.

6259. There has not been much material change?—Not a material change, but the tendency has been to increase—more particularly as regards the mechanics; there has been a considerable increase in the wages of farm mechanics.

Rural depopulation.

6260. Do you find that the young men leave the villages?—Very much.

6261. More than they did?—Yes.

Mr. H. E. Raynbird.
21 Dec. 1893.

6262. Do you think that your suggestion as to compulsory attendance at evening schools will counteract that, or the contrary?—I could hardly reply without consideration. It would make them better servants whether they were employed on the farms or elsewhere.

Technical education.

6263. Is your county council doing much for the practical education of labourers?—Yes, they are doing a good deal. They are sending lecturers out, and establishing classes all over the county.

6264. With good effects?—I should think the effect would be good, but it is slow work.

6265. Are those lectures well taken up by the labourers?—Some of them fairly well, but not to such a great extent as one could wish.

Slaughter of cattle at port of debarkation.

6266. (*Mr. Chaplin.*) I think you said that the slaughter of all the cattle at the port of debarkation would interfere with trade?—I think so; that is my opinion.

6267. Would it interfere with the public sales?—Yes.

6268. And auctions?—Yes.

6269. Is it the general opinion of farmers in your district that they are opposed to the slaughter of cattle at the port of debarkation, or is that opinion limited to the auctioneers?—I should think that the auctioneers in addition to the traders were opposed to the slaughter.

6270. The auctioneers, but not the farmers?—Some of the farmers would be of one way of thinking, and others of the other; the majority would be in favour, I believe.

6271. Do you speak as an auctioneer or as a farmer?—I am both an auctioneer and a farmer.

6272. Have you found any inconvenience during the last 12 months with the trade?—Not to our individual trade.

6273. Are you aware that this very thing, this slaughter of all cattle at the port of debarkation, has been in force during those 12 months?—No, I have paid very little attention to it, I am sorry to say.

6274. Then, if you had been aware of that fact, it probably would have altered your opinion?—I think not.

6275. Why, if there has been no inconvenience arising?—I believe that the slaughter of animals at the port would interfere with the trade and with the public generally. I think it would be an advantage to the public to have as little embarrassment placed on a trade as possible.

6276. Of course you are aware that these restrictions are imposed in order to prevent the importation of disease?—Yes, but I believe that disease could be prevented in other ways.

6277. What other modes would you suggest?—If they were carefully inspected that should be sufficient.

6278. That is your opinion?—Yes.

6279. You are not aware that in spite of all kinds of careful inspection the terrible importations of foot-and-mouth disease occurred under the system you advocate; you are not aware of that?—I am quite aware of the existence of foot-and-mouth disease; I have been aware of it all my lifetime.

6280. What I am asking you is this: Are you aware that when the last great importations of foot-and-mouth disease occurred, which committed so much havoc in the country, those importations occurred under the very system of inspection which you say is sufficient to prevent it; are you aware of that?—I am living inland, and that is a matter that I have not given a great amount of attention to.

Increase of currency.

6281. I think, in reference to the chief cause of agricultural depression, namely, the fall in prices, one remedy that you suggest would be an expansion of the currency?—Yes.

6282. Have you studied that question carefully?—I do not think I have studied it sufficiently to give evidence upon it. I have a statement that I should be very glad to read.

6283. A statement of your own?—Yes.

6284. If you have not studied it carefully I will not press you upon it?—I have read most of the speeches and most of the articles on the subject.

Mr. H. E. Raynbird. 21 Dec. 1893.

6285. Do you wish to read the statement?—I have no desire to press my opinions on the Commissioners at all.

6286. (*Lord Cobham.*) Perhaps you might send it to Mr. Chaplin, and then we could avail ourselves of his opinion as to putting it in?—I should be very glad to send it to Mr. Chaplin.

6287. (*Mr. Chaplin.*) You say you have not studied it carefully?—I have read the speeches and articles, but I am sure I couldnot give evidence on so intricate a subject, and I should not venture to do so.

Sub-division of farms.

6288. (*Sir Nigel Kingscote.*) You said in the beginning of your evidence that you think it would be very desirable if some of the large farms were made into smaller ones. Take the farms in Hampshire and Wiltshire, those large farms which are generally called sheep farms; do you think that can be done?—Not to any great extent.

6289. I was going to say with economy?—You mistook me if you understood me to say that it was desirable. I do not think it would be possible to carry it out to any great extent.

6290. I understood you to say that it was possible?—No, not to any great extent.

6291. If money could be borrowed at a low rate to do it with?—Not to any great extent—not on the sheep farms; on the best farms in the county perhaps it might be done.

6292. With reference to large farms, there must be a certain acreage for there to be an economy of labour and other economies in farming to make them pay, would you not say that?—I think that it would be very difficult to make small holdings out of the poor Hampshire land, because the return is so small and the expense of providing the necessary equipment is so great in comparison.

Extension of woodland.

6293. (*Mr. Whitehead.*) You advocate planting poor land in Hampshire with wood, I think?—Yes, from my experience, I do.

6294. You think that the profit on that compares favourably with that on arable land?—It does so compare with the returns from similar land during the low prices.

6295. Land of the same kind?—Yes.

6296. I think you said that the initial cost of planting wood land was 50*s.* an acre?—From 50*s.* to 5*l.*

6297. Would that include preparing the lands and getting the young trees?—We do it in a rough and ready kind of way. We grow our own trees and plough them in.

6298. May I ask what kind of wood you would plant?—Larch, beech, oak, ash, and spruce.

6299. Have you a sale for hop-poles in your district?—Yes.

6300. Is that the reason why you advocate planting the land?—One reason.

6301. Because there is a sale for hop-poles?—There is a sale for hop-poles and underwood generally; it is quite a business in our part of the world.

6302. That would not apply to other districts where there was no sale for hop-poles?—We have a sale for other things as well as hop-poles.

6303. What other things may I ask?—Crate rods for potteries, hurdles, hoops; there are a great number of articles made in the woods, it is quite an industry. At present prices timber and underwood are preferable to corn growing on the poor chalks and clays of North Hampshire. Besides, an extension of the woods would add to the future value of the land for residential and sporting purposes.

Increase of currency.

6304. (*Mr. Giffen.*) Was the resolution of your association regarding currency in favour of increasing the use of silver throughout the world by international agreement and in favour of issuing notes based on silver to be legal tender in this country up to a limit of 10*l.* passed after much debate; was that resolution debated?—There was a certain amount of debate.

6305. Do you agree with it yourself?—Yes.

6306. But your own views go a little further I understand?—With regard to the State loans.

6307. You agree with the association about the currency?—Yes.

Mr. H. E. Raynbird. 21 Dec. 1893.

6308. Was there any discussion of the question as to how much more silver could be used throughout the world if this international agreement was to be come to?—I think not.

6309. No discussion?—No, I think not.

6310. You do not know whether more silver could be used or not?—I am not competent to give a reply.

State loans for redemption of tithe and land tax.

6311. (*Mr. Little.*) You suggest facilities being given for the redemption of tithe. Have you considered, and are you prepared to suggest any practical scheme for the redemption of tithe?—No, I am not.

6312. You are not?—No.

6313. Perhaps you recognise the difficulty of securing to the tithe-owner what he has now, and of taking from the landowner no more than he pays now; you do not think the tithepayer could afford to pay a higher tithe than he pays now, even with the view of the ultimate redemption of the tithe—he could not pay more than he does now, could he?—If he had the tithe redeemed after a certain time.

6314. You think he would be prepared pay a higher tithe?—I think he pays too much now according to his ability, and therefore I advocate State loans at 3 per cent. and half per cent. sinking fund for the redemption of tithe, land tax, and mortgages.

6315. If you have not got a scheme it is no use pursuing it?—No, I have not got a scheme.

6316. The same with regard to the land tax. Are you acquainted with the terms upon which the land tax can be redeemed now?—I am not.

6317. You know there is power to redeem?—Yes, I am quite aware of that, but I do not know the terms.

6318. But you think money might be lent to landowners with the object of redeeming the land tax?—Yes.

Redemption of mortgages.

6319. With regard to the mortgages, would you ask the State to lend money for the redemption of mortgages?—I think so.

6320. You think the State could afford to lend money at a cheaper rate than an individual?—The State could make a profit, I believe, and it would be a saving to the individual.

Roads and bridges.

6321. Then you say that the roads and the bridges should be in the charge of one authority. May I ask what you mean; is it that all the roads and bridges in a county should be under one executive board?—I mean should be in the charge of one authority, either a local one or the county authority. I think there is a waste from there being two authorities.

6322. You mean the parochial system—the district system and the county main roads?—Yes, there are two systems now.

6323. Have you highway districts?—Yes.

6324. Then you have the main roads maintained by the county?—Yes.

6325. Does the county call upon the districts to maintain them?—Yes, the county makes a bargain with the districts.

6326. Do the districts maintain the bridges, or does the county?—The county maintains the main bridges.

6327. The county maintains the county bridges?—Yes.

6328. And the district maintains the district bridges?—Yes.

Extension of woodlands.

6329. You spoke of the planting of woods. Is not one of the benefits that you expect from the extension of woodlands the improvements of the condition of the labourers?—Yes.

6330. I do not want to go into the question of Mr. Bear's report to the Labour Commission, but in it he speaks of the great advantages of woodland country to the labourers?—Yes, to the labourer and the farmer too.

6331. By giving work in the slack season of the year?—Yes.

6332. Perhaps you are acquainted with Cobbet's Rural Rides; he makes the very same remark about the woodland districts?—Yes.

State loans for redemption of land tax.

6333. (*Mr. Dalton.*) What benefit do you think would result if the State were to lend money for redeeming the land tax? At present the land tax is

Mr. H. E. Raynbird. Dec. 1893.

owing by the owner to the State; what is the advantage of substituting another debt to the State for it?—The idea in my mind would be that the charge would be less, and that the charge would be extinguished after a certain number of years.

6334. It would come to this then, that you would wish it to be redeemable by instalments, instead of being redeemable in a lump sum?—Yes, by the payment of 3 per cent. and ½ per cent. sinking fund.

Redemption of mortages.

6335. If the State were to lend money for mortgages, would it not practically put itself in the position of a landowner in the course of time; it would have to foreclose if it did not get its money? Would that not be very awkward?—I apprehend the position would be just the same.

6336. If an estate were heavily mortgaged, and the State advanced the money for paying off those mortgages, the State might be very soon placed in the position of having to foreclose and become the landowner?—Yes.

6337. Would that not be very awkward?—It would be in the same position as——

6338. The ordinary mortgagee would be?—Yes.

6339. It would be a very awkward position for the State to assume, would it not?—I do not see it in that light.

Rates.

6340. You consider that the depression in agriculture is partly caused by the rates, I think you said?—The great depression in agriculture, I believe, to be caused by the continued low prices.

6341. I think you said it was partly due to the rates?—The rates are a heavy charge.

6342. Have they not gone down in Hampshire?—They are reduced lately, they are lower.

6343. Lower now than they used to be?—Yes.

6344. In consequence of the Imperial subventions?—Yes.

Highway rates.

6345. Do you suggest that the State should pay a larger amount than it does at present towards the roads?—Yes.

6346. Does it not in Hampshire pay the whole cost of the main roads practically?—I believe so.

6347. Then it would be that you think it should pay for the country lanes, as well as the main roads?—I believe that those who use the roads should pay for them.

6348. The lanes, the country lanes?—Yes; the public use them.

6349. The public already pay for the main roads?—Yes.

Farms in hand.

6350. In the farms that you have in hand, you say you made no rent, I think?—No rent.

6351. And not enough even to pay the rates?—No.

6352. Or to pay any interest at all on the working capital?—No.

6353. (*Lord Cobham.*) Have you got the value of the stock left on the farm?—No; it would be considerable.

6354. Would it cover the loss?—Hardly; it would, the greater part of it.

6355. (*Mr. Dalton.*) Did you have them for any long period?—It extends over a period of from 1866 to 1892.

6356. The farms in hand?—Yes; these are farms that came in hand from time to time, because it was impossible to find tenants for them.

6357. Then if a tenant had been found for them he would probably have been put into a very disastrous position?—It is quite possible he would—in all probability he would.

6358. I mean even if he had paid no rent on these particular farms?—Yes.

6359. Were they very bad ones?—They were poor farms.

Remedies for depression.

6360. (*Mr. Lambert.*) What is your main remedy for agricultural depression?—I have already stated that to the Commission, I believe.

6361. (*Lord Cobham.*) I understood you to say an increase of the currency?—An increase of the currency and State loans.

6362. (*Mr. Lambert.*) And the increase of the currency you have not studied much?—Not much; no more than reading the speeches and articles which have appeared in the papers.

Mr. H. E. Raynbird. 21 Dec. 1893.

6363. What per-centage should you say agricultural produce has decreased in the last 10 years?—That is a question that I should require to consider before answering if I might be allowed to have time to do it.

6364. Could you give us a rough estimate?—The decline in produce.

6365. The decline in prices of agricultural produce?—Generally?

6366. Generally?—It is a question that it is impossible to answer without data to go upon.

Fall in prices.

6367. You said just now that you attributed the agricultural depression to the fall in prices?—The fall in prices has been general in most articles of farm produce, and more especially in wheat.

6368. But you do not know how much they have decreased?—I should not wish to commit myself to any answer of that kind without consideration.

Particulars of farms.

6369. Now referring to the Blacklands Farm; for what reason did the first tenant leave after he and his family had been there for 200 years?—He was unable to pay his way.

6370. What is his present employment?—He is a very old man; I do not think he is employed upon anything; he is not engaged upon any kind of work.

6371. Is he in poor circumstances?—Very.

6372. Was the second tenant a fairly industrious man?—Very; he is in my employ at the present time.

6373. As bailiff?—Yes; he was the son-in-law of the first tenant.

6374. The farm was let in 1886 at 30*l.* a year less than the old tenant paid?—Yes.

6375. Did you give the old tenant an opportunity of continuing at that rent?—At the reduced rent?

6376. Yes?—He would not keep on the farm.

6377. He would not keep on the farm, even at that rent?—No.

6378. But you let it at 200*l.* a year?—Yes, it was to his son-in-law.

6379. Who was a very industrious man?—Yes.

6380. And who, in six years, got 649*l.* in arrears?—Yes.

6381. To what do you attribute his getting into arrears?—To low prices and bad seasons in his case; he lost his hay crop once or twice, I think.

6382. He was not able, I presume, to pay so much rent?—He was not in a position to pay so much rent.

6383. (*Lord Cobham.*) Was he a good farmer?—A very fair farmer.

6384. (*Lord Vernon.*) If he had had his whole rent back he would nevertheless have failed?—He could not have gone on.

6385. Practically he would not have been able to get on with no rent?—That is so.

6386. (*Mr. Lambert.*) I cannot admit that. Then you have now let the farm at 250*l.* a year?—Yes.

6387. Had you many applications for it?—We had not more than one or two applications.

6388. But you have had to give back a reduction of 20 per cent.?—This last year.

6389. Which means 50*l.*?—Yes.

6390. Do you consider that the farm is rented at more than it is worth now, when it is rented at 250*l.*?—The 20 per cent. was given back on account of the bad season, the dry season.

6391. Why do you think that this Devonshire farmer can pay 250*l.* a year if the other, an industrious man, could not pay 100*l.* a year?—That is a matter for the tenant's consideration. We hope for better prices. Another reason is that the Devonshire man farms upon a different system; he goes upon selling milk and butter, and the other tenant went upon the plan of growing corn. That is the reason we hoped he would succeed.

6392. I understood you to say that you made no profit on your own farms that you had in hand?—We made no profit on our own farms on an average.

6393. Do you expect, as a practical man, that this Devonshire farmer will be able to pay 250*l.* a year?—

Mr. H. E. Raynbird. 21 Dec. 1893.

This Blacklands Farm is of a very different character to the land I have in hand.

6394. Judging from your experience with the other man, who was an industrious man, but was not able to pay 100*l.* a year, do you think this Devonshire man can pay 250*l.* a year?—If the prices keep as they are, and if he depends upon corn, I do not think he can. It is possible that if he is a good manager of stock he may do it—he will not make any large amount of income from it.

6395. The 20 per cent. that you have given back he gets no advantage of in a lowering of his assessment?—No, I think not; he would in the income tax assessment.

6396. Do you think it would be advisable instead of this temporary abatement to give him a permanent abatement?—I think not in the interests of the landlord.

6397. But presuming you study the interest of the tenants?—I am employed by the landlord.

6398. So you do not study the interests of the tenants?—I think the landlord does.

6399. But in this case you have not?—I believe I have.

6400. I said, would it not be to the interest of the tenant to have this a permanent abatement rather than these temporary and uncertain abatements?—This abatement was made on account of the unusual loss he suffered from the dry season.

6401. But yet for all that you are letting this farm at practically 50*l.* a year more than the other tenant, who was an industrious man, was able to pay?—We are looking for better things, and the incoming tenant is no doubt looking for better things.

6402. So you are living on hopes and not on practical results?—The result was in the future; it could not be seen.

Increase of currency.

6403–4. (*Mr. Everett.*) I understand you in regard to the currency to hold the opinion, and that others in Hampshire hold it with you, that an increase of money raises prices, and a diminution lowers them; that is the general view that you take on the currency question?—Yes.

6405. Is it therefore fair to suppose that the closing of mints generally against one of the two precious metals is calculated by reducing the quantity of money to raise its value and so to force down prices?—You are asking me a question upon which I do not consider myself qualified to give evidence.

Mr. H. E. Raynbird. 21 Dec. 1893.

6406. You can see, I have no doubt, that the closing of mints against one of the two precious metals is an influence to diminish the quantity of the metal?—To diminish the currency.

6406*a*. And as a diminution of the quantity of money lowers prices that therefore is an influence to lower prices generally?—Yes.

6407. You would assent to that?—I would assent to the fact that the contraction of the currency would lower prices.

Extension of woodlands.

6408. (*Mr. Elton.*) About the woodland district. I suppose it is a very great advantage to the labourer in the woodland district to have wood very cheap?—Yes.

6409. As fuel?—Yes.

6410. He is allowed it very cheap, I suppose?—Yes, you see they get the dead wood which is a great advantage to them.

6411. They can buy 100 faggots very cheap?—Yes, the men are in the woods working.

6412. If they make it themselves what do they pay?—They get the dead wood for nothing; it is a perquisite.

6413. When there is a timber sale they will buy the tops and lops, I suppose?—Yes, sometimes.

6414. The timber men let them have them very cheap?—Of course they get all they possibly can for them. There is this advantage in working in the woods, that they get their fuel cheaper.

6415. I asked you a special question: are they not able to buy a hundred faggots for their cottage very cheaply indeed?—The price of firewood is moderate because there is an abundance.

6416. How much would it be if they make their faggots themselves?—The faggots vary so much in their size and in what they really are.

6417. In every village I suppose they have a customary size?—Yes.

6418. Take a stack of firewood enough to last half a year?—A stack of firewood is about 9*s.* or 10*s.* at the present prices.

6419. If he makes it himself it would be very much less?—It would make it about half-a-crown less.

6420. It is a distinct advantage to the labourer in your district that he has not to buy coal?—Yes, there is no doubt that the working in the woods is a distinct advantage to the labourer on account of the cheap fuel.

6421. (*Lord Cobham.*) Have you anything further to add?—I think not.

The witness withdrew.

Mr. J. Stratton.

Mr. James Stratton called and examined.

Mr. J. Stratton.

6422. (*Lord Cobham.*) You live at Chilcombe?—Yes, close to Winchester.

6423. How far from Winchester?—Two miles.

Description of farm in Hampshire and Wiltshire.

6424. And you rent about 5,500 acres?—Yes, about 3,500 in Hampshire and 2,000 in Wiltshire.

6425. Is that one take?—No. There are something like 10 holdings. Some of the farms are up to 1,100 acres, and some are small farms.

6426. Are the holdings scattered, or fairly consolidated?—Somewhat scattered; about 2,000 acres are around Winchester under the Dean and Chapter of Winchester Cathedral, 500 or 600 acres on the Tichborne estate, and 2,000 in Wiltshire in the Pewsey Vale.

6427. Is the whole of this great farm under your sole management?—Yes, I pay rent for the whole.

6428. And manage it?—Yes, but I have sons who are a great assistance to me.

6429. You are the tenant farmer of 5,500 acres?—Yes, I am.

6430. Would you describe the character of the land?—The Wiltshire land is heavy, of a clayey character; it is wheat, bean, and barley land, and it also runs up on the Down. Those 2,000 acres are taken on lease at a rent of 1,100*l.* a year tithe free.

6431. What lease do you hold under?—A seven years' lease.

6432. (*Sir Nigel Kingscote.*) Could you give us the proportion of the clay and the Down—I mean roughly?—It is about 700 of Down, and the rest is arable with the exception of 100. There is 100 vale pasture, and the rest is vale arable.

6433. (*Lord Cobham.*) What is the total acreage?—2,000 acres.

6434. Then the other properties?—The other property is all pretty much typical Hampshire land. It is all on the chalk. It is pretty good sheep land; some of it grows wheat very well, and some is very poor.

6435. That will be 3,500 acres?—Yes.

6436. At what rent do you hold that?—At various rents.

6437. What is the rent of the whole?—The rent for the whole holdings I have, the 5,500 acres, averages 11*s.* per acre tithe free.

6438. (*Sir Nigel Kingscote.*) The whole 5,500?—Yes, and Hampshire is an average of it as to price.

6439. (*Lord Cobham.*) Is that held from year to year?—Most of it from one to two years holding.

6440. When did you enter upon those?—I entered upon most of the Hampshire land in 1866.

6441. And the rest?—I entered upon the Wiltshire land in 1888. I may say that I took one of these Hampshire farms this Michaelmas. It is a property 4 miles from Winchester. The late owner was

Mr. J. Stratton. Dec. 1893.

offered 24,000*l.* for it about 20 years ago; he mortgaged it and died, the mortgagees foreclosed, but could not let it, and asked me to take it. The tithe is 212*l.* a year. It is in a very fair state of cultivation, and they let it to me at a nominal rent of 1*l.* a year. It is 640 acres of Hampshire land, which I have taken at 1*l.* a year, the owner paying the tithe and being responsible for repairs.

6442. (*Mr. Giffen.*) What is the tithe, did you say?—The tithe is 212*l.*

6443. (*Lord Cobham.*) Is that not for a limited time?—Yes, for one year.

6444. But the understanding is that it is for a year at all events?—Yes, it was in the hands of Rawlence and Squarey, who advertised it and tried to let it. They are farming the adjoining parish for the landlord, and they asked me to take this farm at a rent. I told them I would give them a mere nominal rent. I met them, and they said they must get some rent. I said I think your alternative will be to farm it at a loss, as you do, I fear, in the adjoining parish, or to let me find the capital and farm it. After consideration and consultation with the owner, they wrote asking me to take it; it had been advertised for months.

6445. Is it in a very bad condition?—No, rather above the average. It is now carrying 360 ewes, and 100 head of cattle.

6446. How near to Winchester is it?—Four miles.

Reduction of rent.

6447. Can you tell us the variations in rent that have occurred since you entered upon the farm?—I cannot tell you exactly that.

6448. Approximately?—Speaking generally of Hampshire, I may safely say that the corn and sheep farms have come down about 50 per cent.

6449. That would be a typical Hampshire farm, would it?—Yes.

6450. About 50 per cent.?—Yes, and the poor farms of Hampshire do not find a tenant—as Mr. Raynbird said, the owners farm them at a loss.

6451. Do you take these 5,500 acres as very fairly representative of Hampshire and Wiltshire land?—Yes.

6452. Neither better nor worse?—Yes. One of these Hampshire farms is let at about a third of the rent that it was let for 20 years ago. My brother paid 1,600*l.* a year 20 years ago, and I pay 600*l.*

Low prices.

6453. Do you wish to give us any information as to the results of your extensive farming?—The chief losses that I have sustained have been from the depreciation in the value of my farming stock. Cattle and sheep are now about 30 per cent. lower than they were four or five years ago, and if my affairs are valued up in that way I should be a considerable loser. The depreciation in the value of stock is the chief way in which I have lost.

6454. How many years ago is it since that depreciation set in?—It has been going to the bad ever since 1879. We have had no redeeming season since 1879.

6455. You do not mean the value of live stock?—No, that has been up and down. I mean the farmers have not done well; they have not held their own.

6456. How do you manage these 5,500 acres?—I have working bailiffs on them. I keep a great deal of cattle, and an immense deal of land that I took as arable is now pasture. I keep stock upon it, and so keep down the labour expenses.

Laying down of permanent pasture.

6457. How has it been turned into pasture?—It is laid down to permanent pasture.

6458. Have you done that yourself?—Yes.

6459. Have you done it without agreement with the landowner?—With regard to my land near Winchester I laid some of it down under the Agricultural Holdings Act, and last Michaelmas came to a settlement, as I had a fresh take at a fresh rent. I was paid under the Agricultural Holdings Act for this land. It was left to the valuers, and they settled it without any dispute.

6460. Do you consider yourself well protected by the provisions of the Agricultural Holdings Act?—I consider that I benefited the land very much more than I got compensated.

6461–2. Do you think that the Act should be altered so as to meet such a case?—No, I do not say that.

Dairying.

6463. You are also engaged in dairying, I believe?—Yes, I send milk to London.

Mr. J. Stratton. 21 Dec. 1893.

6464. Will you give us your experience of dairy farm operations?—I think that is the best branch of my business. I dairy 200 cows and rear all the stock. I keep the young stock upon the poor lands I have laid down to grass, and keep the dairy cows on the better land at home.

6465. You send the milk to London?—Yes.

6466. You do not make butter or cheese?—No.

Railway rates.

6467. You find it pays best to send the milk straight to London?—It is much better to sell the milk than to make cheese or butter. Now the railway rates come in; the railway company take about an eighth of the value of my milk as carriage for 60 miles, which I think is very exorbitant.

6468. Have they not come down?—They have not come down, and the railway rates are unequal. From Midhurst to London is 3*d.* less upon 18 gallons than from Winchester to London, and the distance is the same.

6469. Winchester not being a competitive point, I suppose?—Yes, I think so.

Sheep breeding.

6470. But on the whole year dairying is more profitable than any other farm operation?—It is the best thing I do, I think. I breed sheep very largely, and that is very speculative. Those farmers who this year had to sell their lambs early sold at a terrible loss, but those who happened to have thunderstorms, or any other accidental circumstance, that enabled them to keep them on to the autumn, sold them right well; just that accident made the difference between a good profit or a great loss.

Corn growing.

6471. With regard to your corn-growing, what have you to say about that?—I do not grow corn to anything like the extent I used to do. I do not grow corn so frequently. It is difficult to say whether it is profitable or not. You cannot keep these cows without growing a lot of corn, because you want straw for wintering them. My cows are kept on oat, straw, and roots, so I must grow straw for their sake. To keep cattle it is well to have a considerable proportion of arable.

6472. Do you consume the whole of the straw you grow upon the farm?—Yes, generally; and of course enormous sums are spent for cake and such like.

6473. I presume you also consume the hay?—I sell the hay; I seldom consume hay.

6474. Do you sell it at Winchester?—Sometimes there—sometimes at Aldershot. I consider hay generally much the most expensive food you can use.

6475. Aldershot, I presume, is a first-rate market?—No, it is not very high priced there, and they are very capricious in their tastes; sometimes they like what I should call not very good hay; sometimes they will have the best.

Freedom of sale.

6476. Would you give tenant farmers as a rule perfect freedom to sell off both hay and straw?—Certainly; let them sell anything. I never hear of any restriction now.

6477. You do not hear of any?—No, I never hear of any.

6478. Although there may be restrictions in the covenants they are not enforced?—They are quite disregarded.

Reduction of rents.

6479. With regard to the subject of rents, have you any opinion to lay before the Commission?—I think that rents were very much too high some time ago—they were driven up by amateur farmers and one thing and the other. There was a sort of land hunger, and rents got higher than was reasonable. They are now gradually getting down, but in my opinion they will still have to come down as we tenant farmers will not go on occupying land and investing capital in it unless we can get something like a fair return. Things are not satisfactory now with us at the present rents, and the only thing we can see to alter is the rent.

6480. Do you think that a reduction of 50 per cent. upon typical Hampshire land is not sufficient?—It is not sufficient because the difference in the value of our wheat crop comes to that money, and there is a fall in other things too, but a still futher reduction of some 25 per cent. will have to be granted. Is land worth anything? is the common remark among farmers.

Position of landowners in Hampshire.

6481. That would mean, would it not, that a great deal of land would have to be rented so low as to prevent the landowners making anything like permanent improvements upon it?—It seems to me

Mr. J. Stratton. 21 Dec. 1893.

like the ruin of the pure agricultural landlord. Many estates in Hampshire have not paid working expenses for a long time, and then the tenants are being ruined. I am sure the Tichborne estate, on which I have been a tenant for 20 years, has not paid working expenses, and as for anything spent in the way of improvement is money lost and there is very little of it done.

6482. Are there many cases that you know of where the landowner takes the land in his own hands and lets the buildings and fences go down and the land is just used as a cattle or sheep run?—Yes, I could mention several estates that are served in that way.

6483. The landlord probably gets in this way rather more out of it than a tenant can afford to pay?—He cannot let it, and then his object is to save expenses, so he lays it down to grass and stops nearly all the labour. A great deal of Hampshire is very poor, and even in the best times there were very few cases where the tenants did well.

Depression in Hampshire.

6484. Would you regard Hampshire as somewhat exceptional in the depression that has overtaken the country?—Do I think the depression exceptionally great in Hampshire?

Mr. J. Stratton. 21 Dec. 1893.

6485. Yes?—But perhaps Essex has suffered as badly.

6486. I mean taking the southern and midland counties generally?—Yes. A great deal of Hampshire land is not worth occupying at a penny an acre; it is now worth nothing at all.

Tithe and taxes.

6487. (*Mr. Everett.*) That is if the tenant pays the tithes and rates?—The assessment would not be very high where the rent is nothing. In the case of the farm that I have taken at a pound a year the assessment committee have put the gross rateable value at 100*l.* and the net rateable value at 90*l.*

6488. Tithe, I suppose, is paid on that land still?—There will be some alteration with regard to the tithe. I do not know what will be done, but the owner will not pay 212*l.* I believe he might avail himself of some fresh Act. I think the present local taxation upon land is very unfair.

The witness withdrew.

Adjourned to to-morrow morning at 12 o'clock.

Thirteenth Day.

Friday, 22nd December 1893.

PRESENT:

THE RIGHT HON. GEORGE JOHN SHAW-LEFEVRE, M.P., IN THE CHAIR.

Viscount COBHAM.
The Right Hon. BARON VERNON.
The Right Hon. HENRY CHAPLIN, M.P.
Sir ROBERT NIGEL FITZHARDINGE KINGSCOTE, K.C.B.
ROBERT GIFFEN, Esq., C.B.
FRANCIS ALLSTON CHANNING, Esq., M.P.
JOHN CLAY, Esq.
CORNELIUS NEALE DALTON, Esq.
ROBERT LACEY EVERETT, Esq., M.P.
JOHN GILMOUR, Esq.
WILLIAM CUTLACK LITTLE, Esq.
WALTER HUME LONG, Esq., M.P.
CHARLES WHITEHEAD, Esq., F.L.S.

HERBERT LYON, Esq., *Secretary.*
R. F. CRAWFORD, Esq., } *Assistant*
FREEMAN THOMAS, Esq. } *Secretaries*

Mr. J. Stratton.

Mr. JAMES STRATTON recalled and further examined.

Mr. J. Stratton. 22 Dec. 1893.

Local taxation.

6489. (*Lord Cobham.*) We have dealt with rents, and we will now take the second point on which you wish to be examined. Have you got any suggestions to make to the Commission with regard to local taxation and its incidence?—I think it is a crying shame that land should bear the same extraordinary taxation now that it used to bear when it had the privilege of protection. It is generally felt among all farmers that as it bears now no exceptional advantages, it ought not to have those exceptional hardships. The local taxation upon land is altogether out of proportion to the value of the land, and to the value of the profit of the people who occupy it.

6490. Have you any specific suggestion to make to correct that anomaly?—That personal property should share it in the same proportion as real property does, that everybody should pay towards these taxes according to their ability. That especially refers to the poor rate. With regard to the roads, such a tax as the wheel tax was the most fair that could be imagined.

6491. Would you alter the local collection and management of rates?—I do not find any fault with the present collection, it is only the incidence of taxation.

Corn returns.

6492. Now with regard to corn returns, I believe you wish to say something upon them?—I think they act very unfairly, inasmuch as the tail corn as a rule is not sold at all, and the best corn is sold again and again. I have known several instances where barley has been returned at 8*s.* more than the farmer has taken. That is very unfair in relation to the tithe.

6493. Do you think that that hits you specially in Hampshire and Wiltshire?—No, I do not see that it does. There have been some glaring instances of what I say in Winchester market, but there is no reason why they should be more common there than at other places.

6494. Would you say that your corn produce is not up to the average produced in other places?—No, I do not think our barley is up to the average.

6495. Barley is not?—No, but our wheat is.

Tithe.

6496. You would advocate an alteration of the law in fact?—I think the seller, the farmer who first sells, should make the return. That would obviate the evil. I think that is the only hardship the tithe-owner can plead—that the returns are grossly unfair. I think that if the returns were fair he would have no complaint. He may as well complain about his acres being less than he wished, or about their being poorer than he wished they were, as that there was this tax of tithe on it, which has been there from time immemorial.

Mr. J. Stratton.
22 Dec. 1893.

6497. (*Mr. Long.*) The tithepayer you mean, not the tithe-owner?—I look upon that as the same. I think the tithe-owner has no cause to complain as long as the corn returns are fair.

6498. (*Lord Cobham.*) That would of course result in considerable diminution of the already reduced amount of the tithe?—A very great diminution. If a man buys land with tithe on it, and then complains that it is there, I think he may just as well complain that the land is poor instead of being good, or that the estate is smaller than he wished it was. Of course, that is only my personal view of it.

Railway rates.

6499. Now as to railway rates, which is your next point, do you consider that there is an undue preference there?—There is an undue preference given to foreign goods. Then the rates are too high, especially upon milk; I think it is monstrous that the railway company should take an eighth of the gross value of my milk.

6500. Is your milk sent up by passenger train generally?—Yes. It is a very good service.

6501. I suppose that you would allow that they are entitled to charge for sending up the milk by passenger service?—Yes. Without passenger service the milk trade would stop altogether when it is beyond 30 miles from London; it would be too slow.

6502. Those rates are now fixed, are they not?—They will not alter them.

6503. Formerly they could charge what they pleased?—I think so.

6504. Have you found no relief from that?—No. I have been complaining that at Winchester they charge 3*d.* more on an 18-gallon churn to London than they do from Midhurst, which is the same distance, and I can get no redress.

6505. (*Mr. Little.*) Is it the same company?—I do not think Midhurst is the same line; I am not quite sure.

6506. There are two lines to London, I think?—That answers it—that is the reason I suppose. I have been refusing to pay this 3*d.*; I have been holding it back so that the thing may be brought to an issue.

6507. (*Chairman.*) Have you refused to pay the extra charge since the beginning of the year?—Yes. Their reply to me is that since it is the same that I paid last year, they insist upon my paying that. I do not consider that a sufficiently good argument. As I have paid it for the last two or three years they think it a sufficient reason why I should continue to pay it, but I have only lately found out that there is a difference between it and the Midhurst rate, and as soon as I did find it out I stopped it. I expect I shall get the worst of it.

6508. Has a large sum accumulated in that way?—No; about 15*l.*, I think. I pay them something like 500*l.* a year for the carriage of milk.

6509. (*Lord Cobham.*) Are you aware that with regard to foreign produce preferential rates are illegal?—I cannot give chapter and verse, but there is a general feeling through the country that foreign corn in large quantities, and over long distances, is carried a good deal cheaper than it is upon our South-Western line.

National granary.

6510. Is there anything else that you wish to add to your evidence in chief?—I cannot help thinking that the fact that we produce less than a third of our food is a great national question.

6511. Are you referring to wheat?—Yes; to our wheat. If we had a war with even a small Power the disturbance to the sea carriage of corn would be such as would put corn at a famine price. That does not come from me particularly well, but it is a great national question. I have felt it so much that I should like just to state it now. We all remember the effect of the "Alabama" and the "Shenandoah" upon the trade of the North American States. Those were the only vessels they had, and they were enough to drive all the carriage from off the American ships. Supposing we were at war with a nation of only a tenth of our power, we could fight it and beat it anywhere, but we could not prevent the existence of privateers to a very considerable extent—to a larger extent than the South had then against the North. That, I think, would have an extraordinarily bad effect upon the carriage of corn, and it would drive the price up to more than double, through insurance and so on. It seems to me that it is as necessary that there should be a store of foreign corn in England, of, say, twelve million quarters, as that we should have an arsenal. Foreign corn is so dry that it would keep for ten years, but it would only be kept one year. It would be no great expense to any Government, because it could be shifted monthly. A million quarters a month should be passed through the stores, and we should always have then twelve million quarters of corn in store.

Mr. J. Stratton.
22 Dec. 1893.

6512. How long would that keep us going?—That would keep us going, with our own supply, for nearly a year. It would be a very little cost, because it could be sold off monthly and drawn in monthly, just the interest on the cost of 12,000,000 quarters of wheat. It would be of as much consequence to us as our arsenals.

6513. In the hands of the Government you mean?—That is a question for the Government.

6514. In the hands of the Government you mean?—Yes, certainly. This of course would damage farmers; we should not get exactly the great war prices, but it is a great national question, and any man who feels it as I do cannot help mentioning it.

6515. In addition to that would you artificially stimulate the growing of wheat?—I do not think so. I do not think that would do; when you can buy it so cheaply as we can I do not think the country would put up with anything of that sort.

Large and small farms compared.

6516. Is there anything else?—I think the idea that large farms have been more disastrous to the landlord than small farms is a mistake. The mistake has arisen in this way, that the small farms are upon grass land, and no doubt the grass and stock farms have paid better than the others, but if with that idea landlords cut up their arable and sheep and corn farms into small ones, I am sure they would find very much greater disaster than they do now.

6517. I think that answer is especially applicable to your part of the country, is it not?—Yes; I think it is, but with landlords who have got to do with large farms, that is where the disaster would be, because the large farm land is arable, corn, and sheep land.

6518. You would call a 300-acre farm a small farm?—Yes; we do in Wiltshire and Hampshire.

6519. That is quite a large farm in parts of the Midland counties?—Yes; I know it is.

Labour.

6520. I forget; did I ask you about the supply of labour in your district?—No; you did not mention that.

6521. Is it well maintained?—It is simply that farmers are cutting down the labour; they are not farming as well as they were; they are cutting down expenses, and instead of wanting more cottages we do not get all our cottages occupied; we do not require them to be.

Wages.

6522. Are the wages well maintained?—The wages are low; we pay from 10*s.* to 11*s.*

6523. Have they decreased in the last 10 years?—Yes, generally speaking.

6524. (*Chairman.*) How much have they fallen?—From 1*s.* to 2*s.*

6525. Since when?—In the last 10 years.

Quality of labour.

6526. (*Lord Cobham.*) Do you find that the quality of the labour is good?—There is a difficulty in finding boys and young fellows. The school regulations, which are so good for them generally, specially fits them for other work than agriculture, and farmers suffer from that.

6527. You do not consider that the labour question has a very material bearing upon agriculture in your part of the country?—No. Superior machinery has helped us to do away with a good bit of labour.

Reduced labour.

6528. (*Chairman.*) Have you been able to economise labour yourself in your own farm?—Yes, a good deal, by laying poor land down to grass—land that did not pay for tillage.

6529. To what extent would you say; what percentage?—I should think 25 per cent.

6530. In quantity as well as in wages?—More in the quantity.

6531. Besides the 25 per cent. reduction in the quantity of wages, has there been a reduction in the price?—Yes, but more in the quantity than in the price.

Mr. J. Stratton.
22 Dec. 1893.

6532. Does the 25 per cent. apply to the quantity?—That would include the two.

Allotments.

6533. (*Lord Cobham.*) Have you set apart much land for allotments?—My landlords have around Winchester; they have taken land that I used to occupy, and let it out for allotments.

6534. Land adjoining your farm?—Yes. The Dean and Chapter of Winchester have thoroughly accommodated the town of Winchester by small allotments all round it.

6535. Do they fall within the boundaries of your farm?—Yes, they did; some of my land was taken.

6536. Do you find them any convenience, or the contrary?—They are a great accommodation to the people; and no inconvenience to me.

6537. To some extent I suppose they would give you facilities for finding labour when required?—No; not much of that. It is generally used by the town people.

6538. Small tradesmen, and such as those?—Yes.

6539. (*Sir Nigel Kingscote.*) With reference to these allotments that you have mentioned near Winchester, they are not occupied by purely agricultural labourers, I presume?—Not generally; they are citizens.

6540. There is no very great demand by the agricultural labourer for allotments?—No.

Large and small farms compared.

6541. You said just now, in answer to Lord Cobham, that you thought the landlords would make a great mistake in breaking up their large farms, or dividing them. I suppose you would say, with reference to that, that large sheep farms, such as the Wiltshire and Hampshire farms, can be more economically managed at a certain acreage than they can in smaller holdings?—Yes, I am sure of it.

6542. That is your experience?—Yes.

System of farming.

6543. May I ask, as you have been farming for many years, and even in these bad times have increased your holding, whether you have found that having this large acreage you were able to do every part of the farming, if I may call it so; that is, rear your own stock, fat your own stock, and in fact put your hand into your pocket as little as you possibly can, and to sell out when that stock has been reared, either as store stock or fat stock?—Yes, that is the system I have adopted. My great reason for having to put my hand into my pocket is to buy artificial foods, such as cake and so on. I often pay 3,000*l.* or 4,000*l.* a year for artificial food. If it were not for foreign artificial food this year half the cattle of England would have starved—literally starved.

6544. I understood you to say that you sold off your hay; does that hay include sainfoin and clover hay?—Yes.

6545. Then you feed no hay, even for your sheep?—No; that is my general practice.

6546. Of course farmers generally would not have the opportunity of having such large farms as you have but even on smaller farms do you think it would be wise for farmers to rear as much of their own stock as they possibly can, and use even their own grain for feeding the cattle?—I think they would be wise to rear all their own stock that they can; but I do not think they would be wise in using their own grain. I think our wheat, for instance, is as unwholesome a thing as you can give cattle. Most practical farmers say, "Sell "all your own stuff for what you can make, and buy "cake." This year foreign barley has been so extraordinarily cheap that that has been the great source of cattle food. You can get Russian barley at four guineas per ton. We are selling our hay at 7*l.* per ton, and buying foreign barley at four guineas per ton.

6547. And you find that a good feeding stuff?—Yes; that is a very good feeding stuff.

Cattle disease.

6548. Have you suffered at all in past years, or lately, from cattle diseases—foot-and-mouth disease, for instance?—That is the greatest comfort of the present day. We can go to market and buy anything we fancy, and bring it home and have no fear of cattle disease. The first half of my farming career it was the greatest curse possible. Often you would buy cattle, and put them into quarantine for awhile, and even then disease would come and ruin your herd. In several instances I have lost two or three hundred pounds at a go, even 500*l.*, from getting foot-and-mouth disease into a herd of dairy cattle. That is the only bright side to our present condition. We do feel free from cattle disease.

Mr. J. Stratton.
22 Dec. 1893.

6549. I conclude that you would be a strong advocate for what is now carried out—slaughter at the ports?—I can see no possible excuse for that not being carried out, from a sense of humanity to the animals, as well as from other considerations.

6550. In fact the restrictions, in that respect, have been of great benefit to the farming interest generally?—They are inestimable.

Extension of woodlands.

6551. (*Mr. Whitehead.*) Has any land been converted to woodland in your part of Hampshire?—On Lord Northbrook's estate it is taking place now.

6552. Could you tell the Commission the result of that?—It is new; they are only just on now. There are a lot of labourers out of employment on Lord Northbrook's estate, and he very wisely is planting his poor lands with larch, and he is even planting some of his underwood, which has not been very profitable. They are doing it at a very little cost, just digging a hole, and putting the tree in, and they say it will do very well. I think more of that ought to be done. Men who have got capital, and poor chalk land, would turn it to good account by growing larch trees.

6553. Larch trees?—Especially larch, I think—larch comes to money quickly.

6554. For what purpose could larch be used?—Larch is marketable in every way; it is an excellent timber. All carpenters appreciate larch.

6555. (*Lord Cobham.*) At what age does it come to maturity in your county?—It becomes fit to cut for hop poles, and so on, at about 12 years, I think, and so you thin your wood then.

6556. And for timber?—At 30 or 35 years, I think, it has got to its best.

6557. You cut it before 40 years at all events?—Yes; there are some splendid larch plantations in my neighbourhood, on the estate of a relation of Mr. Long. I believe the present Mr. Long's grandfather planted them. That is a very valuable property.

6558. (*Mr. Whitehead.*) Would there be a considerable demand for larch poles as hop poles?—Yes, the small ones; the 12 year old ones.

6559. (*Mr. Giffen.*) Looking at the business of agriculture from the tenant farmers' point of view, which I understand is your point of view——?—Yes.

Local taxation and tithes.

6560. You attach much more importance to the reduction of rent than to any measures for transferring local burdens to personal property, or mitigating the incidence of the tithes?—I do.

6561-2. The question of transferring local burdens to personal property, and the question of diminishing the weight of the tithe, are more questions for the owner than for the tenant farmer?—Yes, generally speaking; only a good deal of land is held on lease you see, and as long as that lease lasts the tenant is interested in these alterations.

6563. Undoubtedly; but generally they are questions more for the owner than for the tenant farmer?—Yes; certainly.

Land paying no rent.

6564. Then you stated that a good deal of land in Hampshire and Wiltshire could not pay any rent at all, you considered—that that was the condition of things now?—Such is the case; it would hardly pay the local burdens.

6565. What per-centage of the land would you say is in that condition?—I could not say that. It would want a considerable calculation.

6566. There is an average rent from a good many different kinds of land in those localities?—Yes.

6567. This statement that the land cannot pay rent does not apply to the better land in those districts, I suppose?—No.

6568. Still, you would not like to name the per-centage of land in that condition?—No.

The letting of land.

6569. Is there any difficulty in getting tenants for the better qualities of land?—No, not at a rent—it is merely a question of rent.

6570. That is to say, there are people willing to take the land at the reduced rents?—Yes; the better land.

6571. Do they make a living by it at the reduced rents?—They have not got the rents reduced sufficiently to make a living at these prices.

Mr. J. Stratton.

22 Dec. 1893.

Local taxation.

6572. But still, on land of that kind, it is really a question of rent?—I think so.

6573. Then with reference to this question of transferring local burdens to personal property; to some extent would it be quite fair, do you think, when a certain kind of property has been subjected, for a long period of years, to special burdens, and all the dealings in that property have taken place subject to these burdens, to transfer them to some other property which had not borne them?—Yes; when the burdens are very much increased.

6574. Then you would say that the burdens have increased of late years?—I should say they have increased during the last century.

6575. Has the rate per pound increased on the rental?—I think it has.

6576. But within what time has the increase taken place—of late years?—Speaking of the poor rate, I think it has been a gradual increase from the time of Elizabeth, when it was first instituted.

6577. You could not give us any figures bearing that out?—No I could not do that.

6578. Of course you are aware that that contention of yours would be disputed?—Yes; certainly.

6579. Then is it not the case also that the difficulty of putting local burdens upon personal property is really such that it has always been found impracticable whenever experiments in that direction have been made, and that that is also the contention of a great many people who are interested in these subjects?—In reply to that remark I should say it seems very unfair that myself for instance with a 1,000 acres, giving healthy employment to a dozen labourers, should be rated upon 1,000*l.*, whereas my neighbour giving dangerous and unhealthy employment to two or three hundred people, should be rated upon his house, and upon his buildings, perhaps upon a hundred a year, and he should be making 5,000*l.* or 6,000*l.* a year, and I should be losing 500*l.* or 600*l.* I could give you plenty of instances of that sort. That looks to be monstrous upon the face of it.

6580. If, as a matter of fact, experiments have been made in trying to put burdens of that kind upon personal property, and they have always failed, would not that be a reason for caution in trying to do it again?—I think it shows a great lack of ingenuity.

6581. But still it is the case, that this is an experiment in taxation which has been tried again and again?—Yes.

6582. And has not often been successful? I do not know of any case; do you know of any?—No. That theory—that wish—has been outvoted. It is merely a question of voting power in the House of Commons, I suppose.

6583. The American Government, I believe, have tried very extensive experiments in putting taxes upon personal property, as well as upon real property, and the record is that they have completely failed all over the United States?—Yes; but they have failed because the majority of the voters there prefer things as they are.

6584. No; the law is, that both should pay taxes; but, as a matter of fact, personal property escapes?—I think that you must admit that that question is disputed.

6585. There is a great deal of literature upon the subject, and I wish merely to put it upon record that this point is disputed, and to raise it; I do not think we can go into the discussion profitably?—No.

Corn returns and tithe.

6586. Then with regard to the corn returns, am I to understand, from what you said about the unfairness of the present returns, that they are collected and made up in a different way from what was the case at the time of the Tithe Commutation?—Yes; I think it ought to be altered.

6587. Is it not made the same way now that it was done then?—I suspect it is.

6588. If it is made the same way now that it was done then, and if you make an alteration in the method, would not that be a reason for making an alteration in the tithe commutation itself?—I think that when the commutation was made it was clearly understood that the corn return should be a fair return of what it made. That is not the case. We want to revert to what was the intention then.

Mr. J. Stratton.

22 Dec. 1893.

6589. When the tithe commutation was made, then I believe the corn returns existed; they were practically obtained for other purposes, and all that was introduced into the Tithe Commutation Act was a clause stating that these exact prices, which were well understood, were to be taken, first of all, for the purpose of the commutation itself, and then for reckoning the changes from year to year?—I think the system has fallen into abuse.

6590. Has it changed?—I suspect it has; but I cannot say positively.

6591. Would that not be a point to be inquired into before any of these suggestions could be considered?—Yes, perhaps so.

6592. (*Lord Cobham.*) I think you said, in answer to a question of mine, that it would involve a change in the law?—Yes; I propose a change in the law.

6593. (*Mr. Giffen.*) It is a suggestion that would involve a change in the basis of the commutation itself, so as to be just to the tithe-owner?—That may be so; I cannot dispute with you upon that point.

6594. I merely wish to have this brought forward so as to be on record—that that would be a point to be considered?—Yes.

6595. Have you any calculation as to what percentage of the tithe rentcharge generally could be reduced if those amendments of yours were introduced?—No. I should think perhaps from 1*s.* to 2*s.* a quarter.

6596. On barley and oats, as well as wheat?—Yes. My remark is problematic. I cannot be certain about that, of course.

6597. It would not be a very material matter in any case, except to the owner?—I think that is material to the owner.

6598. To the owner?—Yes. 2*s.* a quarter when the quarter is very low, say 25*s.* a quarter, is a large proportion of the whole, but 2*s.* a quarter is not of much consequence when it is 40*s.* or 50*s.* a quarter. It is a very large proportion of 25*s.*; it is a twelfth.

6599. You have not made a calculation of how much, in point of fact, the per-centage in the tithe may be?—No; it may be more.

National granary.

6600. Then with reference to your suggestion as to the importance of encouraging the cultivation of wheat on account of political considerations, because of the danger of wheat going to famine prices, even if we were at war with a small naval Power——

6601. (*Chairman.*) I do not think you proposed to increase the cultivation of wheat?—Quite the contrary.

6601*a*. You merely meant that for political reasons there should be a quantity stored?—Yes.

6602. (*Mr. Giffen.*) The question I wish to put is, that that was not put forward by you as a measure to benefit the agricultural interest at all?—No. It is impertinent to the case, perhaps; but I ventured to mention it.

6603. It is perhaps not a thing which we can go into the discussion of here—it is more a naval question than an agricultural question?—It is a national question.

6604. But I should like to ask you whether your attention has been called to a pamphlet lately issued by Admiral Colomb, a distinguished naval officer, in which he does not lay stress upon this point, of the storage of wheat?—I have not seen that.

6605. Have you referred to the debate in the House of Lords last Session, in which this very question was discussed?—No.

Reduction.

6606. (*Mr. Clay.*) I gather from your evidence that you consider that immediate relief is to be found in the reduction of rent?—Yes.

6607. What amount would you consider has been the fall of rent since 1882, the last year of the Richmond Commission?—Altogether I consider that we have had a fall of rent of 50 per cent., and I should think half of that has been since 1882.

6608. Do you consider at the present time that with that fall it means ruin to the tenant farmers to go on paying the existing rent and keeping up the cultivation of the farm?—I think the farmers at the present rent and prices are very dissatisfied, very restless, and very uncomfortable. As Sir Michael Hicks-Beach said, it in the constant decline of things that has frightened

Mr. J. Stratton. 22 Dec. 1893.

us. We cannot seem to get to the bottom of it. If farmers could see a good price for their stock, as they did a few years ago, a very large portion of them would sell out and go out of the business. They hang on because of the low price of their selling stuff—their cattle, their implements, their everything.

6609. This year for the English farmers has been very exceptional?—This year is exceptional; the crops are exceptionally bad.

6610. Very bad; not only for the tenant farmer but also for the landlord?—Very bad.

6611. You told us what would benefit the tenant farmer—that was the reduction of rent?—Yes.

6612. Have you any idea of what means would benefit the landlord?—I think the purely agricultural landlord, a man who depends wholly on his acres, is doomed.

Laying down to permanent pasture.

6613. Speaking from your experience, and I believe you have had a large experience, you state that a very important question both for the landlord and for the tenant farmer just now is laying down to grass; have you been successful in that business?—Yes, I have laid down, I should think, 2,000 acres of poor arable land to grass, and instead of losing money as that land did before I consider it pays its way. I have stopped all expenses upon it. One man now can look after 200 or 300 acres, whereas formerly it would take seven or eight, or perhaps five or six.

6614. (*Lord Cobham.*) Are you speaking of permanent grass, or of laying it down for five or six years?—You can call it permanent grass. You may plough it up if you see that it will pay you to grow a crop of oats upon it, or if the stock which you have got a great lot of owing to constantly laying down sell very well, then you can clear out a lot of stock and plough up a bit. That has been my policy, but if I were farming my own land I would never plough it out of grass. But now stock is accumulating with us, because we cannot sell it. That has been one inducement for me to take fresh farms, not that I can see any amount of profit in the ordinary way, but because rather than sell my stock at a loss I have taken fresh land to put it on, so long as I can find capital to do it with.

6615. (*Mr. Clay.*) So you would recommend that if that land is not able to yield the rent or the expenses upon it, it should go to grass?—Certainly.

6616. How many years does it take with you to bring grass to the paying point?—If you put land down to grass in a fair condition, and if you never mow it, and at once begin feeding that grass with cotton cake, you have no check at all; it grows a fair amount of grass from the beginning to the end. It is a little more productive perhaps the first year than in any other year, but it will carry a fair amount of stock all through. But if you mow and carry off the hay, and if you feed sheep and fold them off it, it will be good for nothing very soon.

6617. You believe that the nitrogen received from the cotton cake, the undecorticated and the decorticated, is the most valuable ingredient you can put on grass for either cattle or sheep?—That makes the best and cheapest manure, inasmuch as the cattle or sheep will generally pay for it.

6618. And grass is like anything else, when it is not fed it will never produce richness?—That is it. Sir John Lawes has clearly proved, and so have many other people, that if you have only a field of couch—nothing but couch—if you fence it, and have a pond of water, and put cattle on it feeding with cake, it will give you good pasture. I could give you instances where no grass has ever been sown except sainfoin; the sainfoin has died out, and possession of the ground has been taken by other grasses. I can show you pasture fed in that way worth 2*l.* an acre now where no seed has ever been sown.

6619. I can corroborate you in all these points myself practically?—You know it is a fact.

6620. Yes; but I only want to put on record what you know about it?—A pasture is no good unless you have a fence round it, and some water. With that, any land will make a pasture, I think, but some quicker than others.

6621. What is the general price of laying down that land to grass?—I do not at all approve of expensive seeding. I have had many good pastures from 12*s.* an acre. It depends much more upon how you treat it afterwards than upon what seed you sow.

Mr. J. Stratton. 22 Dec. 1893.

6622. By the course of feeding the sheep with cake?—With cake, that is the secret, but it is better with cattle than with sheep.

The Agricultural Holdings Act. Compensation.

6623. After you have done all that, and made the farm, what part does the Agricultural Holdings Act play; are you compensated for laying down the grass under that?—I have laid down grass under that Act, and have been awarded compensation under it, but the Agricultural Holdings Act is so complicated that very few of us farmers can understand it, and I think it ought to be amended. I do not consider there is sufficient encouragement for high farming. Rather than lay land down under the Agricultural Holdings Act, I should prefer to have it in my own hands, and break it up, and have a couple of crops of corn before leaving. The compensation awarded is not equivalent to that.

6624. That would be very damaging for the farm if the owner wishes to let the farm again?—It would very. I know many farmers who are about to leave, who do that. They feel "if I leave this down to grass "there will be plenty of competition for this farm; if "I plough it up I can take it again on my own terms."

6625. If the Agricultural Holdings Act was amended and strengthened in that way, it would enable the outgoing tenant to leave that grass land, which would be beneficial to the landlord and to the incoming tenant?—Yes. The Agricultural Holdings Act ought to be so altered as to prevent the evil I have indicated, and put a premium on the best farming.

6626. (*Chairman.*) How should it be altered?—I cannot go into that now, it would take too long.

6627. (*Mr. Clay.*) But you consider the machinery and the expense of working that Agricultural Holdings Act is too cumbersome?—Yes, I think if you had a competent arbitrator in the county to settle such a question it would be a great relief to landlord and tenant.

Official referee.

6628. It has been put before this Commission that there should be an official referee?—Yes, that would be better perhaps.

6629. It would thereby save what is the abuse of the Act—the law expenses and the solicitor's expenses?—Yes, and there is its ambiguity too—we cannot understand it.

6630. Would you favour the appointment of an official referee in each county, and, in a large county, in each district?—Yes, in the hope that his action would encourage an outgoing tenant to improve his farm and leave it in the best condition.

6631. You would have a man to go and perform that duty of giving cheap justice—cheap compensation to the outgoing tenants?—I think so. I think a practical farmer would be the best authority; he would be the best judge of what would be advantageous to a farm.

6632. Do you think that the referee's decisions should be final, and not liable to appeals at law?—Yes; it would be perhaps difficult to find a man who would have the confidence of landlord and tenant—you must consider both interests.

6633. As far as you see just now, as the Agricultural Holdings Act stands, a small tenant is afraid to enter upon it?—I have heard of such cases.

6634. The expense of getting his law suit outweighs the sum awarded?—Yes, I have heard of such sums awarded. Counter-claims are of course provoked and tenants are afraid of them.

6635. But still the landlord is entitled to a counter-claim as against an outgoing tenant?—Yes, but still the Act does not work well; it causes friction.

6636. This official referee would deal with the counter-claim the same as he would deal with the claim itself?—Yes.

Outgoing and incoming tenant.

6637. Are you of opinion that this Act should deal only with the outgoing tenant and the landlord, and not with the incoming tenant?—Yes, unless the incoming tenant likes to take the place of the landlord which is very common.

6638. There would be no contract between the outgoing tenant and the incoming tenant—the outgoing tenant's contract is between himself and the landlord?—Yes, entirely; but the incoming tenant might take

Mr. J. Stratton.

2 Dec. 1893.

the landlord's position if it were so agreed between him and the landlord.

6639. But the outgoing tenant is not bound to accept the incoming tenant?—No; he may or he may not as he thinks best.

6640. The incoming tenant may be a man of straw—where is the outgoing tenant then?—Just so.

6641. Does not the whole thing rest between the landlord and the outgoing tenant?—Yes.

Slaughter of cattle at port of debarkation.

6642. (*Mr. Gilmour.*) In reply to a question with regard to the benefit that arose from the slaughter of cattle at the ports, you added also that you considered the question of humanity towards the animals. I take it from that answer that you were rather indicating that there should be nothing but dead meat brought across?—Yes, I meant slaughter on the other side.

6643. Do you think that would encourage very much the breeding of young cattle among farmers in this country?—Protection from disease does encourage the breeding and keeping of cattle, but since meat comes over here in perfect condition in a cooled state, I see no reason why live cattle should come at all.

6644. Have you considered the question with regard to the interest of feeders in certain counties in the country who desire to have imported store cattle in those counties?—I thought you were asking with reference to the consumer of meat; I think he would be greatly advantaged by keeping out disease. With regard to the feeder, I have hardly considered that.

Extension of woodlands.

6645. You spoke a good deal about the larch; may I ask if in your county the larch keeps free of disease for from 10 to 12 years?—If it is free from disease?

6646. Yes, from lice?—It grows very clear and well. I have never known of disease in a larch.

6647. Are the young trees raised from local seed, or is seed brought from a distance?—I think the planter would grow his own seed; he would have a nursery and plant them out, but they are sold by seedsmen and nurserymen at a moderate price.

6648. What I want to know is whether these plants which seem to do so well in your county were brought from a higher and more northern part of the country and throve?—I do not think so, but I am not certain about that.

Workhouse occupants.

6649. Have you any idea what is the proportion in the poor-houses in your county of rural labourers as compared with those engaged in other employments during their active life?—I think they are chiefly the rural population.

6650. In your poor-houses?—In our unions. I think so.

Reduction of rents.

6651. (*Mr. Little.*) I think the gist of your evidence last night was with regard to rent, that in a large part of Hampshire and Wiltshire rent had almost entirely disappeared, and that the landlord in many cases did not get enough to pay for the upkeep of the estate?—I would rather stick to the statement that the rents have gone down 50 per cent.

6652. You gave us an instance where you hired a square mile of land for a sovereign?—Yes.

6653. And other instances where the land was hired for a very small sum?—Yes, I spoke of a whole estate.

6654. And the farms you described as having a certain portion of good land, and a certain portion of down which is worth little or nothing?—Yes.

6655. Then there must be a considerable part of those counties which now produce no rent to the landlord?—Yes, it is so.

6656. If the decline should continue, the landlord must either disappear or become the occupier of the farm?—Yes.

6657. In that case the tenant farmer disappears?—Yes.

6658. The cause is, I presume, that the cost of production is so very near to the value of the produce?—That is it.

6659. And there is too little margin left for rent?—That is it.

6660. Notwithstanding the reductions that have been made in the rent, you say the tenant is not in a satisfactory position?—That is so.

6661. You said the tenant farmers would not go on getting only a bare interest on their capital without any reward for their labour and skill?—No. It is worse than that—they are sinking capital.

Mr. J. Stratton.

22 Dec. 1893.

6662. If there is no chance of raising the price of produce, what can be done; must you not either alter the description of the produce or decrease the cost of production?—Yes.

Changes in system of farming.

6663. What are the items in the cost of production which can be decreased, in your opinion, outside of rent?—I think the farmer generally attempts to grow too much corn and consequently spends too much on labour.

6664. You think that labour can be reduced?—Yes, by laying the unprofitable land down to grass

Local taxation.

6665. That is a change of system. You think that rates and taxes, though they may not have increased, are a part of the expenditure, and that they are relatively a larger part than they were?—Yes.

6666. The produce having diminished in value?—They are relatively larger.

Changes in system of farming.

6667. I believe that you have not only farmed very largely and farmed a great variety of soil, but you have gone into many different systems of farming?—Yes.

6668. You have experimented?—Yes.

6669. You have never been afraid of stepping out of the beaten track?—No.

6670. You have tried market gardening to some extent?—Yes, and poultry.

6671. You have been an adventurous farmer?—I have tried everything I could think of.

6672. Is there much prospect, in your opinion, of some new system of farming being introduced which would be more successful than the old one—any great change?—No.

6673. Apart from laying all the poor land down to grass and increasing the breeding of cattle and sheep, do you see any great outlet for the farmers in the greater part of the country?—No. My idea is to keep down the expenditure upon unprofitable land; the money is lost upon the poor part; whatever you put there is lost. Stop that leak, and do your better land as well as possible.

6674. Would you say farmers generally are prepared where an opportunity offers to enter on fresh branches of farming and to develop fresh systems?—No, the farmers generally are very conservative.

6675. Are there any hindrances to them in developing their land in fresh methods?—No, I think not.

6676. Is not the difficulty of transport in many cases a great hindrance?—Do you mean railway carriage?

State loans for constructing railways.

6677. Do you want railways?—Of course, if there were railways in some districts the milk trade would be further developed; but that would be at the expense of those who have already got a milk trade—that would lower the price.

6678. Do you think that the suggestion which has been made here that the Government should lend money to help to make tramways would be of any advantage in your part of the country?—No, I do not think so at all.

Restrictions in agreements.

6679. You said that the restrictions on the growth and sale of different descriptions of produce were unknown in your part of the country now; may I ask whether they are entirely abandoned, or whether they are only suspended?—They are entirely abandoned.

6680. Do you mean that they are not introduced into agreements?—If they are they are ignored.

6681. But that is not quite the same thing; are they introduced into agreements?—They speak now in agreements of carrying out the best "practice of the country," which is very vague. Tenant farmers generally know that if they break the letter of the lease, unless the landlord can prove damages, he would have no chance of remedy.

6682. But the restrictions still remain in the agreements which are offered to tenants on hiring a farm?—I have do doubt they do to a great extent.

6683. In your own case have you any conditions?—Only with regard to leaving, and that is general—farm, as it were, how you like until the last two years; and then very properly there are restrictions.

Mr. J. Stratton.
22 Dec. 1893.

6684. Would you say that restrictions are unnecessary?—With the exception of the last two years.

6685. Would you say they are generally ineffectual?—Yes; with that same exception.

6686. In your opinion many of them might safely be abandoned?—Yes, they have become obsolete.

6687. What would be the protection to the landlord supposing that the land were reduced in value by a constant succession of crops and a removal of produce?—I do not see what protection he would have.

6688. Then you admit the necessity for some restrictions?—I only admit the necessity of such restriction for the last two years of a tenancy.

6689. Would you be satisfied if a tenant could show his farm in the last year of his tenancy with good crops and clean?—Perfectly; whatever he had done before.

6690. You think the landlord would be perfectly protected by that proviso?—Yes.

The Agricultural Holdings Act.

6691. I understood that you had been compensated for laying down to grass under the Agricultural Holdings Act, and I rather gathered that you were disappointed—not dissatisfied, but disappointed with the result?—I was not exactly disappointed, because I knew that would be the result. But as a matter of fact, I might state that that was worth a pound an acre, but by irrigation with sewage it became worth 4*l.* an acre, and that was a permanent improvement, so that I quadrupled the value of the land, and on leaving, instead of ploughing it up and getting a crop or two out of it, I received 5*l.* an acre.

Laying down to permanent pasture.

6692. Did that sum recoup you?—It had been paying me all through; that was their argument.

6693. Were you paid in cash?—Yes, they paid me in cash.

6694. Do you happen to know the basis of the calculation of the referees?—No, I do not.

6695. I suppose they did not state that?—No.

6696. I presume they took into account the inherent capabilities of the soil—they were bound to do so by the Act?—I do not see how they could do that, because the inherent capabilities of the soil has not prevented its being generally reduced in value by almost a half during the last 14 years.

6697. The land was capable of inprovement—that was an inherent capability?—Yes, but then all land is capable of improvement, and yet has fallen in value.

6698. Yes, but it was capable of so much improvement as you have made?—By the accident that I could command sewage to be thrown upon it—a mere accident.

6699. (*Lord Cobham.*) You could have ploughed up that land, could you not?—Yes, if I had not bound myself by the Agricultural Holdings Act.

6700. Were you bound under the Agricultural Holdings Act not to do so?—Yes, I laid it down under the Agricultural Holdings Act, which restricted me from ploughing it up.

6701. You had not that lever over the landlord—you could not threaten him with an intention to do that?—No, I could not do that.

Land paying no rent.

6702. (*Mr. Chaplin.*) I think you told us that in Hampshire and Wiltshire there was a considerable quantity of land where it was beyond the question of rent altogether and it had gone quite out of cultivation?—Yes, it never was worth much.

6703. What sort of crops did it grow formerly?—Turnips and oats and down to grass four or five years.

6704. Well farmed, could it be made useful?—Yes, it took its regular course with the rest of the farm.

6705. How many quarters to the acre of oats would it grow?—After the turnips were fed off it would grow perhaps four quarters.

6706. Then do I understand that the present condition of this land is due principally to the fall in prices?—Yes.

6707. Is the quantity of it very considerable?—Yes, it is considerable.

6708. You are not able to tell us how much?—No, speaking roughly I should think an eighth of the county.

6709. An eighth of the county?—An eighth or a tenth of the arable portion of the county.

Mr. J. Stratton.
22 Dec. 1893.

6710. Of which county?—Of Hampshire.

6711. And of Wiltshire?—And of South Wiltshire.

6712. I suppose we can obtain tolerably reliable evidence on this point by sending a sub-commissioner into those counties?—Yes, that could be found out.

Reduction of rents.

6713. Now in the case of other land that you have spoken of where the rent is not sufficiently reduced to enable the farmers to continue farming at a profit, what class of land is that?—The ordinary Hampshire land, the sheep and oat land.

6714. You said, I think, that that had been reduced 50 per cent.?—Yes.

6715. How much more reduction would be required to make it profitable?—That is a very difficult question because profit depends so much upon season and the accident of the prices of stock as well as of corn. It is difficult to say that, but I know that a great many of the farmers would leave if they could not get another 25 per cent. reduction, if it were not for the loss they would sustain in selling off their affairs.

6716. Now, if I may assume that a 25 per cent. further reduction was made, what proportion of the total cost of production would the rent bear to those outgoings; it would be something very small, would it not?—Yes, very much smaller than it used to be.

6717. What do you put it at now in your own case?—I have never reckoned it.

6718. You have a very large outlay every year I suppose in labour, and in cake, and fertilizers, and one thing and another?—Yes. My labour would be more than my rent; my fertilizers and cake bill would be greater; then would come my rates and taxes. I should think the rent would be perhaps about one-sixth of the whole outgoings, but I am not quite sure of that.

6719. So that even if you get this further reduction the relief would be comparatively very small?—Yes. A very common question in our market is: Is the land worth anything? That is what you hear farmers saying one to the other, and the reply is given: Nothing this year, but we hope it will be better.

6720. Then if the present continuous fall in prices—for it is almost continuous——?—Yes.

6721. If that continues, this further reduction of rent that you speak of would practically do very little as a remedy?—Very little.

6722. In fact, it seems to me—I gather rather that that is your opinion—that under those circumstances the tenant farmer would be doomed as well, as you say, the landlord is at present?—Very nearly.

Low prices.

6723. Now what is the chief cause of all this in your opinion?—Certainly low prices.

6724. And the real remedy I suppose would be an improvement in prices?—Yes. The low prices arise from natural causes.

The Agricultural Holdings Act.

6725. Now with regard to the Agricultural Holdings Act, I understood you to say that it is complicated, and that farmers do not understand it—I will assume—I feel pretty sure that you understand it?—No, I think it is rather puzzling.

6726. Cannot you make to us any suggestion as to amendment which might be useful?—I think what Mr. Clay has suggested would be a great help.

6727. That you should have an arbitrator?—Yes.

6728. Is not the place of an arbitrator such as he describes sufficiently filled now by the practised valuers whom you appoint yourselves?—No; they do not seem to know what to do, and their action in respect to it has not conduced to the encouragement to leave farms in the high state of cultivation so much desired.

6729. In your county?—In this question of mine we had two of the best valuers, one of Hampshire and one of Wiltshire. They had not settled so large a question as this before. It was something like 300 acres—indeed it was more than 300 acres—and they really did not know much what to do. I could not tell them, that was very certain. The landlord and myself told them to settle it how they liked, and not to refer, and they felt their way in the dark. They did not know what to do with any degree of confidence.

6730. Does that not point rather to this, that it is the administration of the Act rather than the Act itself which is to blame?—Perhaps so.

Mr. Stratton. 22 Dec. 1893.

6731. I am only seeking from a practical witness like yourself for information for our own guidance?—I should not have known how to settle that question. Supposing I had argued that I had made the land worth four times as much as it was before, and then asked them to pay me four times its value down, they would not have done so, and I could not have expected them to do so, but that would have been justice.

Slaughter of cattle at port of debarkation.

6732. Now with regard to what you said as to the present arrangements with reference to the contagious diseases of cattle being so great a blessing. By the present arrangements you are aware, I suppose, that the landing of all animals is prohibited entirely from Europe, and that when they come from any other country they are obliged to be slaughtered at the port of landing?—Yes.

6733. You are aware that that is the arrangement existing at the present moment?—Yes.

6734. But it is not permanent at all?—No, that is it. I wish it were permanent.

6735. Would you like to see the discretion which at present rests with the Board of Agriculture removed, and the slaughter at the port of landing made absolute?—Yes, or at the port of embarkation.

6736. You would rather go further and prohibit the entry of all live animals into the country at all?—Yes.

6737. Would you be in favour of legislation to that effect?—I should.

The Agricultural Holdings Act.

6738. (*Mr. Long.*) With reference to the Agricultural Holdings Act, one question further. Have you known many other instances occurring with other occupiers than yourself where the Act has failed?—I have not known any other instances where it has been used.

6739. Where it has been put into force you mean?—That is so.

6740. Then it would be right to say that, so far as your experience goes, it has very seldom been put into force?—Yes.

6741. Do you mind my asking you ——?—You may ask me any questions you like.

6742. Whether your evidence represents solely your own experience, or whether you give it as representing your family and the enormous experience gained by your family?—I think I represent the feeling of farmers generally.

6743. Have not your family had exceptional opportunites in consequence of having rented such enormous quantities of land in different parts of the country?—Well, I do not think they have availed themselves of this Act at all—I do not know that they have.

6744. As a matter of fact, they do rent at the present moment probably more land than any other one family in the country?—Yes; I should think a great deal more.

6745. Amounting now to many thousands of acres?—I should think 30,000 to 40,000 acres.

Reduction of rents.

6746. With reference to the rent difficulty, notwithstanding these heavy reductions of 50 per cent., you still consider it is too high?—Because that is the only thing we can seem to touch—to alter.

6747. As a matter of fact, in the greater part of Wiltshire at all events—Hampshire I only know of from hearsay—in all recent agreements, have not the farmers practically had the fixing of the rent in their own hands?—Yes, and they thought the reduction would have been sufficient.

6748. I mean even now leases are of very little value, and many of them have ceased, have they not?—Yes.

6749. Consequently, if a tenant came to his landlord and said, "I want a reduction of so much more," is there not every probability that he would get it rather than be parted with?—That is the case in very many instances, but it is not invariably so by any means.

6750. But still it is more often than not the case, is it not?—Yes.

6751. Does it not especially apply to that part of Wiltshire and Hampshire which you described just now where there are those big corn and sheep farms?—Yes, I think so.

Probable result of continued depression.

6752. You told us that the purely agricultural landlords are doomed; have you formed any idea yourself as to who should take their place with reference to the necessary outgoings for maintenance and improvements?—That would entirely go to the wall. Very little has been spent in maintenance and improvements lately, because the landlord has found that any money invested is money lost upon the land, and that he gets no interest at all for it. If he puts up new buildings, the tenant still comes and wants a reduction of rent, owing to the bad times. So that there has been very little money spent on land, and there will not be money spent. We can see no other people to own the land but rich commercial men, and so on.

Mr. J. Stratton. 22 Dec. 1893.

6753. But, as a matter of fact, is it not the case that properties which would be described as purely agricultural are really altogether unsaleable now?—There is some land within 4 miles of Winchester which 30 years ago was sold for 3,000*l.*, consisting of 175 acres, which I bought the other day for 1,300*l.* I was farming it, and got it laid down to grass. I did not want to lose it, because it was in a good state in the way of grass made in the way I have been telling you of. I bought that land for 7*l.* 10*s.* an acre, tithe 6*l.* per annum.

6754. Was not that rather a special case?—That same land had been sold for 3,000*l.* within 30 years.

6755. I believe that between Winchester and Andover there is an enormous quantity of land which can be bought at almost any price?—At 2*l.* an acre I should think.

6756. It is practically unsaleable?—Yes, it is worth nothing except for rabbits.

6757. Anybody who desires that the cure of agricultural depression should be of a permanent character would be brought face to face with the fact that if the agricultural landlord is doomed, with him will go the necessary provision for maintenance and improvement of landed estates?—Yes, and the labourers' employment and income.

6758. Precisely; it would involve in the end the destruction of all agricultural processes?—Yes, that is gradually taking place now.

Local taxation.

6759. One question with regard to the rates: Mr. Giffen put a question to you as to the experience in America with reference to the incidence of local rates upon personal property. Would your rates be met or partly met by contributions out of revenue which is solely produced by personal property being devoted to the aid of local taxation?—Yes.

6760. Is it not the case, notwithstanding Mr. Giffen's travelling over to America, that he might have found experience in our own country? In the year 1888 was not a very large contribution made which was derived solely from personal property?—It was; that was a step in the right direction.

6761. Would that be the sort of course you would like to see followed in future?—Yes, we see no great difficulty in that.

6762. I do not know whether you have followed the rise and fall of your local rates in Hampshire. Has the county rate increased or decreased?—I think there is some slight increase since the county councils.

6763. The county councils have in a great many cases increased the expenditure?—Yes.

6764. Rents, and consequently assessments have fallen?—Yes.

6765. Is it your opinion that the rates have not increased as much as they otherwise would have done having regard to the large fall in assessments?—I really have not followed that.

6766. You have not studied it?—No.

Workhouse occupants.

6767. One question with regard to the paupers; Mr. Gilmour asked you whether the inhabitants of the workhouses of Hampshire were not mainly of the rural population; is it not the fact that the inhabitants of the rural workhouses are practically confined to three classes, the infirm, the aged, and orphan, or deserted children?—Yes, I think they are.

6768. It may practically be said that in the rural workhouses pauperism, with which we are familiar in the urban districts is unknown—they are rather hospitals for the sick and the infirm, and homes for orphan and deserted children, than institutions for anything else?—Yes, chiefly so.

Particulars of rates.

6769. (*Mr. Dalton.*) Can you say what amount you pay in rates?—No, I cannot. I have not got it here.

Mr. J. Stratton. 22 Dec. 1893.

6770. Nor what the average rate in the pound is over these 5,500 acres?—No, I am sorry I did not bring that with me.

6771. (*Chairman.*) Can you supply it, because it is very important information?—Yes, I could supply it.

6772. Could you show year by year how much you had paid in rates?—Yes.

6773. (*Mr. Dalton.*) For the last 10 years?—I think I could; I could get a statement of that from the office. (See Appendix A. XXIII.)

6774. Could you give the rates and the rental? I think it was said that now the rates bear relatively a larger proportion to the rent than they did?—I think the comparison was with profits.

6775. We would find out by the statement you have just promised whether it was a larger proportion of the rent or not?—Yes, I will try and supply that.

Local taxation.

6776. Then I think you were under the impression that personalty does not contribute to the rates?—Not sufficiently.

6777. Take the case of railways. Shares in railways are personal property, are they not?—Yes.

6778. And they are rated to the full?—Yes, they are an exception.

6779. Then you have canals, waterworks, gasworks, and so forth?—Yes.

6780. You would not put an additional rate upon those, I suppose, if they pay rates already?—No; I should only put the net over other property.

6781. That would very much reduce the amount of personalty that you would get a contribution from?—Yes.

6782. Then I think you mentioned a case where some man, employing 200 or 300 persons, paid so much less rates than a farmer employing a smaller number?—Yes.

6783. What case had you got in mind?—I should speak of large factories.

6784. A factory pays rates?—Yes, upon the rent of the building.

6785. But is that not a very heavy item?—No; I think a very small one in proportion to the income.

6786. The income of the factory depends to some extent upon the fact that 200 or 300 persons are employed there?—It may.

6787. Then it would be paying urban rates which would be higher than the rural?—If it were in a town, yes.

6788. I meant that; but were you under the impression that a man owning a factory of that kind was only paying the rates on the house that he was living in?—And on his workshops too.

6789. In the case of a farmer, he pays his rates in one lump for his house and for the property on which he carries on his business?—Yes.

6790. But if we are going to compare the employer of labour in a town with the farmer, we should have to take the rates he pays upon his house and also the rates he pays for his factory?—Certainly.

6791. To make a fair comparison, that would have to be considered?—Yes.

6791*a*. (*Mr. Channing.*) You spoke of bringing personalty under rating, in order to get a relief to the rating burdens on the land?—Yes.

Assessment to rates.

6792. Are you aware that in some unions the assessment that farmers have to pay upon is actually higher than the assessment of houses in urban districts in those unions; have you any cases of that kind within your own knowledge?—I am well aware that the tradesman pays rent only upon his house and his workshop in which he may carry on, and does carry on, an enormous business and employs a great many hands and makes a great income, whereas we pay rates upon our house and farm, and perhaps are losing money.

6793. That is hardly the point that I meant. Are you aware that in certain unions—the union which I have lived in, for instance, in Northamptonshire—the assessment to the poor-rate of the houses in the urban part of that union is very much lower—put it at about half the annual value—than the rate of assessment must be upon farms?—No, I did not know that, but I have no doubt as to the general fact that I have stated, that we are over-rated with regard to the poor and the roads.

Mr. J. Stratton. 22 Dec. 1893.

6794. Supposing there are many instances of that kind, the question of assessment would have to be gone into as well as of the incidence?—Yes, certainly.

Railway rates.

6795. Now about railway rates, do you object to the existing railway rates only because there is sometimes a preference given to foreign produce?—I think they are too high,

6796. They are too high for English produce?—Yes.

6797. Are you satisfied with the return to the rates and charges of last year, which I suppose is the usual thing now, or do you think we could go farther than that?—I think we ought to go farther.

6798. Do you think that the trader ought to have some means of obtaining the lowering of the existing charges as well as a remedy in the case of an increase in the existing charges?—Yes I think if possible agricultural produce ought to be carried cheaper than it is.

Official referee.

6799. Now about the official referee, I understand your point to be that your main reason for assenting to that question of Mr. Clay is, that you would prefer a skilled man to carry out such arbitrations to the ordinary type of valuer?—Yes. I think it wants an expert.

Laying down to permanent pasture.

6800. You recommend laying down in permanent pasture as a cure for agricultural trouble in a good many districts; would you also support the right of a tenant to lay down and obtain, even if the consent of his landlord is withheld, compensation for laying down if the official referee declared that that was an improvement in the character of the farm?—I think that would be rather hard upon the landlord. He would perhaps have to pay a sum which he could not afford to pay, and when he did not want to make any outlay at all upon his land. That would be his feeling. I think that would be rather hard upon the landlord.

6801. So you would leave it open?—Yes, I would.

6802. In cases where the estates are very much burdened, where the landlord was not able to do this, you would leave it entirely open?—Yes, I do not think it would be fair to serve the landlord so.

Cattle disease.

6803. You spoke of cattle disease, and you expressed a very strong opinion as to that?—Yes.

6804. Have you formed any opinion as to the losses to farmers from tuberculosis, and what there ought to be done in that matter?—It is a very serious disease, and there are very few herds without it, that is my opinion, and I think it is a matter that ought to be taken up.

6805. You think the losses are so great?—I know they are.

6806. That is a matter which calls for urgent attention?—I think so.

6807. As soon as the Commissioners' report is out?—Yes, I have thought a good bit about it.

6808. You spoke of land being on lease very largely in Hampshire?—Yes.

Reduction of rents.

6809. How are the adjustments of rent managed in the leases there; are the leaseholders able to obtain reductions?—In most cases they have done so. It depends very much upon the condition of the tenant and the landlord. If the tenant is poor and cannot pay his landlord makes him an allowance.

System of farming.

6810. You seem to prefer cotton cake for improving the permanent pasture?—Yes.

6811. Is that partly because of the higher per-centage of nitrogen?—Yes.

6812. Or because of the cheaper cost?—Because of the higher percentage of nitrogen.

6813. (*Mr. Everett.*) Is that decorticated or undecorticated?—Decorticated is the best, the richest.

6814. (*Mr. Channing.*) You think it improves the grass quicker than linseed cake?—I know it does. Its manurial value is greater.

Restrictions in agreements.

6815. As to the question of free sale and free cultivation, I suppose you would limit what you have said rather to leases would you not in saying that it was quite enough to leave it only to the last two years?—Yes.

6816. In yearly tenancies would you not recognize the justice of the landlord having an agreement that

Mr. J. Stratton.
22 Dec. 1893.

there should be a manurial return?—Yes, but if he were wise he would not take any notice of any technical flaw, but if he saw that the tenant was generally farming badly, he would take advantage of his agreement.

6817. I understand that most of the penal rents and agreements of that kind are not only obsolete, but are being left out of the new agreements now being made in Hampshire, such as the clauses for mowing twice and that sort of thing?—New leases and agreements in Hampshire are I am sure much more liberal than they ever were before.

6818. Do you mean that they are generally coming to the type of "fair husbandry of the district"?—Yes.

Tenants' capital.

6819. Now, you were asked a question by Mr. Long as to the farmers being able to fix their own rents practically; that is true to a great extent, but is it not limited by the fact that the farmer is compelled to lose by leaving his farm; there is a loss of capital involved?—Yes.

6820. What would you put the average loss of capital at; what percentage? It has been estimated by Sir James Caird and others, what would you put it yourself at?—In how many years?

6821. On quitting the farm?—Some years the tenant would not lose anything. If it was a good year to go out there would be an inducement to go out, if the stock were high; but if the stock were low it would be a disaster to go out.

6822. It has been put by Sir James Caird at about 10 per cent. of the tenant's capital on the average. What do you think of that?—Just moving from one farm to another.

6822*a*. Yes?—I do not agree with that.

6823. You think it depends more upon the circumstances?—Yes.

Laying down to permanent pasture.

6824. (*Mr. Everett.*) You have had a great deal of experience in laying poor land down to grass. Do you lay it down in a corn crop generally?—Yes, always.

6825. In your neighbourhood a great deal of sainfoin is grown is it not?—Yes.

6826. Do you find laying the land down to grass is better than laying it down to sainfoin?—No, as long as the land is fresh the sainfoin is most profitable, I mean if it is not grown for 20 years. If it is suitable for sainfoin it is the most profitable crop you can possibly grow.

6827. I was wondering whether laying it down to sainfoin for a few years, then taking corn for a few years, and then laying it down to sainfoin again would not be better?—No, sainfoin will not grow under about 20 years. Sainfoin as a rule will stand perhaps 7 years, but after that you must expect no more sainfoin there for 20 years. It has taken out all that it can find of that which it requires.

Land paying no rent.

6828. (*Lord Vernon.*) The land that you speak of when you talk about rent disappearing is very bad land is it not?—It is the worst land, it never was worth much.

6829. Hardly typical of agricultural land at all?—It would be land that was broken out of down.

6830. It would have been better if it had never been cultivated?—Very much better.

Railway rates.

6831. You buy large quantities of feeding stuffs do you not?—Yes.

6832. What port do you get them from?—Southampton now.

6833. Do you complain of the rates on feeding-stuffs now?—No, it is so short a run from Southampton. I do not think that they are excessive.

6834. But otherwise you would think from the ordinary rates on feeding stuffs that if you were some distance from the port you would suffer considerably?—Yes.

Slaughter of cattle at port of debarkation.

6835. As regards the question of the slaughtering of cattle at the port of landing, or of importing them dead, you do not think it is worth while risking the interests of the many farmers to the few who gain by wishing to have store stock?—No, that is my view.

Changes in system of farming.

6836. Then you said that the farmers were very Conservative. Do you not think that is a good deal because they have been of late years almost paralysed in anything that they have undertaken that is at all out of the common run?—I do not know.

6837. Frightened, I mean?—I think farmers generally adhere to a system and are afraid to go out of it. A man who has been accustomed to sheep, as a rule knows nothing about cows, and is very loth to change.

Mr. J. Stratton.
22 Dec. 1893.

Adulteration of feeding stuffs.

6838. Of course you being on a large scale can look after your own interests; but do you think that the smaller farmers have suffered very much from the adulteration of feeding stuffs?—I expect they have.

Tuberculosis.

6839. To stamp out tuberculosis, do you not think it would be better if the Act were more stringently enforced to prevent dairying being carried on in buildings that were not sanitary?—I do not know about that. We have got tuberculosis in the country in very good buildings.

6840. Do you not think that the spread of it has increased very much where the buildings are not sanitary, if the cows have to be in them in the winter?—I am not sure about that, or whether it is brought about by extreme cold without any buildings at all. I think that is as likely as not.

6841. (*Chairman.*) Do you hold any of this very poor land yourself?—Yes.

6842. How much?—Several hundreds of acres.

Description of farm.

6843. What proportion does it bear to the rest of your land?—I have got 2,000 acres of down land, or land that is laid down to grass, which I look upon as down, which I shall not break up probably; that is 2,000 acres that are down, and ought to remain down.

6844. And how much of other land?—I have 450 acres of pasture, some of which I have laid down and is good pasture, and ought never to be broken again, but as to whether I break it again depends upon what terms I can make with my landlord on leaving. Then I have 3,100 acres of purely arable land.

6845. That you would call good land?—Useful land.

6846. Then about two-fifths of your land is the poor land that you speak of?—Yes.

6847. Which you think would not bear much rent?—That is so.

6848. Can you state what is the average rent which you pay upon the 5,000 acres?—Yes, 11*s*.

Reductions of rent.

6849. And that has been reduced 50 per cent. within recent years?—I do not think my land has been reduced so much as that.

6850. Not so much?—No. When I spoke of 50 per cent., I gave the general history of the county.

6851. But take your own land?—It is barely that.

6852. Has it been reduced 40 per cent.?—It has been reduced 50 per cent. with the exception of some down and cheap land, and about 2,000 acres, around Winchester. On that I have not got such a reduction.

6853. What should you say, taking it all round, has been the reduction in your rent?—I should think perhaps 40 per cent.

Assessment to rates.

6854. Have you had the benefit of that reduction in the reduced assessments for rates?—Yes.

6855. And you cannot tell us, not having the figures before you, where your aggregate rates have been reduced or not?—No, I have not that information.

6856. I presume you derive some advantage from the rates or from the reduction of your assessments?—Yes.

6857. Have you also had the advantage of the reduced assessment to the income tax?—Yes.

6858. Do you pay upon the assessment on the income tax half of your rent?—Yes.

6859. You have not taken advantage of the recent provision that the farmer may pay upon his actual profits?—No.

6860. You are aware of that, I presume?—Yes. A farmer's accounts are so difficult to keep; it is impossible for him to show a satisfactory balance-sheet. I mean a balance-sheet that will satisfy the Commission.

6861. I presume you would know at the end of the year whether you have made a profit equal to half the rent or not, would you not?—Yes; all that is very difficult to find out, because the condition of your farm one year makes an enormous difference.

6862. You have not at all events availed yourself of that provision?—No.

6863. And you have paid the tax upon half your rent?—Yes.

Mr. J. Stratton.

22 Dec. 1893.

Reduced labour.

6864. And you have had the benefit therefore of the reduced assessment?—Yes.

6865. Then, I think, you have also said that you had an advantage in the reduction of labour of 25 per cent. in quantity and in wages?—Yes.

6866. Could you say how much of that is due to reduced quantity and how much is due to reduced wages?—In my case almost all to the reduced quantity. I have not altered my wages.

6867. Therefore the 25 per cent. is wholly due to reduced quantity?—Yes.

Prices of feeding stuffs and foreign barley.

6868. I presume also you have had some advantage from reduced prices for feeding stuffs?—Yes.

6869. And your foreign barley was available to feed your cattle?—Yes.

Dairying.

6870. Now, I think, you said you took up dairy farming some time ago?—Yes.

6871. When did you take that up?—About 12 years ago.

6872. Have the prices there been much reduced?—Yes, until this year.

6873. Until this year?—And now we have got a higher price for milk than we have ever had, in consequence of the shortness of forage.

6874. Apart from this year, what has been the reduction in the prices of milk?—Sometime like 1½*d.* an imperial gallon on the milk.

6875. What per-centage is that?—It is something like a seventh.

6876. About 17 per cent.?—Yes, something like that, I should think.

6877. Has it on the whole been a profitable business?—I think it has. It works in this way: I dairy 200 cows. I have always 200 cows in full milk, and I rear all their offspring, so I have something like 700 or 800 head of cattle on my own farm always of my own breeding.

6878. The reduction there has been about 17 per cent.?—On milk.

6879. But still not so great as to destroy the profit?—No, but the great loss is upon my stock; that is worth about half now what it was. All these cattle are worth about half what they were three years ago, and my implements and all those things are only worth half what they would have been estimated at two or three years ago.

6880. I am now trying to make out what has been the result upon your profits. That, of course, is affected to a large extent by the reduction in value of your capital stock?—I suppose it would, because if you made out a balance-sheet and were to value all you had as to whether they had increased a hundred pounds or shortened by a hundred pounds, or as to whether they were worth as much again, I think that would make all the difference.

6881. It makes some considerable difference, but still in your dairy business the profit and loss would depend upon the annual receipts?—Yes.

6882. And I presume that it is in consequence of dairy farming that the rent upon your land near Winchester has been maintained?—I do not quite see that, because nearly all the grass land there is artificial, it is what I have made myself. It was all arable land when I took it 20 years ago, with the exception of a little water meadow.

6883. And you have turned it into grass land?—Yes.

6884. Do you send your milk mainly to Winchester, or is it to London?—London chiefly.

Tribunal for fixing rent.

6885. Are you in favour of any tribunal for fixing the rent between landlord and tenant?—No, I think not.

6886. You are not?—No.

6887. Has that question been mooted in your district by farmers?—No.

6888. Has there been no movement in that direction?—No.

6889. And you yourself are not favourable to it?—No, I think certainly not.

Mr. J. Stratton.

22 Dec. 1893.

6890. Will you state your reasons?—I think it is like everything else—it ought to be ruled by the law of supply and demand.

6891. You have found yourself able to make a bargain with your landlord?—Yes, I think we can fairly deal with each other.

Leases and agreements.

6892. Have you held under leases yourself?—Yes, in several instances.

6893. But mainly by yearly tenancy?—I should think most of my land is on lease.

6894. Have the leases expired during the last 10 years?—Yes.

6895. Have you renewed them?—I have renewed them at reduced rents.

6896. Taking a lease again?—No, in the renewal I have not taken leases.

6897. You have not?—No, I have no longing for a lease.

6898. You have no longing for a lease?—No, there is a strong feeling in our country that we do not want leases. We are afraid of the future.

6899. As leases fall in, the land is renewed on a yearly tenancy?—Yes, there are no fresh leases.

6900. That I presume is on account of the uncertainty as to the future?—That is it.

6901. (*Mr. Dalton.*) If you have only had a yearly tenancy how do you get that arrangement with the landlord by which you have freedom of dealing with your land, except in the last two years; how is that practically managed?—In this way: if I feel I was going to leave I should get my land into proper condition.

6902. But you would not be compelled to give two years' notice?—No, most of mine is on one year's notice.

Tenants' capital.

6903. (*Chairman.*) You must have a very large capital employed in your business?—Yes.

6904. I do not know whether you would mind one asking how much?—I used to think I had a large capital, but if I come to look for things now, I cannot find the money I want and expect.

6905. Of course the capital value has been considerably reduced?—Yes, years ago the occupation I have, stocked in the way it is, would have been worth 40,000*l.*, but I do not think it would be worth more than 25,000*l.* now. Steam engines of Fowler's make used to cost 2,000*l.* I have got four of those double sets. I gave 2,000*l.* for two lots. The other day I bought a set as good as my own, double 14-horse engines, plough, scarifier, ropes, large van for 250*l.* in perfect working order. They had cost 2,000*l.*, that is the way in which our capital has tumbled down.

Advantages to those commencing farming.

6906. Any person with capital going into farming now would have all the benefit of that?—He would.

6907. He would have the very low prices?—Certainly. I think that is the greatest inducement for keeping on, or for taking on.

6908. (*Lord Cobham.*) You are only speaking of your farming stock, I suppose, not tillages?—Only farming stock, tillages would be valued at the same price.

6909. (*Chairman.*) I think you said that good land even now would let?—Yes.

6910. And that farmers would be found with capital prepared to take the land?—Yes.

6911. I presume that this very low price of stocking a farm has something to do with that?—Certainly; it induced me to take another farm this Michaelmas.

6912. That induced you to do so?—It did.

6913. Therefore any farmer coming in now with capital would have the great advantage, not only of very low rents, but of stocking his farm at a very low price?—Yes.

6914. That may probably to some extent account for the fact that good land can still be let?—Yes.

6915. And that farmers are still ready with capital to enter the business?—Yes, they still have hope.

The witness withdrew.

Mr. C. P. Tebbutt.

Mr. Charles Prentice Tebbutt called and examined.

Mr. C. P. Tebbutt.

22 Dec. 1893.

6916. (*Chairman.*) You are an owner and occupier of land in Huntingdonshire, I believe?—I am.

6917. You are also manager of a private bank at St. Ives in the county?—Of a branch of a private bank.

6918. What extent of land do you own?—I own with my family about 800 acres.

6919. How much do you occupy yourself?—About 500 acres.

6920. You have therefore had considerable experience?—Yes, it is not all my own that I occupy, but most of it is.

6921. Is the depression among the agricultural interest severe in your district?—It is very severe.

Reduction of rents.

6922. Have rents been largely reduced?—Yes, they have been largely reduced; I think on the average 40 to 50 per cent., but varying a good deal, some more, some less.

6923. According to the quality of the land?—According to the character and the quality of the land; the worst land of course has had the largest reduction.

6924. When did these reductions begin?—They have been going on slowly and gradually during the last 10 or 12 years.

6925. Did they begin immediately after 1879?—There was of course a considerable amount of depression in 1879; I think the reductions in the value of rents began shortly after that.

6926. 1878 and 1879, if I recollect aright, were very bad years?—1879 was a very bad year.

6927. For production?—A very bad year indeed.

Bad seasons and low prices.

6928. The depression then was largely due to bad harvests as well as to low prices?—1879 was a particularly bad season, particularly in our neighbourhood and all through the fen country. I am on the edge of the great level of the fens, and in that district it was an extremely unfavourable year.

6929. Taking the interval since then has the depression been mainly due to low prices, or to bad harvests?—I think mainly to low prices; this year the harvest is a very bad one indeed.

6930. Last year it was very bad?—Last year the harvest was a very bad one, except in the fen country, where it was not universally a bad one.

6931. And this year has it been bad in the country?—I beg your pardon, the last harvest was not a bad one in the fen country, but it was a very bad one indeed in all the country adjacent to it.

6932. You are speaking of this year?—Yes; of the harvest of this year.

6933. The previous year was a bad one for the district, was it not?—No, I do not think it was a specially bad one; I do not think the harvests have been bad up to this year as a general rule since 1880. Stock has fallen very much in value of course during the last year or two.

6934. That I suppose has been also due to the drought of the last year?—I do not know that the fall in stock has been due to that, I should be inclined to think it has been due to the very large imports of foreign meat. I daresay the drought might have had some effect possibly.

Remedies for depression.

6935. Now what do you consider the possible remedies?—The principal hope that I have for the future does not lie in the direction of any Government interference, but in the capacity of the occupiers and owners of land to adapt their bargains and their methods of cultivation to the changed circumstances. I feel that strongly, for this reason, that 30 or 40 years ago it was undoubtedly the feeling of farmers generally that they could not produce wheat to a profit under 7*s.* or 8*s.* a bushel. Gradually that price went down to, say, 6*s.* a bushel, and now the price of wheat has gone down to 3*s.* 6*d.* a bushel. The rapidity of the change has been so great that it has been too difficult a problem for the capacity of the farmers and of the landlords to grapple with. But even now I find that the farmers generally acknowledge that if they could get 5*s.* they could keep the land in cultivation, although 30 or 40 years ago they would have thought it impossible. So I hope, and I think it is the only hope really of any improvement, that the capacity of owners and occupiers of the land if they are fairly and properly dealt with may ultimately bring about some degree of prosperity again.

22 Dec. 1893.

6936. I do not quite understand what you mean by the capacity of the owners and occupiers?—I mean this, that at the present time farmers can get a profit with a much smaller price than they could have done 40 years ago, the increase in knowledge of the adjustment of their methods to the circumstances, and the increased knowledge and capacity that they have had enabled them to do this. I think that the increased knowledge will continue. I think that 20 or 30 years hence the cultivation of the soil will be understood in some respects better than it is now, and so I hope that the progress of improvement may meet this tremendously heavy fall.

6937. Is that by better methods of production?—Yes, either by producing the same crop with a greater economy, or by producing a greater crop with the same amount of cost.

6938. Coupled, I presume, with lower rents and reduced cost of cultivation of all kinds?—Yes, of course in the adaptation of the bargains I included that. A very heavy fall has taken place in rent, so heavy that certainly there could be no further fall without a great deal of the land being ceased to be cultivated.

Average rent.

6939. What should you say is the average rent now in your district?—The average rent?

6940. You told us that the average fall there was about 40 or 50 per cent.?—I think it is almost impossible to give an average rent, because the rents fluctuate from 1*s.* or 2*s.* an acre up to 40*s.* an acre.

6941. Forty shillings?—In very exceptional cases.

6942. What do you pay yourself on the average for the land you hold?—I do not hire a great deal. I hired some time ago a piece of land which has been worth 40*s.* an acre for 12*s.* 6*d.* an acre. The landlord was to pay the tithe, and it had a tithe of 8*s.* 6*d.* an acre on it.

6943. (*Mr. Little.*) How much?—8*s.* 6*d.* I said, but I ought to correct that. The commutation was, I believe, a shade over 9*s.*; but of course it would now be reduced by the 25 per cent.

Local taxation.

6944. (*Chairman.*) Now will you go further and state what you think can be done for the benefit of the farming interest?—I have heard the evidence of Mr. Stratton, and I feel with him that there is a real genuine claim for relief from unjust burdens as compared with personalty, and I think that all possible relief in that direction should be given. I think land, or what I should call capital invested in the reclamation of land, has been subjected to special burdens to a most unjust extent, and I cannot conceive any reason why a man, choosing to invest his capital in the reclamation of land, as has been done very largely in my neighbourhood, should be treated upon different principles to a man who is using his capital in trade or in other directions. But the habit of the country has been to burthen this land, which has been very often created by the capital which has been invested in it, very heavily indeed, and it certainly seems to me to be unjust.

Assessment to rates.

6945. Do you know whether tenant farmers generally have had the benefit of reduced assessments arising from reductions of rent or not?—I think that generally speaking farmers have got their assessments reduced, but I question whether they are reduced to the full extent of the reduction of rent; in some cases they are, but very often I think they are not. The assessments have, however, been considerably reduced. The county rate assessment has been reduced considerably.

Rates.

6946. Have the rates in your district been about the same?—I do not think that there has been any marked increase. Of course in villages where the school boards exist there has been a school board rate which has been an addition.

6947. But where the school boards do not exist have the rates been about the same?—I think they have remained during the last 10 years very much the same. They are larger in proportion to the rent and the assessment than they were, but I think the gross amount has been very much the same. I do not think there has been any increase in the rates.

6948. Taking it as so many shillings in the pound, has the rate per pound increased or not?—I am not in

Mr. C. P. Tebbutt. 22 Dec. 1893.

a position to answer that definitely, but as the assessment has considerably decreased I imagine that the percentage in the pound has increased.

6949. One would like the facts upon that point?—I am afraid I cannot give them.

6950. Of course it makes a great difference whether the percentage in the pound has increased or not?—Yes. Of course the percentage in the pound would increase if the assessment were decreased.

Assessment to rates.

6951. If over the whole union that was the case?—Yes, and that is the case over the whole union. The whole union assessment has largely decreased. I happen to have in my bag here a book which will show the decrease on the county rate. I think it was about one-fourth.

6952. That would be very interesting if you can give it to us?—The county rate was assessed in 1881 at 545,952*l.*, and in 1891 it was assessed at 396,423*l.*

6953. That is about 20 per cent.?—Yes, but a considerable reduction has taken place in the assessments of the parishes since that time, although the county rate assessment may not have been changed. The county rate assessment, of course, does not necessarily follow the changes of the local assessment, it is only done at intervals.

6954. Still if the rents had been reduced 50 per cent., and generally assessments on farm lands have been reduced in proportion, the figures that you give for the county would show that the total assessment of the county has not been reduced in the same proportion, and that therefore other property must contribute in somewhat larger proportion than it did?—I am speaking of the 50 per cent. reduction in the rental down to the present time, but a very considerable reduction has taken place within the last two years since this assessment in 1891. It is also true, no doubt, that there are towns and property in the county where it has not been reduced; houses and places and so on, in the same proportion, although it has been reduced to some extent.

6955. You cannot tell us what the rate in the pound has been for 1891 for the county as compared with the towns?—I am sorry to say I cannot.

Rates.

6956. Perhaps you could fill that up when you get the proof of your evidence?—I do not know I am sure. I should think I could, but that is a complicated matter. It includes grants in aid, and there have been important changes. The poor and the general rates I should think have been from 2*s.* to 2*s.* 6*d.* in the pound.

6957. And have remained at about that rate?—I suppose they are now probably a little higher; they would be a little higher in consequence of the change of the assessments, but that is about it.

Tithe.

6958. Then with regard to the tithes, what is your view upon them?—With regard to the tithes there are such a number of flagrant instances that have come across my notice that it seems to me that there is some reasonable claim for any possible adjustment of tithes. I mentioned just now that I had hired a field for 12*s.* 6*d.* an acre which had a commuted tithe of 9*s.* or a little more than 9*s.* upon it. Such cases could be multiplied in considerable number. I heard of a farm some time ago which was let for 5*s.* an acre, the landlord paying tithe, the tithe being 4*s.* to 4*s.* 6*d.* It appears to me in such cases that there is a call for some reasonable adjustment, It cannot have been the intention that such a state of things should exist.

6959. You think that where the tithe forms anything like the same proportion to the real rent of the land there should be a re-adjustment?—I think there should. Of course there was some re-adjustment possible under certain contingencies in Sir Michael Hicks-Beach's Bill that he brought in, but it was fenced round in such a way that practically I should think probably not half-a-dozen men in England have been enabled to take advantage of it, and I think it was utterly inadequate to meet the cases which have arisen. The principle was admitted in that Bill that there should be in some cases some adjustment.

6960. Then with regard to the law of distress, have you any opinion upon that subject?—Perhaps I may venture to say with regard to the tithe question, to return to that again for a moment, that I entirely agree with Mr. Stratton's evidence as to the averages not being on a thoroughly sound principle. At the time the tithe computation was effected it was the habit and practice of farmers to sell not only what is called their head corn, but also all their tail, or inferior corn. It all came into the market; 40 years ago, almost every farmer who offered a sample of wheat in the market, offered the head corn, and he offered so many quarters of the tail corn, and the miller bought that too. At the present time none of the tail is offered in the market. Consequently at that time it was the practice that the averages were taken not only on good corn sold in the market, but also on inferior corn. At the present moment there is no such thing as an inferior sample of tail corn brought into the market; it is all consumed at home.

Mr. C. P. Tebbutt. 22 Dec. 1893.

6961. It is all used for food?—It is all used for food; and in that sense the averages have become delusive.

6962. Then with regard to the law of distress?—I am sorry to go back again, but I want to say this: the tendency now is very strong indeed to lay land down to pasture. In my own parish, out of 1,780 acres of arable about 450 or 460 have been laid down to pasture. Upon the pasture the tithe at the time of the computation was far less valuable than it was upon the arable, and the effect of the present state of things is that it is burdening pasture land where the gross produce is very small with a tithe which never would have been realised under the old system before the commutation took place.

6963. If that land had been laid down at that time in grass the tithe would have been very much less?—It would have been very much less.

6964. You think that a re-adjustment ought to take place in accordance with the change which has taken place?—I think some re-adjustment should take place.

Law of distress.

6965. Now will you go on to your next point, the law of distress?—I gave evidence before a Committee, of which Mr. Goschen was chairman, with regard to the law of distress, and an alteration was made as a consequence of the recommendation, I think, of the Committee. That alteration, I think, provided that there can be only a distress for one year instead of for six years. I think in principle the law of distraint is wrong, but I do not think that at the present time its abolition would have any practical effect at all.

6966. Then why do you think it wrong?—I think it was wrong because I think it gave the landlord a preference which was not good for him, and which enabled him when there was great competition for land to accept inferior men, because of the security which he possessed, and I think that so it had a tendency to lessen the application of capital and skill to the land.

6967. Then why do you think a change in the law now would not produce any effect?—Because I think at the present time tenants are able to make their own terms with their landlords, and that they are masters of the situation, and not the landlords.

6968. I do not quite see how that is an argument against making the change, do you think the law a bad one?—I quite agree with the proposition that I can see no principle upon which the law of distraint could be maintained, but at the same time I am quite sure that its abolition under present circumstances would have no beneficial effect.

6969. It would have no immediately beneficial effect you mean?—That is so.

6970. I presume that when things changed somewhat and prosperity has returned then the same arguments you have used would apply again?—They would do so.

6971. That landlords would again be induced to accept tenants whom they would not otherwise select, and in that way an undue competition would exist for farms again?—The law of distress operated principally injuriously, not with regard to the owners of large estates who usually fix their own moderate rents, but with regard to the owners of small properties who being under the protection of the law of distress when things were prosperous did as I believe get an unduly high rent from a very bad tenant, and that also to the injury in the long run both to themselves and to their tenant.

6972. I suppose when the tenant is in possession it is to some extent a protection to him against the claims of other creditors?—When the tenant is in possession?

6973. Yes?—I think so far as it is a protection I should rather have said a protection to the landlord perhaps than to the tenant, but so far as it is a protection I am bound to say I do not think it is a just

Mr. C. P. Tebbutt.

22 Dec. 1893.

protection; I am bound to admit that it is an injustice to the other creditors.

6974. Would not the effect of abolishing the law of distress be that the landlords would be more strict in claiming their rent?—Quite so. But they would be able to get their rent from a good tenant, and the consequence would be that they would be obliged to take very great care that a tenant had plenty of capital, although just at the present moment no doubt it might lead to some exceptional difficulties.

6975. That is what I am rather alluding to, whether there might not be the same difficulty at the present moment, when tenants generally do not find it easy to pay, and whether the effect would not be to induce the landlords to press immediately for their rents?—I think it would do so.

6976. Therefore it might not be a wise thing to do at the present moment?—I think so.

6977. I was only trying to lead you to that point?—Quite so. At the same time I think the principle of the law of distraint is not a sound one.

6978. You would not abolish it immediately?—I should not urge it as a remedy for the present depression.

Sale of land.

6979. Then with regard to the sale of land, do you think further measures should be taken for facilitating the sale of land?—I constantly hear it stated very truly that the sale of land ought to be very free, and made so, and that persons should be encouraged to buy it. When persons buy a piece of land there are stamp duties and taxes charged upon them. If I am buying consols I do not find these duties, and I cannot understand why it can be a wise or a proper thing to put taxes on the transfer of land or on the mortgage of land. It seems to me that they are unsound in principle altogether.

The Agricultural Holdings Act.

6980. Then with regard to the questions of land tenure and of compensation as between landlord and tenant, what have you to say?—I am entirely opposed to all legislative interference in the matter. I believe that the Agricultural Holdings Act, instead of doing any good, has done a great deal of harm in the country, and I think that the more you leave the landlord and tenant at liberty to settle their own affairs in their own way the better.

6981. In what way has it done harm?—We have heard that persons have been encouraged to go into court and expend a great deal of money in legal expenses. Incidentally very curious results have come across my notice several times. Some time ago the period for which legal notice was necessary for leaving a farm was extended from six months to twelve months. I forget when it was done.

6982. It was done under the Agricultural Holdings Act?—I dare say it was; it was under Mr. Disraeli, I think. I have no doubt that that was done with the best intention and for the supposed interests of the tenants. As a matter of fact, I have come across repeated instances in which poor fellows have been obliged to hold on to their farms in consequence of that, and have been ruined. They were not aware of the change, the fact had not come home to them. They supposed that the old six-months' notice was all that was necessary, and they held on after the Christmas or until the New Year came, intending to give notice to leave, but they had been unable to do so, and then they were obliged to stick on to their holdings where they had hard landlords.

6983. That seems to imply an ignorance of the law on their part?—Quite so. I merely mention that as one of the things which came across my notice.

6984. I do not quite understand in what respect you think the Agricultural Holdings Act was defective; was it defective in so far as it insisted upon certain claims for compensation between landlord and tenant?—I think the objectionable part of it was in making it compulsory. I think before it was made compulsory it was an excellent Act, because it held up a standard which either party could agree to. But directly it became compulsory it seems to me that it led, from my point of view, to evil instead of good. I am always in favour in all these matters of leaving the landlord and tenant to make their own bargains, and to construct their own arrangements, and I believe they can do that better than the State can do it for them.

6985. But the Act only provides the minimum, and leaves landlords and tenants to make any bargain beyond that?—Quite so, it does.

Mr. C. P. Tebbutt.

22 Dec. 1893.

6986. In that respect it does not differ much, does it, from the customs of the country except that it supplies a general law in place of custom?—A singularly able witness before you to-day said that he does not understand it, and that he believes the people generally do not understand it. I have no doubt whatever that it has led to a great deal of litigation and has done, I believe, a great deal more harm than good, except in so far as in the early stages before it was made compulsory, I think it had a good tendency then in leaving landlords and tenants to make wiser arrangements between themselves.

6987. If I recollect aright, when it was not compulsory landlords gave notice that they would contract themselves out of it?—They did, and very wisely I think. They made very much fairer arrangements with their tenants very often than the law provided. I think that has been the great benefit of it, that landlords generally contracted themselves out of it before it was compulsory. They generally then made arrangements of a wise and sensible character, some of which I have seen, and which have come before me. I believe landlords and tenants can always make much better arrangements between themselves than the law can make for them.

6988. If I recollect aright those arrangements generally were not so favourable to the tenants as those provided under the Act?—Of course sometimes it might be so. In many cases that have come under my notice they were more favourable.

6989. When they were more favourable they would still hold good under the Act as they would now; is that not so?—Yes; I have no more to say on that than that I think the actual operation and working of the Agricultural Holdings Act has been what I expected it would be when the State undertook a matter of so delicate a kind, and one which requires so many considerations. I think it has been a great failure, and I think the fact that we are perpetually hearing that it is being tinkered and amended is a very strong proof of that fact.

School attendance.

6990. The next head of your evidence is with reference to the school attendance of the children of agricultural labourers. What have you to say to that?—I have observed with regard to the boys on a farm that if lads are kept too long at school before they go on to a farm they never become farm labourers, they lose interest in farming matters, they get at an age at which they have a tendency to go away from the village and they get away from it altogether. I made a great effort at the time compulsory attendance was enforced to obtain a half-time system beyond 10, which, I think, should exist, so that boys should have a taste and a knowledge of farm work and should not be kept away till too late a period. Of course I am aware that as a matter of fact boys can get away at 10, and they have, many of them, done so. After this year I believe they will not be able to leave school until they are 11, but under some circumstances if they do not happen to pass certain standards which country boys sometimes cannot pass they may be kept in until they are 13 or 14, to their own great detriment and to the great nuisance of the school, and, I think, to the great injury of themselves during life.

Rural depopulation.

6991. Has there been much reduction in the number of labourers in your district?—The population in my parish—there are two villages in it—has come down from 1,500 to about 1,000.

6992. As much as that?—Yes.

6993. Is that in consequence of so much of the land being laid down in grass?—Partly, no doubt, not entirely, but partly.

6994. And partly also from farmers employing less labour?—Partly no doubt from the farmers employing less labour. I see that the population has come down in Huntingdonshire from 59,491 to 54,969.

Wages.

6995. What has been the run of wages; has the rate of wages fallen, or what?—The rate of wages has very slightly fallen lately, but the rate of wages up to a very short time ago was maintained exceedingly well and is a very great deal higher than it was 30 or 40 years ago.

6996. When did the fall begin then?—I do not think there had been much fall until two or three years ago.

Mr. C. P. Tebbutt. 22 Dec. 1893.

6997. What has been the rate of fall?—The rate of wages now in my villages, that is the nominal winter's rate, has been 11*s.* a week.

6998. What was it three years ago?—Three years ago I think it was 12*s.*

6999. 12*s.*?—I think there was one year when it went to 13*s.*, but I do not think it kept to that all the winter. There has been practically a very small fall in wages indeed. To show the rise in wages which undoubtedly is one of the causes of rise in the cost, one of our difficulties, I may say that 50 years ago I was on a farm, and the gentlemen to whom the farm belonged called their labourers together and asked them what they thought was a fair wage to be paid to a working man. The men at that time said they ought to have the value of a bushel and a half of wheat a week. At that time the price of wheat was 8*s.* a bushel, so they thought 12*s.* was a fair wage. At the present moment the labourer instead of receiving a bushel and a half of wheat a week, is receiving more than three bushels of wheat. I merely mention that as an illustration of the fact that wages have steadily risen, and so far that has been the one satisfactory thing.

7000. When you take into account the prices, that is?—When you take the prices into account.

7001. Receiving the same amount of money, they must be better off?—Quite so. I have known times since I have been farming when wages have been down to 8*s.* a week, but that was some 20 years ago.

Bank loans to farmers.

7002. (*Lord Vernon.*) Would you tell us, please, whether the farmers in your part of the world are much in debt—I suppose having to do with a bank you would know?—Of course it is rather a difficult question to answer. Considering the extraordinary fall that there has been in the price of grain and produce, I think it is marvellous how well the farmers have stood it, but at the same time of course the farmers are very poor.

7003. I mean do they make many loans?—Do they borrow money?

7004. Yes?—I think they used to borrow more money 30 years ago than they do now, because the banker is more unwilling to lend now than he was at that time.

7005. What sort of rate of interest do they have to pay for money?—They usually pay 5 per cent.

Law of distress.

7006. Would you tell me one other thing. You were talking about the law of distraint. I suppose you have realised that if the law of distraint was abolished the tenants would have no credit from the landlord; they now pay months after the rent is due?—If you ask me my personal opinion, I think that is purely a matter between the landlord and the tenant. I do not see why we should make a law to enable a landlord to give credit to a tenant. The landlord if he pleases to make himself safe, can make a provision if he likes that he should be paid beforehand.

7007. That he will be paid ready money?—Yes, he can demand that if he pleases, and I personally do not see any reason why the law of distraint should interfere with the ordinary methods of making bargains between a landlord and tenant any more than between a buyer and seller of anything else. That is my own personal view.

7008. It would be to a certain extent a disadvantage to the tenant in that way if the law of distraint was done away with?—That would depend upon circumstances. Suppose I were a tenant with plenty of capital and skill, and that I were bidding for a farm, and that another tenant with less capital and less skill—or less capital at any rate—were bidding against me, I should think it a disadvantage that that should exist.

7009. But still the tenant would get no credit from the landlord then—he would have to pay him ready money?—He would get the same kind of credit, I suppose, as an ordinary man of business gets now. You will find that although a cake merchant has no preference of payment over another creditor, yet he gives ordinary credit to the farmer when he sells him articles, and so I daresay the landlord if he trusted a man and knew that he was a respectable man would give him a certain amount of credit. I quite admit that it would lessen the motion for giving credit, and I do not wish for a moment to urge that as any remedy for existing distress.

Mr. C. P. Tebbutt. 22 Dec. 1893.

7010. (*Mr. Everett.*) I suppose you would consider taking your district as a whole that the fall in prices has been a very great calamity to the district?—A very great calamity indeed.

Fall in prices.

7011. (*Mr. Dalton.*) I think you said that you thought capital invested in the reclamation of land in your district ought not be subjected to the burdens it has borne?—I think so.

Local taxation.

7012. You have some heavy drainage and embankment rates, I think, in Huntingtonshire?—We have.

7013. But those are practically simply levied for the improvement of land, are they not?—I did not address my remarks in the slightest degree in regard to them. I think they are perfectly just, and they are private matters. I was speaking of public burdens.

7014. You simply mean the other local rates?—Yes, the general local rates.

7015. If a man invests his capital in building house he then is subject to the same burden?—He is, exactly, and the injustice remains with him just as it does with the special burden on the land.

7016. And the man who invests it in the making of a railway would be in the same position?—He would to some extent.

7017. To a greater extent, I should imagine, than a man who invests his money in the reclamation of land, would he not? I should have thought so, because he would add more to the value?—Not anything like in proportion to the amount of his outlay of capital. I should think his outlay of capital could bear a very much larger burden than the rates which would be put on his outlay on a railway, because the land is after all only a very small portion of that.

7018. But the land is rated in proportion to the profits of the railway?—Yes, it is, I am quite aware of that, and so far it is a just remark that that particular kind of personal property is rated, and so far it is a proof, I should say, that all other personal property ought to be brought under the same conditions.

7019. But what is the personalty that you think escapes when it is spent in the improvement of any kind of property in England?—We will say, for instance, all kinds of property which is charged to the income tax.

7020. Railways are charged to the income tax. If you take the schedule, will not you find nearly all such property as canals, gas works, waterworks, cemeteries, and so forth rated?—Yes, and that is just, so far as they are rated and subject to the burdens of the rates, but the proportion in which they are rated seems to me to be nothing at all comparable to the proportion in which land is rated.

7021. What I mean is this, in all these cases you take a simple piece of agricultural land and lay out a certain amount of capital upon it on which you are rated in proportion to the enhanced value in the same way as in the case of the land which you say is reclaimed. What is the kind of personal property that you complain of escaping?—Take, for instance, one large mass of personal property, the whole of the money invested in the shares of the joint stock banks of England. Suppose that I and a number of other persons invest our moneys in establishing a bank and receive our dividends from it, so far as I know we pay nothing at all to the local rates of the country except the rating of the bank in this place or in that place where the bank has an office. But if we employ our money as money has been employed in the case of the Fen country in the reclamation of a swamp and in reclaiming a vast tract of land, then we are charged on its full annual value.

7022. Then those would be the only kinds of personalty?—All kinds of personalty. I am not expressing my opinion for the present moment as to the policy of doing it, but the equitable thing would be that just as all property is assessed to the income tax, so should all property be assessed to the poor rate.

Tithe.

7023. You were proposing that there should be a readjustment of the tithe, I think?—Yes.

7024. I am not quite clear what you intended. Do you mean that where there is too high a tithe on one land and too low on another, you should take it off one land and put it on to the other, or merely that the tithe should be reduced where it is too high?—I think that it is evident that in the spirit of the Commutation Act there could not have been any intention for such

Mr. C. P. Tebbutt. 22 Dec. 1893.

relations to exist between tithe and rent as do exist at the present moment. Practically tithe in some cases is now taking all the surplus and I think that cannot be right. I acknowledge the difficulty of the case, and I think that the relief that was provided in certain cases in the Bill that was brought in by Sir Michael Hicks-Beach was an indication of the direction in which such legislation should go. It did not go anything like far enough to afford any real relief.

7025. That would be merely in the direction of reducing the tithe?—Quite so.

7026. Where the land has gone up in value since the Tithe Commutation was placed upon it, you would not propose to increase the tithe upon it?—I should have thought that such cases were not to be found.

7027. You merely go for the reduction?—Where there are such flagrant cases as these.

7028. You mentioned readjustment, but that is merely a diminution?—Yes, it is so.

7029. (*Mr. Little.*) Your county is purely rural?—Yes, purely rural.

7030. You have not got an urban population of 5,000 anywhere in the county, have you?—No, but we have altogether.

7031. I mean no one place containing such a population?—No, we have not.

7032. Therefore your county rate is assessed almost entirely upon agricultural land?—Very largely.

Drainage rates.

7033. You have had great experience and you have a great knowledge of the system of the drainage of the fens?—Yes.

7034. You have been for 30 years to my knowledge a member of one of the largest drainage boards and one of the largest taxing authorities in that part of the country?—That is so.

7035. The rates that they levy are a very heavy burden upon the land and take a considerable part of the rent in many instances?—They are large.

7036. I suppose in some cases your drainage rates and the district drainage rates would come to as much as 12*s.* an acre?—To quite as much as that.

7037. That represents capital which has been expended by the owners of the land in reclaiming the land?—That is so, or in improving it.

7038. The process of improvement has been going on for a couple of hundred years, but there has been a very large expenditure in the present century?—A very large expenditure, an expenditure so large that it is far beyond the present value of the land.

7039. That is what I was coming to; would you say the present value of the land is entirely the production of capital applied in improvement?—Yes, absolutely.

Local taxation.

7040. I understand that you argue as to the burdens upon the land that this money sunk in improvements should be treated just the same as personalty?—Exactly so.

7041. You do not agree with the theory of hereditary burdens upon land, that land having once had a burden imposed upon it should under all circumstances bear that burden?—No, that argument that because land has had a certain burden upon it, and has been bought and sold appears to me to be an absolute fallacy. If the charge were an injustice when I bought the land I bought it with the right to expect that this injustice should be remedied just as when a person bought 40 years ago a house with the window duty on it, it was not said we will not have the window duty taken off because houses have been bought by the present owner with the window duty on them, but it was regarded as a matter of justice or right, and if it was right it was to be repealed, and it was repealed.

7042. Then I understand you to argue that the owner and occupier of land have a fair claim to have their share of the burden adjusted under the altered circumstances?—I think so.

7043. As to the particular way in which the adjustment should be made, I do not think you have given us your opinion?—No.

7044. Whether by subvention or otherwise?—I have not. I quite recognise the great difficulties which have been pointed out in the charging and getting at personal property, although they seem to be overcome in the income tax and therefore it is, I suppose, that the principle of giving some subventions has been adopted and I think most justly and properly.

Mr. C. P. Tebbutt. 22 Dec. 1893.

School rate.

7045. I should just like to ask you about one rate that you mentioned, the school rate, would you relieve only those districts that have a rate for schools or would you relieve all districts from the burden of education?—In my own parish we have no school board. I cannot say that I have thought a great deal about it, but it always seemed to me very obvious that a new charge upon a parish for school purposes ought not to be made upon the same principle as an ordinary rate, because I see no reason why a farmer who happens to reside in it and who may not be so well able as his neighbour, the doctor or the lawyer or what not, should pay more towards these schools than the others. I have never understood it.

7046. You argue that education is a national object?—The nation has undertaken it.

7047. It is not specially for the benefit of occupiers and owners of land?—Certainly not.

7048. As a matter of fact it rather injures them for the time?—They may rejoice to see the children benefited or otherwise as they may think best, but certainly it does them no good.

7049. It has a tendency to take away the labourer from the land?—Undoubtedly, and to raise the price of labour.

7050. Why I mentioned the school rate was because of this, would there not be an unfairness in treating those parishes which had established their own system of education without a rate before 1870 in a different manner from those parishes which had to be forced into adopting measures for education; the parish which provided itself with its own schools and had kept them up by a voluntary subscription is as much entitled to relief as the parish which provides education by the rates?—Quite so.

7051. If a large landowner builds a school and provides school and school-house and no rate is necessary, surely that parish should not be taxed to help another parish where nothing had been done?—I suppose the answer to that would be that if the parish which has a school board is relieved of the rate the parish which has no school board ought to have a larger grant in proportion in order to make it stand upon a level with the school board parish which is relieved.

Local taxation.

7052. I was not referring to any particular scheme, but you think that these burdens upon the land are excessive, and that they ought to be lessened?—As compared with a great deal of property which so far as I can see ought equally to pay burdens on land and realty generally, amount to something like 2*s.* to 2*s.* 6*d.* in the pound income tax in addition to the ordinary income tax.

Tithe.

7053. You spoke of a reasonable adjustment of tithe; in your opinion has the Act of 1891 been at all operative?—I think not at all. I think it was a very great failure.

7054. In cases which might arise in your neighbourhood it would be inoperative; for instance, if you had a drainage rate of 12*s.* an acre and a tithe of 3*s.* an acre you would have an income tax assessment of 15*s.*?—Yes.

7055. And the tithe not being two thirds of 15*s.* the landlord would get no relief?—Quite so.

7056. (*Mr. Gilmour.*) I think you said it was your opinion that increased knowledge of the subject would help very much, you hoped, in the future to the bettering of agriculture; would that extend to the labouring classes as well as the proprietors and the tenants?—I confess I was thinking mainly of the tenants.

School attendance.

7057. You have stated here I think very clearly that in your opinion there should be less general education given to the children in rural parishes?—No, I did not state that.

7058. I understood that in your opinion from their not having compulsory attendance which I should say would lessen the education which those children receive they would be better farm labourers?—What I said was that I thought if boys were kept away until they were 13 or 14 years of age they would never gain the taste for the life of a farm labourer, and therefore it is desirable that the boys should be to some extent on a farm. I suggested half-time, certainly at as early an age as 10. I think it is desirable that a boy should be

Mr. C. P. Tebbutt. 22 Dec. 1893.

at work on a farm at 10 during part of the day. I made all the effort I could to get that adjustment effected at the time.

7059. Do you consider that to make reparation perhaps for the withdrawal of these children from school it might be a good thing to apply compulsory clauses in reference to technical education taught after labour hours in rural parishes?—No, I personally certainly should object altogether to all compulsory clauses with regard to technical education after work. I am sorry to say that I have very little belief in what is called technical education.

7060. Even if you withdraw the children from the other education?—I believe these boys who are part of the day on the farm will learn five times as much as they will if they are engaged in classes, being taught by lecturers and others. I think it is the practical homely education which all men need for the life which they are going to lead afterwards which is of value.

7061. That I understood in my opinion was technical education, which there has been a great attempt to forward as far as it could be done in all parishes?—I have had some observation of the subject; at the same time, so far as I can see, the technical education which is now prevailing to some extent in rural districts does not touch the working classes at all.

7062. Would not the very thing that I propose be far more likely to make it touch these classes?—I should be very glad indeed that the boys should go to a night school, and should learn to read and enjoy the books that they can read, and their newspapers; but as to their obtaining any practical knowledge of farming, which will be of any use to them in after life in these evening schools, I say they will not do it at all—they will learn nothing as to their business or employment in life.

Law of distress.

7063. In reference to this law of distraint, which is, I understand, equal to our law of hypothec in Scotland which is now abolished, the custom has been since the abolition of hypothec in Scotland to make rents forehanded to a large extent,—do you think that that would be as favourable to the tenant as the present existence for a short time of the law of distraint in England?—I think it would be favourable to the well-to-do and skilful tenant, and not favourable to the more doubtful tenant.

7064. Not favourable to the man without capital?—Quite so.

7065. Although he might perhaps be quite as skilful a man as the man with capital?—I should think that just as you observe in other business generally if a man is a very industrious and skilful man, even if he has not much capital he can get credit in consequence of his skill and his industry, so I think a farmer who had small capital, but who had skill and industry, would probably obtain that which was reasonable credit under any circumstances, and I do not think we need any law to bolster up arrangements of that sort. I would simply leave that to the ordinary course of things.

Local taxation.

7066. (*Mr. Giffen.*) You have told us that you object to the idea of local rates being a hereditary burden upon land?—Yes.

7067. That you still consider them unjust, and that when dealings take place the purchaser buys the equitable relief as you describe it?—I did so.

7068. Have you any idea in any specific case how much money value is set upon the prospect of that equitable relief?—That is a question which it is utterly impossible to answer.

7069. It is not an element which enters into the state of mind of the seller or of the purchaser?—It ought to do undoubtedly.

7070. The fact is the burden is assumed to be heriditary, and likely to continue, and that transactions are entered into upon that footing?—I have no doubt persons often buy on the probability that it will decrease, and they also I have no doubt sometimes buy upon the principle that it will increase.

7071. Still as compared with other investments you could not put a money value upon the estimate of either party to the transaction?—That would depend of course upon the probabilities that you think there are of relief from the unjust burden being granted. There might very easily be cases in which you might calculate on that. I put an instance which I think of a parallel kind of a man buying a house at the time when there was a window tax upon it. He bought it subject to a window tax. My own house, for instance, had a tax of 8*l.* or 9*l.* a year upon it. I think it would have been perfectly legitimate for a man buying that to say that obviously he bought not only that house but also the hope of the probability that this window tax would be taken off, as it was taken off, without so far as I heard any statement being made that it would be unjust to take it off, because it had been bought and sold subject to it.

Mr. C. P. Tebbutt. 22 Dec. 1893.

7072. That would apply to the case of any tax being taken off whether it was unjust or not; at the moment there was a prospect of its being taken off. There would be a speculation upon it; and what I am desirous to ascertain now is, whether, as a matter of fact, the prospect or the hope of relief from this burden being obtained does affect the price at which property exchanges?—That seems to me to be something which rests in every man's mind. I cannot see what is in the mind of any purchaser. A purchaser would have been very wise in taking into account that the rates would probably have some subvention, as they did get a subvention from Mr. Goschen two or three years ago.

7073. Still there are some things remote and some things near, and what I am anxious to ascertain is whether this particular idea has affected the value of real property in transactions or not?—I am afraid that is a question which it is impossible for me to answer.

Tithe.

7074. Then, with regard to this question of the tithe, you stated that at the time of the tithe commutation it was the practice of farmers to sell their tail corn as well as their good corn?—Yes.

7075. But that now no tail corn is offered?—Yes.

7076. I presume you are not speaking from personal knowledge of what happened in 1836?—No, I am not, but I am speaking of what took place in 1846. I am speaking of what was the practice then, but I have no experience of the time of the Tithe Commutation Act.

7077. I just wished to know to what time your experience referred. The next question I wish to put to you is: Have you any idea what percentage of the total returns the tail corn would be?—It varied of course in different years. Very often indeed a farmer offered 30 or 40 quarters of wheat, and would bring with it a sample of five or six quarters of what was called, to use the local name, the tail or inferior corn.

7078. That was an eighth part?—That was about an eighth, and he usually sold that to the miller at about two-thirds of the price of the head—that was roughly the practice 30 or 40 years ago, say 40 years ago.

7079. What proportion would there be now?—There is never any of it at all. I do not suppose for 10 years anybody has ever seen a farmer offer two samples, the head and the tail together; he never brings the tail to market.

7080. Does that apply to barley and oats?—Yes, quite so; tail corn has as a rule absolutely ceased to be sold.

7081. Was it the practice at that time you speak of to sell the tail ends of barley and oats as well as of wheat in the way that you have described?—I should think it was. I was speaking mainly of wheat, because I have so constantly seen it done, but in oats I have often seen it done.

7082. You cannot speak about barley so much?—No, I do not know of that.

7083. My reason for asking you is, as you know, the tithe average is made up of equal parts of wheat, barley, and oats?—Yes, it is.

7084. The question would be, whether the elimination of that eighth part of the kind of sales that took place 50 years ago from one-third of the basis of the tithe average would affect the tithe very much?—I am not speaking of it as being something which will produce a great change. I am simply speaking of it as a matter of imperfection in the present method of taking the tithe averages.

7085. It is not a material thing?—I do not think it is a material thing, and I quite recognise the fact that if the same practice existed as now, there would be no grounds for my complaint; but as at the time when tithe was commuted it was the practice to sell tail corn, undoubtedly tail corn came in and increased the number of quarters on which the tithe was fixed in each individual parish.

Mr. C. P. Tebbutt.

22 Dec. 1893.

7086. It is not a material matter?—It is not a material matter.

7087. The other thing that you suggested as a reason for revising the tithe was the fact that now a great deal more land is laid down in pasture than was the case at the time of the tithe commutation, and I suppose we may assume that to be true?—Yes.

7088. That is a fundamental change which ought to be considered and ought to be a reason for revising the tithe settlement itself?—That was my contention.

7089. Would it not be the case that there are other questions which would have to be considered in such a matter; would you say, for instance, that the gross produce of agriculture in England is less or more now than it was 50 years ago?—I should think less—distinctly.

7090. The value?—I think so; distinctly less.

7091. You have not made a calculation, however?—No; but I have no hesitation at all in stating that it is.

7092. Taking it all round?—Taking it all round.

7093. Still, suppose it had been increased and not diminished, that would be a subject which would have to be considered?—It would, no doubt.

7094. Would it not be the case also that such a change as has occurred in the great accessibility which the farmer has to markets in many parts of the country would be a change that would have to be considered, and that instead of getting the merely local price he almost gets a metropolitan price as compared with what he did 50 years ago?—I do not think that practically affects it. I think the influence of that would not be sufficient to make any appreciable effect at all.

7095. Still that is a kind of change which might have to be considered?—I do not think I see exactly why it should be considered.

7096. You say that an alteration in the mode of calculation is a thing to be considered, and I am suggesting that the accessibility to market is a thing that would have to be considered?—I was urging what I said upon the ground that the original conception of the tithe was that it was a tenth part of the produce, and that now large portions of the land are being laid down in such a state of cultivation that the gross produce is a very great deal less; indeed, not more than one-third probably what it was formerly—and that this constitutes a ground for some consideration. I do not see exactly the point with regard to accessibility to markets.

7097. I am not sure that I do not agree with you in a great many points, but I am more anxious to get your opinion exactly as to what it is. I should like to ask you this now with reference to the tithe question. You suggested that the tithe now is a much greater proportion of the rent than was contemplated when the people who settled the tithe commutation did the work?—Quite so.

7098. But there was a proposal then, I believe, that the tithe should be settled not as was actually settled, but as a proportion of the rent, and that was deliberately rejected?—Was it, indeed? It was a very great mistake on the part of the landowners of the country.

7099. I may say that I happen to know there was a great deal of discussion upon these points, but it was somewhat difficult to find out what was in the minds of those who proposed the Tithe Commutation. The suggestion that it should be upon wheat, barley, and oats was only adopted after a great deal of debate, but we have not all the debates before us as far as I know. I should like to ask whether you think that it would be possible now after the deliberate rejection of that mode of settlement 50 years ago, to go back to a proportion of the rent?—Of course it is very difficult indeed to say what is possible, but perhaps I look at tithe altogether from a different point of view to what many persons do. I look upon tithe as taxes.

7100. As in the nature of a tax?—Yes.

7101. And should be dealt with in the same manner?—Yes; of course with all due consideration for all existing interests. I think we have a most striking instance of it in this very great district of Bedford level. 250 years ago there was nothing to tithe; it was a swamp practically. Gradually a large amount of money was spent upon it, and it was brought into cultivation, and by the law of the land tithe grew up.

7102. You agree, I suppose, that there are fundamental difficulties in making a settlement of any kind so far ahead as 50 years, and that you cannot provide for all circumstances that are likely to arise?—Quite so. *Mr. C. P. Tebbutt.*

7103. (*Mr. Whitehead.*) I think you farm yourself to some extent?—Yes. 22 Dec. 1893.

7104. May I ask whether your farming has been satisfactory, and whether you have made a profit?—In the last two or three years. Result of farming.

7105. Yes?—It has not been at all satisfactory.

7106. (*Chairman.*) But before the last two or three years?—I was not farming quite so much then. Farming is and always has been a business which makes a very small return; but at the same time it was fairly satisfactory before the present depression.

7107. (*Mr. Whitehead.*) Has it been more satisfactory within the last two or three years than that of your neighbours?—That is a most difficult question to answer, I really do not think I know what to say.

7108. In answer to Lord Vernon, I think you said that the bank of which you are the representative does not advance money to tenant farmers?—No, I did not say that. Bank loans to farmers.

7109. Did you not say that?—No. Of course I cannot say anything with regard to the particular bank that I am connected with; but probably all banks are more cautious now than they were 30 or 40 years ago, because of the very bad times.

7110. Still advances are made from time to time to farmers even in these bad times?—Yes, no doubt.

7111. (*Lord Cobham.*) You would not say you have lost more money as a banker from farmers than from other classes of the community, would you?—I should think that 30 or 40 years ago they were the safest class of men in the world to lend money to, but I should not say it has been so in the last 10 or 20 years.

7112. In your particular part of the country the depression has been very severe, I believe?—Very severe indeed.

7113. I gathered from one of your answers that you have no very high opinion of theoretical instruction in agriculture?—I am sorry to say I have not at all. Technical instruction.

7114. Either to farmers or to labourers?—Either to farmers or to labourers.

7115. With regard to the labourers, do you not think that if they had some intelligent knowledge of principles as well as of practice it would increase their interest in their work and have a tendency to keep them in the country?—I think farm labourers have a great interest in their work and are very intelligent people indeed. I very much differ from the notion which is generally entertained of farm labourers. My experience of farm labourers is that they are a very intelligent set of men, equal to the artizans of the towns, although not equal in certain outward and superficial signs of intelligence.

7116. Do you think that that intelligence of theirs could be further developed a little by technical instruction?—I doubt that very much. The technical education which is given seems to me not to touch them at all; they do not come near it.

7117. Is that not rather because it is on the wrong lines?—I doubt the possibility of it. I do not believe in it.

7118. You do not believe that in such a complicated and scientific a business as farming theoretical knowledge superadded to practical knowledge would be useful?—I value—nobody more so—the investigations of such men as Sir John Lawes, whose farm I have often been over, and the investigations which are carried on by men of that stamp, but if you ask me whether I think a farmer is more likely to succeed because he has passed through a course of agricultural chemistry I say I should think him rather less likely to succeed; he would become theoretical instead of practical.

7119. If he had made himself acquainted from books with the results of Sir John Lawes' experiments, do you think he would be more likely to succeed?—If he went over and looked at them, he would; but it would not be from a scientific point of view, it would be as a practical man, as a practical farmer. The men who have gone through these difficult times the best have not been the theoretical farmers, they have been the practical hard-headed farmers who look at every transaction from a strictly business point of view.

Mr. C. P. Tebbutt. 22 Dec. 1893.

7120. Then you consider that the large sums which have been recently expended upon technical agricultural education have been wasted?—I am sorry to say that I think they have been largely wasted.

7121. You do not think that we shall have the benefit of it even in our future experience?—I am sorry to say I do not.

7122. Or that more could be done?—I think there has been a certain amount of amusement given by the lectures, and so on, which have been held in the villages, people have enjoyed the meetings, but I do not think they have produced any practical result.

Uncultivated land or land in hand.

7123. (*Chairman.*) Have any farms gone out of cultivation in your district?—A good many farms have been laid down to pasture; of course it is rather difficult to say what "going out of cultivation" means.

7124. I mean are they without tenants?—Then the landlord takes them in hand and does something with them; the Duke of Manchester had a very large amount.

7125. Has much land gone into the hands of its owners in that way?—A good deal has no doubt.

The letting of farms.

7126. When good farms are vacant is there a difficulty in getting tenants?—You can get tenants for good farms at a reduced rent.

7127. You can; you would now?—Yes.

7128. Can you find men with capital?—Fairly so, yes.

7129. You have heard, I suppose, what Mr. Stratton said about farmers coming into the possession of their farms with capital?—Yes.

7130. It requires very much less, probably 40 or 50 per cent. less capital than formerly?—No doubt, and that has been an encouragement.

7131. That widens the circle of men who can come in?—It does so no doubt.

7132. In your district is it possible for a good farm to be let at the present rents?—Rents have been varying so much you see that they have hardly settled down to a uniform scale, but it is quite possible to let a good farm in the neighbourhood at a rent; there is no question about that.

7133. I presume the farmers of the district form a large proportion of your clients at your bank?—Yes, a fair number.

Successful farmers.

7134. Are there men among them who have made money?—Yes, there is here and there a man. Of course just lately things have been very bad indeed.

7135. I do not mean within the last two years when the harvests have been bad, but up the last two years?—There have been occasionally men who have made money. There are some men with special ability who have had cheap farms and so on.

7136. That is to say, who have paid low rents?—Yes, farms at a very moderate rent; they have been capable men; there are a few such men.

7137. Do you know a few men still doing well?—Yes.

7138. (*Lord Cobham.*) On good land?—No, not necessarily on good land.

7139. (*Chairman.*) Not necessarily on good land?—Not necessarily on very good land; but they are very capable men.

7140. It is still possible that a farmer with ability, and devoting himself thoroughly to his farm, can make money?—I should have great hesitation in advising any man who was a man of ability to go into farming at the present time, I confess.

7141. Still you say your experience is that there are men who can make money at it?—Of course, now and then one meets with a man of special ability. I have one in my own mind at the present moment, I am sorry to say he is not living, who from being a bailiff gradually became a farmer. He was a specially capable man, but then he was one man in a hundred, you know.

7142. Was that by striking out into new lines, or by carefully looking after his affairs?—He was a very industrious man and a very shrewd man, he knew the value of everything, and could tell you the value of everything directly he saw it. He was fortunate also in his circumstances, as he took farms at the reduction; he just came in at the right moment when there had been a heavy reduction. On the other hand, I have known some extremely capable men indeed, and 30 or 40 years ago I should have thought them sure of making a fortune, but they have been just able to get along, and that is all.

Mr. C. P. Tebbutt. 22 Dec. 1893.

Wages.

7143. You said just now that some years ago the labourers considered that they were entitled to one and a half bushels of wheat per week?—Yes, that was a great many years ago, more than 50.

7144. And that now at present prices the labourer would get three bushels?—Quite so.

7145. I presume it follows that the low price of wheat and other agricultural products has been an enormous advantage to the labourer?—No doubt it has.

"Protection."

7146. I presume therefore that you would hardly contemplate artificially raising the price of the produce?—It seems to me that except in view of the increasing dependence of the country upon foreign corn, such a proposal could not be justified.

7147. Looking at it from the point of view of the labourers generally?—I think that it is quite out of the question.

7148. Then you do not look for any remedy in that direction?—I do not.

Local taxation.

7149. Then with regard to local taxation, I presume you would hold that the management of the poor must be local?—One sees the difficulty that if it all comes through the central authority, of course you must have some control by the central authority. My attempt to-day has been to show that there is a real burden, and it is perhaps hardly for me to go into the details of the way in which it is to be met. I do not think people are aware generally of the way in which capital invested in the reclamation of land is burdened as compared with other capital.

7150. Supposing that capital instead of being invested in the improvement of land is invested in the building of houses, cottages, and shops, then I presume it would pay increased rates?—Yes, it would.

7151. Is there any difference in principle between the investment of capital in that direction and its investment in the improvement of land?—I do not see any difference.

7152. Therefore whatever principle would apply to one must be applied to the other?—Quite so. What I mean is that the distinction between realty and personalty does not seem to me now to exist, and that it ought not to exist. I see no difference between realty and personalty.

7153. Practically the inherent value of the soil has almost disappeared in many districts?—Yes.

7154. And there is nothing left but the value which has been given to it by the money which has been expended upon it?—Exactly so.

7155. Does it differ much in that case from a house?—No.

7156. Or a cottage?—No.

7157. Where the whole value or nearly the whole value is derived from the money which has been expended upon it?—No; it is the same.

7158. Therefore whatever principle would apply to the one we must apply to the other?—Certainly.

7159. Take a county like your own which is mainly a rural county—I presume there are not many industries in it except that of farming—there are a certain number, but not many, I suppose?—There are some, of course.

7160. The farming interest is the main interest?—True, it is the main.

7161. There are a few banks, I suppose, like your own?—Yes.

7162. Not many manufacturers?—No, not many.

7163. Now if you pay income tax upon all property within the district in aid of the rates you would have to tax the farmers?—Yes, I suppose you would in lieu of the rates.

7164. At present the land pays the rate, and the farmer has no tax upon his capital?—In a certain sense. One sees no distinction between the way in which it would get to the landlord if it were taxed directly to the farmer than if it were in the form of rates, or any other tax. Practically, it comes to the same thing, no doubt, ultimately. These things have

Mr. C. P. Tebbutt. 22 Dec. 1893.

all a tendency after a long time to shift themselves on to the landlord.

7165. In the long run you say they fall upon the owner?—In the long run, no doubt. Of course you may have a race of men ruined in the process in the meantime, but still undoubtedly all fixed charges, or all charges of any kind, have that tendency.

7166. Taking the poor rate at the average of what it has been for a great many years that I presume is in the main now paid by the landlord?—I should think it probable, you can say it is so; no doubt about that.

7167. If you put an income tax upon all the property within the county in aid of the rates, would not the farmers have to pay income tax upon their profits as well as other trades?—I should say that would go to the landlord too.

7168. Why?—For the same reason precisely that the poor rate does; the farmer in taking possession of his farm would take that into consideration; he would say I am carrying on my business in the hope of a certain return. I see no distinction between the operation of the two processes.

7169. He would only pay the tax when he makes a profit. I suppose if you put an income tax upon all incomes within the district in aid of the local rates the person whom you call upon to pay would only pay in the event of his making a profit?—Yes. It is very difficult indeed to trace all these smaller matters to the point where they finally land themselves.

Mr. C. P. Tebbutt. 22 Dec. 1893.

7170. I mean whether your proposal would not really land us in a further tax upon farmers?—But I do not think I made any proposal.

7171. Only I gathered from you that all property in the district ought to pay an income tax, and you specially took the case of a bank, and I think that you intimated that bankers at all events might pay?—No, I think not; what I said was that the difficulties which were mentioned as being so great with regard to personal property had been overcome with regard to the income tax. I did not propose that the poor rate should be put upon the income tax; on the contrary I said that I thought the method which Mr. Goschen adopted of giving aid to local rates was just and proper. I think that was the extent of my evidence.

7172. You do not go further than that. I only want to know if you still think the principle of subventions might be increased?—I think so, it seems to me that it ought to be increased to the utmost extent to which it is capable except some other method can be devised.

The witness withdrew.

Adjourned.

Fourteenth Day.

Thursday, 15th February 1894.

PRESENT:

The Right Hon. GEORGE JOHN SHAW-LEFEVRE, M.P., in the Chair.

Viscount Cobham.
The Right Hon. Baron Vernon.
The Right Hon. Henry Chaplin, M.P.
Sir Robert Nigel Fitzhardinge Kingscote, K.C.B.
Robert Giffen, Esq., C.B.
Charles Isaac Elton, Esq., Q.C.
Captain Owen Thomas.
Francis Allston Channing, Esq., M.P.
John Clay, Esq.
Cornelius Neale Dalton, Esq., C.B.
Robert Lacey Everett, Esq., M.P.
John Gilmour, Esq.
George Lambert, Esq., M.P.
William Cutlack Little, Esq.

Herbert Lyon, Esq., *Secretary.*
R. F. Crawford, Esq., } *Assistant*
Freeman Thomas, Esq., } *Secretaries.*

Mr. E. P. Squarey. 15 Feb. 1894.

Mr. Elias Pitts Squarey called and examined.

7173. (*Chairman.*) You are a member of the firm of Rawlence and Squarey, land agents, of Salisbury and Westminster, are you not?—Yes.

7174. And you have been so for a great many years?—We have practised as a firm since 1852.

7175. In what parts of the country are you principally engaged?—Our business grew wonderfully, from small beginnings at Salisbury; we were taken from the plough tail, to be made land agents. Our business ranges from Shropshire and Lincolnshire, which is our most northern limit, to Cornwall and through the Midlands.

7176. And in Wiltshire?—In Wiltshire, Hampshire, Oxfordshire, and Dorsetshire very largely.

7177. What counties do you specially speak of to-day?—I do not know that I have any special preference, but I shall be happy to answer questions bearing upon the Midlands, especially Lincolnshire and the great central parts of England, Wiltshire, Dorsetshire, Berkshire, and Oxfordshire.

Acreage under management.

7178. What is the amount of acreage of land that you are agents for?—I am unable to give that to you.

7179. It is very large, is it not?—Very large. That it is a considerable area is proved by the fact that we had last year nearly 15,000 acres in hand for our various clients.

7180. What counties are those in?—They were chiefly in Berks, Hampshire, Wiltshire, Oxfordshire, partly in Warwickshire, and some part of them in Staffordshire.

7181. Are the estates that you manage for large owners or some very small ones?—Nothing is too large, nothing is too small for us.

7182. Have you many large estates, or are they mostly small ones?—Our largest estate is about 26,000 acres—that is the largest estate that we are agents for; but we are auditors and consulting agents, for two estates of nearly 40,000 acres each besides.

Mr. E. P. Squarey. 15 Feb. 1894.

Size of estates under management.

7183. Where are those?—One is in Wiltshire, the other partly in Wiltshire and partly in Somersetshire.

Condition of agriculture in Wiltshire 1847-52.

7184. Speaking first of all of Wiltshire, will you state what is your experience as to the condition of things there?—The condition of things is very sad. I am impressed with the traditions of the past, having begun my professional life as a farmer in 1844, but I recognise the most grievous and serious changes in the condition of things from that period to the present. Of course, I am cognisant of the state of affairs from 1847 to 1852, a period of depression very largely affecting farming in that part of England (which I then alone knew) almost as acutely as this depression has done.

7185. (*Mr. Chaplin.*) In what years?—From 1847 to 1852.

7186. (*Chairman.*) During those five years there was very serious depression, was there not?—Very serious depression.

7187. (*Mr. Chaplin.*) Was it as bad as the present?—Not so bad or continuous as the present.

7188. (*Chairman.*) That was immediately following free trade?—Yes, after the repeal of the corn laws, and free importation of meat.

7189. And until the year 1852?—From 1852 to 1853 it began to mend; the Crimean War broke out about then.

Mr. E. P. Squarey. 15 Feb. 1894.

7190. From 1852 to 1879 was there a period of prosperity?—Most certainly, beginning to decay before 1879 arrived.

1852–79.

7191. Up to what year?—Up to 1874 and 1875.

7192. Then there was a commencement of change, and that became aggravated in 1879, did it not?—Certainly; it began gradually to fall: lower and lower prices obtained.

Rent.

7193. Had rents fallen in the years 1847 to 1852?—Yes, very considerably.

7194. Was it temporarily?—Temporarily, and generally as well.

7195. Do you mean that temporarily the abatements were made only year by year, or were the rents permanently reduced?—They were not generally reduced but there was a less competition in the taking of the farms; the turn of the market was in favour of the tenant.

7196. Well, then, in 1852 the better state of things occurred; was there a rise of rents between that year and 1875?—Very considerable.

7197. What should you put the per-centage of increase at that period?—It would depend upon the platform upon which you start. Upon the platform of 1844 and 1845 the rise would have been considerable; it is difficult to say off hand what the rise was; it depended largely on the improvement of landed estates by the expenditure of capital both by landowners and tenants.

7198. (*Mr. Chaplin.*) The rise of rents began when?—The rise began in the years 1853 and 1854. It was a temporary depression. I have said that the turn of the market was in favour of the taker rather than that there was any great abatement of rents.

7199. (*Chairman.*) Up to 1852 and after 1852, you said, between that year and 1875 there was a considerable rise of rent?—Yes, there was a considerable rise of rent. There were always plenty of tenants to take farms, but generally speaking there were stipulations made by them that improvements should be made, new homesteads should be erected, drainage done, better water supplies, fencing, road making, and things of that kind. With this expenditure there was a general advance of rent beyond the usual interest on the outlay.

7200. Was that rise of rent general over the estates that you manage?—Certainly, it was general.

7201. And did not apply to only the particular owners that you are agent for?—No, it was general over the whole of England.

7202. Can you give us an idea of the measure of the rise; was it 20 or 25 per cent., or what proportion?—No, it would have been 25 per cent. from the platform of 1845 and 1846.

7203. But as compared with 1852, the year when it was reduced?—It would have been 25 per cent. certainly from the lowest point of 1852, and perhaps more, but that 25 per cent. would be subject to abatements in respect of interest on outlays made by the landlords for improvement.

Depression since 1875.

7204. Well, then, in 1875 a turn came, and in 1879 that became very serious?—1879 of course was one of the most unfortunate seasons we have ever known, singularly unfortunate, low temperature, and great rainfall.

7205. And also low prices?—Low prices concurred, aggravated by the damaged quality of the cereals.

7206. I think I am right in saying that it was almost the first time that low produce was not compensated for by increased price?—Certainly there was not any compensation by an increase of price.

7207. Generally speaking, up to that time when there was a bad harvest it was accompanied by high prices?—It always affected the prices.

7208. But in 1879 for the first time that was not experienced?—That is so.

7209. And you had very low production and very low prices?—Very low prices for very inferior produce it is fair to say.

Reduction in rents from 1875.

7210. Well, then, since 1875 I presume rents had fallen very considerably?—Yes, very largely indeed.

7211–2. Can you give us the general average, stating with regard to what kinds of properties rents have fallen most?—Averages would be very delusive. First of all the measure would be the platform upon which those averages would have to be taken. For instance, a large estate, where rents were never forced to their maximum, the per-centage of reduction is obviously less than on estates of less area where the necessity for getting the utmost penny from them has arisen; this would clearly average a larger per-centage of fall in value than would the larger estates to which I first alluded. If I may illustrate that, I would say that, given a rental of 10,000*l.* for 10,000 acres, the tenants paying the tithe rentcharge in addition, and given another estate of similar character of 2,000 or 3,000 acres, where the rental had been forced up to the maximum of 22*s.* or 23*s.* an acre, it obviously would be unfair to measure the average fall by the two estates.

Mr. E. P. Squarey. 15 Feb. 1894.

7213. Then we may take it from that, that in the case of estates where the rents have been nominal the reductions have not been so large as in the case where rents have been forced up, and the utmost penny had been obtained from them?—The per-centage of reduction is not so large from two causes: first, there is not the height to fall from down to the lower price; and, secondly, there is always a tendency on the part of the tenant to appreciate the moderately rented estates, and to be content with a less reduction than on estates where, up to that time, was demanded the extremest rack rent.

7214. Have you found much difference in the case of pasture land, and pasture farms, and arable farms?—The arable farms, of course, have been those which have been subjected to the greatest fall, but there are qualifications even necessary in that answer.

7215. And in different parts of the country?—Not quite so much in different parts of the country as in the greater richness or poverty of the lands affected.

Reduction of rent on different land.

7216. And the reduction has been less upon the good land, I presume, than on the bad land?—Very considerably less. The fact is, there are generally takers of good land even now, but not takers of the very poor and inferior lands.

7217. Could you put any average for the reduction of rent to the good arable land that you speak of?—Good arable land with an admixture of pasture—I have rather in my mind at the present time my own district——

7218. In Wiltshire, do you mean?—In Wiltshire and Dorsetshire and Hampshire, because they all coincide in their general character, where there would be usually the proportion of water meadow in the valleys. Taking a farm of 500 acres, of which 20 acres would be probably water meadow, 100 acres would be pasture, partly down pasture and partly pasture in the valleys, and the remainder would be arable.

7219. What has been the reduction there?—The reduction of rent has been from 30 to 40 per cent., depending in degree on locality, under conditions which I have referred to before.

7220. Are those what you would call the better class of properties?—The better class of properties.

7221. And with that reduction have you found no difficulty in getting new tenants?—It is a question of terms.

7222. With that reduction of rent, I mean?—With the farms ranging up to 400 to 500 acres, there is no great present difficulty in obtaining tenants with a sufficient reduction of rent on that type of farm.

7223. Now come to another class—the worst class of farms?—Do you mean the inferior?

7224. Yes?—The inferior classes of land certainly have abated very much more than that. I know of cases of extreme abatements of something like 55 per cent. I think that is the extremest amount that I know of, except under certain circumstances, which do not really bear upon the case.

7225. But 85 per cent. would be about the extreme?—Yes.

7226. What would be the average—from 45 to 50?—The average would be from 35 up to 45 per cent. But that is not a reliable average, the interval is really too wide.

Difficulties in letting large farms.

7227. And even with that reduction have you great difficulties in getting tenants?—On large farms you practically cannot get tenants. We have just succeeded in letting a farm of 1,800 acres. It has immense attractions, and I have always regarded it as being one of the finest farms in Wiltshire. It was let up to 1875 at 1,800*l.* a year, and it is now let at 1,000*l.*

7228. Have you been able to get a tenant with capital to take that?—We have.

7229. (*Mr. Everett.*) Is that an old tenant?—The old tenant died.

7230. (*Mr. Little.*) Did the old rent include the old tithe-rent?—It is tithe free.

7231. (*Chairman.*) Was it in your hands?—We had it in hand for two years.

7232. (*Mr. Clay.*) What rent did it yield then?—It was a minus—one year certainly it was a minus.

7233. How do you expect a new tenant to pay 1,000*l.* a year?—He is a much cleverer fellow than we are.

7234. (*Mr. Little.*) Did he pay the ordinary tenant right valuation on entering?—Yes, he will. The tenancy only commences from Michaelmas. He understands that. I should say that it is accompanied by some stipulations as to expenditure; moderate expenditure on buildings—nothing unreasonable at all—the farm was fairly equipped before.

7235. (*Chairman.*) Then that is rather an exceptional case of a large farm being let?—It is the only case of a large farm that we have lately let. We have other farms not quite so large as that, one of 1,600 acres, and one of 1,000 acres, and one of 1,200 acres. For these farms we have not got offers.

Land in hand.

7236. Going below that, but still large farms, have you still many unlet?—We have not posted up our lands in hand very lately, but we had in 1893 something like 15,000 acres of land in hand.

7237. Were those mostly large farms?—They were mostly large farms that we could not find tenants for at a rent which we could recommend our clients to accept for them.

The letting of small farms.

7238. Then in the case of smaller farms, have you found great difficulty in finding tenants for them?—No; just as the area decreases, so is the disposition to take farms increased.

7239. What would you call the maximum of the small farms?—From 250 to 300 acres. But still the same remark would apply to farms down to 100 acres.

7240. The lower you get the more easy to let the farms?—The more readily we can let farms.

7241. Is that because there are more men with capital sufficient to work them, or is it that they are more profitably worked as small farms?—Because there are more people who hope to get money out of land by farming in such cases than are found for large farms.

7242. Not that they are more profitably worked?—My experience is that these men do manage somehow or other to pay their rents, but they live extremely hard lives, and are economical to a degree.

7243. Then have you not much land in hand of farms of that kind?—Not of small farms.

Subdivision of farms.

7244. Have you found a difficulty in breaking up the large farms into small ones?—Practically it is a question of expenditure, and we cannot advise our clients to expend the very large sums that are necessary for breaking up 1,000 to 1,500 acre farms into three or four farms under conditions which we have been hoping and still hope are temporary.

7245. You cannot advise them to take the large expenditure which is necessary for the purpose of erecting new farm steadings in order to break up the farms under present conditions?—That has been our policy hitherto, but I may supplement that remark: our farms, as a rule, in the counties to which I am alluding do not conveniently bear division. The upper lands are, generally speaking, of the poorest and thinnest, the middle lands are fairly useful arable lands, the home lands are very nice attractive arable lands and pasture lands, and the water meadows, of course, are very desirable indeed.

7246. I gather from that that the farms have been so arranged that there is considerable difficulty in breaking them up?—That is so; they are long parallelograms for the most part, and it is obviously a difficulty to divide a parallelogram (unless you have very wide parallelograms) into convenient holdings.

7247. You said that under the present conditions you cannot advise your clients to break them up, but that you still hope that the conditions may improve?—I hope so.

7248. What is the ground of your hope?—I am of a sanguine temperament, I put it that way.

Prices.

7249. Do you hope that better prices will come?—I hope that better prices will come. I cannot conceive the continuance of such prices of cereals as those that have prevailed during the last five or six years.

Cheap distribution of produce.

7250. Have you any remedies to suggest or any opinion to give as to the remedies which have been suggested?—Well, of course, I have small remedies which I do think may be of some assistance. I venture to think that as to small occupations the necessity for the cheap distribution of produce is a very large and important factor. I mean that through the medium of the Post Office the smaller products of industry might reach the consumer direct from the producer and at a very moderate cost of carriage. I am no enemy to the middleman; I believe he is a most useful person, and must always subsist; but I am confident that for small matters, dairy produce, vegetables, and kindred matters, there is a very large opportunity for a living to be obtained by men on small farms, by cultivating them, more or less, as market gardens, if they could only be put in direct communication with those who consume.

7251. How can that be effected?—I think through the medium of the Post Office, and by the application of the system which, no doubt, is better known to you than to me, of the prepayment by the purchaser, through the Post Office, of the articles which he desires to buy. I am told that that exists in India under our rule there, and certainly it exists on the continent to a very considerable extent.

7252. I do not quite understand you as to what the process is; is it payment on delivery through the Post Office officials?—It is this: the person who orders the goods can pay at his Post Office, so that the person who sells the goods can receive the money at the Post Office at his end and conclude the transaction at once; of course plus cost of carriage.

7253. You say that the present parcel post affords facilities for the distribution of those products; but not so much facility to the payment for them as it might do?—Certainly, it implies a very large extension of the use of the Post Office.

7254. Do you think that there should be a further reduction of charge by the Post Office?—I will not venture to speak upon that, because I could be no authority upon a matter of that kind; but I think that it should be done upon the very lowest possible rates consistent with the avoidance of loss; I certainly think that is a desirable thing.

7255. There has been a great deal done in that direction?—A great deal; it is no new principle that I am suggesting.

7256. (*Mr. Elton.*) It is like a deposit account in the stores; they will open a deposit, and they have a balance?—They might do that, or simply they might say, "I want two dozen eggs to come up by parcel "post," and if they are strangers to each other the purchaser could pay the cost of the eggs and the carriage.

(*Chairman.*) And wire the 2*s.* up to London?—Yes. There was a small letter in the *Times* of Thursday referring to this very matter, which gave it more clearly than I am able to do.

7257. What other suggestions have you to make?—With reference to the question of price?

Free trade.

7258. What have you to say upon that?—I have no desire to refer to the question of protection. I was a free trader when Cobden and Bright came to Salisbury in 1847 to fight the battle of free trade there, and I and my partner were amongst the few farmers who were with them in that idea. I see no reason whatever to depart in any degree from the principles of free trade as they have been since applied, but I do ask that the produce of cereals and meat in England shall be placed on the same platform, as far as possible, with those who export from foreign countries the same articles that we produce.

The currency.

7259. With that view, what do you suggest?—I would suggest some means of dealing with the currency question between India and Russia. Of course, I am not an authority upon these matters, but it is irresistible that there is a premium offered to the export of wheat from India and Russia at the present time, through the depreciation of the rupee or rouble, which operates most adversely and unfairly, as I conceive, to the English producer.

7260. Would you apply that to Russia as well as to India?—The principle applies, though the rouble has not as largely, but very nearly as largely, depreciated as the rupee.

7261. Do you attribute some of the low prices of wheat to that difficulty?—It is scarcely possible to measure the amount of that depreciation, but I conceive it to be very considerable indeed. A friend who has relations with Indian produce, and particularly wheat, estimated it to be at something like 4*s.* to 5*s.*

Mr. E. P. Squarey.
15 Feb. 1894.

per quarter. I do not know that he would vouch for that, but that was his rough estimate of it.

Beer.

7262. You think that but for that bonus, as you call it, the price of wheat would be somewhat higher?—Obviously it would. You may remember the motion that was made in the House of Representatives at Washington, where a member proposed to bring in a Bill offering a premium upon the export of all wheat grown in America, equivalent in amount to the bonus offered by the export of Indian wheat to England; it took no form, but it was a perfectly logical sequence of the system of protection in the United States.

Marking of foreign meat.

7263. Then with regard to the sale of foreign meat, what do you say?—I have no objection whatever to as much corn, meat, or other foreign produce coming in to feed the millions of England as can be brought in on a perfectly fair platform, but I do ask that what is brought into England shall be sold for what it is. If it is foreign meat it shall be declared not only by the shipper and the middleman and the butcher (and I venture to say he is not a butcher really), but that it shall be declared what it actually is to the consumer. Rightly or wrongly, the English people have the idea that they prefer English mutton, and if they do prefer it they are entitled to know whether they are buying English mutton or foreign mutton. I am not depreciating foreign mutton at all; it is very good.

7264. And you think that the butcher should be compelled to declare what it is?—I think that the vendor should be compelled to declare it, and that all parties connected with the transaction should be bound to declare it.

7265. And you would extend that also to the case of beer?—I should extend it with equal stringency to the case of beer. The fall in the price of barley has been very great, and the profits of the brewers, judging from their accounts when they are converting themselves into limited liability companies, has been very great, so great that it is quite clear that there is a hidden source of profit which did not formerly exist; I assert that the drinker of beer shall be allowed to drink just what he likes, but that he certainly shall be informed of what the beer that he is drinking is compounded. I do not ask for an absolute disclosure of the items used in the production of beer, but I do say that it shall be stated where a brewer does not brew beer only from malt and hops that he shall so declare it. I venture to put in a sheet of the "Mark Lane Express" of the 29th of January, 1894 containing a list of substitutes used by brewers, which are advertised in the brewers' papers for sale to the brewers. It is a long and troublesome list.

7266. This contains a list of articles which are used by brewers in substitution for malt and hops?—I do not say that they are used by brewers; but it is a not unreasonable conclusion that they are used by brewers, because they are advertised in the brewers' papers as things that are necessary for their business.

Tithe.

7267. Then with regard to tithes there has been, has there not, a considerable fall in the tithes since 1879?—Yes, there has been a great fall in tithes since 1879, but the fall in the averages of tithes has not been commensurate with the fall in the price of the actual produce of the farm.

7268. Is it not the fact that a difficulty arises from the tithe being calculated upon a septennial basis, and, therefore, where there is a continuous fall in price the fall of the tithe must naturally lag behind the other fall?—No doubt that aggravates the condition up to a certain point; but, if I may read a statement which I venture to put in, as an "illustration of the relative "fall in the value of cereals and tithes on a farm of "500 acres, 100 acres pasture and water meadow. Say "the tithe rent-charge is 100*l.*, equal to 4*s.* per acre. "Value of tithe in 1881 equal to 107*l.* 2*s.* 10½*d.* As- "sume the cereal produce to be as follows:" (and roughly I have taken the prices in 1881) "100 acres "of wheat, 28 bushels per acre at 48*s.* 4*d.* per quarter, "845*l.* 16*s.* 8*d.*; 70 acres of barley, 32 bushels per "acre at 37*s.* 10*d.* per quarter, 529*l.* 13*s.* 4*d.*; 30 acres "of oats, 40 bushels per acre at 25*s.* 6*d.* per quarter, "191*l.* 5*s.* 0*d.* giving a total of 1,566*l.* 15*s.* 0*d.* "Annual average prices for 1893" (I need not trouble you with that because you know it) gives a result of 959*l.* 12*s.* 6*d.* The value of the tithe in 1893 was 74*l.* 3*s.* 9½*d.* "So that the value of the "produce has fallen from 1,566*l.* 15*s.* 0*d.* to 959*l.* 12*s.* 6*d.* "equal to 38·75 per cent. The tithes having fallen "from 107*l.* 2*s.* 10½*d.* to 74*l.* 3*s.* 9½*d.* equal to 30·75 "per cent.," showing a difference of 8 per cent on the fall between the value of the cereals and the amount of the tithe payable.

Mr. E. P. Squarey.
15 Feb. 1894.

7269. Does not that difference arise from the fact that the tithe is calculated upon a seven years basis, and in some of the earlier years the prices were not quite so low as they are now?—It would be so; but practically if we took an average of the three years preceding 1893 the tithe rent-charge would be rather more than 74*l.* 3*s.* 9*d.* if taken triennially instead of septennially, but that is a mere accident.

7270. But taking it generally, is it not the fact that there is a difference in the natural reduction of the tithe as compared with prices when prices are falling, and this arises from the fact that the septennial average is fair?—Yes, the course is continually downwards.

7271. Assuming that the present prices were to continue for seven years, then at the end of the seven years the reduction in the tithe would be equal to the reduction in the prices?—Theoretically; but I do not think that the averages are fairly and properly taken.

7272. That is another point; but would it be desirable in the interests of agriculture now, when the prices we may hope are at their very lowest, to alter the average?—I do not attach any very great importance to altering the averages, because if I were arguing from a selfish point of view I might hope that the tendency would be upwards, and therefore the septennial average would be in my favour.

7273. And then the farmer would lose. It might turn out to the great disadvantage of the farmer, when prices are very low, to alter the average?—Yes, so far as he is a tithe payer.

7274. If prices took a turn for the better the farmer would get the advantage, whereas under the present rule he would have four or five years of tithe in proportion to the prices?—Certainly; he has borne the burden and the heat of the day, and it would be very hard not to let him have the benefit of the rise.

7275. Have you any other remarks to make on the subject of tithe?—I had the pleasure of a very long conversation the other day with a gentleman who I believe is to be called before you, and who, far better than myself, would disclose his views in which I thoroughly participate. On the very poor thin lands of the Oolite and Chalk, and on the very worst of the clay lands, there is a means by which I think the landowner can, up to a certain point, divide with the tithe-owner, notwithstanding the strong power which the tithe-owner has to get the tithe. When land has gone out of cultivation, and is simply remitted to prairie value and something for sporting upon it, the tithe-owner clearly has no remedy but to enter into possession and let it, but he enters into possession under much less favourable conditions for finding a tenant than the owner himself; hence, if the tithe-owner entered into possession, he might get a rent if rent were obtainable, but my impression is that he would get, if any, much less than the owner.

7276. When you say that he may be in possession, is that merely for the purpose of letting in order to get his tithe, he does not go in like a mortgagee to get possession of his property, he merely has the right of taking it for the purpose of letting?—Just letting it, and getting what he can get for letting.

7277. Therefore, if he lets the land for less than the tithe he would not get more than that?—He would not get more than that, and the landowner would be quite prepared to pay his tithe if he could get a rent beyond the tithe. But I am confident that conditions exist under which land is so absolutely valueless that the value not only of the rent but of the tithe has absolutely disappeared: in that case I can conceive the landowner and the tithe-owner coming to terms under which the tithe-owner may accept a portion considerably less than that given under the 8th section of the Tithe Act of 1891.

Small holdings.

7278. I think you have had some experience in small holdings?—I was a director of Lord Wantage's Small Farms and Labourers' Land Company for some five years.

7279. Has the result of your experience been to show you that there is any prospect of the sub-division of land into small holdings?—I fear not; the result was eminently disappointing to me. I went into it with a sanguine hope and expectation that we should find plenty of people, not only to let the land to, but to buy the land at moderate prices.

7280. And your experience is that no considerable number of people are ready to buy?—Very few people are ready to buy; they are ready to rent but not to buy.

Mr. E. P. Squarey. 15 Feb. 1894.

7281. Do you think there is a probability of many people being prepared to hire small holdings?—Yes, there are people who will hire small holdings even to-day, but it depends so much upon districts. If there were any common lands over which these small people could turn out their cattle as part of the estate which might be split up, then I think you would have no difficulty in letting and probably in selling small holdings. I have the great privilege of living near the New Forest, and I count amongst my best friends some of the small freeholders who live on the borders of the forest. No doubt their ancestors have stolen the land from the Crown, but they are very good fellows notwithstanding.

7282. You concur with those who think that the maintenance of small ownerships in the neighbourhood of the Forest has been mainly due to the fact of having the right to turn out the cattle?—Most certainly; it is the *raison d'être* that they have.

7283. And the same, I suppose, applies to small holdings as well as small ownerships?—No doubt.

State loans.

7284. Do you agree with the principle of advancing money by the State for the purpose of creating small owners?—I think that it is extremely dangerous, and I do not see where the line is to be drawn. I think the blacksmith, the grocer, and the small linen draper, may make out as strong a case for an advance of money to them by the Government as the small landowner.

Equipment of small holdings.

7285. Then one difficulty, as regards the extension of small ownerships, I presume, is the cost of supplying houses and farmsteads suitable for them?—That is the obvious difficulty; it is almost impossible to equip holdings under 50 acres with the necessary appliances for its moderate management, except at a cost that is absolutely prohibitive to the tenant.

7286. Are you now speaking on behalf of the owner of the land, if the owner wishes to take advantage of the Small Holdings Act?—I am speaking of the difficulty as well of the application of the Small Holdings Act for letting.

7287. The great difficulty in that case is the great expense of equipping these small holdings in the shape of farm buildings and houses?—Certainly; I must say that according to my experience, the small holder is very exactive, not perhaps in the first year, but in the second and third years of his tenancy as to his requirement in the shape of buildings, and under the Sanitary Acts the landlords are bound to give him a water supply: that is often most difficult to arrange.

Small holders.

7288. I suppose you are now speaking of small holdings where the holder would be expected to make his living wholly out of his land?—I do not think that the small holder under 50 acres can make a living out of his land, unless he does something else. But these men do something else—these people in the New Forest; the commercial spirit is strong upon them of buying and selling, and I do not know where they get the profit out of it, but they do get a profit and they live.

7289. That would rather tend to show that if greater facilities were provided for these small holdings, the holders of them would find some other means of living along with it?—Yes; but, of course, there is a limitation even to the application of the commercial spirit; it cannot be exercised too largely in a district.

7290. But apparently, from what you say, in the district of the New Forest there is a very large body of very small people who make their living partly from the profits of their small holdings and partly in other ways?—Quite so; but then they have an almost illimitable right of common on the Forest, which helps them very greatly.

7291. (*Sir Nigel Kingscote.*) I think you were examined before the Duke of Richmond's Commission?—Yes.

Land Improvement and Enfranchisement Company.

7292. And you were examined in two parts, if I may say so, as a land agent and as the chairman of the Land Improvement and Enfranchisement Company; are you still the chairman of that company?—I am.

7293. May I ask you generally—I do not want to go into figures, but generally since you were examined in 1880—whether the company still goes on granting large loans for improvements on estates?—It is still going on; but of late years since this depression has come in with such emphatic force, we do not do one-tenth of the business that we did in 1880.

Expenditure on improvements.

7294. May I ask you, in the capacity of land agent, is it your opinion that the landowners generally have not laid out so much money in the last 12 years as they did previously?—The landowners certainly have not laid out so much money in the last few years as they did before; the reason why our business has fallen off so largely is simply the indisposition upon the part of the occupier to meet the landowner's expenditure, whether by loan or personally in the shape of increased rent—he has lost heart.

Mr. E. P. Squarey. 15 Feb. 1894.

7295. As a matter of fact, do you consider then that on many estates more money is still required to be laid out in improvements on buildings?—Concurrent with a reasonably moderate price of cereals, I have no doubt that there would be still found plenty of areas for the expenditure of money in improvements of land.

7296. You gave us an instance of a very large farm that you have lately let, but you have others in hand—probably when this large farm came in hand it was not in the very best state of cultivation?—Yes, it was in an excellent state of cultivation.

7297. And yet for the last year you could not let it?—It is fair to say that we were asking more rent than we have accepted now.

Uncultivated land.

7298. Do you think, speaking generally of the estates that you manage, that there has been much deterioration in cultivation?—If you had asked me that question three or four years ago I should have said that there had been, but a very considerable area of land has gone out of cultivation on our farms, and since that area has gone out of cultivation the remaining area has, I think, been certainly improved in cultivation and general management since 1885.

7299. May I ask as to this area that has gone out of cultivation, have you much on the estates which you manage?—A very large proportion.

7300. What is happening to the land?—The tenant sows a certain quantity of grass seeds, and then lets it bide, as the expression is.

7301. (*Chairman.*) When you say "gone out of cultivation" I presume you mean that it remains in the hands of the tenant, who treats it as arable land?—He lets it run into a natural state, he has probably sown some grass—it is not a sudden resolve of his, and he takes a crop of oats or barley the last thing, and then he sows some grass seeds and then lets it bide.

7302. And after the natural process, after some years, it becomes pasture?—A very great number of years.

7303. (*Mr. Lambert.*) Would it be laid down in this way, after roots in the ordinary fashion?—Yes, probably after roots, the grass seeds would have been sown amongst the crop of oats which follows the roots.

7304. (*Sir Nigel Kingscote.*) As to this land which you call "gone out of cultivation," but which has tumbled down or perhaps helped it, is that in contradistinction to other land which has been properly laid down for grass?—In contradistinction to that certainly, because where lands have been properly laid down to grass I do not regard those as having gone out of cultivation; although the plough ceases to go over it, it still may be used in the same way as the old pasture land.

Land laid down to grass

7305. Has a certain area of the estates you manage been laid down properly to grass?—A very large area indeed.

7306. Who has borne the chief expense, the landlord or the tenant?—The landlord generally; he has found the grass seeds generally and has contributed very largely to assist the land when laid down to grass afterwards by sending subsidies of manure.

7307. May I ask if you encourage the laying down to grass?—It is an absolute necessity to enable us to let farms.

7308. Because I conclude that on some of the light land farms on the downs it is almost impossible to lay it down to grass?—As I have said the tenant sows a certain amount of rye-grass and hop clover and then it takes its chance. Of course this is cruelly treated; the sheep go over it and eat it, or the bullocks, and take all the feed that there is upon it, and then they are taken away to some other place to drop their manure; it is not fair treatment.

7309. I conclude you are of opinion that in the case of large farms, of the sort you mention at least, there is a certain economy in the management of those farms by having a certain area under grass?—Than the farm to which I have referred I can conceive nothing more perfect for the production of cereals and sheep and wool, and a certain portion of dairy produce; it is perfectly equipped with homesteads in the most convenient sites, and with a pleasant residence, and all together, if that farm were to go out of cultivation, I do not know what farm is going to be cultivated.

Large and small farms compared.

7310. I want to ask your opinion on the farms over a certain size, say 400 or 500 acres; are they more

Mr. E. P. Squarey. 15 Feb. 1894.

economical to manage than the average of the smaller farms in the district?—Most certainly.

Leases.

7311. Are any of the lands under you held on lease?—We cannot get tenants to take leases now.

7312. Are they simply taken from year to year?—On a yearly or two-yearly tenancy, a yearly tenancy is preferred by the tenants as a rule.

Barley-growing.

7313. (*Mr. Clay.*) What do you consider the depreciation of the good English barley has been from the abolition of the malt tax?—I am afraid your question entails rather a long story.

7314. I mean the depreciation at so much per quarter?—From 1875 we will say it has depreciated from 8*s.* to 10*s.* per quarter.

7315. From the abolition of the malt tax?—I do not know the cause of it. To be perfectly candid, we in common with the general growers in the South of England have not been able to grow on the average as good barleys even from Scotch seed as we grew 30 years ago.

7316. That is not the question I am wanting to get at. I want to know simply what has been the decrease of value, say of good Norfolk barley, from the abolition of the malt tax; how much per quarter?—From memory I should think the reduction has been about 8*s.* per quarter.

The marking of foreign meat.

7317. (*Mr. Gilmour.*) Have you thought out the most practical way of dealing with the importations of foreign meat,—to put them on the same platform, as you phrase it, with the home producer?—I have not. I am not an administrator, I am sorry to say, in these directions, but I am quite clear that it should be done; I saw it done in Cairo and Alexandria, and Cyprus, and, therefore, if it is done there there is no reason why a clever people like the English should not do it here.

7318. What do they do out there?—They put a mark upon it.

7319. Each individual small beef steak?—No; the carcase is marked.

7320. Do you think that the main carcase being marked down the back, or in any particular way, would secure the small consumer in the retail market?—As in Egypt, I would put penalties extremely heavy upon the man who sold New Zealand mutton as Southdown or Scotch mutton.

7321. But do you think it probable that an intimation that foreign or colonial mutton was sold "here" would be sufficient to put the purchaser on his guard?—I do not think that it would, because I have heard of cases—I do not know them myself—I have heard of one case where one part of the shop is devoted to the sale of colonial meat and the other part to the sale of English meat; so I am told.

7322. (*Mr. Little.*) I think you said you had 15,000 acres of land in hand?—Yes.

Land in hand.

7323. May I ask you whether that is all of one description of soil, or whether the farming is of one character?—It was pretty much one description of soil on the chalks and oolites, on the thin oolites; but when I speak of the chalks I have in my mind soils where the drift of the tertiaries is of some considerable depth upon the chalk.

7324. Strong clay with flints in it?—Yes; you know the soil with the drift of the tertiaries upon it.

7325. It is chiefly confined to arable land, I presume?—Arable land chiefly. Of course, the farms that we have in hand are the least desirable to let, and they have been farms where the owner from various circumstances, in the exercise of his own discretion, very possibly from our folly in backing him up, thought that if he held on a little longer he would be able to get the old rent.

7326. There was nothing in the management of the estate on which this land lies which led to its not being let?—Nothing at all.

Land Improvement and Enfranchisement Company.

7327. (*Sir Nigel Kingscote.*) I asked you about the operations of your company; is not one of the causes of your not doing so much business the Settled Land Act?—No, I do not think that it is; the cases where the Settled Land Act has operated adversely to the interests of our company have been comparatively very few, and I may say that the machinery of our company has been used frequently under the Settled Land Act for the purpose of applying settled moneys for the purpose of improvements.

Mr. E. P. Squarey. 15 Feb. 1894.

7328. Then would it mark an indisposition or an inability upon the part of the landowner to spend money, or an indisposition on the part of the tenant to pay interest upon the money spent?—I do not think it marks an indisposition upon the part of the landowner to spend money so much as it marks the absolute indisposition upon the part of the tenant to undertake any further burdens in the shape of rent.

7329. I only mean indisposition on the part of the landowner in not getting any return for his outlay?—That is a very natural thing.

Agricultural Holdings Act.

7330. You have had considerable experience of the Agricultural Holdings Act?—Yes; I have.

7331. Are you of opinion that it has been beneficial?—I am of opinion that the principle of the Agricultural Holdings Act has been decidedly beneficial. I am of opinion that the procedure of the Act has been decidedly antagonistic to its application in a great number of cases, and I should very much wish that the procedure of that Act might be very largely modified.

7332. (*Mr. Little.*) I have one or two questions to ask you on the Agricultural Holdings Act; you are of opinion that the procedure ought to be simplified?—I think, if it is not too radical a suggestion, that it might be abolished.

Compensation.

7333. The principle remaining?—The principle remaining that the tenant is to be compensated for that which is of value to the incoming tenant.

7334. Whether done with the consent of the landlord or not?—That is a large question. Over the whole of my experience and the experience of my firm I do not know that I have ever had a case. We have never been applied to for any work to be done under the First Schedule, I think as a rule, English land is so perfectly equipped that it has all that is wanted for its proper management and cultivation, and the tenant is simply called upon to apply himself to the mere material aspect of the question of cultivation, and for that the second section amply compensates him, under the principle of the Agricultural Holdings Act.

7335. As regards the procedure you would simply provide that the tenant should be entitled to compensation without providing any means for obtaining it?—Precisely.

Procedure under the Act.

7336. You would strike out all the arbitration clauses?—Well, I should not like to exercise too free a pen without very great consideration. But what I wish to eliminate from the Act is this; that first of all the tenant is called upon to give notice to the landlord. That in a very large number of cases he absolutely forgets to do; the notice having been given the landlord bristles with antagonism and makes as large a counterclaim against the tenant as his agent can make out. The result is an unkindliness of feeling and friction raised which is absolutely unnecessary. Then the tenant's and the landlord's valuers meet with their armour on which they used formerly never to exercise at all, but they meet and the claim is asked for, and if that is not present there is an end of the proceedings, and then they get to cross purposes and say that the landlord is hard and that the tenant is bad. If the failure of notice is waived they proceed with their work under the Act, with the almost inevitable result that in my own experience an award under the Agricultural Holdings Act is scarcely ever made in proper time; a case which Sir Nigel Kingscote knows very well, in which I was the umpire, compelled me to run after the county court registrar of Essex to obtain the enlarged time necessary to make the award.

7337. You would be satisfied with the principle being accepted that a tenant is entitled to compensation?—Most certainly.

7338. And with regard to the time for making the award, what would you say?—The award practically never can be made until something like Christmas, three months after the tenancy has terminated, where a Michaelmas tenancy obtains.

7339. There is no limit of time for the umpire to make his award, it may be indefinitely extended?—It may be indefinitely extended if he chooses to go to the registrar of the county court.

7340. Is not this complicated procedure a necessary consequence of the interference between landlord and tenant by law?—I like the principle of the Agricultural Holdings Act, because I have known in the far distant past some injustice and wrong done to tenants

Mr. E. P. Squarey. 15 Feb. 1894.

from the non-recognition by the owners of the land of improvements which they have made—not large ones, but valuable manurial products of which they have been deprived; and, therefore, it is that reluctantly, because I am a great believer in the doctrine of *laisser faire*, I conclude it is necessary and desirable that there should be a law instead of mere custom, which obtains in some districts, recognising tenant right.

ontracting it.

7341. (*Chairman.*) And that the landlord and tenant should not be allowed to contract out of the Act?—The landlord and tenant should not be allowed to contract out of it. That was the defect of the Act of 1875.

7342. That is the essential principle of the Act of 1883?—Yes.

ithe.

7343. (*Mr. Little.*) With reference to the tithe question, I gather that the Act of 1891 has been practically ineffective in relieving the owners of tithe where the tithe is very heavy?—I only know of one case where the eighth section has been applied, and there it was fought out nearly to the bitter end, but it resulted in a compromise.

7344. Would you think it desirable that the tithe payer and the tithe owner should be empowered to make a binding bargain lasting for more than one year as to the reduction of the tithe?—A great number of tithe owners are merely tenants for life or during possession, and it would be hard, therefore, for a life incumbent to bind his successor; but I can look forward with great certainty that under the course which I believe I have suggested in my examination by the President, I can conceive of conditions under which the tithe owner would be an extremely wise and prudent man if he made terms with the landowner so as to avoid absolute loss by entering into possession of the land from which he can get no good.

7345. If the tithe rentcharge equals the present value, or even closely approaches the rental value, the landlord has no inducement to keep the land in cultivation?—None.

7346. The tithe owner would be a very bold man if he took the remedy which he possesses of letting the land or cultivating it?—He would be an extremely bold man if he did it, because I venture to say that the landowner is in a far better position to let the land than the tithe owner could be under any circumstances.

7347. If the land is uncultivated the tithe owner gets nothing?—If it is uncultivated the tithe owner gets nothing.

7348. On the principle that half a loaf is better than no bread, it would be better for him to make an arrangement with the landlord to take considerably less than his legal payment?—Obviously it would. I know of one case where the application of the 8th section was met by a compromise.

7349. Would it very much facilitate such bargains if they could be made valid bargains, extending over a period of years? I put a case which has come under my notice of a farm which is let for 100*l.* a year, and upon which the tithe is 112*l.* Obviously the ordinary landowner has no inducement whatever to let that land; but suppose he could go to the tithe owner and say to him, "Now we will divide this 100*l.* a year between us "if you will agree for seven years, and I will keep the "farm let, and pay you 50*l.* a year," would not that be an advantageous arrangement for both parties?—I do not see why they could not make the arrangement according to the interest which each party possesses.

7350. Supposing they were both free, but a clerical tithe owner cannot do that?—Why not?

7351. He cannot bind his successor?—But each can arrange for the interest that he represents.

7352. What I mean is that you want a certainty for a period of years, and the clerical tithe owner cannot give the landlord that certainty; would you think there was any injustice if such a bargain were made, say with the ratification of the Board of Agriculture, to endure for a certain period of years?—I should like them to make their own bargains. The tithe owner would be benefited if there was a sudden rise in the value of cereals.

7353. But a bargain for a year, or an uncertain time might not be sufficient for the landlord?—I am making that last remark on the understanding that I would extend it considerably beyond one year.

7354. All that I wished to get at was whether it would be fair to make such a bargain binding upon the successor?—I do not think it would be wise to make the bargain binding on the successor. I think the parties might make a bargain between themselves depending upon the thousand and one varying conditions in each case. That would meet the case better than any other bargain that could be made by legislation.

7355. Notwithstanding that such a bargain might be upset at any moment by the death of the incumbent, or the avoidance of the living?—Yes, because the successor would be almost certain to be willing to adopt the conditions which his predecessor had found necessary and desirable.

Agricultural Holdings Act.

7356. (*Mr. Chaplin.*) With reference to the Agricultural Holdings' Act, when you say that a landlord ought not to be allowed to contract himself out of the Act you mean, I presume, unless the tenant is assured of his compensation or something as good or better than the Act?—That is part of the Act now.

7357. You approve of the principle of the Act?—I approve perfectly of the principle of the Act. I think it cannot be improved upon, and I believe amongst tenant farmers and land agents the principle of the Act is absolutely recognised and approved.

7358. That principle being the value to the incoming tenant rather than the outlay which is made by him?—Yes.

7359. I understood you to say that you think the notices which are now necessary ought to be abandoned?—There is no necessity for them at all.

Lincolnshire custom.

7360. Are you acquainted with the Lincolnshire custom?—Perfectly.

7361. It is a fact in the Lincolnshire custom that there is no notice on either side and it has never given rise to any difficulty whatever?—I have never known it give rise to any difficulty.

Paul and Portarlington.

7362. Have you any further changes to recommend for this Commission to consider with reference to that Act?—Yes, there is one which I venture to call your attention to with reference to the case of Paul and Lord Portarlington. It is technically an amendment of the Act which I think is necessary. The circumstances of the case are these: It was in Dorsetshire, and the case was that of a very large farm, and when the tenancy was expiring Mr. Paul forgot to serve the notice. But in Dorsetshire there obtains the custom of over-holding. The tenancy proper expired at Michaelmas, but the tenant has the power of over-holding the buildings and certain lands around the buildings for the purpose of consuming his straw and fodder. Mr. Paul proceeded after the termination of his tenancy (it was a lease) to feed a large quantity of cattle with corn and oil cake and cotton cake in the premises during the months of October, November, December, January, and February, when his over-holding ceased. The case was tried before Lord Coleridge finally, and he held that the word "tenancy" under the terms of the Act meant the absolute surrender of the whole of the lands, and that, therefore, Mr. Paul was entitled to be compensated under the Agricultural Holdings Act, for which he had served a notice after his tenancy had expired, and he was paid accordingly. I think that the principle is unfair and unreasonable. The tenancy expires, and the tenant has simply those acres of land and the yards and barns left for him for the conversion of his corn, and he has no right to draw upon the incoming tenant a large portion of tenant right under those circumstances. I hope I have made myself intelligible.

7363. Quite so; but at the same time the incoming tenant would derive all the advantage of the consumption of that extra amount of cake?—He might; but the circumstances of that case are peculiar, that the consumption of a large quantity of cake would be on an extremely small area of land. My partner was one of the witnesses in this case. I will not venture to commit myself to the quantities, but a very large quantity of cake was consumed on a small area and the surface of the pasture disappeared because the cattle were kept in such a limited area to consume the cake.

7364. The case which you have submitted to us would only apply in certain districts of the country where the system of over-holding exists?—It would only apply in those cases.

Mr. E. P. Squarey. 15 Feb. 1894.

7365. Are they numerous or common?—They are very large indeed; all over the southern and western counties the custom obtains absolutely.

7366. And that, you think, ought to be altered?—Lord Coleridge's ruling ought to be remedied in that direction.

Low prices and bad seasons.

7367. Now you have given us some very interesting and important information as to the condition of agriculture in the districts with which you are acquainted; What is the chief cause of this terrible depression?—Low prices, and rather bad seasons.

7368. I suppose the real remedies, then, are improved seasons and improved prices?—Remedy the last, if we can, and the first must be accepted as they come.

Prospects of agriculture.

7369. I gather that you see no real prospect of a permanent improvement in agriculture?—No, I should say not; we have adapted ourselves up to a certain point in Wiltshire to the altered conditions. First of all, the fall in wheat has been greater than the fall in barley, and consequently we have applied ourselves with not signal success, to the growing of barley rather than wheat occasionally. Oats, too, have maintained their relative value better than wheat has, and therefore we are disposed frequently to grow oats instead of wheat, and the community of idea upon that point is obvious from the large proportion of lessened area of wheat in this last year as compared with the previous years.

7370. From 1853 to 1874 you said there was great and general prosperity, and then that after 1875 a change began, getting worse and worse after the year 1879?—Yes.

7371. And which has continued up to now?—It has been further aggravated recently.

Low prices.

7372. And that change, I understand, is mainly owing to the fall in the price of agricultural produce?—I would not say agricultural produce so much as I would limit it to wheat and barley in a degree, and in a lesser degree to oats, and in some degree also to sheep and mutton.

7373. (*Captain Thomas.*) And wool?—Wool, certainly.

7374. (*Mr. Chaplin.*) In fact, I should not have been very far out if I said it was chiefly, in your opinion, due to the fall in the price of many articles of agricultural produce, in which, of course, there may be some exceptions?—Yes.

Causes of low prices.

7375. What, in your opinion, is the reason of this great fall in prices; to what do you attribute it?—To the large import of foreign corn mainly.

7376. And next?—And that that import of foreign corn has been stimulated very largely, unduly, unfairly stimulated by the depreciated value of silver acting on India, Russia, and Hungary.

7377. (*Chairman.*) And that only applies specially to wheat?—That applies specially to wheat.

7378. As distinguished from barley and oats?—Yes.

The currency.

7379. (*Mr. Chaplin.*) Would you be prepared to answer one or two questions in connection with the depreciated price of silver?—As far as I am able, but I must ask the Commission to understand that I am not a capable person in that direction.

7380. I will not ask you those questions unless you wish?—I should be quite willing to answer them so far as I am able to do so.

7381. Do you trace the depreciation in silver to the monetary changes which were made on the Continent and in America in 1873 and 1874?—Having read Sir David Barbour's books, and having thought carefully out the whole question, and observed the coincident fluctuations in the value of silver and the value of cereals, I can have no doubt of their absolutely logical relation with each other.

7382. Those monetary changes he would say have led to what is called the appreciation of gold?—They have arisen from the appreciation of gold.

7383. Or caused the appreciation of gold?—Or caused the appreciation of gold.

7384. And that appreciation has caused a depreciation between gold and silver, which gives this bonus to the countries having a depreciated currency?—Undoubtedly.

7385. Then you do attribute a large part of the fall in the prices of produce which are affecting us so seriously to the great monetary changes which were made at that time?—I honestly believe that that is so.

Mr. E. P. Squarey. 15 Feb. 1894.

7386. Do you wish to say anything with regard to any remedy for that state of things, or have you any proposals to suggest to this Commission?—Having given you my confession of faith, the remedy is obviously the adoption of a double standard upon terms to be settled. I cannot venture to give the terms of settlement, but that there will be a double standard, a settled ratio between silver and gold, I can have no doubt. It would at once put upon a steady and prosperous footing the value of agricultural produce, and indeed all other produce, for it applies to everything.

Uncultivated land.

7387. I wanted to ask you a question about the land out of cultivation that is in your hands. What kind of land is it that you say has "laid itself down to grass?"—Of course they are the most inferior lands; they are lands that have been simply maintained in the past in more or less profitable cultivation by the disposition on the part of the landlord to equip those areas with the necessary farm buildings, water supply, and roads, and things of that kind; and what the landlord has contributed, equally with the energy and capacity of the tenant and his disposition to farm what is called highly and liberally. Those conditions alone maintain the productive capacity of those lands, and the margin of profit under the joint contribution was a very narrow one. It has absolutely disappeared under the present conditions.

7388. Under the altered conditions of prices you mean?—Yes.

7389. Then I am to understand that the land which has "laid itself down" in this way is practically worthless, or worth very little per acre?—It is worth very little per acre. It may be worth 6*d.* to 9*d.* per acre for sporting purposes, and it may be worth 1*s.* or 1*s.* 6*d.* in addition for the sheep to run over it. I must ask you to understand that I speak of lands out of cultivation. I am not referring to the 15,000 acres of land which we are cultivating.

7390. (*Chairman.*) You are not now referring to farms wholly gone out of cultivation, but parts of farms which the farmer has not thought it worth while to treat as arable?—Quite so.

7391. (*Mr. Chaplin.*) I describe the land in these words, "The land which has laid itself down to grass?"—Yes, in some cases it has. On clay land it has. But what I would mean is the case of the farmer who is sick at heart with the whole surroundings, and he says, "I will take a crop of oats and sow it down with "Italian grass and hop clover, and there it shall "remain until times are better."

Cattle disease.

7392. Have you suffered in Wiltshire at any time from cattle diseases?—Very slightly.

7393. You have had some cases?—Yes, but they have not spread.

7394. I suppose if it had spread, or you had a recurrence of disease, that would be a terrible calamity?—It would be a terrible calamity, because we are certainly increasing our stores of cattle in Wiltshire, more in proportion than our sheep.

Slaughter of cattle at port of debarkation.

7395. Would you agree with the evidence which has been given by a great many witnesses, that with a view of preventing the possibility of any recurrence of disease, cattle might be slaughtered at the port of landing?—Most certainly.

7396. Without any exception?—Without any exception at all.

Tithe.

7397. (*Mr. Dalton.*) Has this land that has gone out of cultivation any tithe upon it?—Yes.

7398. And the tithe has gone?—When I say there is tithe upon it I must explain myself. Most of the tithe apportionments in the districts to which the remark applies, are only a farm apportionments, not field apportionments, and therefore it would be extremely difficult to allocate to any particular parts of land the amount of tithe upon it, and under the circumstances the tithe-owner would, in the absence of a field apportionment, have to get the tithe where he could get it.

7399. You do not know of a case where the land has gone out of cultivation owing to the tithe?—Yes, I think I do.

7400. What kind of case would that be?—A very exceptional case, but it is the case I was speaking of where the tithe-owner and the landowner came to a

Mr. E. P. Squarey. 15 Feb. 1894.

compromise instead of applying the provisions of the 8th section of the Act of 1891.

7401. It went out of cultivation?—It went out of cultivation, and it is out and has been for some time.

7402. (*Chairman.*) Is that the whole farm?—Well, I should think 40 to 50 per cent. of the farm.

7403. Is that the case where there is field apportionment?—There was more or less field apportionment, but it was such large areas of field apportionment that it would be very difficult indeed to define the precise areas where they have gone out of cultivation and where not. It is absolutely open land. I am speaking of the chalk district in Hampshire and open land, so that, of course, you could not define precisely the areas relatively gone to grass with the areas subject to special tithe from which it is taken.

7404. (*Mr. Dalton.*) The tithe-owner and the landowner came to a compromise, but notwithstanding that it has not gone back into cultivation?—No, the compromise was only effected last year.

7405. What was the nature of the compromise?—The nature of the compromise was about 50 per cent. The tithe-owner took about 50 per cent. of his claim.

7406. But the result of that compromise has not been to bring it back into cultivation?—No.

7407. What inducement has the landowner when the tithe is larger than the rent, to expend any money on the improvement of the land?—He has no inducement.

7408. Is it not desirable that some tribunal should be arranged by which the tithe should be reduced in such a case so as to give an inducement to the landowner?—I think it is perfectly reasonable and equitable that the tithe which was commuted in 1836 when we were in the full bloom of protection should in certain circumstances be moderated. The prices were very low in 1836. I may illustrate the lowness of prices in 1836. I remember as a boy staying with a friend who looked after the New Forest hounds, and his coming home from Southampton saying that he had bought a load of wheat at 7*l.* 10*s.*, that is 30*s.* per quarter, to feed the hounds upon, and I remember the cry of shame that was raised that "dogs should be fed upon "wheat when God's people had been so short of it."

7409. But is the tithe not very often higher on the worst arable lands than on grass lands?—It is invariably higher on the arable land than on the pasture land: I mean that it does not follow *ad valorem*.

7410. But I understood you to say that you thought it was sufficient to leave the arrangement open to the clergyman for the time being and the landowner?—That is under the existing Acts, yes, certainly.

7411. But do not you think it is desirable that there should be either some tribunal or some means of their coming to a permanent arrangement?—I think so. I think that it is desirable that the whole question of tithe should be reconsidered. I was remarking about that year 1836 when the tithe Acts were passed, we were in the full bloom of protection; we are now absolutely without it, and our prices at the present time are so abominably low, to use a strong expression, that I do not see that it can be fair that the imposition of what is supposed to be a tenth of the produce of these lands—which were kept in cultivation and maintained and managed entirely by the enterprise and skill of the farmer—I do not think that it is fair that the conditions which then obtained as to prices should be allowed to apply now to lands which have ceased practically to produce what they were supposed to be capable of producing in those days. A reconsideration of the tithe to my mind would be not only equitable and just but would be most absolutely beneficial.

7412. But without having a reconsideration of the whole question of the tithe, what objection do you see to a power being given to make a bargain, subject to the approval of the Board of Agriculture, which shall be binding upon the successors of a country clergyman? You cannot expect the landowner to make a large expenditure on improvements without a binding bargain?—Certainly not.

7413. What is the precise objection, supposing it were settled by a proper tribunal?—It is not the landowner that would make the improvements, it would be the tenant who, of course, would be paying the tithe as rent, supposing a rent were obtainable for the land, which it is not now.

7414. But in this case that Mr. Little mentioned, with a tithe of 112*l.* and a rent of 100*l.*, what would you do?—I would reconsider that case by all means.

Mr. E. P. Squarey. 15 Feb. 1894.

7415. Would you reconsider that particular case?—I ask for a reconsideration of that and kindred cases; there are many of them.

7416. I think you said that you thought that the producer was entitled to be on a perfectly level footing with the producers of other countries?—Yes.

7417. How can you do that; he is not on the same footing as to climate, soil, or cost of labour?—I venture to think that under the English climate the English soil will grow as good wheat as any in the whole world, and that in the vale of White Horse in Berkshire there are places, climatically, and by soil, as good for the production of wheat as any country in the world.

The currency.

7418. Take the price of labour in India and England, how could you put that on a level?—I do not want the English level of wages to be lowered in any degree. I wish the question of price to be protected against the fall in the value of the rupee.

7419. But you would wish to put it on a perfectly level footing in one respect, but not in the others?—I scarcely appreciate your question.

7420. Your statement is that you thought the producer in one country was entitled to be on a perfectly level footing with the producers of another country?—Yes; *quoad* the currency.

7421. Nothing else?—Nothing else. Let them stand on their own bottoms absolutely.

7422. You are not proposing a duty on them?—Certainly not; nothing is further from my mind.

7423. (*Mr. Lambert.*) Are you a believer in protection?—Not in the least.

Protection.

7424. Do you think it would be an advantage to the farmer to have protection?—Not a bit.

7425. Why do you advocate that cattle should be slaughtered at the port of landing?—Simply because we may avoid the diseases which are incident to the import of live cattle.

Slaughter of cattle at port of debarkation.

7426. But presuming the country from which these cattle came was free from disease, would you still have them slaughtered at the port of landing?—If you can guarantee absolute immunity from disease, then, of course, the necessity for slaughter at the ports of import ceases to operate; but the diseases are so absolutely subtle that it is scarcely possible to discriminate.

7427. Supposing there was an immunity from disease in foreign countries, you would not advocate the slaughter of cattle at the port of landing?—If immunity from disease was certain to continue, of course my objections would be minimised in degree, but then in all human things there is no certainty; there cannot be any certainty.

7428. But you only advocate that on the ground of protection from cattle disease?—Certainly.

7429. You said just now that the import of wheat had been unduly stimulated by the currency question, would that be the case in Argentina?—I do not know anything about Argentina, except that the people have lost a great deal of money there.

The currency.

7430. I believe you may be aware that in Argentina a very large amount of wheat will be exported from there into this country this year?—I have heard so.

7431. Does the currency question affect this?—I do not suppose that it would. I do not know the currency question of Argentina at all.

7432. So that you would not consider the adoption of two standards would in every case effect the remedy that you think desirable?—I do not know, but I should be most delighted to see it tried.

7433. Would it effect the remedy that you wish for, even if it were tried in such a case as Argentina or Russia?—I cannot tell you, because I have not got data about Argentina.

7434. Or Russia, I said?—Russia, certainly it would.

7435. What is the currency of Russia?—Roubles.

7436. Is it based upon silver or paper?—The paper rouble of Russia is 3*s.* 2*d.*—that is the currency value, but in the open market it is not worth more than 1*s.* 10½*d.*—I am speaking really without having recently looked into the matter.

Mr. E. P. Squarey. 15 Feb. 1894.

Tithe.

7437. How would you propose to reconsider the question of tithe?—I should ask that valuers should be appointed by the Board of Agriculture to hold courts to listen to the complaints of tithe payers as to certain areas of land which they may think, under the existing condition of prices, are unduly charged.

7438. So, presuming that the land was unduly charged, you would give the tithe payer a reduction by releasing him from those obligations? — Certainly. I may supplement my answer by saying that I believe the tithe owner would practically be benefitted in the long run by such a scheme, because he would get a certain payment instead of getting a probably uncertain income by entering into possession of the land.

Tenure.

7439. How is land let under your agency?—Almost invariably on yearly tenancies, and in some cases for two years.

The fixing of rent.

7440. How is the rent fixed?—By the higgling of the market.

7441. That is by open competition?—If we can get anybody to trade with us.

7442. You said the difficulty was in letting poor farms?—Yes.

Difficulty in letting.

7443. In the case of good farms would you have a difficulty in letting them?—No; of course goodness and poverty are questions of degree. A fair farm up to 400 or 500 acres is still a lettable commodity at a price.

7444. Would you have to give a reduction of rent in such a case?—I have said from something like 30 up to 45 per cent., and I have known one or two cases where it has been up to 55 per cent.

7445. Would you get many applications for this farm?—Not many, one has to deal very delicately with such cases.

7446. Are the farms let by tender?—Never.

The fixing of rent.

7447. Who fixes the rent?—If you offered a farm by tender in the counties of which I have specifically spoken, Wiltshire, Berkshire, Hampshire, and Oxfordshire, I not believe you would get a tender given you.

7448. How do you fix the rent?—By the higgling of the market.

7449. The higgling of the market would assume that it would let by tender?—I do not think it would. The higgling of the market would be this: we should ask for a farm of 500 acres, say 350*l.* a year; the tenant would say, "If you will lay out so much money for "buildings, and do this and that, I will give 250*l.*" That would be about the basis upon which we should probably transact business. We should part, and he would come back again and say, "I will spring another "25*l.*" and we should say, "No, we shall not do it." The higgling would result probably in our saying, "Well, you shall have the farm, subject to two years' "notice to quit, at 325*l.*, and we will knock off 25*l.* a "year for the first year of entry, and make some pay-"ment for imaginary or real dilapidation of cultiva-"tion or condition."

7450. You would take, I presume, the best terms you could get?—We should take the best terms we could get, but there are some of our clients who, of course, would say that they would not go below a certain price.

7451. So they practically fix the rent at which the land is let?—Yes.

7452. When there are two or three men in competition for a farm, I presume the higgling of the market would mean that you would accept the one of those men who would give the best terms?—The one who would give the best terms, but not in treaty with all three at a time, because if an agent did that once he would never let a farm again, but he must simply say, "I will treat "with A, and if A and I cannot agree then I will try B, "and if B and I cannot agree then I will try C, and "so on."

7453. So that he has more than one string to his bow?—He has more than one string to his bow, but remember the intending tenant has now twenty strings to his bow if we do not come to his terms.

7454. (*Chairman.*) He knows twenty farms which are unlet?—Yes, and for which he can treat.

Difficulty in letting.

7455. (*Mr. Lambert.*) Is it a fact that there are so many desirable farms to let?—We had 15,000 acres in hand last year—I do not think it is quite so much this year—which we shall be only too happy to let.

Mr. E. P. Squarey. 15 Feb. 1894.

7456. Is that desirable land?—Some of it is very desirable land. In an earlier period of my life I should have thought so.

7457. Have you endeavoured to let it?—We have indeed.

7458. At a reduction of rent?—At a reduction of rent; a very big reduction of rent.

7459. For what reasons are the farms not let?—Because we cannot get anybody to take them.

7460. (*Chairman.*) I think you said, at the beginning of your evidence, that this land was mainly very large farms, and the difficulty was to find tenants with sufficient capital; was not that so?—That was quite so. With regard to those 15,000 acres of land of which I speak, the farms vary in size from 500 up to 1,700 acres.

7461. (*Mr. Lambert.*) So that really a man has not so many strings to his bow, because he is unable to find sufficient capital to take those large farms?—Certainly, but sometimes a tenant will say, "If you will strike off "a certain area of that farm of 500 or 600 acres I will "take it." We have been treating with one farm that I know of where the tenant has said, "If you will take "off 100 acres of that farm I will take the rest of it, "but I will not take the whole of it."

7462. So that it is easier to let a farm of less than 500 acres?—It is infinitely easier to let them with less than 500 acres.

7463. Then you have no difficulty in letting farms under 500 acres?—The number of tenants who are disposed to treat are, up to a certain point, limited; but still they are to be found if the farm has no grave disabilities, and we should be able to let a farm, even up to 500 or 600 acres.

Shooting rights.

7464. Then as regards the game, does it go with the farm?—It does now, almost invariably.

7465. Is that an advantage to the tenant?—I do not know that it is an advantage, but it is a pleasure to him.

7466. (*Chairman.*) Do you say that you almost invariably let the game to the tenant?—In these latter days, yes. On the large estates it is not so, but practically the question of game has disappeared as a difficulty between the landlord and tenant.

7467. (*Mr. Lambert.*) By giving it to the tenants?—There is a good understanding, generally speaking. The landlord has the winged game, and the tenant, under the Ground Game Act, does what he likes with the ground game.

7468. You would give the tenant the ground game to do what he likes with?—He has got it already.

7469. Not under the Ground Game Act?—Will you tell me in what directions he has not it?

7470. (*Mr. Lambert.*) He has only a right to put a trap in a certain position, and only a right to one gun?—He can use a net.

7471. Would you free him from those restrictions?—No; he can use nets to any extent.

Reductions in rent.

7472. (*Captain Thomas.*) Are your tenants satisfied with the reductions that you have made in the rents?—No, I should say not; because I do not think that, as a rule, with the reductions that have been made, the tenants are doing themselves any good generally.

Payment of rent out of capital.

7473. You consider then that they are paying rent out of capital or borrowed money?—I will not say that they are paying rent out of capital or borrowed money, but I mean they are not adequately remunerated for the labour and energy which they bring to bear in the conduct of their business generally. They take the concession of rent; it is a compromise—in the hope that something will turn up; that things will be better. That hope is disappearing very rapidly under the experience of the past four or five years.

7474. You do not consider, then, that they are spending their capital at the present time?—There has been a very large amount of capital lost in the past, but I should say that, of course, with regard to the loss of capital of the tenant farmers, as a rule a man with 500 acres of land would have, probably, 4,000*l.* or 5,000*l.*, and he may perhaps be indebted to his relatives or perhaps his bankers for a certain proportion of that money, but he manages to live. At all events, the farm supplies him with a home and a horse to ride, and a great number of minor luxuries which, if he went

Mr. E. P. Squarey.
5 Feb. 1894.

into the town to live he would be without, and miss very sadly.

7475. If you were convinced as agent that a farmer paid rent out of his capital, would you feel justified in compelling him to pay the full maximum of his rent?—He must know his business so much better than I know it, that I must ask him to do what he thinks he can do. I have known cases where men have paid money out of their capital, and where my clients have been able to afford it they have done a very kind turn behind my back, and the tenants have appreciated it very thoroughly. But between the agent and the tenant it is quite clear that the agent cannot go into the resources from which the man gets his rent, and the way in which he gets it. Some men are making a profit even now; some very capable close shavers; but I have no knowledge whether payments are made out of capital or otherwise, speaking generally.

7476. Do not you think it is the duty of an agent between landlord and tenant to know that?—I do consider those matters, and I think of them very much, but I have no right to intervene. When a man says "I can take a farm formerly let at 700*l.* a year, "at 350*l.* or 400*l.*" I have no possible right to say, "Are you paying this rent that you have just given me "out of capital?" First of all he would not know.

7477. (*Chairman.*) You can only deal with him on an application for rent?—Yes.

7478. (*Captain Thomas.*) That is what I meant; that a tenant who pays out of pocket would naturally complain to the agent?—He does complain, but what he would say is: "How am I to go on with the farm; I am losing money;" and I say: "Very well, what rent are you paying?"

7479. Then you meet him fairly?—If he made out a capable case, and if, on inspection of his farm, I thought it was dearer than other farms, I should recommend a corresponding reduction.

7480. (*Chairman.*) You have to consider whether you can get the same rent from someone else, and whether he can get another farm at a less rent?—Certainly.

7481. Those elements are considered on both sides?—Yes.

Condition of agriculture, 1847–1852.

7482. (*Mr. Elton.*) I want to know a little more about this period between 1847 and 1852. It was not quite so bad as now. 1853 to 1875 was an age of plenty?—Yes.

7483. Was not the Californian gold produced in great plenty just before that period?—I believe the great discoveries of Californian gold were in 1854. At the latter end of 1853 to the beginning of 1854.

7484. Then it was about coincident with the Californian increase of gold that the age of plenty began. Do you connect that, in your mind, with the age of depression?—Most certainly. It is always present to my mind as one of the most absolute coincidences that I know.

7485. Now, in that period of plenty, was not there a very bad year, about 1862, as bad as 1879?—No, it was not so bad as 1879.

7486. It rained all the autumn and summer?—It was a wet season.

7487. Hay lay in November?—Yes, but it was not so bad as in 1879.

7488. But it was very bad. I am doing right in calling attention to the fact that there was that black spot?—Yes.

Depression in Wiltshire and Oxfordshire.

7489. Now, you told us about well-watered Wiltshire farms, with water meadows and all that. You have also lands up in Oxfordshire and lands about the Chilterns?—Yes.

7490. That is a place where there is very great depression?—That is a place where there is very great depression.

7491. There you have no water at all?—It is very difficult to obtain; water is obtainable now on better terms than it has been through the adoption of the American windmill pumps.

7492. My point is this: Has the presence of the water in the Wiltshire farms saved them from the fate of the Chilterns?—No doubt it is better. We look after some large property on the Chiltern Hills, and they have to supply water at considerable cost.

7493. In the Chilterns you will find a whole parish in one rough grass field practically?—I do not know of that parish, but I know the reduction of returns on the Chiltern Hills has been something awful.

Mr. E. P. Squarey.
15 Feb. 1894.

7494. Berkshire is one of your worst parts, generally speaking, is it not?—Some parts of Berkshire are. The lands lying on the chalk and on the hills in Berkshire.

Price of land in Berkshire and Dorsetshire.

7495. They are sold for 5*l.* per acre, fee simple?—Some lands have been sold for 5*l.* an acre.

7496. In Dorsetshire and Wiltshire what could you expect from chalk hill land; about 10*l.* or 11*l.* an acre?—No, a great deal of the land is not worth anything like that.

7497. A reasonable hill farm of 200 acres, with arable, wood, and grass, lying about 900 feet high, about how much would that fetch?—From 8*l.* to 12*l.* an acre; of course subject to the question of tithe.

7498. A few years ago it would be worth a great deal more?—More than double. The depreciation of the capital value is quite as large—I think it is larger.

Small holdings.

7499. When you were a young man in Wiltshire, and in fact with your long experience of the West of England tenures, can you tell us whether there was not a system of small holdings prevalent all over the place before the large farms came in?—Yes; those conditions coincided just with my entry into farming life. I remember a great number of what were called the common fields (that was before the Enclosures), where each occupier generally held as copyholder. I am able to tell this Commission that there is one place at Stratton, in Dorsetshire, where they can be seen at the present time, if anyone wishes to see them; they have been held from the times of the Romans probably.

7500. These copyholds were small in extent; from 20 to 30 acres?—They were sometimes 150 acres.

7501. There was a customary yard-land, which would mean about 30 or 40 acres?—It was dependent upon the district in which it was, but that 30 or 40 acres would be lying in strips all over the parish, and their sheep and cows were fed in common, and each man was obliged to sow his land at defined times, and to mow his land at certain times.

7502. There was a town flock and a town herd, and a custom of cultivation?—Yes, a fixed custom.

7503. And then it was common all over the place at certain times of the year?—Certainly; there was no freedom of action at all.

7504. And these small people then did not prosper?—No, they have all disappeared; not at all from any disposition on the part of the great landowners that they should not exist, but simply because it did not pay them to hold those small holdings at the relative value for sale of their interest in that land.

7505. You do not think that it was because the landlords refused to renew, but it was because the tenants did not ask for it?—I think the landlords did refuse, because they might wish to enclose a large portion of their lands, and of course they would not renew to one man who would be outstanding.

7506. Naturally the Ecclesiastical Commissioners would not renew if they could help it?—No; they would be very glad to go back to the small holdings system if they could.

7507. In Dorsetshire does that system prevail?—At one district in Dorsetshire, and at Royston in Cambridge. Those are the only two places that I know of.

7508. It died out in Somersetshire?—Yes, it died out.

Land Improvement and Enfranchisement Company.

7509. (*Lord Vernon.*) You are chairman of some company for lending money on improvements on land, are you not?—Yes.

7510. What rate of interest do you lend money at?—We are lending money at the present time at about 4 per cent. simple interest, with the necessary sinking fund to extinguish it in 25 years.

7511. Do you advance that money yourself, or do you borrow it?—No, we advance it temporarily ourselves; but having obtained from the Board of Agriculture the approval of the works which are being carried out, then our practice is to sell the rent charge thus created, which includes the charges of the company, and of the incidental expenses of carrying it through, to the insurance companies and other capitalists of that kind.

7512. Then what sort of form does the landowner have to go through before he can raise the money?—He has to sign a document (which I hope he reads

Mr. E. P. Squarey. 15 Feb. 1894.

carefully before he does sign it), disclosing the terms of the transaction, and of course it depends upon the value of money at the time of the transaction, and then he subscribes a request to the Board of Agriculture to send an inspector to inspect the works. The Board of Agriculture looks very carefully at every item of the expenditure, and guards the interest of the tenant for life as well as the remainder-man in the whole transaction, and after the works are completed, and after being inspected once or twice during their progress, an order is created charging the land for 25 years with the necessary amount, including all expenses.

7513. Can you tell us what is your commission?—It varies from 3 per cent. up to 5 per cent. in very small cases.

7514. Does not it even amount to 10 per cent.?—As a director of the company, I should like it to be 10 per cent.

7515. Do you not think that the forms that the landlord has to go through in raising money are unnecessarily expensive?—They are expensive in small cases, but they are not really expensive when a large business is being done.

7516. Then they would be expensive to any landowner who wished to convert big farms into small ones?—Yes; they would be expensive, certainly, but would depend on the amount of the transaction.

7517. Therefore they are detrimental to the creation of small holdings?—No doubt to that extent they are detrimental, but of course any landlord in the present time who wished to raise money for the purpose of improving his farm can go into the open market if his estates be free and charge his lands at 3½ or 3¼ per cent., which of course would offer him far better terms than a company like ours.

7518. Any restriction either of form or expense that could be made to facilitate the borrowing of money by the tenant for life would tend to the investment of capital in the land, would it not?—Any restrictions that could be removed, or any economies that could be effected would certainly be most desirable, but my experience dictates most distinctly that there should be no possible relaxations of the inspection and careful watching that is kept on the execution of the works, and their inception by the Board of Agriculture.

The marking of foreign meat.

7519. I think you said that you thought foreign meat should be sold as foreign meat?—Yes.

7520. You are aware that a Committee of the House of Commons sat for a length of time trying the matter, and came to the conclusion that it was impracticable to do that?—I regretted to read their conclusions very much.

7521. In your large experience, do you know of any really good land that has gone out of cultivation?—No.

Uncultivated land.

7522. Nothing but very bad land?—No good land has gone out of cultivation.

Land Improvement and Enfranchisement Company.

7523. (*Lord Cobham.*) What is the per-centage on the loans that you lend out to the landlords, including the sinking fund and expenses?—I think at the present rate it is about 6*l.* 1*s.*, including interest on principal and sinking fund for 25 years.

7524. It has fallen of late years, then?—It has fallen concurrently with the lowered value of money. When our company was first established we used to get 6*l.* 14*s.* 1*d.* per cent. That meant 4½ per cent. simple interest; then it fell to 4¼ simple interest; and now we can sell our rentcharges on so much better terms than we could formerly, with the rate now of simple interest we should be able to borrow money, if we wished to borrow it, at something like 3¾ to 4 per cent. instead of the 4½ per cent. which we had to pay formerly.

7525. (*Lord Vernon.*) Does that include everything?—Of course it does not include the inspector's charges.

7526. That is what I meant?—But they are all included in the capital sum advanced.

7527. Excuse me, that is just what I want to arrive at; I meant the rate of interest on the actual money spent; I did not mean the money raised, but if a man raises 500*l.* he has to add 200*l.* for inspection and commission and everything, and then he has to pay 6*l.* 1*s.* 6*d.*, not on the 700*l.*, but on the 500*l.*, which makes the rate of interest much higher. The rate of interest is considerably more than the money laid out in the improvement. Do you follow me?—Yes; I quite agree with you that that is so; that the actual per-centage of cost on the capital sum, in small amounts, when expended for improvements, is undoubtedly very large, because the machinery that is imported into the condition of supervision of those improvements is quite as large as it would be if you were borrowing 10,000*l.*

Mr. E. P. Squarey. 15 Feb. 1894.

7528. (*Lord Cobham.*) Do you think that the office expenses could be at all reduced?—I have always thought that the duties of the inspectors to the Board of Agriculture have been most economically remunerated. As a rule, they are extremely good men who are selected, and their charge is only three guineas a day. I wonder you get such good men for three guineas a day.

7529. But when all is said and done, it is a serious deterrent to poor men who have to pay a charge of 6, 7, 8, or 9 per cent. for the next 25 years?—No doubt; I quite agree with you. But if the landlord is free to act for himself of course nothing can be better than to charge his estates for the money precisely that he wants, which he can get for 3¼ to 3½ per cent.

The currency.

7530. (*Mr. Giffen.*) I should like to ask you about your evidence as to your theory in prices, and about the remedy for it in the double standard, and I should like to begin so that we may understand each other, by asking in what sense you use the phrase, "Appreciation of gold"?—I do not pretend to be an authority upon those matters. I am simply a believer in it.

7531. In what sense do you use the phrase "Appreciation of gold"?—I say that there is now infinitely less gold producible and useable for the purpose of currency than there was in 1854 and 1856, and up to 1864 and 1865. Gold is used in so many other directions than it was formerly, so that a great quantity of gold is taken away from currency purposes for those purposes. I am told that dentistry alone takes something like 6,000,000*l.* of gold yearly.

7532. But I understand you to say that you have certain monetary changes in your mind, which had caused the appreciation of gold. What were those monetary changes?—I do not think they were monetary changes which had caused the appreciation of gold. What I intended to convey was this: that gold had appreciated because many more uses for it had been found than existed before, and consequently the purchasing power of gold was far greater than it was in former times.

7533. But it was not monetary uses that you had in your mind?—Will you kindly define what you mean by monetary.

7534. Monetary uses would simply mean that it was for currency purposes more now than in 1854; is that your meaning?—That gold is used more for currency purposes now than in 1854.

7535. Before 1870?—I should think there is a larger quantity of gold in circulation now than in 1854, because of the discoveries made at that time, but when one thinks how enormously the commerce of this country, and other parts of the world, have extended concurrently, there is not available for use for currency the same quantity of gold as before.

7536. But you ascribe that to general causes and increase of population—the use of gold in the arts, and you do not ascribe it to changes which different governments have made in the money?—I do ascribe the demonetisation of silver by Germany to be a very large factor in the matter, and also the action of the United States Government. I do not profess to be an authority upon questions of this kind. I have simply read, and have concluded from my reading most distinctly that the operation of the single standard has had, under the conditions which have existed during the last 25 years, a most maleficant influence on prices.

7537. But you do not agree that it is chiefly the changes which have been made by the different Governments of the world which have caused gold to be so much in demand?—I think that is one of the factors.

7538. But not the chief factor?—I should hesitate to describe the proportion.

7539. In what way would the double standard be of advantage now to the farming interests, is it to raise prices?—It is to raise prices undoubtedly, to bring them to a more reasonable relation to the cost of production.

Mr. E. P. Squarey. 15 Feb. 1894.

7540. In what way would it raise the prices?—If I had a farm growing 100 sacks of wheat, and I was under contract with my landlord to pay him 75*l.* in sovereigns as the rent of my farm, I would have greater difficulty to get my 75 sovereigns to pay him his rent which I am under contract to pay him in gold now than I would under former circumstances.

7541. Why?—Because my 100 sacks of wheat will not realise anything like what they did before.

7542. How do you think that the double standard would enable you to get more than 75 sovereigns?—I think first of all that the appreciation of gold has depreciated prices to an extent which I will not venture to measure, because I am not competent.

7543. In other words, the appreciation of gold and the depreciation of prices are the same things, our prices being in gold?—Yes.

7544. How is your remedy going to raise prices?—The remedy would be that there would be an increased volume of currency.

7545. Are you quite sure?—I believe so.

7546. Or do prices depend at all upon the currency?—I think they do depend upon currency. I remember the suspension of the Bank Charter Act in 1846. You could sell nothing; you could not sell sheep, or cotton, or wool. Shares were nil. The Bank Charter Act was suspended and in 24 hours confidence and happiness were restored.

7547. That is a change of credit and not of currency?—We were not one iota richer by the suspension of the Act.

7548. It was a change of credit?—And an increase in the volume of currency.

7549. Not an increase in the volume of currency?—There was not, when the suspension of the Bank Charter Act occurred, enough gold to allow the Government to issue notes beyond their authority.

7550. You will find that there was no increase in the volume of currency?—But the ability was there, the credit was there.

7551. That is a different term; you say an increase in the volume of currency is going to raise prices?—But it did operate in the one case in 24 hours; on the Black Friday there was no traffic; there was no commerce.

7552. Because, according to what you say, there was a change of credit, and not a change in currency?—The credit was as good as currency.

7553. That I quite agree with—credit for certain purposes, but it is not the same thing?—The country believed, if the Bank of England issued notes under the suspended Bank Charter Act they would be paid. They could not be paid in gold.

7554. But credit and currency are not the same things?—I am afraid I am not able to deal with this important question you are raising as to currency, I only tell you my authority.

7555. I want to have a distinct idea of how the application of the double standard would raise prices?—In the direction that I have named. If a debt is payable in two standards, one, say, absolutely depreciated, and not available for paying debts, and the other appreciated and proportionately scarce, that if those two standards are employed, there would be a greater facility for a man to meet his obligations than under the present system.

7556. Not as great facilities as the man who writes a cheque?—But that cheque means gold that would be paid.

7557. It is not a want of currency then that makes it difficult for him to pay his rent?—I think it is.

Farms under management.

7558. (*Chairman.*) I have one or two more questions to ask. Your evidence to-day has been mainly in respect of farms in the counties of Berkshire, Oxfordshire, Hampshire, and Wiltshire?—Yes.

7559. Are those, as a rule, arable farms?—There would be over the districts that you have named something like 60 per cent. of arable land.

7560. And they would be called arable farms in the main?—Yes.

7561. To some extent it would be laid down in grass, and, therefore, there would be more pasture?—A certain proportion would be laid down to grass.

7562. You told us that when it was reduced in respect of smaller farms not over 400 acres, it was reduced from 20 to 30 per cent.?—Yes. *Mr. E. P. Squarey.* 15 Feb. 1894.

7563. And in the case of the larger farms it was reduced from 35 to 45, and even 50 per cent.?—Yes.

7564. And you told us that you had 15,000 acres in hand?—Yes.

7565. What proportion does that form of the whole under your management?—I am ashamed to say I cannot answer it.

7566. Is it a 5th or 6th or 10th, or what; I want some idea, because 15,000 is a large amount, but I want to know if it is large in proportion to the total acreage under your management?—I will give you the actual figures, and add it to my evidence. (*See* Appendix A., XXIV.)

Difficulties in letting large farms.

7567. It is in these large farms that you have mainly found the difficulty of letting?—Yes.

7568. And that has been due to the difficulty of finding men with capital large enough to work those farms?—Quite so; and, further to the unprofitable character of the undertaking under present conditions, and an indisposition generally to go into farming.

Rent.

7569. What would you say was generally the average rent per acre at the present time in respect of the smaller farms, is it 15*s.* or 18*s.*?—Under 15*s.* per acre—about 12*s.* per acre—not more than that.

7570. I presume a tenant coming into one of those farms at the present times comes under great advantages, he buys his stock and implements at a very low price?—There is a very great inducement at the present moment to go into farming.

7571. There are many adjustments favourable to the tenant?—I hope so.

7572. But all depending upon the present prices?—Yes.

7573. He pays much less for his stock and implements, and then his tithe is greatly reduced, not quite so much as you think it ought to be, but still by 34 per cent.?—Yes.

7574. I presume that the assessment of land has been reduced?—Yes, moderately.

Rates.

7575. And the rates are less?—Certainly; they are less than they were 20 years ago.

7576. And the assessments are less?—The assessments are less, I mean the actual payment in respect of poor rates is decidedly less.

7577. Then as to manures and everything that he has to purchase; they are also less?—Yes; but I should supplement my remarks by saying that there are certain charges which are not less, which have been thrown upon him within the last 20 years.

7578. In the case of rates?—Yes.

7579. But, on the other hand, there has been some alleviation in the shape of contributions?—Certainly; but still there has been a sensible appreciable increment of payment by the occupier, and ultimately by the landowner in the shape of rates beyond those which, I think, are perfectly rightly chargeable and fair to be paid by the freehold, that is, the poor rates.

7580. Is it within your knowledge that the assessments have been reduced in proportion to the rent?—Invariably.

7581. Therefore the tenant comes under considerable advantages?—There are those advantages.

Prospects of farming.

7582. Now, supposing the present prices remain, is it possible, in your opinion, coming in under those circumstances, that a tenant can make the thing pay?—I am not a pessimist; I believe that farming will go on. The action of the depression has been to throw out of cultivation those lands, the profit of the management of which was very moderate indeed. The margin of profit on that land has absolutely disappeared in cultivation. Of course, it has other uses, and to those uses it will be applied; but even with a persistent 26*s.* per quarter for wheat, and 27*s.* per quarter for barley, and 1*l.* or 18*s.* per quarter for oats, I do not believe that English land, under fair and reasonable conditions, with a farm properly equipped, will go out of cultivation; it will be farmed.

7583. In other words, there is still an inducement at those rates, and at present rents, for tenants to take the land?—I think there is.

7584. And that they can make a living out of it?—I do not know that, but they will try.

Mr. E. P. Squarey. 15 Feb. 1894.

7585. But supposing it were otherwise, there is still a margin of rent?—A very much lessened rent.

Charges on land.

7586. Less than formerly: but still a margin of rent on which to draw. I understood you to say that rent has been reduced 30 to 40 per cent. in some cases, and consequently there is still the remaining 60 to 70 per cent., and if a reduction of 30 to 40 per cent. has been sufficient to bring the adjustment to a point—if 30 or 40 per cent. reduction were made, it would make a very great difference?—But I should say that the remaining 50 or 55 per cent. is still subject to the terrible fixed charges on land.

7587. But these do not affect the tenant?—If you are dealing with the tenants alone that would be so.

7588. (*Lord Cobham.*) You include the upkeep of the estate?—That has to be maintained. Practically estates are not kept up as they were.

7589. That affects the tenants?—That affects the tenant in a more or less degree.

Bad seasons.

7590. (*Chairman.*) But still I mean the tenant is not affected by the fixed charges; I am not dealing with the maintenance of the property, but the fixed charges. I presume the last few years have been exceptionally bad?—The seasons have been exceptionally bad to the farmer, but 1893 was a most enjoyable year.

7591. But for agriculture it was excessively bad, and the previous year was even worse?—It was not so bad in our district, certainly; it took another form.

7592. Whereas in 1892 you had a very wet season, and in 1893 it was a very dry season, and in both years the production was very small?—The gross produce was very seriously reduced.

7593. Then the farmers have had the enormous disadvantage of two excessively bad years?—Two very bad years.

Concessions to tenants.

7594. Have you had greater arrears of rent for those years?—Our clients have generally adopted the suggestion that, instead of abatement of rent, we should make presents to meet exceptional seasons.

7595. That is practically the same thing; it is only an abatement under another name?—But it would not be included in those abatements of rent.

7596. It is over and above the reduction of rent; you have had to make those special?—Yes, we have had to make presents of 20 to 25 per cent. to the tenants.

7597. (*Mr. Clay.*) Over and above the repairs?—Over and above the repairs.

Comparison between 1892-3 and 1879.

7598. (*Chairman.*) In 1892 and 1893, having regard to both production and prices they were even worse than in 1879?—Except that we did not get the sheep rot in those last two years. In 1879 thousands and thousands of sheep were rotted and swept off the face of the earth.

7599. But for arable farms which produce corn the year 1892 must have been as bad as 1879?—Not quite. In 1879 there was a promise of a crop, but it was absolutely spoilt in the harvest.

7600. From the return I have before me the actual production of wheat per acre in 1879 was only 16 bushels, and the price was 46*s.*, and the return, therefore, per acre was 4*l.* 12*s.* In 1892 the production of wheat was 26 bushels to the acre, and the price was 26*s.* and the result per acre was 4*l.* 8*s.*, worse even than in 1879?—Quite so.

7601. The question I have to ask you is this, inasmuch as these figures show what was formerly the state of things, namely, that prices rose in proportion to the bad produce?—In some degree; not in full proportion.

7602. In some degree; it has not been the rule, but the low prices remain even though the product is very low; do you think that rents have been reduced sufficiently in consideration of that?—I should hesitate to use the word "sufficiently." As I have said, it is a question entirely of settling the terms between landlord and tenant, and the higgling of the market settles it better.

7603. But is it not almost beyond the expectation of anybody that two such bad years as 1892 and 1893 should succeed one another?—Certainly.

7604. And combining with this very large production that price should remain also so very low?—Certainly. I think the two seasons have been more disappointing to the farmers than many seasons for many years; the confluence of those two seasons has broken their hearts.

Mr. E. P. Squarey. 15 Feb. 1894.

7605. Of course it was beyond the expectation of landlords and tenants that two such years should occur?—Certainly.

7606. And the question is whether, having regard to the possibility of two such years occurring again, rents have been sufficiently reduced?—If such seasons continue I do not think farming would probably go on as in the past.

Tithe.

7607. With regard to the tithe, I think you said that, generally speaking, the tithe is apportioned by farms?—Not generally; it is generally field apportionment.

7608. Now in the case of a farm where a field is allowed to go out of cultivation, and where the apportionment has been by the field, does the tithe cease in respect of that field?—If there is a special apportionment of that field of course it would be in those cases in which the operation of the compromise that I have suggested would obtain.

7609. I am not now talking of a possible compromise, but of the actual state of the law at present; supposing in the case of a farm where the tithe is apportioned by the field, one field goes out of cultivation, does the tithe cease to be payable in respect of that field?—I cannot tell you. That would be a technical legal question that I could not answer.

7610. It seems to me to be an important question?—It is a very important question. I apprehend if there is a field apportionment that the eighth section would apply.

7611. You do not know of any case of that kind?—I do not.

7612. It seems to be a matter for serious consideration. Then it would seem to follow as a matter of principle, that, where the tithe is apportioned, say on each farm and not by the field, then if a portion of the farm goes out of cultivation, there should be some process by which the tenant should be relieved of the tithe, in respect of the portion of the farm which has gone out of cultivation?—Clearly, because in that event the whole area being chargeable in one sum for the tithe, the tithe owner would be perfectly safe, because he can go over the whole area to collect his tithe.

Expenditure on improvements.

7613. (*Lord Vernon.*) You say that improvements are not so readily carried out on large estates as they were, did you not say so?—Yes, at least we find that our volume of business——. Do you refer to improvements under the Act?

7614. No, I mean the estate repairs. What I want to know from your great experience on farms is this: are not the lands on which improvements have been effected in the good years better equipped for farming than they were before the depression?—No doubt they are; they are sufficiently equipped, there is really no large sum of money required to be expended in improvements except drainage; it has been very nearly done. Upon road making occasionally there is something done.

Tithe.

7615. (*Mr. Little.*) One question arising out of an answer that you gave to Mr. Lambert. You said that it would be desirable that the Board of Agriculture should inquire into any case where there was a complaint of the tithe being unduly high. I presume you would put some limits to that when you say "unduly high," it would be in proportion to the rent?—I was referring to that particular case where the tithe was 112*l.* and the rent 100*l.* including tithe.

7616. You would make it a condition of inquiry into an alteration of the tithe, that the tithe should be something like the rent or something approaching the rent; you would not, because a man was dissatisfied with the amount of the tithe, allow the question to be re-opened?—No; there are a very large proportion of cases still subsisting where the tithe is a perfectly fair and equitable charge upon the land; it is only in the case where it presses with undue weight in proportion to the capacity to produce on the land that I would interfere with it.

7617. I felt sure of your meaning, that it was not a general inquiry that you wanted?—Oh, no.

The witness withdrew.

Adjourned to to-morrow at 12 o'clock.

Fifteenth Day.

Friday, 16th February 1894.

PRESENT:

The Right Hon. GEORGE JOHN SHAW-LEFEVRE, M.P., in the Chair.

Viscount Cobham.
The Right Hon. Baron Vernon.
The Right Hon. Henry Chaplin, M.P.
Sir Robert Nigel Fitzhardinge Kingscote, K.C.B.
Robert Giffen, Esq., C.B.
Captain Owen Thomas.

Francis Allston Channing, Esq., M.P.
John Clay, Esq.
Cornelius Neale Dalton, Esq., C.B.
Robert Lacey Everett, Esq., M.P.
John Gilmour, Esq.
George Lambert, Esq., M.P.
William Cutlack Little, Esq.

Herbert Lyon, Esq., *Secretary.*
R. F. Crawford, Esq., } *Assistant*
Freeman Thomas, Esq., } *Secretaries.*

Mr. O. D. Johnson. 16 Feb. 1894.

Mr. Oliver D. Johnson called and examined.

7618. (*Chairman.*) You are owner and occupier of land in Suffolk?—Yes.

7619. And you are also the representative of the Ixworth Farmers' Club, and Vice-Chairman of the Suffolk County Council?—Yes.

7620. And you come here on behalf of your association, I presume?—Yes.

7621. How much land do you own?—320 acres.

7622. And you rent besides 1,380 acres?—Yes.

7623. And you farm the whole of it?—Yes.

7624. Is it chiefly arable land?—Yes, chiefly.

Condition of agriculture.

7625. What has been your experience as a farmer during the last few years?—My experience is that with the prices gradually going down the farming interest generally has been placed in very great difficulties. For the matter of that, many tenants have had to go under water and the owners have also been, many of them, placed in difficulties. A great many of them have given up their residences and their sporting, and are living elsewhere.

Reduction of rent.

7626. Taking your case have you had considerable reductions of rent?—Latterly I have.

7627. When did the reductions begin?—Some of the reductions began seven years ago, I might say eight years ago.

7628. Not so far back as 1879?—No.

7629. About 1885, 1886, and 1887?—It would begin about 1881 and 1882.

7630. I presume they commenced with abatements of rents and then they were made permanent?—That is so.

7631. When were they made permanent?—I have not the figures by me, but they were made permanent some three or four years ago. I got a permanent reduction, and those reductions have been increased. I say that in my own particular case it was through an application for a reduction of rent, and that application has been acceded to.

7632. What did your rent stand at before the reduction on the 1,380 acres?—Perhaps if you would allow me I might put it before you a little more clearly; there has been some alteration in the acreage of the lands which I occupy; the farm on which I live did consist of some 1,150 acres and of that some 20 acres have been planted, so that now it would consist of about 1,130 acres. The rent was at the highest times, that would be in 1870 we will say, 1,300*l.* a year plus the tithe.

Tithe.

7633. Is the tithe heavy there?—It is heavy there; it is 5*s.* 6*s.* or 7*s.* an acre—say 5*s.* to 7*s.* an acre on that farm; no great reductions were made in the rent until seven or eight years ago. The greatest reduction has been made from last Michaelmas. I did not know that I should be asked the exact figures referring to my own occupation, or I should have been provided with notes to refer to. There had been reductions made previous to last Michaelmas in the rent from Michaelmas 1892. The rent at Michaelmas 1893 was 1,130*l.*, and the rent at the present moment is 850*l.* as from Michaelmas.

Mr O. D. Johnson. 16 Feb. 1894.

7634. The landlord paying the tithe?—The landlord paying the tithe. I might say as to the rent in previous years that whereas the 1,130*l.* last year included the tithe, the 1,300*l.* did not include the tithe.

7635. If you take the tithe at 5*s.* per acre, which is rather less than it is, I suppose?—Yes.

Rent.

7636. That would make the present rent to the landlord 525*l.* roughly speaking; that is to say, there has been some little reduction in acreage; and considering that also, it is about 500*l.* a year as compared with 1,300*l.*?—Yes, that is so.

7637. And is this a permanent reduction now?—Yes. I mean to say it is a hiring subject to 12 months' notice at Michaelmas.

7638. It is not merely an abatement?—Not an abatement, it is a re-hiring.

7639. As the rent has fallen has your assessment been reduced in the same proportion as the rent has been reduced?—The assessment is now somewhere about equal to the rent.

7640. And what was it when the rent was 1,300*l.*, was it then equal to the rent?—I do not think it was—not quite.

7641. May that be taken as a test of the land in the neighbourhood?—Well, the land in the neighbourhood varies, and there is a variation in the rent. The changes in the rental of the land vary very much according to the position and what the land is. I have one or two cases that I might quote to the Commission from reliable sources with regard to the rent. My informants do not desire that their names should appear in the press, but they do not object to their being given to the Commission for the purpose of identifying the accuracy of any statements that I might make. I might say as to the reductions in rent that one somewhat large landowner in the county, (he is a well known man, and he owns land in a great many different parts of the county, and therefore his land would be very variable), told me that where he used to receive 100*l.* in rent he now receives 30*l.* I am prepared to give his name for your private information if you wish.

Mr. O. D. Johnson. 6 Feb. 1894.

7642. That seems to be very much the case with your landlord; because your rent has been reduced about 50 per cent.?—Yes.

7643.—But the case you are now mentioning is rather more than that?—Yes; my landlord, I take it now, receives about 600*l.* where he did receive 1,300*l.* —that is about really what it is, allowing 250*l.* for the tithe.

7644. (*Lord Vernon.*) 525*l.* as against 1,300*l.*?—1,300*l.* at the highest time. I am taking the highest rental at 1,330*l.*, there is some land taken off.

7645. (*Chairman.*) Your own rent has been reduced about 50 per cent., and the case you are now mentioning is about 70 per cent.?—Yes, that is information given me by a landlord who is a man owning land in many different parts of the county, and whose information can be thoroughly relied upon. I am not prepared to give his name except for private information.

7646. Has he considerable property?—Yes.

7647. You said that the reductions varied very much according to the nature and position of the land?—Yes.

7648. Is there anything favourable in your own case which has prevented the reductions being so great as in that case?—Well, the land that I occupy is partly mixed soil, partly heavy and partly light land—that I consider to be somewhat of an advantage to a farmer. Then it is fairly near the rail, it is within two miles of a railway station—some of it is less than that, so that I might say it is within a mile-and-a-half to two miles of a station, and through being a farm situated so that stock can be carried, and also vegetables, which are grown to some extent, as well as growing corn, the reduction of rent is not quite so great. But if I might be allowed to place it before you as bearing upon the value of land in the county I have in my hand some information which has been given me by a gentleman who has purchased some land in the county recently. One farm I could mention which 20 years ago was sold for 13,000*l.*; it consisted of 240 acres, two homesteads, five cottages, and a good class of buildings; in 1873 this farm was sold for 13,000*l.*, it was bought by a yeoman farmer, and he farmed it himself; he raised on this farm 9,000*l.* on mortgage, the mortgagees seized the property, and last year it was sold for 1,800*l.*, the freehold was sold for 1,800*l.* by the mortgagees. There are 240 acres, and it is a freehold farm with about two-thirds of the land tax redeemed; it is subject to a tithe with the exception of 17 acres, the tithe being now at about 5*s.* 6*d.*

Reduced value of land.

7649. Was there anything exceptional about that farm to account for this extraordinary reduction?—I know of nothing to account for it except its being a sale forced by the mortgagee, and there not being a demand at the time for farms on account of the existing state of things. I know of nothing else.

7650. Is the new owner farming it himself?—Yes.

7651. That was a forced sale and someone has made a good bargain?—I should think so. But I have another case, so that it is not a solitary one.

7652. (*Viscount Cobham.*) Is it a good sporting farm?—I think there is not very much sporting on it. There is another farm of 107 acres, all freehold except five acres; the tithe is about 4*s.* an acre, and it was sold some years back for 3,000*l.*; a sum of 2,500*l.* was advanced on this farm on mortgage; last summer the mortgagee determined to realise, and by his direction this farm was sold for 450*l.*

7653. Was it bought by a man who intends farming it himself?—I do not know the present purchaser.

7654. On account of the uncertainty of prices there was no demand, and then by this forced sale the mortgagees were compelled to take what they could get at the moment?—My informant here does not wish his name to be published, but if you wish to have it to identify this he will be willing to give it; he is a well-known county man. He writes with regard to this matter: "These are extreme cases; but I could give you a dozen more very nearly as bad."

7655. (*Lord Vernon.*) Did this farm require a great deal of money to be spent upon it to put it in repair or was it in good order?—The first one was in good order and the homestead was in good order, and it was in a good situation so far as the high road is concerned, and it was a desirable description of land. With regard to the latter one I do not know as to the condition so well.

7656. (*Mr. Chaplin.*) These are not exceptional cases?—My informant says they are exceptional, but he could quote a dozen more very nearly as bad.

Mr. O. D. Johnson. 16 Feb. 1894.

7657. (*Mr. Dalton.*) Is not the low price because of the heavy tithe, which is the first charge upon it, as compared with land with a light tithe?—Of course the tithe would make a difference.

7658. Would it not make a great difference in the capitalised amount?—It does make a difference, but I do not think that it makes all the difference of the capitalised amount.

Farm losses.

7659. (*Chairman.*) If those values are to be taken as at all average prices, it would seem to indicate that the rents of land in the hands of tenant farmers must be very high as compared with the interest on the purchase money?—It would, judging by the opinion expressed by me with regard to that arable farm, but from the description of the farm, and my informant being a man who is well known and who knows the value of land in the county, and on whom I can rely, I can only think that did he desire it he could let that farm as I have stated, viz., at 15*s.* per acre. I cannot imagine otherwise. It is desirable land and in a good situation, and it shows this, that where there is a forced sale by the mortgagee in our county, at any rate just at the present time and during last year, it is difficult to say how great is the depreciation, and how great a sacrifice may be made of property. As to the condition from the tenants' point of view, if you desire a case in point I can give you the result of five years' farming in my neighbourhood, the case of a heavy land farm of 350 acres. It has been farmed for five years from Michaelmas, 1888, to Michaelmas, 1893, by a good business man, and it has resulted in a loss during those five years of 1,523*l.*

7660. What was the rent there?—This was jointly farmed by the owner and a friend of the owner together in partnership, and the owner charged his rent, I take it, as interest upon the purchase money.

7661. Is that included in the 1,523*l.*?—A sum would be deducted for the rent and interest upon the capital invested before that 1,523*l.* was arrived at. There are some charges, I think, calculated in that sum. The rent of this farm would be from 10*s.* to 12*s.* an acre.

Changes of tenancy.

7662. Have there been any changes of tenancy generally in your district?—Yes, a great many.

7663. And have the farms been relet at greatly reduced rentals?—Yes; several of them have been in the hands of the owners for a year or so, and then they have let them at greatly reduced rentals.

Land in hand.

7664. Is there also land in the hands of the owners now unlet, or have they been generally let at a reduction?—On some of the farming lands they have not been let, but they would be generally light lands. There were a great many farms in my immediate neighbourhood in hand until some two years ago, and the owner then determined to let as best he could, and he did at a greatly reduced rental.

7665. He kept the land, not being willing to let it a great reduction, but at last found himself compelled to do so?—That is so.

7666. Do you know whether the reduction in this case was about 50 per cent.?—Quite that; and more too, in many cases.

7667. And have the rents been reduced in the same proportion on farms which have remained in the occupation of old tenants?—I should think nearly so now; I think they have now.

Rates.

7668. Generally, should you say that in that district the assessments have been reduced in proportion to the rent?—In some cases they are above the rent; they are being reduced.

7669. And has the per-centage of the rates remained the same?—There may in some, but not in all cases, be an increase in the rates. The grants of taxes which are now allocated and paid over to the county councils amount to a sum larger than that which used to be paid to the county authorities directly from the Imperial Exchequer previous to the passing of the Local Government Act of 1888. Those sums, which we now receive through the tax allocated for local purposes, and which are paid over to the county councils are considerably in excess of the grants from the Imperial Exchequer in aid of the charges before that date. That benefit has prevented, in my judgment, to some considerable extent an increase in the rates.

Mr. O. D. Johnson. 16 Feb. 1894.

7670. How much in the £ are your rates now?—The Poor Rates are about 2*s.* in the £, and the Highway Rate varies very much. It would vary from 8*d.* to over 2*s.*

7671. Do you mean from year to year?—If you mean my own rates, my rates would amount to 2*s.* 9*d.*

7672. What was it 12 or 14 years ago, before this depression arose; was it about the same?—Yes; there would not be a great difference.

7673. The benefit of the contributions from the Imperial Exchequer has prevented the rise in the rates, which have been due to the lower rate of the assessment?—That has been so; but the lowering of the assessment has only recently come into operation. One considerable reduction in the assessment only came into operation since Christmas. It has not yet began to work, as the reduction has just now taken place.

7674. Still your last rate was no more in the £ than it was some years ago?—That is so.

7675. And it would have been higher, you think, but for the contributions from the Imperial Exchequer?—That is so.

7676. At all events you and your neighbours must have derived a considerable benefit from the reduction in the aggregate payment of rates in consequence of the reduction of the assessment?—Yes; they would, slightly.

Wages.

7677. What has been the case with wages in your district?—From a year ago wages have fallen some 11 per cent.

7678. Up to that time had they been maintained?—Not to their highest pitch.

7679. When was the highest point attained?—In 1880, I should think, or 1876 and 1877.

7680. What was it then?—I have not the figures by me; I might say, as a guide for the Commission, that the wages of the ordinary day labourer, paid by me at the highest point, were 13*s.* per week. I am speaking of what we term the ordinary day labourer; that is the monetary day's pay; there are a great many things to be taken into account.

7681. That does not represent the full earnings, but for purposes of comparison it will suffice?—Quite so; the ordinary day labourer's pay at the highest point was 13*s.*; that would be 2*s.* 2*d.* a day, and is now 10*s.* per week.

7682. When did it fall from 13*s.* to the point to which it has fallen; was it 12*s.* for a little time?—Yes; it has been 12*s.*; 11*s.*; and now it has fallen to 10*s.* per week.

7683. Altogether the fall since the depression has arisen has been 3*s.* per week, or nearly 20 per cent?—Yes.

Uncultivated land.

7684. Now, has much land fallen out of cultivation in your district?—There are a good deal of the poorer lands which have gone out of cultivation.

7685. Is that in the sense that the farm altogether has gone out of cultivation, or that parts of the farm have gone out of cultivation?—They have gone out of cultivation more or less in some cases of the poorer lands, but only a very small portion. On some portion of the heavier lands, in many cases, farmers put down a large portion of seeds, and allow them to lie, perhaps, two or three years. In some cases they do not cultivate the poor fields, but let them go, and take advantage of them as long as they grow anything.

7686. Have any farms become derelict in the sense of not being farmed at all?—Not at the present time. I knew a case of a farm which lay vacant for a year, and then it was taken up. I have a case here of a small farm, quite near me, that was uncultivated for several years, but it is now being cultivated.

7687. As a general rule when you speak of land out of cultivation, it means the inferior parts of farms have been allowed to fall into poor grass farms?—This is so as a general rule.

7688. (*Mr. Chaplin.*) And does that apply to the whole of Suffolk?—Yes; I should think the larger portion of Suffolk.

7689. Do I understand that there is no land out of cultivation in Suffolk?—Oh, yes, there is.

7690. (*Mr. Lambert.*) What does that land produce, anything at all?—In some places it produces game, and some rabbits—rabbits principally.

Mr. O. D. Johnson. 26 Feb. 1894.

7691. Is it let as pasture?—Well, just to the north of me there is a large tract of poor light land; those lands were all cultivated and tenanted 20 years ago; now there are very few tenants; and there is a large tract, a good many miles across, which is principally in the owner's hands. The owner gets some rabbits, and some sporting perhaps, but he does not get very much else.

Drainage and claying.

7692. (*Chairman.*) Has the drainage of heavy land been maintained or not?—I do not think it has; on a good deal of heavy land the drainage has not been kept up, it is not done so well. A tenant farmer in many places has not the money to invest, and in the next case he would be inclined to ask himself whether he would receive a return for the outlay with present prices.

7693. Has the light land been clayed?—I have not seen the light land clayed for a long time.

Expenditure on improvements.

7694. Has there also been expenditure by the landlords to keep their tenants, or to induce new tenants to take the land?—In some cases there has been. Landlords have spent money and have not always had a return for it.

7695. They have endeavoured to keep their tenants in that way?—They have in some cases.

7696. In your own case has the owner of your land expended any money in improvement?—Some 20 or 25 years ago new buildings were put up and repairs done, but not to a very great extent.

Deterioration in farming.

7697. Taking the general condition of farming, has that deteriorated?—The farming is not so well done as it used to be. For the reasons I have stated the draining is not so well done, nor the claying so well done; the claying of light land I have not seen done for a long time.

Bad seasons.

7698. Have the last two seasons been very bad in the way of production in your district?—The last season very much so. The season before was not a very good one, but the last season was bad. It is very variable, and is dreadfully bad in some districts.

7699. But you have not suffered from the wet seasons of 1892?—No; we did not suffer very much from the wet season of 1892, but more from the drought of 1893.

7700. There were very exceptional losses in that year?—Yes; very exceptional losses.

Tenure.

7701. What is the general system of tenure in your district; are the farms generally let on a yearly agreement?—Generally, the system of tenure used to be that of leases, but as the leases have fallen out tenants have been very loth to enter upon a lease. There is no desire to enter upon a lease. I think they are afraid of entering upon a lease with the present prices.

Restrictions.

7702. There has been a relaxation of the restrictions on cultivation, and of other usual covenants of the agreement, has there not?—Whether they have been actually in writing I am not prepared to say; but, practically, farmers now can cultivate or do pretty well as they like, provided they keep the land in good condition, and leave it in shift, that is, part corn and part roots and seeds. In this county the farmers in my district farm the four course, having part in corn, part in seeds, and part in roots. If a man cultivates his farm well, the majority of the owners do not object to the tenant doing what he likes.

The Agricultural Holdings Act.

7703. With regard to the Agricultural Holdings Act, has there been any complaint of it in your district?—My impression is that tenants do not generally claim under that; they are afraid that if they did do so, the owner might make a counter claim. It is rather difficult to my mind for a tenant to prove whether a farm was in perfect condition when he entered it, but an owner looks and expects to find the farm in perfect condition when he goes out of it, if any claim is made by the tenant for anything that he has done.

7704. In recent years when farms have been given up, have they been deteriorated?—In some cases.

7705. And possibly it may be that the outgoing tenants have been afraid of the counter claims?—They would, of course, where the farm was in very bad condition. I do not think it has worked very much. I do not know of many claims under the Agricultural Holdings Act.

Suffolk custom.

7706. (*Mr. Chaplin.*) What do they claim under?—There is a Suffolk custom, that an outgoing tenant is paid for his tillages on the fallows. The Suffolk custom is this: that a tenant for his fallow land, instead of

Mr. O. D. Johnson.
16 Feb. 1894.

being paid for the crop of roots which he will leave on the land, is paid for the tillages, ploughing, and seeds, and manures, and in some cases the rent and rates, but not in all cases; that is the Suffolk custom.

7707. (*Chairman.*) Then you consider the Suffolk custom to be rather better than the scheme of compensation under the Agricultural Holdings Act?—I do not know that. The Agricultural Holdings Act would include that, and would go further; and would give some further compensation than does the Suffolk custom. But under the custom, if he has done recent draining, he would be compensated for that. It goes to some considerable extent on the lines of the Agricultural Holdings Act, but not quite so far. Might I make one remark as to the fall in the price of labour?

Cost of labour.

7708. Yes?—I do not think that fall in the price of labour is altogether 20 per cent., although it might be. I do not think that the fall in piecework has been so much as that. There is a great deal of piecework done, but I do not think it has fallen 20 per cent. There was a considerable fall in harvest wages. Harvest wages are always paid by the piece, and there was a considerable fall last harvest time; an irregular and very considerable fall, but I do not think that fall has amounted to 20 per cent.

7709. Do you mean taking it all round;—Yes; not quite 20 per cent.

7710. But approaching 20 per cent.—more than 15 per cent.?—Well, all piecework included, perhaps 15 per cent.

Causes of the depression.

7711. To what do you attribute the depression?—I attribute the depression to foreign competition, and to the change in the currency, which has taken place during the last 25 years. I consider those two great factors in the case.

7712. Then you think it has close relation to the monetary question?—I do think it has a very close relation to the monetary question.

7713. What remedy do you suggest?—That an English agriculturist should be placed, as near as possible, on the same footing as his foreign competitor.

Poor, highway, and education rates.

7714. In what respect?—I take it that in the United States of America, or for the matter of that in India, the poor rates and highway rates are not there in existence, and I think that these charges on land which it is possible to remove should be removed. I look upon it that the maintenance of the poor, the education of the people, and the maintenance of the highways, are matters in which the nation is interested, and for which the nation should pay. I do not think that a man, merely because he happens to be an occupier of land, should have to pay the large proportion which he now pays in finding the necessary funds for national expenditure and for national purposes.

Local management.

7715. Do you think that the management of the poor and of the highways, should be taken out of the hands of the local authorities, and placed in the hands of the Imperial authorities?—That is another matter; whether they would be better in their hands is another matter. With regard to the question of management I do not suppose that the occupiers would object to the management being in other hands, if they provide a large share of the money.

7716. It would follow, as a matter of course, that if the payment is to be made by the Imperial Exchequer, the management must be Imperial?—Yes.

7717. And that would mean taking all these matters out of the local management?—Yes.

The currency.

7718. What further do you recommend?—As to the currency question, if I might say a word upon that now, I believe that by the change which took place some 20 years ago, when silver was abandoned as a standard by a great many European countries, there was a reduction made in the circulating medium of the world, and that that had the effect of reducing prices. I do not know that I have any authority to speak on a matter of this kind, but I have formed my own idea, and I have thought that that is one of the causes of agriculture suffering from low prices. I have thought that prices are ruled by three factors; one of those is the supply, and the second is the demand, and the third is the amount of circulating medium by which they are measured. I have always thought that, if there is a large heap of gold, and a little heap of wheat, or any other agricultural commodity, whatever it may be, the agriculturist would stand a better chance of getting gold out of that large heap than out of a small one. Whether that is right or wrong, I take it that during this century whenever there has been an increase or decrease of the circulating medium, there appears to have followed in the wake of it a rise or fall in prices. I also imagine that if we go a long way back, some 200 or 300 years, when a bullock was sold for 5*s.* and 10*s.*, and a sheep for 2*s.* 6*d.*, we find that there was only a small amount of the circulating medium, and that the prices then received have fallen very much in accordance with the amount of the circulating medium which has come into existence. I think myself that the owners of property and of commodities, whether they be land or whether they be agricultural produce, have a just right to complain (if my theory is right), that these prices have fallen, not by the natural course of things, but by the arbitrary tampering with the circulating medium by the different Governments and States of the world. That interference with the owners of land and property as against the owners of money, has placed them in a disadvantageous position on the contracts which have been entered into and which have to be carried out by the payment of gold, a larger amount of goods being required to realise that gold in order to pay these contracts.

Mr. O. D. Johnson.
16 Feb. 1894.

7719. (*Mr. Giffen.*) You could not give us now the statement of the circulating medium 20 years ago, and how much it was reduced by those measures?—I could not give a statement; that is a matter which only one who has given the subject great consideration might do.

7720. You said it was reduced, and I wished to know if you have any idea as to how much it was reduced?—There is an output of gold which varies, which has not greatly increased during the last few years, and as silver has been displaced entirely, I take it that gold is to stand in the place that silver occupied in those various countries which formerly used silver and are now using gold. Therefore there is a greater demand for gold. I do not gather that gold has increased in supply in order to meet that demand.

7721. I do not wish to cross-examine you just now; but I merely wish to get out of you whether you could give any statement as to how much the circulating medium of the world has been reduced?—I cannot tell you how much it has been reduced.

7722. (*Mr. Chaplin.*) You have not examined into the figures and you do not come here to give the details?—I do not come here as a specialist.

The Merchandise Marks Act.

7723. (*Chairman.*) What further changes do you recommend?—I think that something should be done in order to insure that English agricultural produce should be sold as such, or rather that imported agricultural produce should be sold as such in all cases; that the purchaser should always know whether he was buying foreign agricultural produce or whether he was buying English; that is, in other words, that there should be an extension of the Merchandise Marks Act.

Markets.

7724. With regard to markets, have you any suggestion to make?—As to markets, the vegetable market in London, one of them at any rate, I happen to know something about. The owner of the market holds a charter, and under that charter he has the power to prevent anybody else opening a market within a certain radius, and I think that radius is a very considerable one. By that means a grower of vegetables in the eastern counties is prevented from placing them in the hands of the consumer at as small a cost as he would otherwise do were it not for that charter. I might state that in a very plain way, so that you might see clearly what I mean. If a market was attached to the Great Eastern Railway—and I speak of that because I live on that line—if a market was attached to the railway station so that vegetables could be placed from the trucks directly into the greengrocers' carts or handed over to those requiring them, the produce of an acre of potatoes, for instance, could be so delivered at some 10*s.* an acre, at any rate, less than they could be now, when they have to be delivered into Spitalfields Market. The cartage from the rail into the market would now amount in potatoes—I take that as a typical case—to 10*s.* per acre. That would be the cartage of the potatoes from the rail into the market. In the case of other vegetables such as cabbages and lettuce, there is not only the cost of conveyance from the railway into the market, but the damage in transit. One can easily understand that cabbages and green stuff in being taken from the truck into the van and from the van into the market have to

Mr. O. D. Johnson. 16 Feb. 1894.

be handled, and there is not only the expense of porterage, but the damage done to the property itself. I do not myself wish unduly to interfere with vested rights, but I do think that the time has come when a charter of so old a date as that which the owner of Spitalfields Market possesses, and under which he exercises authority, should not prevent the grower coming directly into contact with the consumer. I think the time has come when, seeing the needs and necessities of a City like this, and also the position of the grower, that something should be done in order to let those two people get together, and that that obstacle should be removed. I do not say that a charter should not be equitably dealt with, but I do say that some means or other should be taken to remove any obstacles in the way of bringing the producer and consumer together. In the case of green vegetables, cabbage, and the like the cost of cartage would be very much in excess of what I speak of for potatoes, because they are bulky, but the cartage of potatoes at 1*s.* 3*d.* per ton would soon amount to 10*s.* an acre.

Spitalfields Market.

The Law of Distress.

7725. With regard to the law of distress, do you consider there is anything in that direction which might be done?—I do not think that the law of distress operates adversely to the tenant farmer.

The Land Tax.

7726. And the land tax, what do you say about that?—I think that the land tax was originally a tax to be paid by people according to their ability to bear it, but in latter years it has devolved principally upon real property. I think in these times it is a hardship and an injustice to the owners of real property to pay that tax in the way they have now to pay it.

Railway rates.

7727. I think you have something to say about railway rates?—It seems to be a matter generally understood even now that facilities are given for the transit of foreign goods over and above that which is enjoyed by home growers who place their goods on rail at stations intervening between the ports of debarkation and the large centres of industry where those goods are sold. I do not think it necessary for any detailed case to be made out because that seems to be generally acknowledged. I say in the interest of the growers and agriculturists of this country that the lowest rate which can be offered should be offered to the growers in order to enable them to carry on their business both in their own interest and in that of the community at large.

Condition of agriculture before 1879.

7728. Now, apart from those recommendations that you have made, what are the present prospects of farmers like yourself in your district? I presume that before 1879 you were not doing badly?—No, before 1879 we did fairly well; farming did very well. 1875 and 1876 to 1879 was a landmark as to the starting of the adverse times, because that was a bad season; and bad prices and bad seasons following one after the other, brought things to the present condition.

Income Tax.

7729. (*Mr. Chaplin.*) Is it not the case that 1874 was the last great farming year?—I cannot say positively.

7730. (*Chairman.*) Since then I understand from what you have said that your rent has been reduced by 50 per cent.?—Yes.

7731. Your assessments to the local taxes have been reduced in a corresponding degree, and I presume that the claims of the income tax have been reduced by the same amount?—Yes.

7732. Do you pay upon your rental or take advantage of the provisions and pay upon your half rental?—I think the half rental is generally paid, not under Schedule D.

7733. Have you taken advantage yourself of the plan under which you may pay upon the actual produce?—I pay on half rental.

7734. You are aware of the provision?—Yes, I am aware of it.

7735. You have not made any demands?—No.

7736. Have your profits been equal to half the rent?—I am afraid they have not.

7737. But you have not availed yourself of it?—No.

Reduced charges on the land.

7738. I understand that the reduction of 50 per cent. was only made recently up to that point?—Yes.

7739. Your rent has been reduced 50 per cent. and your assessment in the same proportion and your income tax has been reduced in the same proportion, and the labour has been reduced by 15 per cent.?—Yes.

7740. I presume that you have a considerable reduction in prices upon all the articles you have to buy, manures, and so forth?—As to manures it does not quite follow.

Mr. O. D. Johnson. 16 Feb. 1894.

Prices of manures, &c.

7741. But stock or anything of that sort?—As to manures, nitrate of soda, for instance, from some cause or other whether it is union or something of the kind I do not know, it does not fall with other things. Nitrate of soda I have known to be cheaper than it is now.

7742. Taking all the articles that you have to buy, has there not been a considerable reduction in prices, probably from 20 to 25 per cent.?—There has been a reduction in the price of corn.

7743. Feeding stuffs?—Feeding stuffs.

7744. Even a larger reduction than that? What I am trying to get is whether the adjustment has been made which makes it possible for you to carry on your business as a farmer?—I think farmers will adjust themselves, to some extent, to the circumstances; but what has hurt the farmer is the coming-down process.

Present prices and future prospects.

7745. I am now assuming that the present prices, low as they are, are maintained, and assuming that those prices are maintained, will it be possible for you as a farmer to maintain your business?—Well, I am not sure whether farming will be maintained with present prices. Prices are lower to-day. The last time I was in the market was Wednesday, and they were lower than ever they have been during my lifetime. Speaking of wheat, I never knew it as cheap as it is to-day—never.

7746. Of course, we may hope in the future that there will be average harvests, and not bad ones like those of 1892 and 1893. Assuming average harvests and the adjustments made on rent, taxes, income tax, wages, &c., I want to know whether it is possible for a farmer under those conditions to carry on his business?—It is very difficult to say whether they will do so with existing prices—perhaps they may.

Rent.

7747. If not, it is still possible for a further reduction to be made in respect of rent. Your rent is now 15*s.* per acre?—That is in my case, but in many cases you cannot adjust the rent. The rent has to be a nominal sum. In my case, as I stated before, I have a farm of some portion pasture, a larger portion of arable, but being of variable soil, and being adapted to the keeping of stock, and also growing some descriptions of vegetables, I do something in all those different lines, and I think the rental has not fallen so low as some. I have a case here of a small farm of 80 acres; it is within three miles of my house, the present tenant pays 5*s.* per acre for it, and on the farm there is a tithe which the landlord has to pay out of his 20*l.* a year.

7748. Is your farm a very exceptional one, or may we take it as a fair average? Of course, some are very much worse?—There are some worse.

7749. Is your farm a very exceptionally good one?—It is not an exceptionally good one; some of it is good, but it varies.

7750. May it be considered a fair average?—A fair average.

7751. Is the rent a fair average?—No; my rent, although it be an average farm, is a higher rent than is paid in very many cases. I am inclined to think that across the southern district of Suffolk—and that would include corn growing lands—the rents are not 15*s.* I should think they are more like 10*s.*—in many cases they are. In respect to this farm which I have mentioned, it is a heavy land farm of 80 acres, a small farm—there is nothing particular about it; the condition is not bad.

System of cultivation.

7752. Have you made much change in the cultivation of your farm—have you given up corn?—I have not myself. I grow corn. I also grow a great many vegetables. It is exceptional in that respect; nobody else does so immediately around me. I grow a great many potatoes and other vegetables, and send them to London.

7753. Where farmers have done that, have they been able to make both ends meet?—I think they have to some extent.

Rent.

7754. What I have been rather pointing to is, that there is still a considerable margin on which to draw in your case, to prevent the land going out of cultivation, seeing that you pay 15*s.* per acre?—I think that is exceptional; it being a mixed soil farm to a great

Mr. O. D. Johnson. 16 Feb. 1894.

extent makes all the difference. Again, referring to this farm of which I have been speaking, I may say that there are thousands of acres of similar land in the county, and I do not know of any reason why this rental should be so much below others. I know the tenant of this farm, and I knew the tenants previously, and I know the history of it for years back, and the rental is now 5*s.* per acre, and the owner pays tithes. It was suggested just now that rents might be still further adjusted. I want to point out that I do not know how an owner with a rental of 5*s.* per acre, out of which he has to pay tithe, can further reduce that rent, and also keep his premises in repair. The tenant travelled with me in coming to London to-day, and he said that he had made an application to have some repairs to the premises done.

7755. I was looking at it from the point of view of the tenant farmer, and not from that of the landowner. You are now paying 15*s.* per acre for the land; part goes to the landowner and part to the Church for tithe, but still the result is that you are paying 15*s.* It does not matter to you to whom it goes. Is it possible for a farmer, paying that amount, to keep on the business, supposing present prices continue; and if not, whether there is not still further possible an adjustment of the rent?—As I said before, I have adopted a different line of cultivation to that generally adopted in the county, and prices are so variable in the commodities with which I deal, that it is almost impossible to say. I grow a considerable acreage of potatoes; sometimes they sell pretty well, and sometimes very low. Although they average a lower price within the last three or four years, still they have not followed in the wake of other things.

System of cultivation.

7756. Was it a wheat-growing district?—Yes. The system that has acted formerly was the four-course system, wheat, barley, roots and seeds. The barley might be varied by oats, but that is it roughly.

7757. Have you reduced the proportion of wheat?—I grow very little wheat.

Barley growing.

7758. Of course the reduction in the price of wheat has been relatively much greater in barley and oats?—That is so. Barley this year, I must say, is rather a depressing feature of things, and the present barley season is exceedingly disappointing. Not only is it a disappointing crop, but unless it is of fine quality, I have never known so little demand for it as now.

7759. (*Mr. Chaplin.*) Are you speaking of the barley in Suffolk or of barley generally?—I am speaking of the barley produced in Suffolk.

Highway rates.

7760. (*Lord Vernon.*) Did you not say that the English farmer suffered in competition with the American farmer and the foreign producer, because they did not have to pay for maintaining the roads?—Yes.

7761. Who do you suppose keeps the roads in the west of America?—I should think the agricultural community if they have a road must keep it up. We here have to keep a road in an agricultural village on which is conveyed the produce of the United States of America in the shape of flour, and possibly beer manufactured from barley grown in Germany, or something of the kind.

7762. That does not touch the question. Who do you suppose keeps up the roads in foreign countries in agricultural districts?—I suppose they do, but not to the same pitch or in the same condition that we keep them up.

Low prices and the currency.

7763. You think that prices have fallen on account of the short supply of the circulating medium since 1874?—Yes.

7764. How do you account for wheat in 1891 being sold at 45*s.* per quarter?—It does not follow. I said when I was speaking of prices there were three factors. One was the supply, the second was the demand, and the third the amount of the circulating medium. That third factor would be the general ruler of prices, but on account of the variation of the other two, that is supply and demand, we should see rises and falls independently of the general depressing influence which the reduction of the circulating medium would have. When we see a rise of that kind it is owing to the inferiority, or supposed scarcity, of some particular commodity.

7765. Did I understand you to say that farmers and landowners had a right to demand that there should be an increase in the circulating medium, and that the prices should not fall as they have done?—I said this: I thought as regards every owner of property and commodities, whatever it might be, whether land or horses or cattle, or buildings, or anything of the kind, it is unfair to them to depreciate the value of their property by withdrawing any portion of the circulating medium. I take it that a portion of that circulating medium was withdrawn when silver was displaced by certain European States, and I suppose now by America to some extent, and India as well.

Mr. O. D. Johnson. 16 Feb. 1894.

The marking of foreign meat.

7766. Do you imagine that the purchasers of agricultural produce have suffered by the fall of prices more than the producers of other articles?—Yes, I should think they have.

7767. I think you said that foreign meat should be sold as such?—Yes.

7768. Do you think that would be an advantage to the English farmer?—I think it would be a very great advantage.

7769. Are you aware that several witnesses gave evidence before the Select Committee on the marking of foreign meat, and they stated that they thought the foreign meat, being sold as such, would tend rather to depreciate the price of English meat—of old cow-meat and bullock-meat?—Being sold as foreign meat would depreciate the value of English meat?

7770. Yes?—I was not aware that witnesses had stated so. I cannot understand the argument.

7771. Are you aware that the Select Committee reported that they did not see any means of doing as you advise?—I was not aware of that until I came into this room. Of course, I am not arguing against any conclusion, but I cannot see the difficulty.

7772. (*Mr. Everett.*) I understand you to say that the low price of produce is the main cause of the present agricultural distress?—That is so.

The currency.

7773. And by a low price for produce, you mean the small amount of money which is received in exchange for produce?—That is so.

7774. And in England the only full standard money is gold, is not that so?—Yes.

7775. So that if gold has gradually risen in value, it would quite account for how it is that we receive less gold in exchange for our produce?—I take it so.

7776. And you are also aware that since 1872 nation after nation has, by legislation, cut off from their subjects the free use of silver and compelled them to use gold instead?—Yes.

7777. (*Mr. Giffen.*) Might I ask the witness to specify the nations?—The States which comprise the Latin Union, I believe, but I do not know.

7778. (*Mr. Everett.*) I can supply that by questions—Germany did that?—Yes.

7779. The United States did that, did it not?—Yes.

7780. (*Mr. Giffen.*) Is that so? What was the money of the United States 25 years ago?—I do not know.

7781. (*Chairman.*) You are under the belief that those changes have been made in the direction you speak of without entering too much into detail in the matter?—That is so.

7782. (*Mr. Everett.*) This policy of forbidding the use of one of the two precious metals, where hitherto the use of both had been freely allowed, is virtually a policy of protection towards that metal which is allowed to continue in free use, is it not?—I should say so.

7783. And by that policy of protection the value of the metal which is allowed to remain as the standard is artificially raised?—Yes.

7784. And the artificial raising of the value of the standard automatically and proportionately lowers the value of all kinds of produce measured by the standard?—I take it so.

7785. And inasmuch as England is a gold standard country, though we have not made any alteration in our laws, the value of gold in England, the value of our money has been proportionately affected?—Yes, I think so.

7786. The farmers have to buy their money with produce?—Yes.

7787. And as a matter of fact, by the recent action of many nations, the value of what they buy has been artificially raised by what is virtually a system of protection?—That is so.

r. O. D. ohnson. Feb. 1894.

7788. When we ask that what we grow should be protected we are met with the outcry that it is perfectly monstrous to ask such a thing?—Yes.

7789. But we really are the victims of protection?—I take it in this way: that I have to sell a much larger proportion of the commodities which I produce, in order, as Mr. Everett would put it, to purchase a sufficient amount of gold to discharge any liability which I have. I am, myself, the owner of a small propery, and being a poor man I have to mortgage it. I have to pay that mortgage in gold, and I have to realise a larger amount of my produce in order to make that payment in gold, and I think that it is hard upon me that that produce should be depreciated as measured by gold by the arbitrary displacement of silver which has taken place by a great many European States, and which is still further taking place by suggested action of the Indian Government or Her Majesty's Government, I do not know which. I have not these matters at my fingers' ends. But I have got the idea that gold is appreciated by this system. As to the particular States which comprise the Latin Union I think Italy was one and France was another, but I have not looked them up.

7790. You are aware that a great change is being made at the present moment in India?—That is so.

7791. Whereby a new demand for gold there has been created?—Yes.

7792. And from the general opinions that you have given to the Commission, may we not assume that it is probable that those fresh demands for gold will still further accelerate the upward movement of gold?—That is so; that prices are depreciated by the displacement of silver and the demand for gold. If silver is further displaced by States who did use it, using gold instead, if that argument is correct, prices must go in the same direction.

7793. The proposition is that great as the fall has been it has not reached bottom, it is still going on?—We have no evidence that it has reached bottom.

7794. We know that new demands are actually current to-day, created by fresh legislation, which are tending to still further appreciate gold and depreciate the value of agricultural produce?—I take it so.

ailway ates.

7795. (*Mr. Channing.*) With regard to the railway rates question, have you any information to give us about preferential rates?—No, I have not.

7796. Have you any opinion as to the amendment of the law which is necessary in order to give satisfaction to agriculturists with regard to railway rates?—My opinion is that with regard to our agricultural produce satisfaction would be given to the agricultural community if it were carried at a reasonable rate, and at the same rate as foreign produce is carried. I believe that the agricultural community would be satisfied if reasonable rates were granted for the carriage of their produce, and that no preferential rates were given to the produce of foreign countries. I might say with regard to that that I myself on one little article which is not generally an agricultural product, that of osiers, went to a buyer in this market, and he tells me that the rates are so difficult and expensive and heavy on this article from Suffolk and Cambridge that they can get them cheaper and better elsewhere.

7797. With reference to the large farmer or the small farmer who always has to make use of the railway, is there anything to be said?—I think that probably the large farmer has an advantage over the small farmer, because in selling more largely he can put more on at a time and avail himself of a truck load say of five or six tons at a special rate.

7798. Is there an unfair preference given to the large farmers under that system of paying for truck loads?—The railway company have to consider what their position as a company is to their shareholders; it is more expensive to run a truck load from any given place with a ton weight than with six or seven tons weight. And more than that I take it that to compel a railway company to carry, or to suggest that a smaller quantity should be carried, at the same rate per ton as large quantities, would be unreasonable. It would not be in the interest of the community at large, because it would probably result in a heavier charge being made for large quantities, and it would be injurious to the large producer certainly, and certainly to the consumer. It would be advocating a means of making transit expensive, and in these days with home and foreign competition we certainly ought not to adopt any policy which would make the transit rates whether for large or small quantities greater than they are now.

Mr. O. D. Johnson. 16 Feb. 1894.

7799. Is there any difference between milk rates this year and the basis of 1892, or have they reverted to the rates of 1892 in your district?—I do not know the milk rates at present.

An agricultural parcels post.

7800. Have you any opinion about an agricultural parcels post for making use of the Post Office, whether that would help small growers?—I should think it might in some instances. Your question seems to tend in the direction of distribution. It might perhaps in some instances, but I do not think there is so much to be done by distribution as is sometimes imagined. The greengrocer now who is the distributor seems to be an expensive man to go to, but he goes into the market and buys what he wants, and the middleman who sells him goods which he got in large quantities by rail sells them at a much cheaper rate than he could sell them if he had got them in small quantities, and he can sell quite as cheaply there as the producer could sell direct to the greengrocer in London, and for the matter of that, the consumer. The consumer in London can go into the market and buy his goods quite as cheaply as he could buy them from the producer in the country direct. There would be this difference, this question has been raised and possibly I might say a word upon it: I know a gentleman in my neighbourhood who took a great deal of interest in trying to establish some means for the distribution of agricultural produce some time ago. That resulted in an interview with the Directors of the Great Eastern Railway Company. They offered a rate of 15*s.* a ton from Suffolk, and they offered to carry garden produce and agricultural produce to London for 15*s.* per ton in small quantities. Well, I do not think that the consumer in London would really be benefitted by getting it direct from the producer if he were only a small purchaser, for this reason, that the railway rate on those goods would be 6*s.* or 7*s.* per ton on large quantities; the cartage into the market would be 1*s.* 3*d.*, say 7*s.* 6*d.* altogether, and then the difference between 6*s.* per ton and the price for smaller quantities would cover the salesman's commission. Anyone could go into the market and get it from the salesman by paying his commission, and by reason of his getting it in large quantities at a lower rate he can supply the consumers in London as cheaply as the consumer could be supplied by the producer direct.

Reduction of rent.

7801. (*Mr. Lambert.*) May I ask what class of land the reductions have been greatest upon in your county?—On heavy land.

7802. Mostly growing corn?—Mostly corn lands.

7803. Would the instance of 50 or 60 per cent. reduction be typical of the whole county?—I put it I think from 30 to 80 per cent. because it varies very much according to what the land is in the locality.

7804. Have you any tables of what the rent was prior to say 1870?—No, I have not.

7805. Would you be able to give that information on your own estate?—No, I could not, I could not give the information as to what the rent was. I am only a tenant farmer; I have not any knowledge of it.

7806. Have you been on your estate long enough to be able to give that information?—As to what the rents are?

7807. As to what the rents were?—I have stated what my own was.

7808. Would you state what your rent was in 1870?—1,300*l.*

7809. Was there any advance say from 1860 to 1879?—1860, yes. I am going a long way back. I am going back into times previous to my occupation. I think shortly before 1860 the rent was 1,150*l.* and in about 1865 the rental was raised to 1,300*l.*, that was the maximum that it ever reached.

7810. So the rental was raised, I presume, owing to better prices for agricultural produce?—I take it that that was so. I was only a lad at that time.

7811. When did the rent begin to drop?—I should think about 1883 and 1884, or something like that.

7812. You say old tenants have given up their farms being unable to obtain a sufficient reduction of rent; are those cases general?—There are several of them, a great many of them; a good many tenants have given up land in this way; an application has been made by

Mr. O. D. Johnson.
16 Feb. 1894.

the tenant to his landlord for a reduction in rent on account of prices falling, and consequently his rent was too heavy. Well, the landlords have in various cases—I could quote some—thought that the land was worth more, and that the tenants could tide over, or they found themselves unwilling or unable to make this reduction, and they have let a tenant go, and sometimes they have had to take a very much less rent from someone else, and in several cases they have had to hold them themselves, and then let them at a very considerable reduction.

7813. You say a great many farmers have been ruined?—Yes.

7814. Would that be before they have received a reduction of rent?—Some of them no doubt.

7815. Had they received a reduction of rent sooner they would have been able to tide over their difficulty perhaps?—Some of them; it would be difficult to say what was the cause in every case.

7816. Are you in favour of the principle of the Agricultural Holdings Act?—Yes.

The Agricultural Holdings Act.

7817. Are you in favour of the principle of arbitration between landlord and tenant as regards quitting under the Agricultural Holdings Act?—I do not know what the section means as regards quitting.

7818. I mean that a landlord would appoint his valuer and the tenant would appoint his valuer; would you be prepared to carry that principle further as to fixing the rent?—No.

Fixing rent by arbitration.

7819. What objection should you have to carry out the principle of arbitration with regard to the fixing of the rent?—I think that the time has not yet arrived when it will be possible to compel a landlord to accept a certain rent. I think that the landlord up to the present at any rate is somewhat the owner of his property as well as the rent charger, and I do not think it is necessary that a tenant, because he is in occupation, should claim to hold under a certain rent. That would make a fixity of tenure if he had a right to appoint an umpire or valuer, and the landlord to do the same. I understand that to be the purport of your question.

7820. That is the purport of my question; some farmers have been ruined?—Yes.

Land courts.

7821. Do you think it would be advisable to prevent them being ruined, supposing that a reduction of rent would prevent it, by having such a court established for the purpose of fixing a fair rent?—It would have been better for those cases, I think, but the time has gone over. I fancy that the old leases have gone out and, therefore, the position of the tenant is such that the occasion for it does not now arise.

7822. (*Chairman.*) Were the cases in which you speak of the farmers being ruined, cases where they hold under a lease?—Yes.

7823. And not from year to year?—If they were held from year to year, at most they could give a year and 11 months' notice.

7824. Has this matter of a judicial rent been discussed by your association?—No, I do not think we have discussed judicial rents.

Shooting rights.

7825. (*Mr. Lambert.*) You said you had not the shooting on your estate?—I have not the shooting on the farm I occupy, and on which I live. I am a small owner as well.

7826. Have you the right of killing the ground game?—I have the right of killing the ground game as I please—or I can appoint some one else in writing to do so.

7827. Have you any further extension of those liberties?—No.

7828. Do you think it would be wise to give a further extension?—I do not think there is much complaint as regards ground game now, and I do not think there is a necessity for it. I dare say there are a few cases where a tenant would like to have those rights, but I question whether it is desirable. It would still further curtail the landlord's rights and his pleasure in his estates. It seems to me that further legislation would drive him to take less interest in his estates than he has now.

7829. Speaking from the tenant farmer's point of view would it be wise to give him the ground game on his estate?—He has that now.

7830. I mean to do with it as he pleases?—The right which he now holds is sufficient to enable him to keep the ground game down. I do not hear many complaints. I do not say that there are not isolated complaints, but I think they are not at all general in my county.

Mr. O. D. Johnson.
16 Feb. 189

Tenure and changes in system of cultivation

7831. You spoke of the farmers adapting themselves to different produce; do you think the system of tenure of land in any way prohibits them from adapting themselves to different systems of cultivation?—It may in some cases, but not to any great extent. Farmers are not fast to adapt themselves to a new system; they do not move in that direction very fast, and I have not heard complaints that they are not able to move in that direction. I have myself done so, and I now grow some vegetables.

Notice to quit and compensation.

7832. Would you think it desirable in such a case as yours that, presuming your landlord were to give you notice to quit, say a year's notice to quit, you should be entitled to compensation for such notice?—If he gave me notice to quit, that I should be entitled to compensation? I do not think I should be entitled to get compensation for that notice. I have not myself applied to my landlord for a lease, for the reasons which I have stated before. But I should not feel inclined for a long undertaking under existing circumstances. I do not see any reason, if my landlord gave me a notice to leave, why I should ask compensation beyond the compensation which would be due to me on any improvements in the soil. I think a tenant should have that. He should have compensation for improvements which he may have brought about, for draining and for the manures that he used on his land, and cake and corn fed on the soil and the like; he should have all those, and have the full value of what he leaves on the land.

The marking of foreign meat.

7833. On the question of foreign meat, how would you propose to mark it?—I take it that the mark would have to be made in such a way that in the event of any one trying to sell foreign meat as English it could be discovered, whether it is so or not.

7834. How can you discover whether meat is foreign or British?—I would compel the importer of foreign meat to put a brand on that meat in some way to be known perfectly. I have learned quite recently in this room that there was a difficulty which could not, I suppose, be overcome, and it has not been recommended by the Committee that sat on this question, that foreign meat should be marked. I take it that the difficulty was a great difficulty, or it would have been overcome, but I am at a loss to know why it could not be done. I would make a vendor of foreign meat stick a placard on it showing that it was foreign meat. Well, the next point would be how to identify it. I take it that where there is a joint there must be a bone, and there should be a brand put upon that bone.

7835. Would you brand every bone in the beast's body?—You would catch most; a leg of mutton would have a shank and so would a shoulder. As to whether it would be possible to brand every joint, or almost every joint, I think you might. I do not see any difficulty. You could have a little brand and pop it on to the bones. In the case of meat being offered for sale which has not this placard on, it could be examined, and then it could be seen whether this brand had been put there or whether the joint had been somewhere tampered with, so as to cut out the brand if it had been there. I think it might be done.

Farm los

7836. (*Mr. Dalton.*) You gave us some figures as to the profit and loss account of a farm for five years?—Yes.

7837. The loss for the five years amounted to 1,523*l.*?—Yes.

7838. Was the greater part of that loss made in the last two years?—I have not got that so much in detail, but I have the balance sheet here.

7839. It would be more in the last two years, would it not?—There has been a depreciation in the value of stock. I have not the yearly details, but I have the balance sheet here for five years put together.

7840. In that you allow the rent?—Yes.

7841. Do you also take into account anything on account of the rent of the residence of the farmer?—Well, the rent included his residence.

7842. But in the loss account you charge him with the whole of his rent as a loss?—Yes.

7843. But the farmer has a residence?—Yes.

7844. No allowance is made for that?—No, I do not think there is. This is information given to me. I cannot say whether that is so or not; it would not be usual if it were done.

7845. Nor would the produce on the farm consumed by the farmer be in that account?—Yes, I should think so. I think the produce the tenant consumed on the farm would be taken in. This was done by a business man, and very accurately done.

7846. On your own farm the present rental is how much an acre?—About 15*s.*

7847. And the tithe 5*s.* or 6*s.*?—Yes, the 15*s.* rental includes the tithe.

7848. And the rates come to about 1*s.* 6*d.* an acre, you say; 2*s.* 9*d.* in the £ comes out on the 1,380 acres, with the rental of 850*l.*, at about 1*s.* 6*d.* an acre?—Perhaps it would.

7849. What is the land tax an acre?—On that particular farm the land tax was redeemed.

7850. Then the tithe would be a far more serious burthen than the rates?—The tithe is a larger charge.

7851. The tithe is a very large charge on most of those farms that you have mentioned?—It is on a good many of them.

7852. (*Chairman.*) That point does not seem to affect the tenant. The tenant pays the rent to the landlord, and the landlord pays the tithe?—That is so.

7853. (*Mr. Dalton.*) Do you consider the rates fall upon the tenant or the owner?—They fall upon the tenant in the first instance, and in the case of new rates—I do not know that we have many just now—in the case of increased rates it is the custom for the tenant during the hiring to pay the rates. In the case of increased rates it falls directly upon the tenant until the expiration of that hire, at any rate.

7854. But as the rates in the £ have not increased in your district, they were probably taken into account in fixing the rent, and they are on that farm practically charged upon the owner and not upon the tenant?—If you put it in that way the rates are taken into consideration in hiring; an intending tenant would naturally consider the rates in hiring.

7855. As they have practically stood still on your farm they have practically been borne by the owner and not by the occupier?—Well, the occupier has paid them.

7856. But he has paid a decreased rent?—Your argument would be that I would pay a less rent on account of those rates.

7857. Yes?—That probably would be so.

7858. Do you consider that the high tithe in your district has prevented landowners from expending money on improvements?—I should think probaby that the tithe does prevent landlords from spending money on their estates that they would otherwise spend. If the income is by so much reduced, he could not spend what he has not.

7859. That is what I mean; where the tithe is high, there is less inducement to spend money?—Of course there must be, and that would apply to the landlord who was not a wealthy man. If a man has not an income outside of his land he cannot spend it. Some of them are wealthy, and independent of the land, and some are not.

7860. But when the tithe approaches to the rent there is less security for any money that he lays out for improvements?—No doubt the security is weakened.

7861. Do you not think that Imperial management of the Local Government would add very enormously to the charge?—In rating you mean?

7862. Yes. I think you said that you considered it would add directly to the local expenditure?—I did not say that. I take it that supposing the rates were paid from an Imperial source, those who administer them would not be so careful; or at any rate the idea would be, that they would not be so careful.

7863. Then they would have to be paid for administering?—I do not know that they would; we have an unpaid local authority in the shape of the County Council, and there might be extravagance, perhaps there might be some increase from that; but matters might be so adjusted so that it was partially local and partially Imperial, and then the occupier locally would be interested. It might not be entirely Imperial.

7864. You do not consider that the rates have caused the depression in any way, you think they have stood still?—Yes, they have not increased lately.

7865. (*Mr. Chaplin.*) I wanted to ask you two or three questions about the Suffolk custom; would you mind stating to the Commission what it includes?—I do not know that I could state the whole of it; but I think I can state shortly the principle of the Suffolk custom what it means and what is involved under it. When a tenant farmer goes out of his occupation under the Suffolk custom which constitutes generally a system of farming known as the four-course shift, which I need not explain to the Commission, the outgoing tenant is paid. I will take shifts with corn; two of those shifts will be sown with corn the last year, that will be one half of the arable portion of the occupation. On the expiration of the tenancy which takes place on the 11th of October, the tenant by quitting will leave his corn standing there, and that which is left the incoming tenant will thresh, carry to market, and dress; for that he receives the straw, chaff, and colder of the corn that is left on the occupation; that is with reference to the corn shift. As to the fallow shift, if it is heavy farm land there is a portion left on long fallow, that is uncropped land, that is ploughed and goes through the various operations of husbandry, but that is rather an exceptional case than the rule. The larger portion of the fallow shift would be cropped with roots, and under the Suffolk custom the incoming tenant does not pay for the roots, but for the tillages which there have been on those lands; he pays for the manures which have been applied to the roots, and in some cases he pays the rent and rates, and taxes for those fallows, but not in all; it varies. In some cases there is a stipulation, and in some cases not, that is as to the fallow shift. As to the seed shift, the outgoing tenant is paid for his hay and clover, and so forth; he is paid for sheep folding and he is paid for the manure in the yards, and in the valuing for that manure, he is either paid (I am not quite confident on this point) an increased price for the manure, if cake and corn are used in making it, or he would be paid a proportion of the bill for the cake consumed during the last three or four years. I am not quite clear whether it is an increased payment on the manure, or getting his cake bill paid back. That is the substance of the Suffolk covenant as distinguished from the Norfolk covenant. Under the Norfolk covenant, the outgoing tenant is paid for his crop of roots that he leaves on the land. If he has no crop, he is not paid for it. Under the Suffolk covenant the outgoing tenant is paid for all the tillages and expenditure on the fallow, whether there is a crop of roots, or there is not. That is the difference between the two systems. Suffolk custom.

7866. At what time of the year do tenants generally leave?—The 11th of October, the old Michaelmas entry.

7867. Would you say what the compensation under the Suffolk custom comes to per acre on an average?—I do not think I could. I should think perhaps 35*s.* per acre in many cases, over the whole farm 30*s.* per acre.

7868. (*Mr. Little.*) That is two years' rent?—Yes; the only basis for that statement was that I was thinking of what I paid myself on the entry on lands, which I bought and now occupy, and that would be a pretty good class of land, and my valuation amounted to 600*l.* on 400 acres.

7869. (*Mr. Chaplin.*) That is when you entered, when rents were higher?—Yes.

7870. Would it be a year's rent or two years' rent now?—I do not know a case in point just now.

7871. I think you told us also that under the Suffolk custom they could claim for drainage?—I think they can.

7872. Drainage done with or without the consent of the landlord?—I think without the consent of the landlord.

7873. Is there any other semi-permanent improvement for which they could claim under the custom?—I do not know of one.

7874. Is the Suffolk custom generally regarded as satisfactory?—I think so. I do not hear of complaints under it.

Mr. O. D. Johnson.
16 Feb. 1894.

7875. And it is therefore partly for the reason that they hold their farms under that custom rather than under the Agricultural Holdings Act?—I think the reason why the Agricultural Holdings Act is not generally adopted is that claims would be made and difficulties arise. The procedure has not, as a rule, been satisfactory in the settlement of it.

The Agricultural Holdings Act.

7876. Have you any proposals yourself with regard to the amendment of the Agricultural Holdings Act?—I have not myself. I have not formulated any.

7877. (*Viscount Cobham.*) Can a landlord counter-claim under the Suffolk custom?—Yes, I think he can claim for damages if there are any. He is not so keen to claim for damages under the Agricultural Holdings Act.

7878. (*Mr. Chaplin.*) As a matter of fact, when a farm is given up by the Suffolk custom, would the valuers allow a counter-claim for damages, or do they as a matter of fact?—Yes, they do.

7879. But not so much as in the case of the Agricultural Holdings Act?—I think not.

7880. Your general impression I gather of the Agricultural Holdings Act is, that one of the great reasons which prevents claims being made more commonly under it is the fear of a counter-claim?—That is so.

7881. You have no suggestion to make?—I have not formulated any suggestion.

Cattle diseases.

7882. Have you suffered at all at different times from contagious diseases among cattle or sheep in Suffolk?—Yes.

7883. Foot-and-mouth disease and pleuro-pneumonia?—Yes.

7884. Are you free now?—Yes.

7885. Would a recurrence of those diseases be very disastrous?—It is very desirable that there should not be a recurrence; they are disastrous; they entail a very great deal of loss, and that is another name for disaster.

Slaughter of animals at port of debarkation.

7886. Do you agree with the evidence of many witnesses who have come before this Commission that foreign animals ought to be slaughtered at the port of debarkation?—I must say, what I think about that, and what I think is in the interest of the county that I come from and the adjoining counties. It is to our interest, and that of the eastern counties generally, to buy our store cattle as cheaply as we can. We do not want to buy disease, we do not want to import disease, and I would not myself advocate for a moment the removal of any restrictions which now exist for the prevention of the importation of disease; but, on the other hand, if it could be shown absolutely that cattle could be imported from a foreign country, or from abroad with a certainty of their coming free from disease, I should not myself advocate the prevention of that importation. I know, and I feel confident, I speak not only my own views, but also the opinions of the agricultural community, not only of Suffolk, but Norfolk as well; I say that it is to our interest to purchase our store cattle as cheaply as we can, let them come from where they would, and I advocate this in the interest of the community and the country generally. I would not advocate it if there was any danger of the importation of disease.

7887. But unless that freedom from danger could be assured, you would not import foreign animals?—I could not ask for it unless they were free from disease, because I know the danger of letting in diseased cattle and the losses arising therefrom.

Present prices and future prospects.

7888. I think you were asked by the Chairman if the present prices of agricultural produce, low as they are, ceased to fall any further, whether farming could be conducted under those circumstances, and you said you were doubtful about that, I think?—Yes; my opinion is that farming would be conducted, and that the farmer would struggle on—whether with anything approaching to prosperity is another matter, but things will to some extent adjust themselves to circumstances. Perhaps the lands may be relieved by laying them down to grass, and in that way they may struggle on, but I cannot speak positively upon that point for this reason: that we do not know that we have touched the lowest point in prices; we have touched a low point, or rather there has been a depression of trade in grain, the only one which is a profitable one of late—at least the nearest approach to it—is barley; it has been touched by the importation of foreign grain more than it has been before. Whether the barley grown will be permanently reduced in price I do not know. You cannot sell it now, unless it is something exceptional.

Mr. O. D. Johnson.
16 Feb. 1894.

7889. I rather gathered that it is your opinion, from your answers to some of the questions, that in many things there is not much room for further adjustment?—There cannot be in a good many cases a further adjustment of rents. I quoted one case here; it is not that I have hunted it up; there are many others I daresay, but it happened to be a small occupation, and I know that the case of small occupations has been a little brought to the front. It is a case within three miles of my door; the farm is in very good condition, and 5*s.* per acre rent is paid, and the landlord pays the tithe, and that is not a solitary case. I could find plenty of such cases if I wanted.

Farm losses.

7890. In one instance you gave us (I am speaking of the farm of 350 acres), the result after five years of occupation was a loss of 1,500*l.*?—Yes.

7891. You said that the rent of that farm was 10*s.* per acre?—Yes.

7892. The rent for those five years was 875*l.*; if it had been held rent free there would still have been a very great loss?—There would have been still a great loss.

Shooting rents.

7893. Talking of any further reduction of rents, is not Suffolk a great shooting county?—Yes.

7894. And shootings in the county are very much in demand?—Yes.

7895. What sort of a rent per acre do you get for the shooting as a rule?—They are in many cases let with the residence of the owner who has vacated, and the residence and the shooting so often go together that it is, perhaps, a little difficult to state what the shootings would be without the mansion. The letting value of the shooting separated from the mansion would be 1*s.* per acre on the arable lands, amounting to some 3*s.* or 4*s.* on woods.

7896. But it is a fact, is it not, that a great many of the mansions are vacant or not resided in by the landlords?—They are not resided in by the landlords.

7897. And many of them are let?—Yes.

7898. In the case of a mansion and the shooting being let together, it often commands a very considerable rent?—Yes.

7899. Are there not cases in Suffolk where the shooting on 5,000 or 6,000 acres lets for 3,000*l.* or 4,000*l.* a year?—I hardly think that. There is one case, I believe, and that is very exceptional, where a shooting lets for a very big sum, but in that case there goes with the shooting the attendants, and everything that a gentleman requires in his residence. It is rather difficult to assess that.

7900. What I want to arrive at is, if any further adjustment of the rent were required in certain parts of that county, is it not possible to treat them as shooting property rather than as farming tenancies?—I believe as shooting tenancies that some cultivation is necessary. It has been found in Suffolk that where the cultivation is abandoned the shooting also becomes of very little value, that is, so far as partridges are concerned. Partridges follow the plough, and if you abandon the plough or tillage you will not get partridges.

7901. Would not you have other game?—Yes, pheasants and hares and other game.

7902. I understand that large tracts are already abandoned to rabbits?—Yes, I am somewhat in the western portion of Suffolk and to the north of me there is a large acreage of land; it is light land that used to be tenanted, but there are few tenants now. A good deal is cultivated by the landlords and a good deal not cultivated. It is what people lay down to grass but it practically keeps nothing but rabbits and game now.

7903. Do the rabbits produce an income?—Whether they do in the hands of the occupiers I do not know. A rabbit warren does produce a rental.

Changes in system of cultivation.

7904. Is there any change of system in farming operations in Suffolk that you would recommend or advise that you think would at all restore the position of prosperity?—Well, I would suggest that a tenant should cultivate and sell as he pleases provided that he leaves the land in good condition or maintains it in good condition. There might occur such a thing as a tenant to have to go against his will, but if he maintains it in good condition and leaves it so under the

four-course shift I do not think there would be an objection to that. I do not believe at the present time that many landlords do restrict the tenant. I think he is allowed a very fair license in what he does provided he keeps within those lines.

7905. But even with absolute freedom at present prices do you see any possibility of the restoration of agricultural property?—I am afraid I cannot say that I see a probability of the restoration of it.

Present prices and future prospects.

7906. So far, we have been discussing the question on the assumption that the prices fell no further. But is not the great difficulty in the agricultural situation at the present moment this, not only a great fall in prices but the fact that the fall up to now appears to have been continuous, and there is no end to it?—That is so up to the present moment.

7907. If that state of things continues what is your view of the position?—If that state of things continues people will not grow wheat. And barley seems to follow in the same way. It seems to me to come to this, that the land in that case would only to a certain extent be cultivated and sown with corn, and a very large portion of it would be left in the position of a layer or pasture. A portion of it would be left in that way, and sheep would be put upon it, and some portion of it would be kept in tillage, but what with the low rent and the small labour bill, from the abandonment practically of a large portion of it going out of cultivation, and the sheep, and in some cases rabbits—between the lot there would be something in the shape of a living upon it, but anything approaching prosperity would not prevail and never could; and as to the agricultural labourer he would be still less in demand as land was less cultivated.

Reduction of labour.

7908. Even supposing that it was possible for the tenant to carry on under this system that you suggest as possible, do you mean that a great loss of employment to the agricultural labourer and further injuring of his position would result?—Yes.

The currency.

7909. I understand that you attribute this great fall in prices to the appreciation in gold following on the increased demand for that metal, which has occurred since the great monetary change to which you have referred?—That is my idea.

7910. And the chief cause of the present agricultural depression, I understand you to say, is this great fall in prices?—That is the main if not the chief cause.

Reduction of labour.

7911. What do you think will be the position of the agricultural labourer?—So far as the agricultural labourer is concerned, he must drift into the worst position eventually, because I can only think that with these low prices and less cultivation less employment must follow.

The currency.

7912. I observe in the *précis* of your evidence, with which you have been good enough to favour the Commission, that, as a remedy, you advocate that silver should be restored to the position it was in 20 or 25 years ago?—That is so. I need hardly say I am not an expert upon this subject, but I can imagine from what I have seen, heard, and read, that whenever there has been a withdrawal of the circulating medium—I always use the words "circulating medium" advisedly—lower prices have followed, if there is any increased supply it means higher prices, and if there is a decrease of supply it means lower prices. I do not advocate the continual or undue tampering with the circulating medium, but if it is a fact that from the circulating medium, a portion of which is silver and a portion gold, silver has been withdrawn and gold has not been forthcoming to make up the deficiency, and as the population and the commodities of the world increase the demand for silver and gold increases also; a larger amount of gold would be necessary in order to measure those products than previously. Supposing an increase in the output of gold, that increase would be required for the normal wants of the world as measured with the population and commodities with which it has to be measured, that is my idea of the matter.

7913. I understand your idea to be this, that by restoring silver to the position that it occupied formerly, and relieving the pressure upon gold, it might be a great advantage?—Yes.

7914. You were asked by Lord Vernon that if these were your views how you could account for the fact that wheat rose in 1891 to 40*s.* per quarter. I have referred to the statistics, and I find that the average price was 37*s.* per quarter in that year. I wanted to ask you whether you are aware of the fact that with some variations the fall in the price of wheat has been pretty continuous since 1873?—Yes, I am aware of that.

7915. Are you acquainted with the argument which is often used that the effect of the fall of silver is to give a bonus to the wheat which is exported from silver-using countries to gold-using countries?—Yes, I am aware of that argument.

7916. Are you aware that in that particular year 1891 there was a very considerable rise, a temporary rise, which lasted for some months, in the price of silver?—As far as I recollect, I cannot say positively that there was a rise. I cannot positively speak upon that point.

7917. It was a fact, and that might account for the rise in wheat?—It might have some effect upon it. I would like to say once more with regard to those prices—I have said it before, I believe—that one wants almost to make it a matter of great research to be able to answer every question definitely as to the prices. The price of wheat, for instance, might rise at a certain period of a year, through the prospect of a bad crop in the United States. I said there was a rise and fall in prices independently of the circulating medium, but that is an inner circle, as it were; but the money question is the outside factor which guides prices.

Rent

7918. (*Mr. Little.*) The effect of your evidence as regards Suffolk, is that with regard to a great deal of land rent was practically extinguished?—That is so.

7919. And I imagine that in many cases, even now, rents have scarcely been adjusted to the prices of to-day?—They certainly have not, because the prices of to-day are lower than ever they were since I have seen a day.

7920. If a still further fall in prices were to take place, the area of land which would bear no rent must be greatly extended?—I am afraid that is so.

7921. The consequence of any further fall would be a greater extension of the area yielding no rent?—Yes.

Tithe.

7922. Is not in many cases the tithe fully equal to the entire value of the land?—It is in some cases.

7923. Do you know whether the Act of 1891 has in such cases been brought into operation?—I do not know.

7924. You have not considered whether the question of tithe when it equals the whole value of the land shall be re-opened?—The question of tithes is an exceedingly difficult one, whether it should be revalued or not I hardly know what to say. An arrangement was entered into in 1836, I believe, and it was arranged accordingly, but the conditions under which agriculture was carried on then are very different to what they are to-day. Nevertheless it was an arrangement made. Whether anything could be devised, whether the payer could be relieved and the owner not mulcted I do not know.

Rates.

7925. With regard to rates I understand that your rates have not increased. Are they not more in ratio to the value of the produce than they were?—Yes, I think they are.

7926. Therefore they are a greater burden?—They would be in that case.

7927. And whether paid by the landlord or the tenant they have still to come out of the produce?—Yes.

7928. And they extract a larger quantity of the produce than they did?—Yes.

Land Tax.

7929. The land tax is a tax from which the county of Suffolk suffers peculiarly, it presses there with exceptional severity, does it not?—I do not quite know how it is generally.

7930. What does it amount to on the farms that you are acquainted with?—I believe the land tax in the village in which I live is 11*d.* in the pound.

7931. In some Suffolk parishes it is considerably more, is it not?—I do not know what it is generally.

Spitalfields Market.

7932. With regard to the Spitalfields Market that you spoke of, that was a case where the monopoly of the market was in private hands?—Yes.

7933. That was a case that was inquired into by the Markets Commission, and they made certain recommendations as to dealing with monopolies in private hands?—I do not know that they did so myself.

Mr. C. D. Johnson. 16 Feb. 1894.

7934. Would you be in favour of such monopolies being acquired by local authorities on equitable terms?—It would be probably better. I do not know what the local authorities would do when they acquired them. If they carried them on on the same footing there would be no advantage. I am assuming that they would not, if they did there would be no advantage.

7935. You think that would be a better guarantee for the public interest if markets were in the hands of the local authorities than in that of a private individual?—I should imagine it would.

The marking of foreign meat.

7936. With regard to selling foreign produce for what it is, without pledging yourself to particular detail, would you be in favour of everything of the kind being sold for what it really is?—Certainly; I think, in justice to the English producer, and in justice to the public as well with regard to foreign produce, every step that it is possible to take should be taken to ensure that foreign produce is not sold as English. It is defrauding the community, and injuring the agricultural producer. I know that in my county, until recently, we have not been very active in adopting the Merchandise Marks Act. Within four miles of my own house, a few days ago, we had an instance of a little grocer selling margarine for butter. Our inspector goes to a cottage and buys something supposed to be butter, and after a little conversation the woman who served him said: "If I had known you had been coming I would not have sold it to you;" and a conviction followed. That is a case in point. That is a case of margarine. I have heard from Lord Vernon, to-day, the condition of things with reference to the Committee which sat on this question of foreign meat, that they found it difficult to adopt any system by which the foreign meat could be marked. I only regret to hear that such is the fact. Whether any more light can be thrown upon it, or whether any individual can be sufficiently ingenious to adopt a means by which foreign meat could be detected, I do not know, but he would be conferring a boon upon the agricultural community if he did so. I think if a gentleman sells New Zealand mutton (I do not wish to interfere with him), he must not sell it as English mutton.

Beer.

7937. And that you would extend to other produce?—Yes, to anything.

7938. Would you say that perhaps beer should be sold for what it is?—I do not mind buying beer made of anything that makes it palatable, but if it makes it injurious I do object. If we look into the dictionary we find that beer is a liquor brewed from malt and hops, and I think that that definition should still continue, and that that definition should be acknowledged as fair, and that anything brewed from anything else but malt and hops should be declared as such. You would be conferring on the agricultural community, particularly on the lower classes of the agricultural community, a great boon, and they would be very glad and hail with satisfaction any legislation to show that what is called beer is brewed from malt and hops. If they knew it was brewed from malt and hops they would be very glad to buy it and drink it.

Small holdings.

7939. (*Mr. Gilmour.*) Nothing has been done under the Small Holdings Act, I understand. Have you had any application to the County Council to put it into operation?—No, we have not. If I may be allowed to read a letter which bears almost directly on that matter I will do so. I asked a friend of mine who happens to live in a parish where I know something about the condition of allotments, and I wrote to him on this question, and he replied to me as follows on the 18th of December:—"In answer to yours, we have 43 acres of "land allotted under the Enclosure Act for allotments. "The rents now average 23*s.* per acre, free of all rates, "tithe, &c., in quarter and half acre plots, about one mile "from the furthest cottages. Michaelmas, 1893, we had "23 unlet, but have now let 7 acres to Sturgeon Brothers, "at 10*s.* per acre. They are large machinists and "hire 10 acres in a batch. We have two small holdings of 40 acres each unlet which the landlord is "farming; one farm of 67 acres 1 rood 34 poles unlet, "and has been laying dormant for the last 5 years. "Another gentleman has about 500 acres unlet that he "is farming himself for the want of tenants. There "are not more than two or three labourers out of work; "the wages are 10*s.* per week; 5 years ago we were "paying 11*s.* You can make any use you please of "this."

Mr. C. D. Johnson. 16 Feb. 1894.

7940. From what you have heard in your county latterly have large or small farms been most in demand on the whole, which of these farms have been better able to meet the rent?—I think that perhaps of all those classes as a rule the small holders have been worse placed. At any rate, there were more small holders in Suffolk 25 years ago than there are to-day. I do not think that those small holdings have ceased to be such through any arbitrary action of the landlord. I believe they have lapsed as it were, they have been given up, and there have been none to take them—they seem to have lapsed.

Large and small farms compared.

Free sale.

7941. With regard to those farms where you have got freedom of sale, what is the custom as to the equivalent brought on to your farm for the produce sold off?—I do not think there has been a stipulation on behalf of the landlord that anything should be returned as a rule. The position is this: this last few years things have been so bad and rents falling, that landlords have been rather glad to keep their tenants, provided that they paid the rent and kept in occupation. I do not say that the landlords are arbitrary; but there are cases where rent is a necessity, and where the landlords have been glad to retain their tenants and allow them a license, in fact without being particular as to what they did.

7942. Practically, would you consider that freedom of sale would be of practical use to the tenant and that it would be only fair that there should be a proper equivalent payable to the landlord on what he did sell?—A proper equivalent?. Do you take it as a sum of money to the landlord or something returned to the land?

7943. Something returned to the land?—I confess myself that if he kept the land in fair condition and left the tenancy in the four-course shift there would be no grievance. As to the question of an equivalent there is so much difference of opinion upon that subject that it is rather difficult to say. Some people think if you use artificial manure it is injurious, but the teachings of the scientists is to the contrary, so that it is debatable ground rather.

Prices of manures, &c.

7944. (*Mr. Clay.*) The Chairman asked you a question as to the fall in the price of manures, suggesting that that was a compensation for the depressed price of our produce. Is it your opinion that you have got your cakes and manures much cheaper?—Some of them are cheaper; they are not all. At the present time linseed cake is dear as compared with corn.

7945. Have not oil-cakes and cotton cakes been a deal dearer in the last three or four years?—I am using very little because corn is cheaper, and I think that cake is very dear as compared with the price of corn.

7946. Therefore we do not derive much benefit from that?—Not altogether. I mentioned nitrate of soda; it is, perhaps, one of the most useful manures that a farmer uses, and the price does not fall. There is a protection or a company, or something of the kind, to proctect their output so that the price does not fall, and, therefore, the price of nitrate of soda remains at 9*l.* 7*s.* 6*d.* or 9*l.* 10*s.* 4*d.*

7947. And the price of sulphate of ammonia remains about the same?—That generally goes with it.

7948. Therefore the low price of corn that you are receiving, and the cheaper price of manures does not compensate the farmer?—It does not.

Potato growing.

7949. You seem to point to something to relieve your trade in the shape of growing potatoes. Has potatoe growing been a profitable part of your business of farming?—I think that, perhaps, on the whole I have done better. I have saved myself a bit, and put myself in a better position by growing more this last year. I grew a pretty good quality of potatoes, and they have stood in my stead a bit as it were.

7950. That is perhaps exceptional?—That quality is not generally grown in my neighbourhood.

7951. When you speak of those exceptional cases it does not prove the rule?—Quite right.

7952. Potatoes, as a rule, in Scotland (and perhaps it is as bad in England) are sold at a ruinous price?—They are sold at a very low price.

7953. What is your price per ton?—Potatoes now can be bought—you are asking generally—in some parts of Suffolk, and in a great many parts of Cambridge and Norfolk at 1*l.* to 22*s.* and 23*s.* per ton.

Mr. O. D. Johnson. 16 Feb. 1894.

Rent.

7954. That would pay neither rent nor expenses?—That is an extraordinary low price, but they grow a large quantity; I happen to grow a better quality.

7955. Considering what you have seen and what lies before us, do you think that the rent of land is likely to be maintained?—It cannot get lower in many cases, unless it goes to nothing.

7956. Is it likely to improve at present prices with the present produce of farming?—I hardly know how to answer that question; they are so variable. In some cases where they are at the lowest with those rents that we are speaking of, nominal rents of some 5*s*. per acre, they will be able to be maintained by partial cultivation and taking advantage of what a man might sell. Where they are holding under an old hire they will have to come out, and drop down to those prices, but with the prices of last Michaelmas they cannot get much lower.

Low prices.

7957. Do you think that the prices of produce—corn and beef, and mutton, and wool have seen their lowest?—I cannot say that they have seen their lowest.

The currency.

7958. (*Mr. Giffen.*) You told us, I think, in reply to Mr. Chaplin, a little time ago, that you used the phrase "circulating medium" advisedly, and that you were of opinion that the restriction of the circulating medium of the world within the last 20 years by the demonetisation of silver has been largely the cause of the fall of prices within the last 20 or 25 years. Do you adhere to that opinion as a matter of theory that prices depend upon the quantity of the circulating medium?—Yes, I do.

7959. Have you considered the discussions which have taken place upon the point, and are you aware that there is a very large body of expert opinion to the effect that prices do not depend upon the quantity of the circulating medium, but that the quantity of the circulating medium has an effect upon the price, and follows upon the prices?—The quantity of the circulating medium follows on the prices, do you mean?

7960. Yes?—I was not aware of that. I have heard this question discussed by experts at different times, and I have formed the opinion that those who advocate the reinstating of silver to its former position, and by that means increasing the circulating medium, have by far the best of the argument.

7961. Are you not aware that there is a large body of expert opinion to the contrary effect; for instance, that there is the opinion of Mr. Tooke, who is, perhaps, the most famous author upon prices, to the effect that the quantity of circulating medium is an effect of the price, but the changes precede the expansion or contraction of the circulating medium?—I was not aware of that.

7962. I wish to know, as a matter of fact, whether you include the circulation of paper as part of the circulating medium, or do you not? In what sense do you use the phrase, "Circulating medium"?—Well, I must, of course, give my opinion; I do not know if it is worth very much. I think this, with reference to the circulating medium, it might be paper, but you must not back the paper with gold; if backed with gold it is practically gold. I hold this: I have been met in discussing this matter with a friend of mine, by his saying, "I pay by cheque." But I say that that is not a paper payment; it is a gold payment. If I give you a cheque in payment of anything I may buy of you, either I have got that gold at my bankers to pay that cheque, or my bankers have sufficient confidence in me to pay it.

7963. But I am taking the case that there is no gold at the bankers or anywhere else. The paper is a circulating medium, and is effective enough to all intents and purposes?—As long as the man's credit is good behind the paper; but you must not put gold behind; if you do it is gold.

7964. But still there is no actual gold representing the paper?—Then you come to the question as to whether Her Majesty's Government, and the credit of the individual is sufficiently strong to back the paper. I think that paper is no use without a sufficient amount of gold behind it, or something which is gold's equivalent.

7965. Why a sufficient amount of gold? "A sufficient amount" does not give us much light upon what you have said?—It is rather difficult to say what is a sufficient amount of gold. The reserve necessary to hold is a question for the banking authorities of England, I suppose, or for the Manager of the Bank of England. Our present system is this: that where notes are issued, there is gold behind those notes, and they are exchangeable for gold at any time.

Mr. O. D. Johnson. 16 Feb. 1894.

7966. But, as a matter of fact, there is an indefinitely varied amount of the metal which is standard money, which is kept for the purpose of making sure of the payment of the circulating medium of paper. Some people may have 5 per cent., and some 10 per cent., and some 20 per cent., and some 30 per cent. on account of the paper which is issued?—I do not quite gather what you mean.

7967. I mean that the quantity of bullion which is kept to secure the payment varies indefinitely; so that when you use the words "circulating medium," with reference to the paper, what I wish to know is, whether it is the paper which regulates the price, or the gold at the back of it?—I take it that it is necessary to keep a sufficient amount of bullion to honour that paper when presented.

7968. Then it is not the quantity of the circulating medium which determines the prices, but the quantity of bullion which the paper represents?—The bullion is the circulating medium, although the paper represents it. The gold is behind the paper.

7969. Still, I think that is using "circulating medium" in a sense in which a writer like Mr. Tooke would not use it?—I may use the phrase "circulating medium" in a sense in which an expert would not use it. I take it for all intents and purposes that money is the circulating medium; whether that money is gold or silver, it is the circulating medium.

7970. But not the paper?—We have always thought that in this country money is behind paper. There was a time previous to 1821 and 1823, when there was an issue of bank notes without gold behind it. That was in times when there was a great deal of harassing by wars and so on; but I understand that that paper was suddenly withdrawn, and that, on the withdrawal of that paper, down went prices. It was a contraction of the circulating medium that caused the fall of prices.

7971. That was the withdrawal of inconvertible paper, but I am speaking of convertible paper?—Convertible paper has money behind it.

7972. But that money may be sometimes 5 per cent. of the quantity of paper, and sometimes 30 and 50 per cent., so that it is very important to know whether you mean by "circulating medium" the quantity of paper, or the quantity of bullion which it represents?—That is a detail of this question which, not being an expert, I am not able to answer, but I take it that this country has practically gold behind its paper.

7973. And other countries?—I do not know what the other countries do in all cases. I suppose they honour their paper; whether Russia does or not I do not know.

7974. This all bears upon the question of how much the circulating medium of the world has been affected by the monetary changes of the last 20 or 25 years, because if you include the paper in the circulating medium, you may have one answer, and if you do not include it, you may have a different answer?—That is an intricate question that I cannot answer.

7975. But is not it a material one? You told me that you used the phrase "circulating medium," advisedly?—As long as the circulating medium, whether paper or gold, be current and exchangeable, it must be exchangeable for gold. I do not know how the credit of the world could be kept up without gold behind it.

7976. Because if you secure the paper by 50 per cent. of gold being kept, and then at a later time by 20 per cent of gold, you might have diminished all the gold in the interval, but there would be no change in prices; no restriction of the circulating medium in the sense in which you are now using it?—I do not know how that would be.

7977. Because the 20 per cent. goes as far as the 50 per cent.?—This is an international and not a national subject. Whatever may be done in this country, and whatever may be kept behind the paper in the shape of gold or buillion, the money question is not a national, but an international question; and the circulating medium, and articles of that kind, are so mixed, that if you contract the amount of the circulating medium in any one quarter of the world, you contract it all over.

Mr. O. D. Johnson.
16 Feb. 1894.

7978. Do you wish "circulating medium" to be described so as to include paper or not?—I use it to include paper, and I take it, that behind that paper, there is gold. I am not capable of going into that detail. It is a question that I have not considered. I imagine that the authorities of the Bank of England or Her Majesty's Government, or whoever controls money matters, find it necessary to keep gold behind their paper, and whether it be from tranquillity and peace, or whatever it may be, they have sometimes, more or less, it is a question that I cannot answer.

7979. I ask the question because I believe that, as a matter of fact, there is a large body of expert opinion to the effect that the quantity of the circulating medium in the technical sense of the word, in the last 20 or 25 years has enormously increased, in fact, to a degree that it never increased before?—I take it that more of the circulating medium is required as population and commodities increase; and there must be a normal increase of that circulating medium in a just proportion to population and commodities.

7980. Then the contention is that it has increased?—I understand your contention is that it has increased.

7981. I am not speaking of my opinion, but I am saying there is a large body of expert opinion to the effect that the circulating medium, using the phrase in its technical sense, has enormously increased within the last 25 years. Your statement is to the effect that it has been diminished?—That the circulating medium, so far as that is comprised of the metals silver and gold, silver being withdrawn, has decreased. As to the amount in circulation I cannot say anything about it. Even if it has increased it would be necessary in proportion to the increase of population and commodities.

7982. You cannot carry us any further with the facts of the question as to what the quantity of the circulating medium has been, or is?—No.

7983. With regard to the demonetisation of silver and the withdrawal of the silver, which is the phrase you have just used, how much silver has been withdrawn?—I do not know the amount. I did not happen to come here with figures connected with the money question. I do not pose as an expert on this subject. Had I done so I should have looked up the figures. I take it if these various European countries, and now India, with all the silver which is necessary for their currency purposes, use another standard, and have displaced silver, that that would be a considerable sum.

7984. I am asking the question because it is a question of fact, whether silver has been withdrawn to any extent at all?—I mean the output of silver. I believe at one time silver was coinable by the owners of it.

7985. Still speaking of the withdrawal of silver, I wish to know in what sense the phrase was used; how much silver has been withdrawn by Germany, for instance?—If it was optional for the owner of silver to have it coined, and now it is not, it would make a difference.

7986. But that is not the same thing as the withdrawal; I am speaking now of the withdrawal and the displacement of silver?—Supposing the same demand after its withdrawal, there is still a greater demand for gold.

7987. But I am asking now to what extent, as a matter of fact, has silver been withdrawn?—That I cannot say; I call it a withdrawal or displacement, silver not taking the place that it did in the nations of the world.

7988. But that is different from actual withdrawal from monetary circulation?—Whether that is so I cannot answer.

7989. It is a question of theory you are coming upon; you are using the phrase "withdrawal of silver," and I wish to know, exactly, in what sense the phrase is used?—The sense in which I used it was, that silver being the standard of those various countries which comprise the Latin Union, and also of America, and now those countries having adopted another standard, they have displaced silver. I, perhaps, misapplied "withdrawal," and should have used the word "displaced" or "abandoned."

7990. You do not mean that silver was the standard, but you mean a bimetallic standard?—They were silver countries, were they not?

7991. I should not say that France was a silver country?—Was not Italy a silver country?

Mr. O. D. Johnson.
16 Feb. 1894.

7992. I think not; I wish to know what the meaning of your language is?—India is a silver country, or has been till now.

7993. I am putting all these questions because I am coming to a further question, and I think I may as well put it at once You say that you wish silver to be restored to the position which it occupied 20 or 30 years ago; is that so?—Yes.

7994. That does not include the proposition that the United Kingdom should become a country with a bimetallic standard?—Whether that does or does not, I do not know. I do not ask, and I do not suggest, and I do not think it is right for any Government to tamper with the circulating medium, that is, that they should not by any arbitrary action, either suddenly increase or suddenly decrease the circulating medium.

7995. Still, you speak of the restoration of silver, and I wish to know how far that goes in your opinion?—I take it that those countries used silver to a very great deal larger extent than now, and so if silver were placed in the position it then occupied, it would be much more largely employed, and that would be, practically, putting it on a proper footing.

7996. But you do not propose anything with reference to the money of the United Kingdom in what you have said?—That is a matter I have not gone into, as to whether the United Kingdom should raise silver to a standard metal, and make more use of it.

7997. The contention of the people who propose the bimetallic standard as a remedy is that the United Kingdom ought to join in because the other countries will not do it unless the United Kingdom does?—Well, that would be a difficulty, but I should like to see the circulating medium current, because I think it would mean better prices.

7998. That is proposing something more than the restoration of silver to the position it occupied 20 or 25 years ago?—I should not object to seeing it go a little further. If the gold has a limited supply, and the requirements of the country are greater that would be an argument to make more use than we have done of it.

7999. That is a different thing from what you proposed in your evidence in chief?—That is the restoration of silver; if I did not then suggest quite far enough there is no reason why I should not amend it.

8000. There is another reason why I may put this question, but what I wish to ask now is whether the restoration of silver would not be a thing that would have no effect towards the end which you propose, because, as a matter of fact, more silver has been used for manufacturing purposes of late years than there would have been with the plan of restoration of silver which you propose?—I should not have thought so, but I do not know.

8001. I give you one instance upon which I would like your opinion, and that is that the United States was not a silver using country 20 or 25 years ago at all, and since then it has used much more, 100,000,000*l* sterling of silver?—The United States has, to a very great extent, developed and grown during the last few years.

8002. Still it has used silver as it did not use it 20 or 25 years ago. The United States down to 1878 was an inconvertible country, and I wish to know what the effect of the restoration is?—If they used paper I take it that the United States' requirements on the two standard metals which form the circulating medium of the world are almost new, and that would be a strong argument for it to be used.

8003. As a matter of fact they have used silver. Now, I must come to the other questions. Supposing all prices at the present moment of agricultural produce were to be multiplied by 10, I assume from what you say that you would consider that that would be an enormous advantage to the agricultural interest?—All prices multiplied by 10?

8004. Yes, all agricultural prices multiplied by 10?—Well, taking such an extraordinary jump it would make some of us very poor men rich at once.

8005. That is the hypothesis; but supposing at the same time as to your rent and your wages and your rates and all your outgoings, and all the things that you purchase with the surplus which you obtain, that

Mr. O. D. Johnson. 16 Feb. 1894.

the prices of those are also to be multiplied by 10; would you be any better off with that multiplication?—We should be better off, we should have a better start. We were beaten by a continual fall in prices—what we had two or ten years ago is not worth the money to-day, and some of us have found the pressure of paying in gold so burdensome on account of the gradual depreciation, as I think, through the withdrawal of silver.

8006. I assume that everything is instantly multiplied by 10?—It would better our start with that good capital—although we had to pay equally in proportion, that capital which we then realised would set us going.

8007. What advantage would you have in your surplus being increased to 10 times what it was when it would not buy anything that you wished to buy any more than the surplus that you have now, I do not see the advantage?—I am myself a poor man, an owner of property with a little mortgage on it; if a sack of wheat or beans was 10 times its own value and enabled me to pay a certain interest, I would have a bigger surplus.

8008. But the mortgage is also multiplied by 10?—Yes.

8009. That is my hypothesis?—It would take time to do that.

8010. Supposing everything was multiplied by 10?—But the land is mine subject to a fixed gold charge.

8011. I am entitled to put the hypothesis: supposing everything was to be once multiplied by 10, you would not be any better off?—Excuse me, your hypothesis would not possibly come about, because you cannot multiply a man's liabilities, they are existing ones.

8012. I wish to put the hypothesis to you, if everything was multiplied by 10 you would not be better off than you are now?—If everything was multiplied by 10, it is rather a difficult question to answer—it depends upon what a man's liabilities are.

8013. Fixed liabilities are also multiplied by 10?—Yes, if you have no profits; I do not know how to follow you.

8014. What you want, in point of fact, is a rise in the price of agricultural produce without any other change occurring at the same time?—No, I do not say that—other changes would occur. I do not ask for that, it would not follow. What I put before you is: that there has been a depreciation through an arbitrary change in the currency, and that it is not right, either to arbitrarily reduce or to arbitrarily increase the circulating medium. I think it would be the duty of governments and nations to keep the amount of the circulating medium as near as possible at a normal rate as compared with the population and commodities and I think, wrongly or rightly, that that circulating medium was reduced by the action taken with regard to the silver.

Mr. O. D Johnson. 16 Feb. 1894.

8015. But still the effect of any change in money (I do not say at once) would be ultimately to bring about the change that I have put to you: supposing you increase the money by 10 you would increase everything by 10, and when all the changes had been allowed for you would be no better off?—But that ultimately would take a long time to bring about, just as the present one has been gradually settling upon us for many years. Supposing prices did expand, during the expansion, we who have a contract payable in gold would relieve ourselves of a difficulty.

8016. You want the change because you think you are so placed that you would benefit from the fact of the change itself although ultimately everybody would be exactly as they were before?—If you talk of "ultimately," after ruining the present generation ultimately, say 50 or 20 years if you please, and say 1*s.* will buy what 2*s.* does now ultimately when things come to a settled condition again, and circulating mediums and all things have adjusted themselves, then it would not matter.

8017. You are proposing a change which is to unsettle the state of things because things have settled down to the low prices?—But they have not settled down with me because I have got a mortgage payable in gold, and I cannot see why I should pay that interest in gold with those prices that have been brought about arbitrarily.

8018. But still if you had no mortgage you would not be interested in the question?—I might have some other contract. I have one which lasts over two years, the hire of a farm; if prices gradually get shrinking they will put me in a worse position, nobody has hope, and no inducement to employ. That is the state of things brought about by the existing condition of money.

8019. Are you quite sure that you are correct in anticipating a further fall in prices?—I am not quite sure; I am not sure that they are not showing signs of going further down.

The witness withdrew.

Mr. T. Carrington Smith called and examined.

Mr. T. C. Smith. 16 Feb. 1894.

8020. (*Chairman.*) You are a tenant farmer living in Staffordshire, I believe?—Yes.

8021. And you also own land?—Yes.

8022. How much do you hold yourself?—I occupy nearly 250 acres.

8023. How much do you own?—150.

8024. Do you let that?—I let it in two farms.

8025. I think you have been elected for some years chairman of the Staffordshire Chamber of Agriculture?—For many years.

8026. Do you come here to represent that Association?—I do.

Reduction of rent.

8027. What has been the fall of rents in your district?—Do you speak of the whole county or of my own immediate district?

8028. Of your own immediate district?—I am able to give you exactly the fall of rents in the estate on which I am an occupier, by the kind permission of the landlord's agent. It is between 10 and 12 per cent.

8029. Whom do you hold under?—Lord Bagot.

8030. What is the size of his property?—Nearly 9,000 acres in Staffordshire.

8031. The reduction in rent has been about 12 per cent. you say; what does the rent amount to, do you know?—Now, per acre, it is 24*s.* 6*d.*; I think that gives 10,000*l.* odd. I have the figures.

8032. Has that reduction of rent been sufficient to enable the tenants to remain and to keep their farms?—I am sorry to say there have been great changes during the time of my occupation. Mine is a long occupation of 38 years, but almost every farm has changed twice round me, excepting in my own case.

Mr. T. C. Smith. 16 Feb. 1894.

8033. Has that change been more in modern than in past times?—On that estate?

8034. Yes?—I think so.

Arrears of rent.

8035. Are there many arrears on the property now?—There are none.

8036. In 1880 what were the arrears?—3,200*l.*

8037. I suppose that was due to the very bad year of 1879?—Partly so, and partly to the claim under the law of distress which the landlord then had.

8038. Then the absence of arrears at the present moment tends to show that the tenants have been able to pay, and that the reduction of the rent has been a fair one?—The financial condition of the tenants and also of the landlords with respect to the receipt of rent is better now than it was a dozen years ago.

8039. Better than it was?—Yes, partly because of the reduction of rent, and partly because the payment has been more regularly enforced.

Characteristics of farm.

8040. What is the general condition of the land; is it arable land, or was it arable land at one time?—The arable area has been very largely reduced, and the grass area proportionately increased during the time I speak of.

Land laid down to grass.

8041. Has the land been laid down in permanent pasture?—Yes.

8042. To a large extent?—To a large extent.

Mr. T. C. Smith.
16 Feb. 1894.

8043. Take your own case, what has been the reduction of the arable?—When my tenancy began in 1856 it was one-half arable and one-half pasture; now it is one-eighth arable.

8044. Only one-eighth?—Yes, and seven-eighths pasture and meadow.

8045. Then, I suppose, it is due to the extent of land which has been laid down to grass that the rent has been maintained to the extent it has, and that the condition is fairly prosperous?—Largely due.

8046. How has the laying down to grass been carried out?—Sometimes by mutual arrangement, and sometimes by the tenant only.

8047. Where it has been done by agreement with the landlord, has the landlord contributed?—I was unable myself to come to any arrangement with the landlord, so I did it myself and made the arrangement after the work was done. That arrangement has now been made.

8048. What is the arrangement now?—The arrangement is that by a transfer of the arable land to permanent pasture, that is the tenant giving up his right to plough, the landlord engages at the end of the tenancy to pay 5*l.* an acre to the tenant for the laying down of that land, the tenant on his side agreeing not to plough it at all under any circumstances.

8049. When it is laid down?—After it has been laid down.

8050. (*Viscount Cobham.*) Is that not dependent upon a certain sum having been spent per acre?—I think I must explain. The arrangement was not made until the land had been down, a good deal of it, 12 or 15 years, and so there was the valuation of the landlord, and my own valuation also.

8051. (*Chairman.*) Has that been generally the arrangement between landlords and tenants?—No, it is quite an exceptional one.

8052. What is the usual plan?—It frequently happens that a landlord engages to give the seeds and one top dressing, which you might put at from 50*s.* to 3*l.* an acre, then the tenant engages for a transfer of the schedule. At the same time it is only right to say that if that were done *ab initio* the landlord would be bound to submit also to a reduction of rent, but as in my own case the arrangement was not made until the land had been down—from 20 to 25 years a lot of it—so the letting value of that land was very greatly increased at the time the bargain was being made, so that it consequently followed that the landlord sacrificed no rent and is now receiving a rent which represents only a deduction of 1*s.* an acre from the highest point.

8053. I do not quite understand it—you say the arrangement was not made until you had laid down the grass for some years?—If I must put it, that is an arrangement which was forced by myself. We had a new agent with whom, I must say, I was not on good terms, and I felt that my position was unsafe under the law with respect to the land being laid down. I said to him, Now I must have an arrangement made with respect to the laying down. "I know," he says, "you are entitled to it"; but I could not get it until I gave him notice that I should plough it all up; the consequence was that he came over, and went over the farm with me and made terms. I was sorry to enforce it in such a way, but it left no bad feeling behind it, and it gave me the power of bargain.

8054. On the whole, do you think it a fair arrangement?—I do think it a fair arrangement.

8055. Is it the general arrangement that the landlord contributes, at the starting, the value of the seed?—I think I must not say general arrangement—sometimes there is that arrangement.

8056. What is the general arrangement?—It frequently happens that the tenant does it on speculation; sometimes he receives nothing whatever, at other times he enforces the arrangement by the threat of ploughing up.

Reduction of rent.

8057. In the case of large arable farms in your district, has there been a considerable fall of rent?—I am able to state from information that has been furnished to me—I cannot give the names—that on large estates where the proportion of arable land is great there has been a fall of 20 per cent. in the letting value of large farms—when I say large farms I mean farms of 400 acres, and so on.

8058. In the case of medium sized farms, principally pasture, what has happened?—There has been no fall at all.

Mr. T. C. Smith.
16 Feb. 1894.

8059. No fall at all?—Not on farms up to 150 acres all in grass.

8060. (*Viscount Cobham.*) What part of Staffordshire are you speaking of?—Mid-Staffordshire.

Competition for farms.

8061. (*Chairman.*) Are there many applicants for vacant farms in your district?—Yes; whenever a farm under 200 acres in good condition is vacant there is no difficulty whatever in letting it.

8062. Then on the whole the depression of agriculture in your district, if it is measured by rents, has not been considerable?—I think I put it in my paper that, in my own judgment taking the average of the whole county, it is about 10 per cent.

The Agricultural Holdings Act.

8063. Have you any opinion to give upon the Agricultural Holdings Act?—Yes, I have.

8064. What is your opinion about it?—That it is practically inoperative.

8065. How is that; is that because the custom of the country is more favourable to the tenants?—The custom of the country has gradually become more favourable, partly owing no doubt to the passing of the Act, because the valuers by arrangement amongst themselves have increased the things for which they give compensation under valuations that do not take place under the Act.

8066. The valuations do not take place according to the scheme of the Act, but I suppose claims are made?—Not under the Act.

8067. Not made under the Act?—I think I may honestly say that both landlords and tenants in my neighbourhood prefer not to conclude their tenancy under the Act, because of the fearful amount of legal uncertainty there is.

Compensation for improvements.

8068. Have you any recommendation to make with regard to an amendment of the Act; do you think it can be simplified so as to be brought more in accord with your customary arrangements?—Yes. Personally I wish myself that the tenant's claims for unexhausted improvements should be unrestricted by schedules, that he should have a right, of which he could not be deprived, to recover the full value of any agricultural improvement made by him.

8069. Would you make no exceptions to those?—No, granting that the word "agricultural" was in before "improvements."

8070. Would you allow the tenant to make any permanent improvements that he thinks fit?—I would, subject to the valuation.

8071. Such as laying down to grass?—Certainly.

8072. Or the erection of buildings?—Yes, subject, of course——

8073. Subject to what?—Subject to the decision of the arbitrator; it might be an improvement or it might not, it might simply be an expenditure.

8074. (*Sir Nigel Kingscote.*) That is material—with the consent of the landlord or without?—Without the consent of the landlord.

8075. He might put up what he liked?—Yes, but then it would be at his own risk.

8076. (*Chairman.*) Of course a building might be erected by the tenant which the arbitrator would not hold to be an improvement?—I would not give a shilling for a silo erected by a tenant—I would not give him a shilling, nor a brick, if I were called upon to arbitrate for a tenant putting up a silo.

8077. On the ground that it does not really add to the value?—Because it does not add to the value.

8078. Then, I see, you would give an absolute and indefeasible right to the tenant in respect to any agricultural improvement effected by him?—He proving that the land has risen in value—the onus of proof being on him.

8079. Including draining and everything—whatever it may be?—Yes.

8080. Take planting; would you allow the tenant to plant without the landlord's consent?—An orchard?

8081. Yes, an orchard?—I would.

The law of distress.

8082. Then with regard to the law of distress, have you formed an opinion about it?—I have, a strong one.

Mr. T. C. Smith.
16 Feb. 1894.

8083. What is that?—I would abolish it.

8084. You do not think it has any value?—The maintenance of distress for one year in the case of small tenants has none whatever, because it invites men to take farms who have not sufficient capital to take them, and I see many instances where the small tenant has lost the capital that he had, it being insufficient when he entered.

8085. By being induced to enter upon the farm, trusting to this protection?—That is so.

8086. But for the farmers who are now in possession, who are now tenants, might it not be rather an undesirable thing for them to abolish the law of distress: might it not at once give rise to the landlord pressing his claims at once?—I will give you an instance on my own estate: there are now no arrears, and the tenants are in better financial position, partly because the payment of the rent has been regularly enforced.

8087. Might it not lead to the rent being demanded in advance?—Yes, it would probably.

8088. You do not think that that would be a disadvantage in the long run?—It would be a decided advantage to the man's capital; he would take the farm at a less rental because he paid cash.

8089. Then the existing law rather tends to the introduction into the business of men of smaller capital?—The abolition of the law of distress would restrict competition to men with sufficient capital to take the farms, therefore it would induce capital to come into the occupation of land.

8090. Wherefore it seems to me rather to follow that the law is favourable to the men of small means?—No, I do not think it is; it leads them frequently to ruin.

8091. That is to say it may lead?—It does.

8092. It does lead?—Yes.

8093. (*Viscount Cobham.*) Do you say that the present law conduces to the larger occupation of land; that is to say, that more land is occupied under it than would otherwise be the case?—I did not go quite so far as that.

8094. The less competition there is, the less land there would be in cultivation in all probability?—We have every acre in cultivation in my county.

8095. You have got the men with capital to take it under the present law of distress?—Yes.

8096. (*Chairman.*) The whole of the land in your county is in cultivation?—Yes, in occupation.

8097. That being so, the effect of the law is, as I understand you to say, to widen the field of competition, and to bring into the field of competition a number of men with insufficient capital?—Who farm the land badly, and who eventually are ruined by the occupation of that land.

Adulteration.

8098. Then with regard to the adulteration of farm produce, what is your opinion?—I have a very strong feeling upon that. I wish the same principle to be applied to adulteration as has been already applied to contagious disease. I would check the importation of agricultural products at the ports by analytical examination. I would stop the importation of adulterated goods into this country, just as we have stopped the importation of animals from countries infected with contagious disease. With respect to the internal management of adulterated goods, I would have a uniform system of action all over the country, so that, for instance, by a duplicate means of the local authorities and the Government, we had certain fixed standards of purity for certain goods all over the country, for instance milk, for instance butter. There is just now before the stipendary magistrate in Manchester, the question of butter coming in from Ireland, adulterated by water. The information was laid with respect to the butter that it contained 25 per cent. of water. Mr. Headlam, who is the stipendiary magistrate, in giving his decision asked that the Government should fix the standard. I have letters here in my bag from the county analyst of Staffordshire, and from the inspectors in Staffordshire, who also ask for a fixed standard in milk, and for an examination of all imported agricultural produce at the port of entry. I have received a communication from Mr. Harold Faber, the Chief Commissioner of the Danish Government, who has been trying to bring about—as possibly some here know—an international conference with respect to the importation of dairy goods, and he is entirely in accord with the county analyst of Staffordshire, and with the inspectors in Staffordshire. I think, speaking from my position as county councillor in Staffordshire, I may say that Staffordshire is one of those counties which has exceptionally enforced the powers under the Food and Drugs Act; but our county analyst and Mr. Harold Faber, and the inspectors all agree that it is impossible for them to carry out the Food and Drugs Act unless inspection is enforced at the ports of entry, and unless, also the local authorities do their duty in the boroughs.

Mr. T. C. Smith.
16 Feb. 1894.

Effect of depression on landlords and tenants.

8099. You said just now that the average reduction of rent in your county is about 10 per cent. Do you consider that the depression of agriculture has been more felt by the tenants than by the landlords?—I have a very strong opinion, and I have been obliged to form it because of the social condition of the farm-houses around me. I do not speak of my own farm house, because fortunately I have an income independent of farming, but of the farms around my own, upon which the tenants have been changed several times during my residence in the neighbourhood. Farms with a rateable value of 500*l.* formerly had, we will say, two female household servants. On the farms immediately adjoining me—several of them I know quite well—there is no female household servant at the present time. The work of the house, sometimes including the dairy work—not often, because milk selling is more prevalent—is done by the members of the farmer's family. I am only stating this as a fact, not as a fact that I regret at all, but I am stating it to show that the depression has pressed socially upon the tenant in my judgment very much more than it has upon the landlord or upon the labourer.

Reduction in labour

8100. Is there less hired labour than formerly?—There is less hired labour than formerly.

8101. Are the farmers and their families doing more work themselves?—That is so.

Changes in tenancy.

8102. When changes have taken place in farms has a somewhat different class of tenant come in?—That is so.

8103. Are they men brought up in the neighbourhood, or do they come from a distance?—They come from the north of the county and from the adjoining county of Derbyshire, and in some instances from Cheshire.

8104. Are they men who are accustomed to do some work themselves?—Yes, and whose habit was also to have boys and young men living in the house as part of their household.

Changes in system of cultivation.

8105. Has there been a concurrent change rather in the nature of the cultivation, that is in making the farm more of a pasture farm than of an arable farm?—There is a very large increase of dairying.

8106. You think it is rather due to that that a different class of farmers has come in?—That is so.

8107. The men who were formerly mainly arable farmers, of a somewhat superior style?—Yes.

8108. They have left and their places are now occupied by dairy farmers, who do more of the business themselves?—That is so.

8109. That would tend to show that the effect of the depression has been to vary the cultivation of the land and to bring in a somewhat different class?—It has brought in quite a different class. You must bear in mind that I am speaking now of a district where the arable portion has been decreased very largely indeed.

8110. That I understand, it has been very largely decreased; in fact the farm has ceased to be an arable farm, it has become a pasture farm?—I may state with respect to my own farm, that I shall not thresh a grain of corn this year of last year's harvest, the straw and corn will be cut up together; there will be no threshing and no grinding.

8111. Will you say that is the case with farms as large as 400 or 500 acres, or not?—I think it would not be; several of the farms adjoining me are about that size, and there is some threshing there, but much less than formerly.

8112. I mean has the change of class of tenant applied to farms as large as 400 or 500 acres, or is it mainly in the smaller class of farms?—It has applied to farms up to 400 acres.

8113. Would a man farming farm of 300 or 400 acres work himself?—Certainly

Mr. T. C. Smith.

16 Feb. 1894.

Competition for farms.

8114. Formerly would he not do so?—Not nearly to so great an extent.

8115. Then apparently there is considerable competition for farms of this kind, and the result has been that rents have not been lowered so much as you would expect in times of depression?—It is a natural result where there is competition, but I hold that the landlord is perfectly entitled to get what rent he can get.

8116. Are there plenty of men of sufficient capital to work farms of this kind forthcoming?—Yes; I think the statement that I have already made, that there are no arrears of rent on the estate, shows that.

8117. It shows that they have capital enough, and that when farms are vacant, men of capital, although of a somewhat different class socially, are ready to come in?—Yes, and they pay their rents well.

Wages.

8118. Then as regards the agricultural labourers, what has been the effect upon them?—Their position is wonderfully improved.

8119. Have the wages been maintained in your district?—The wages are not so high as they were 20 years ago, during the seventies.

8120. What has been the reduction?—About 2*s.* a week from the highest point in the seventies.

8121. What was the highest point?—17*s.* a week with cottage and garden rent, and rate free.

8122. They have been reduced to 15*s.*?—And no rent or rates to pay, with coal drawn, and other perquisites, such as the growth of potatoes in the field.

8123. In considering the fall of prices in the interval, do you consider they are better off now at their present rate of wages than they were at the time you speak of?—Vastly better off, because they have fresh meat regularly now, whereas 25 years ago it was quite exceptional for a cottager to have mutton or beef in his cottage.

Labouring population.

8124. Has there been much falling off in the number of labourers?—We have not so many labourers, but the cottages are occupied—all of them.

8125. How do you account for that?—It so happens that in my parish and in the adjoining parishes there are a large number of old people who are never dispossessed, and who are living on and are not moved.

8126. Supported by their relatives, I presume?—By their relatives, and sometimes by out-door relief. I may say that the workhouse test is not enforced rigidly. It very frequently happens that a small sum in weekly payments is granted by the union, in addition to the payment exacted from the relatives of the old people; that is to say, we go upon the principle of not breaking up the home if possible.

Reduction of rent.

8127. I think you will say that the reductions in rental do not altogether cover the difference between the present income of the landlords and that in former times, that there is a greater outlay on the part of the landlords?—The landlord is required now, and I think very properly required, to equip his farms more thoroughly than he did when the times were very good, and I think that the difference between the actual rental paid by the tenant, and that which comes net into the pocket of the landlord is greater than it used to be.

8128. Has that been necessitated by the change in the cultivation of the land, do these pasture farms require more buildings?—Partly so; but irrespective of that the tenant in the Midland Counties, I think, is asking for the landlord to do more for the equipment of the farm than he used to do. The tenant 25 years ago frequently used to lay out money in permanent buildings, quite knowing that he had no right of recovery, but that he was at liberty to lay out money without asking the landlord. Now he would go straight to the landlord, and I think very properly say, Look here, we must have this done, and the landlord very properly says, well, I will do it.

8129. Is that because the tenants in those days held under lease?—They do not hold under lease in Staffordshire, they are almost all annual tenants, and have been as long as I have known it.

8130. But the tenants in those days, I suppose, being prosperous, expended their own capital?—They did, foolishly I hold, but they did.

8131. Trusting to their landlord to compensate them at the end of the tenancy, I presume; did they get compensation or not at the end?—No, they would not get compensation.

Mr. T. C. Smith.

16 Feb. 1894.

8132. Now the landlord is expected to make this outlay himself?—Yes. What you remarked just now has a good deal to do with it, that is to say, more live stock is kept upon the farm, and the requirements of buildings for the tenants consequently are greater, inasmuch as more shedding is required.

8133. Then the reduction of 10 per cent. hardly indicates the full effect of the change upon the landlord?—It does not.

The law of distress.

8134. (*Mr. Chaplin.*) With regard to what you said about the abolition of the law of distress, I understand that you admit that it would necessitate, perhaps, the payment of rent in advance, is that so?—It might do, but not necessarily.

8135. Where that did happen, I think you said it would be of great advantage to the capitalist, who could afford it?—It would, he would take his farm at less money because he paid cash.

8136. Now, in the case of the small men who could not pay the rent in advance, what would be the effect upon them?—We should still have the small men, but we should have the small men with more capital.

8137. But if it were necessary to pay the rent in advance and they were unable to do it they would be put out of the business altogether; is that not so?—Some of them would, and properly so, too.

8138. Whether they might think it properly so or not the effect would be that it would be injurious to these small men?—I think not.

8139. Not if they were deprived of their possibility of carrying on ther business?—Their possibility and probability of ruin.

8140. I suppose they ought to be the best judges of that for themselves?—I have seen many cases where they have walked into ruin by that.

8141. And have you seen no cases of small men who have not been in a position to pay their rent in advance, but who have succeeded or who are not ruined?—I could not prove a negative.

8142. Then I gathered from you that on the whole, although it might be a great advantage to the large capitalist in many cases, it must be more or less of a disadvantage to these small men?—No, I do not own that at all.

8143. You do not think so?—I do not think so.

8144. But I understood you to admit that there were cases in which it would prevent them undertaking the occupation of farming at all?—Not having sufficient capital it would, and I should consider it desirable.

8145. But they might have sufficient capital, as I understand you, to conduct their farm with, although that capital would not be sufficient to enable them to pay the rent in advance?—You are assuming that the rent would always be demanded in advance.

8146. I take it upon your own statement that it might necessitate the payment of the rent in advance—that would be one of the results of the abolition of the law of distress you say, do you not?—Yes.

8147. Now I take the case of a small man who has capital enough to conduct his farm, but not sufficient capital to pay the rent in advance besides; in such a case it seems to me that it would inflict a great hardship upon him?—I do not think so.

8148. Why, if the fact of the payment of the rent in advance prevented his taking a farm which he would have been able to take and conduct with success without it?—I do not grant his success, I say his ruin.

8149. In cases where he has not sufficient capital you say that it would lead to his ruin?—And does.

8150. But I am assuming a case, which is a perfectly possible one, of a tenant who has sufficient capital to conduct a farm but not to pay the rent in advance besides; surely in cases of that sort you deprive him of an opportunity of earning his livelihood?—I as landlord should not object to let a farm to a tenant without the payment in advance, but I should consider that I was taking that risk upon myself which now is taken by other people.

8151. Yes, but there might be landlords who did not choose to take that view, and having lost the security which is given them by the present law of distress, they might say: "I must make sure by requiring pay-

Mr. T. C. Smith. 16 Feb. 1894.

ment in advance." That is a case which you submitted to the Commission might possibly occur. Then I say that in such a case surely it must be a hardship upon a man who has adequate capital for the conduct of a farm and who could conduct that farm satisfactorily but for the necessity of making this payment?—I take it that if he paid the rent in advance he would get the full discount of a payment for cash and would consequently pay probably 10 per cent. less for the use of that land than if he went upon credit.

8152. I now will ask you, whether in your opinion the abolition of the law of distress would not in any way injuriously affect the smaller farmers?—It would be to their advantage because they would take their land at less rent, they would be in a better financial position, and the receipt of the rent by the landlord would be safer than it now is even with this additional law of distress.

The Agricultural Holdings Act.

8153. I want, please, to ask you one or two questions with regard to your proposals as to the amendment of the Agricultural Holdings Act. I understand from the *précis* with which you have provided us that you wish Section 1 of the Agricultural Holdings Act of 1883 to be amended so as to run as follows:—"Where "a tenant has made on his holding any improvement "after the commencement of this Act he shall be "entitled at the determination of a tenancy to obtain "from the landlord as," &c., to the end of the section?—Yes.

Compensation for improvements.

8154. In that, I presume, you include any improvements that a tenant may think it desirable to make, whether the landlord's consent is given to these improvements or not?—That is so.

8155. That amendment would, I understand, enable the tenant at the determination of the tenancy, whether he quitted the farm or not, to call upon the landlord to pay him compensation for those improvements?—Yes.

8156. Now I will take the case where a tenant has made very elaborate buildings or very considerable buildings; do you contemplate that as one of the improvements which he would be entitled by law to make?—It might not be an improvement.

8157. No; but I am assuming a case where it is an improvement?—If an improvement, yes.

8158. Among the improvements that he would be entitled to make would be buildings?—Such sum as fairly represents the value of the improvement to an incoming tenant.

8159. Those would be one of the improvements that he might make?—Yes.

8160. Then at the determination of the tenancy he would be enabled to call upon the landlord for the increased value of the holding due to that improvement?—Due to that improvement.

8161. How is that increased value to be estimated?—By arbitration.

8162. By arbitration?—Yes.

8163. Not by any increase to the rent?—The payment by the landlord to the tenant would prevent an increase to the rent, inasmuch as it would put it into the tenant's power to make his bargain before his rent could be increased.

8164. If there is to be no increase of rent, where does the increased value to the property of the landlord arise?—If they could not make terms the probability is that the landlord would get rid of his tenant.

8165. That is no answer to my question. If there is to be no increase of the rent, where does the increased value arise?—The increasing of the rent would quite be within the power of the landlord; if the tenant did not agree to pay it, then he might leave; if the farm became vacant, and if it was an improvement and the land had increased in its letting power, the landlord would immediately receive the additional rent due to that improvement.

8166. We are speaking now of a case that might arise upon the determination of a tenancy?—Yes.

8167. Now I will take the case of where the tenant quits his farm, where a tenant gives notice and leaves the farm; would he be entitled then to claim compensation from the landlord?—Certainly.

8168. He would?—Certainly.

8169. How would the value of the improvement be estimated in that case?—By arbitration.

8170. Supposing the landlord was called upon to pay a large sum in compensation for this improvement by arbitration, and then, having to seek for a fresh tenant, he finds that he has no increase of rent, is that the position in which you think a landlord ought to be placed?—Then the arbitration would not be a correct one because it is limited by the value of the improvement to the incoming tenant.

Mr. T. C. Smith. 16 Feb. 1894.

8171. Is it not the case, as a matter of fact now, that when farms are quitted and are vacant, instead of being an increase there is almost invariably a decrease of the rent?—I have a case in point here.

8172. Yes, but would you answer that question, please: is it not usually the case, as far as you are acquainted with agricultural districts, that when a farm is now vacant instead of being an increase there is usually a decrease in the rent?—No, it is not.

8173. In what districts is that?—I am speaking now of Mid-Staffordshire. I know a farm of 150 acres which is rented at 300*l.* a year; it has been held by the tenant a long time. It is too dear; he asks for a decrease of rent of 30*l.*; the landlord does not give it; he is going next Lady-day. There are several applicants.

8174. Now this proposal of yours is to apply universally all over England; it is to be the law, I understand?—It is to be the law.

8175. You heard the evidence, I think, of the last witness?—I did, most of it.

8176. You would gather from him that it is usually the case on a change of tenancy in Suffolk at present that there is a decrease in the rent?—Yes.

8177. Now I am going to ask you to consider this case; supposing your principle is applied in Suffolk, that the tenant has made without the consent of the landlord a large outlay upon buildings; he finds at the end of a certain period that the farm no longer pays him; he gives up the farm, and when the farm is in the market the landlord finds it impossible to increase the rent, and he has, if he can let it at all, to take a great decrease; do you consider under those circumstances that the tenant is entitled to be paid compensation for his improvement?—So long as it fairly represents the value of the improvement to an incoming tenant, yes.

8178. But if there is no incoming tenant?—Then you would have a difficulty in proof.

8179. If there is no incoming tenant?—The landlord is the incoming tenant.

8180. And if owing to a fall in prices the land is absolutely worthless to cultivate, as we have been told by the last witness it frequently is, do you still think that under those circumstances the outgoing tenant ought to be compensated for his improvement which he had made without the consent and perhaps against the judgment of the landlord?—I still hold that where an improvement has been made which adds to the letting value of the farm compensation is due, and only in such case.

8181. When it adds to the letting value, but in this case that I have contemplated in Suffolk there would be no addition to the letting value, because I have taken the case of land in Suffolk, which, it is alleged, is absolutely worthless to cultivate?—If there is no letting value, but I do not believe there is such land.

8182. Then I am afraid you did not hear the evidence of the last witness?—I did not hear that it has no letting value.

8183. We have had a great deal of evidence before this Commission with regard to a quantity of land in various parts of England where there is no letting value at all, where it has been absolutely derelict?—I heard of 5*s.* an acre; but I must say I did not hear the whole of the evidence.

8184. We have had other evidence besides that; but if that were the case, if you were aware of that, if it was shown to you that such circumstances could occur, would you still think your principle applicable to all parts of England; would you still advocate this amendment?—I would still advocate the amendment so long as the tenant could prove, and only so long as that, that his improvement had added to the letting value.

8185. And that letting value is to be tested by what?—Arbitration.

The witness withdrew.

Adjourned to Thursday next at 12 o'clock.

For Mr. Carrington-Smith's further evidence *see* Question 9608.

Sixteenth Day.

Thursday, 22nd February 1894.

PRESENT:

The Right Hon. GEORGE JOHN SHAW LEFEVRE, M.P., in the Chair.

Viscount Cobham.
The Right Hon. Baron Vernon.
The Right Hon. Henry Chaplin, M.P.
Sir Robert Nigel Fitzhardinge Kingscote, K.C.B.
Robert Giffen, Esq., C.B.
Charles Isaac Elton, Esq., Q.C.
Captain Owen Thomas.
Francis Allston Channing, Esq., M.P.
John Clay, Esq.
Robert Lacey Everett, Esq., M.P.
John Gilmour, Esq.
George Lambert, Esq., M.P.
William Cutlack Little, Esq.
Charles Whitehead, Esq., F.L.S.

Herbert Lyon, Esq., *Secretary.*

R. F. Crawford, Esq., } *Assistant*
Freeman Thomas, Esq., } *Secretaries.*

Mr. John Clay, Junior, called and examined.

Mr. J. Clay, Junr. 2 Feb. 1894.

8186. (*Lord Cobham.*) You were one of the assistant commissioners of the Duke of Richmond's Commission, were you not?—Yes.

8187. You then reported upon American agriculture, I believe?—Yes.

8188. Will you state what means you have of judging of the state of agriculture in America at the present moment?—Well, for the last 12 years I have been very actively engaged in the cattle business. First in the range business; I commenced active range business in the year 1881, and I have continued that since. My largest business is in connexion with cattle in the Chicago stockyards, and Omaha; and loaning money upon mortgage upon farms; reporting upon loans for English and American clients; and that gives me a good general knowledge of agriculture in the Western States. I do not go into the Eastern or Southern States at all, except as far as I go into the Texan cattle business.

8189. You are more familiar with the live stock trade, but you can speak generally as to the position of agriculture, and particularly as to the position of the wheat grower?—I am intimately connected with Indian corn growing, and also indirectly with the wheat-growing industry.

Wheat growing in America.

8190. As to the wheat-growing industry in America, what have you to say?—We find the wheat-growing industry in a very depressed condition. It has never been in such a condition since I can remember, and I have been going to America for 20 years. In the Dakotas, where the largest portion of wheat has been growing, it is perfectly impossible to grow it at the price now.

8191. It is entirely a matter of price, I presume?—It is entirely a matter of price. I find, from personal contact with many of the men who are loaning money up there, that it is impossible to get the principal or interest upon the mortgages on farms. That is a very bad sign, because a man will almost do anything rather than let go his farm. I am speaking of the wheat-growing farms.

8192. Does that apply to all the States that supply wheat to the British markets?—No, it does not, because in a great number of States you have mixed farming. For instance, in the corn-growing, the maize-growing States, the farmers are well off at the present moment, comparatively well off, because they have had mixed agriculture.

8193. Will you specify which States are affected?—The States affected very severely are the Dakota's—North and South Dakota—and Northern Minnesota. Those are the wheat-growing States in our country, where they grow nothing but wheat alone.

8194. That is not a country of mixed cultivation?—No, because they cannot grow corn, and they have not got to the length that they can graze. The keeping of cattle up there is exceedingly difficult on account of the hard winter, and the result is that it is merely, to a large extent, a one crop country. *Mr. J. Clay, Junr.* 22 Feb. 1894.

8195. With regard to the States that you have mentioned, what should you say is the prospect before them?—Well, it is very bad. It is so bad that emigration is not only stopped going in there, but it is flowing the other way. You will find that, instead of emigration going into those States, that the labouring classes, those who can get away, the floating population, are leaving it.

Labour.

8196. Is the labour question becoming a serious one?—No, because there has been rather more labour than they needed up there, owing to the great reduction in the amount of wheat planted. You can easily understand that in a country like Dakota, there is a mixed population which has gone up there. They have no ties, and they float about. The population that have ties and houses cannot get away; they have their all invested, and they have to send all their wheat—it does not matter what the price is, because it is the only thing they have to sell.

8197. Do you think that the low cost of production in those States enables them to sell at a profit?—The wheat cannot be produced at the price.

Cost of production.

8198. Can the cost of production be further reduced?—I do not see how it can. You take wheat just now, 35 cents on the railroad at Dakota, and you grow 15 bushels of wheat at 35 cents; it comes to somewhere about 1*l.* an acre, and after that there is the hauling of it to the road. You can never produce an acre of wheat for a sovereign, or five dollars.

Reduction of freights.

8199. As to freights, do you see any prospect of their being further reduced?—Well, we thought in the Richmond Commission, when we reported, they would not be much further reduced, but we have been mistaken, and we do not know what the American railroads will do, more especially those running through the wheat district; two or three of them are in the hands of receivers. There is the Union Pacific, and then the Northern Pacific, which is distinctly a wheat railroad. It is in the hands of a receiver just now. It depends upon the receiver. He can make what rates he likes, because he has no interest on bonds to pay, and has only got his working expenses to meet.

8200. What do you consider is likely to be the case as regards competition with the British farmer from those parts of the world?—My own idea is that the railroads will get re-organised, and that they will have stiffer rates in the next few years. These railroads are not going to do business for nothing, and there will be stiffer rates in the way of transportation on the inland

Mr. J. Clay, Junr.
22 Feb. 1894.

railroads. But we have our ocean way. I do not think it will be any higher; it will be very likely less, and the tendency has been that way for a number of years.

Continuance of competition.

8201. Do you think that the wheat grower in the immediate future will be in a position to continue his competition in our markets?—It may go on for a year or two, but it is merely drawing the blood out of these men. They cannot go on for all time. Of course we can produce wheat very cheap, because we have such advantages in a new country like America.

Mortgages on land.

8202. What happens to the land when it falls into the hands of the mortgagees?—It generally lies fallow; they find it impossible to do anything. If you get a farm thrown upon your hands you cannot rent it, you cannot sell it, and it just lies there.

8203. Is there a considerable extent of land in the Western States in that condition?—A very large amount of it has been going into that condition. I have not got the exact statistics, but I find that the amount of new land which has been going into cultivation in these States is practically stopped; in fact, it has been declining the last year. That is a sign, of course, that wheat growing is not paying.

Exhaustion of soil by wheat.

8204. Does wheat growing show signs of exhausting the land that has been long under cultivation?—Yes, the wheat growing has been gradually going westward, but it has pretty nearly stopped and got to the absolute limit.

8205. Has it been found that the land under wheat cultivation for a considerable time has exhausted the land, and do the cultivators manure the land?—No, not at all. The State of Illinois, which was a great wheat-growing State, has been turned into grazing. It grows blue grass, in which it remains for several years, then it is ploughed and put down to corn a few years, and it keeps up the fertility of the soil; but in these northern States it is not likely that that can be done, because the keeping of cattle in winter costs a great deal of money, whereas in Illinois the cattle run out all the winter.

Continuance of competition.

8206. The general effect of your evidence on this head is that you consider that the present competition with the British farmer can only be maintained with great difficulty by the Western States?—We cannot maintain it at present prices.

8207. Still we get the wheat?—We will get it for two or three years, but they will have gradually to go to the wall by growing wheat at that price.

Indian corn growing.

8208. And as to the Indian corn grower, what will he do?—Well, the Indian corn grower comes in indirectly into competition with the British farmer in this way: that the amount of Indian corn that is exported to this country is very small, comparatively speaking; we probably produce about 2,000,000,000 bushels of Indian corn, and we only export somewhere about 7 per cent. in the raw material. Where we compete with the British farmer is in sending in the sheep, the beef, and, more especially, pork. All our beef and pork is raised upon Indian corn and grass, but Indian corn is the mainstay. It comes indirectly over here, in opposition to the British farmer. A little of it comes in the shape of beef, but the great amount of it in the shape of lard and pork and bacon, and so on.

8209. That is a prosperous industry at the present moment?—Yes, it is a prosperous industry. It depends very much upon the price of cattle. Of course the price of cattle is low just now, but hogs are high, and during the last 12 or 14 years we have had very fair prices for both cattle and hogs. I have got the statistics, showing for the last 16 years the prices, and the general average has been good, so that our farmers in the Western States, in the corn States, and in the grass-growing States could make a fair living, and the result is that they are in a prosperous way.

8210. Is that a different class of soil from the wheat-growing soil?—Not necessarily a different class of soil, but it takes a certain temperature. You cannot grow it in a cold climate; it needs a warm climate, it needs to be in the corn belt. Illinois, Iowa, Nebraska, Missouri, and Kansas are the great corn States.

8211. Where it can be suitably grown has it taken the place of wheat?—Almost entirely. In Illinois it has driven wheat practically out. In Illinois, Iowa, Nebraska, Kansas, and Missouri, those five great States, it has practically driven wheat out. There is still a great deal of wheat growing, but the staple industry is corn growing.

8212. Shall we have more and more meat sent to this country raised upon Indian corn?—I do not think we are going to have a great deal more; in fact, the statistics show rather a decline this year. Our export of cattle has rather declined this year.

Mr. J. Clay, Junr.
22 Feb. 1894.

Exports of American cattle.

8213. Is that owing to the price obtained here?—It is the price obtained here, and there has been a strong demand at home for the first six months of last year. Trade was good. Within the last six months we have had very bad trade.

Consumption of wheat.

8214. Does the home consumption of wheat rise with the population or faster than the population?—No, I would not like to say that, because you have got to look at what prices are and supply and demand. It varies a great deal. Sometimes if we have good trade over here, a little more will come this way, and if we have good times, and the labouring classes are well employed, we consume more there. Of course for a few years it has increased very rapidly, but for the last two years the exports have been standing still.

8215. The financial position of the farmer you have already dealt with?—To a certain extent. In the wheat States the financial condition is bad, and in the corn States it is good.

Interest on mortgage.

8216. What interest do you say the wheat-growing farmer has to pay for borrowed capital?—Well, the mortgages in that country, the best of them, are about 8 per cent. upon the farms.

8217. And what would be the current rate?—The current rate upon those farm mortgages is about 8 per cent., and probably a commission, which would raise it to 9 per cent.

8218. It has fallen considerably, I presume, within the last 20 years?—Originally it would be 10 and 12 per cent. When I went first to Illinois farm mortgages would be done at 10 per cent., that is 20 years ago, and now they are done at 6 per cent.

8219. Is the payment of interest the main burden on the shoulders of the farmer in the Western States?—No, that is not his main burden. Of course it is probably the principal burden, but his main burden is, of course, getting his implements and machinery. His land practically costs him nothing.

8220. His operations are practically on borrowed capital?—Nearly so. Then, of course, the rate is usurious. The rate of interest would be from 8 to 9 per cent. on a mortgage, but he would have to pay heavy interest to the local banker when he bought a horse or paid his taxes. The rate would run from 15 to 24 per cent. per annum.

8221. The cost of the necessaries of life generally are high in the United States; is not that so?—Wheat, of course, he has. Flour is very cheap, and meat, as a rule, is very cheap. Where the expense comes in is in clothing, &c.

8222. Apart from the provisions of the soil?—Yes, it is wonderful how little those people will do with.

Life of American farmers.

8223. Their life is a hard one, I have been given to understand?—Exceedingly. They are poorly housed, very poorly housed, and they are poorly clad, and they generally live upon what they cannot sell.

8224. And the work is very hard?—Yes, in the summer time. In the winter time there is very little work.

8225. And you say that the life of the American farmer is considerably harder than the life of a farmer here?—It is a much harder life than that of the agricultural labourer. You cannot compare him with a farmer here. I am talking of the western districts. If you take Illinois and the eastern districts, the farmers compare somewhat with the farmers in this country, but I am talking of the western agriculturists who are raising wheat; their lot does not compare with the agricultural labourer here.

8226. They have the responsibility of supervising their farms, and at the same time they have to work very hard with their hands?—It is mostly done by themselves. It is only a few men who hire any labourers in those farming districts. Every farmer does his own work.

8227. Are the women well employed?—The women do not work, as a rule, on the farm, except you take Swedes, Norwegians, and Germans. The first generation of them work on the farm, but the second generation stop; they do not work any more upon the farm.

Mr. J. Clay, Junr.
22 Feb. 1894.

"Ranche and range."

8228. As to "ranche and range," could you explain what are the systems represented by those words?—Well, "ranche" and "range" practically mean the same thing. The ranche is more enclosed. They are large enclosures, and the range is an open range, but they are practically the same in management. Now the record of them during the last 10 years has been disastrous. There has been a great deal of money lost upon them, and they have been continually declining. The open range business especially has been declining wonderfully, and we do not draw anything like the number of cattle from those regions that we used to do. On the other hand, the agricultural parts of the country have increased in cattle, so that the one has off-set the other, but the range business has been not only unprofitable, but very disastrous in many cases.

8229. That is entirely distinct from the industry of feeding cattle?—Yes, we draw a great portion of our feeding cattle from the range districts. Very few are able to feed them good enough to grow into fat cattle, and probably 30 per cent. of the range cattle are drafted on to the Indian corn farms and fed. This year they were drafted at probably 3 cents per pound upon the farm, live weight, and they are finished off.

8230. Do you get your supply of lean stock from the ranches?—Yes, very largely.

Cattle breeding in United States.

8231. Is cattle breeding practised on the farms now?—To a great extent.

8232. Then are there many ranges, which were previously occupied, abandoned?—A great number.

8233. And they have gone back into open prairie?—Yes, into open prairie. Well the cattle have disappeared, and some of the ranges have been divided up into pastures, and used agriculturally to a great extent.

8234. What will the future of those lands be? Will they be taken up for agricultural purposes?—They are grazing lands. West of a certain point—the 100th meridian—they are practically grazing lands.

8235. Are they suitable for enclosed farms?—Yes, for large enclosures; they will not do for 80 acre, or 160 acre farms, but probably from 5,000 to 20,000 acres and more.

System of Chicago Cattle Market.

8236. You are well acquanted with the chief western markets, and especially with the Chicago Market, are you not?—My firm operates in Chicago, Omaha, and Kansas City; those are the three great central markets.

8237. I shall be glad to have your evidence as to the system in vogue in these markets?—Would you like me to go from the very beginning to the end of it.

8238. Yes?—The first thing is the cattle coming by rail. We will take Chicago Market. It is a big square block of land, about 640 acres in extent, just a mile square; probably more than half of it is divided off into pens, and the railway roads are round about it, encircling it. The result is, that the cattle are concentrated, and come in from the different railroads by a branch line, by a belt road as it were, and are unloaded right into the yards. When they get there the cattle are fed and watered. Most of them arrive at 4 o'clock in the morning until 9 o'clock. We always try to have our cattle arrive at 6 o'clock in the morning, but of course, receiving 10,000 and 15,000, and up to sometimes as many as 32,000 a day, you cannot bring the thing at the proper moment, but the intention is, to be there from 4 o'clock till 9 o'clock.

8239. When does the market begin?—From 8 to 9 o'clock, and goes on till 3 o'clock. All our cattle are sold privately. There is no auctioneering; it is all done by private bargain, either sold per cwt. or per pound. We all work in decimals. The price is fixed according to the quality of the cattle, and the rest of the work is done by the weighing machines. We have no selling by the slump. The whole thing is done by weight. Immediately the cattle are sold they are taken out of the pen, driven to the weighbridge, and officially weighed there by men appointed by the Stock Yards Company, who are independent, of course, of both the buyer and seller. Their ticket is official, and that is taken in to the commission man, who counts it up, and it is handed around to the buyers, and he issues his cheque; in fact, to simplify business, no cheques go at all. This official ticket is merely signed by the buyer, and we hand it in to the bank, and the amount is transferred from the buyer's account to our account, and then, of course, we send out our money to the farmer who consigns the stock, or whoever he may be. It goes on every day. Our receipts at Chicago Yard ——

Mr. J. Clay, Junr.
22 Feb. 1894.

8240. Each beast is weighed?—No; for instance, we very seldom sell less than 20 cattle a car load, and they run up as high as 300 cattle at a time. Our weighbridges can weigh 100,000 lbs. at a time. That is practically 20 tons at a time, so that you can put 40 cattle on to the weighbridge and weigh them; and say 1,500 lbs. apiece, that is 60,000 lbs. at one time.

Sale by live weight.

8241. A system of selling by live weight is absolutely necessary then?—Of course you can weigh one animal just as well as 50.

8242. (*Captain Thomas.*) Would they be of the same quality?—Take 20 good bullocks; they are generally the same weight. We receive a large amount of butcher's stuff, that is, cows, and heifers, and bulls. We often get a load, and our salesmen classify them; probably five of them of one kind, 10 of another, and three of another. These are weighed separately, but generally the smallest draft is 20 head, and you can weigh from one up to 50 at a time upon these weighbridges.

Exports of live cattle and of beef.

8243. (*Lord Cobham.*) Is the bulk of the cattle sold at these great markets for exportation?—No, there is a very small proportion sold for exportation. In the year 1893 we received 3,143,000 cattle at Chicago. That is a decrease of nearly 400,000 from the year before. 70 per cent. of those cattle were killed in Chicago and 30 per cent. were shipped forward. Those cattle were shipped forward, going to New York, and Pittsburg, and Boston, and the Eastern States, and a certain proportion come here, exported here alive. But gradually we are drifting into the exporting of beef in the carcase. A very large amount of our beef is sent from Chicago into New York and Boston in the carcase.

8244. It will not prejudicially affect the English farmer if the future exportation takes the form of dead meat?—No; by sending them alive the offal can be utilised, whereas by sending the dead meat we utilise the offal at home. The offal is rather more valuable here.

8245. (*Lord Vernon.*) Of this 70 per cent., a large per-centage is exported in tins?—A great deal of it comes in the tin, and, of course, it is sent everywhere in this shape.

8246. When you say that it is killed at Chicago, it does not necessarily follow that it is consumed in the country, does it?—No; but of that meat over 55 per cent. will be consumed in the country. Of course, we tin a great deal, and we use a great deal of tinned meat at home.

8247. (*Lord Cobham.*) But you feel quite confident that the abandonment of live stock transit will not materially affect the export trade?—Not the slightest. It would for a time, of course, but it would gradually drift into dead meat.

8248. Are you speaking of pigs as well as cattle?—Pigs are not sent alive, but sent in the shape of dead meat. They are all sent as dead meat. No live pigs are sent across the ocean.

8249. Your firm takes in hog products as well as cattle?—Yes. We do not deal in the product, we deal in the raw material; after I sell these cattle and hogs, and collect the money, I am through with it.

Sale by live weight.

8250. Have you a strong opinion that the system of selling by live weight in this country would be a very great advantage to the farmer?—It seems to me that it would. There is just this in it, the farmer is probably valuing according to weight his cattle three or four times a year, and the butcher is at it every day, 300 days in the year. We see that exemplified in Chicago. You take a farmer coming in and ask him to guess the weight of the cattle; but he will be a long way out, whereas the man who is dealing with the weight of cattle will come within 10 or 15 pounds of the weight of the bullock.

8251. Have you anything to add with regard to the marketing system in the Western States?—I think not; I think I have covered the whole thing, except with any questions that may arise on further examining me.

Prices of cattle 1878–93.

8252. With regard to the prices during the last 10 years, have they been such as to encourage the production of meat on a large scale in the Western States?—I will give you the prices for the last 16 years to show how evenly they have run. This is the average

Mr. J. Clay, Junr.
Feb. 1894.

quotation of bullocks weighing from 1,200 to 1,500 lbs. In 1893, $5 a cwt. Then I miss 1892, my clerk has missed out the year, but in 1891 it is $4·35, that is 65 cents a cwt. less. Then in 1890, $4·05; then in 1889, $4·05; 1888, $4·35; 1887, $4·40; 1886, $5; 1885, $5·50; 1884, $6·05—$2 a cwt. higher than it was in 1889 and 1890. In 1883 it was $5·35, and 1882, $5·60; 1881, $4·35; 1880, $4·85; 1879, $4·35; 1878, $4·55. These ran, practically speaking, from $4 the cwt. to $6·05. Then, of course, in 1884 we had it very high, but the general average has run very steady, and at the present moment those cattle are worth about $4·25. The average price for the 16 years is $5·12½.

8253. Have you any particular reason to give for the large rise in 1884?—Well, trade in America was exceedingly good, and there was a small corn crop, which always affects the price of cattle with us. For instance, in 1888 and 1891, during those summers, we had cattle very high, and that came about not from fewer cattle, but there were a great number less fed, and the price of corn was so high that the farmers carried their lean cattle over to another year rather than sell. In 1884, 1888, and 1891 we had high prices.

8254. Do you consider that now the home demand is the chief factor in the regulation of the price?—Very much so, and it is becoming daily more so.

Profits in cattle trade.

8255. And as to the profits that accrue in this trade, do you consider that they are fairly constant?—Of course this year farmers are not having a good time of it because cattle are low, but the general average has been good, and we are quite able to send across cattle at something like the price we have been getting during the last three or four years.

Dressed beef trade.

8256. The dressed beef trade has very much increased, has it not?—Very much so, very materially.

8257. Have you some figures to give us?—I was going to say that during the last 30 years the Stock Yards Company have received somewhere about 43,000,000 cattle. The shipments only appear to have been 20,000,000 of cattle, which is nearly half, but during the last year there has been scarcely 30 per cent. shipped, so that that shows the dressed beef has increased very wonderfully. I think I am right in saying that less than 30 per cent. has been shipped.

8258. Is that owing to the restrictions on this side of the water, or to the natural course of the trade in dressed beef?—The restrictions have had a certain effect, but the natural course of trade is towards dressed beef. It has been growing as a western business. It began in New York, and now it is in Chicago, Kansas City, and Omaha.

8259. (*Lord Vernon.*) Does that include store cattle?—We do not send any store cattle from America; they do send cattle from Canada.

Disposal of offal.

8260. (*Lord Cobham.*) What is the reason of their keeping more offal in the country than they did 20 or 30 years ago?—They have wonderful means of taking advantage of the offal of a bullock. Take Mr. Armour's great establishment, where they kill 3,000 to 5,000 cattle in a day. He makes the blood into manure, he uses up the bones, grinds them up into manure and sends them to the Southern States; he sends his hides to a tannery, and all the other parts that he cannot use he sends to his glue factory, and utilizes everything within himself and classifies it, and makes the most he can of it.

8261. He can do it with greater advantage than we can in this country?—That is where the dressed beef men have made their money; they have made their profits out of what they have saved, out of the offal. I may point out that the ordinary butcher in this country or in our country cannot compete against him; because you take a butcher in the country districts in the States: he kills probably five or six bullocks a week, and all the blood and offal goes away. He has to keep a man to kill those five or six bullocks, whereas the dressed beef man has everything classified, and can get his work done very cheaply. The result is that there is a saving in the labour bill, and that is an immense consideration, and consequently the dressed beef trade is sure to increase.

8262. From that cause alone, if from no other?—Yes.

Disease amongst American stock.

8263. As to the prevalence of disease amongst live stock in America, is there more of it than in this country?—We have practically, at the present moment, no disease at all, except local disease. We have Texas fever, but that does not reach cattle that come here at all. As far as the export of cattle is concerned we have no disease. Pleuro-pneumonia is extinct at the present moment.

8264. Is that owing to careful State supervision?—The late General Rusk, who was Minister of Agriculture, took a very strong hand to put it down, and in the Western States we have none at all, but in the Eastern States, in the dairy districts, there may be a little, but practically speaking we are free from disease except the local diseases.

8265. Are you speaking of Canada at the present moment?—I am not talking of Canada at all.

Decline in quality of beef.

8266. Then as to the quality of the beef and mutton, what do you say?—Well, the quality of beef has been rather on the decline.

8267. What is that owing to?—The last two or three years we have had very low prices, and there has been no buying of thoroughbred bulls. Our fine stock trade is practically extinct for the present moment, as far as making any money out of them is concerned. I have a small herd of shorthorns, and I have turned them into steers, because there is no demand for the fine cattle at the present moment. The consequence is that the cattle are getting deteriorated. You can only keep up a herd of cattle by infusing blood into it.

8268. Inferior stock is being bred?—Yes, and the general average within the last two years shows a great decline, and it is likely to decline.

8269. What is the importation of pedigree cattle?—There is no importation at all, and the price of our pedigree cattle is very little above the others.

8270. It does not pay to keep pedigree cattle, then?—No, it is in a deplorable condition. The trade is completely stagnant. In sheep it is otherwise.

8271. If the quality of the meat is being rapidly affected, some remedy must be found?—Well, of course our people will have to get back to using thoroughbred bulls.

8272. But you said the present quality of the beef exported is decidedly inferior?—I would not like to say that there has been a change in the quality of the beef that is exported, and that it is worse, but I may say that the general quality of cattle that we receive at Chicago is not as good as it was two years ago.

8273. That must affect the quality of the meat?—We pick out the best. A certain top kind of cattle is exported here, and our range cattle are decreasing very rapidly in quality, because men have not had the money to put into the bulls to put them upon the range.

Mutton exports.

8274. Then as to the export of mutton, what do you say?—That scarcely figures at all. We have no mutton to export to speak of, but our sheep are improving very rapidly.

8275. Do you think there will ever be a substantial export of mutton?—I think not. We are not a mutton raising people.

American store cattle

8276. As to the store cattle produced in America, what evidence have you to give?—I put that in because there is a great question here about sending stores over here from the States. Of course, in Canada, they would send quite a number, but in the States I have always been of opinion that we have no cattle to spare. We have got a place for all our best stores at home, and I do not think there ever will be any great trade between this country and America in connexion with store cattle, as more especially during the past few years we have been inclining to go back in quality.

8277. (*Mr. Chaplin.*) Did you say that we shall not be able to get any store cattle from the States, because you will not be able to supply them?—Because we need them there ourselves. We have got plenty of second class cattle to send over, but our good quality of feeders we need as feeders at home.

American competition in meat trade.

8278. (*Lord Cobham.*) The general effect of your evidence as to the meat trade across the ocean is that the British farmer need not fear any increased competition, at all events?—I do not think he will need to fear it. My own idea is that he will not. But we in America have got to fear ourselves the competition of Australia and South America and those other places.

8279. Do you feel that already?—We feel that already; not that they will sell meat to us, but they are sending meat and might cut below us here.

Mr. J. Clay, Junr. 22 Feb. 1894.

8280. There is as yet no importation into America?—No; we produce considerably more than we can use, of course; but then, when we come to compete in this market we find it very hard to compete against those other countries.

Diminishing area of virgin soil.

8281. (*Sir Nigel Kingscote.*) May I gather that the cultivation of the land in the States is getting daily more expensive, that is to say, that you cannot produce as cheaply as you did on the virgin soil years ago?—We do not have the amount of virgin soil to work upon.

8282. One witness told us that as the land became exhausted it would be necessary, in order to produce the same quantity per acre in a grain crop, to use manures?—Yes. Of course we have a great deal of land to break, but nothing like the amount we had 10 years ago.

Manures.

8283. You have told us that in the cattle yards of Chicago all the bones and blood manure is sold. Is there a demand for it?—Nearly the whole of it goes into the cotton States; nearly all of it. We are not using any manures at all in the North Western States.

8284. It does not go on to the agricultural land?—Not on to the agricultural land; not in connexion with live stock and wheat growing, but in the cotton States; and a great deal of it is sent to Louisiana, where they grow sugar. Mr. Armour's manure goes south.

8285. It does not go to agricultural land at all, does it?—It does not go on to the agricultural land.

8286. Not on to the wheat growing lands?—Not at all.

8287. But I understand you to say that there were tracts of country which are now being formed into farms where part is arable and part is pasture land?—Of course they manure that land by the amount of corn upon it. The corn is put out the same as oil cake here, and that goes into the soil.

8288. And that fertilises the soil?—That keeps up the fertility of the soil.

8289. And those farms are not laid out with buildings for cattle?—Not to any large extent. The most of them have only a very limited accommodation in that way.

8290. Therefore there is not much money laid out in buildings by the owner?—No.

Increase in sheep.

8291. Did I understand you that the number of sheep was not increasing?—It is slightly increasing. But we do not take it very much into account. Most of the sheep over there have been produced for their wool. The great bulk of them have been wool producing sheep; for instance, Merinoes, and they do not count for selling mutton.

8292. They are no good as mutton, I suppose?—So poor is our mutton that a great deal of mutton is exported from here to New York—the finer cuts.

Horse breeding.

8293. I do not think you have told us whether on those ranches horse breeding is increasing or decreasing?—I would rather say decreasing. I am not quite competent to speak of it, for I have not been in it; but it is not a profitable business at the present moment.

8294. The same cause is operating there as is operating with cattle; that is, that good stallions are not being imported into your country now as they used to be?—During the last three or four years we had a large importation of heavy stallions, such as the French Normans, the German stallions, and Clydesdales, and Shires, and so on. That, of course, has stopped during the last year.

8295. And they prefer a heavier horse?—The heavier horses have been the most profitable breed. We have only the light horse with us, and we have a good demand in the States for heavy horses.

American demand for pedigree cattle.

8296. As regards the pedigree cattle, do you think if times get better in America that there would be a demand for pedigree shorthorn or other breeds?—We have enough to supply our demand. There will be a demand at certain times for a few bulls, or a few special breeds of pedigree cattle, but as a rule we are pretty well supplied ourselves with them.

8297. You yourself keep a small herd of pedigree cattle, and I suppose you hope to be able to get better prices in a few years?—I hope so.

8298. (*Mr. Whitehead.*) I think you said in the Western States the amount of land cultivated with wheat is increasing?—I said it was decreasing.

8299. I did not understand that?—The wheat production from the whole of the country is just now stationary.

Mr. J. Clay, Junr. 22 Feb. 1894.

8300. It is not increasing?—No, it is just about stationary.

Wheat area stationary in United States.

8301. You said that the ranche and the range is not paying, but you did not say why?—A great deal of the trouble has come from climatic reasons. We have had a great number of bad winters, and gradually our range has been encroached upon by settlers coming in and fencing up the best part of the range, and leaving the rest open. The death rate has been very heavy, and the prices of our cattle, as they did not get fat, has been low. In Montana the industry has been fairly profitable, but in other parts it has been unprofitable. In Montana they have an open range.

"Ranche and range."

8302. Then the reason it is not paying is principally on account of the climate?—Very much so.

Cost of wheat growing.

8303. (*Mr. Giffen.*) At 35 cents per bushel I think you said wheat growing does not pay in Dakota and Minnesota. How much is that below the price that it would take to pay to grow wheat?—That is a question which I would not like to answer, because I have been so little in the wheat business, in fact I have not studied it for the last five or six years; but you can calculate for yourself; it is impossible it can be raised at that price. Now where the limit would come would depend very much upon the freight, upon the investment in land, and upon the price of labour at a certain time.

8304. Can you tell us the cost of freight for wheat from Dakota?—I cannot answer that question; I am not quite prepared upon it; but it would be very easily seen; I suppose 8 bushels of wheat would be worth 30*s.* a quarter, and 8 bushels at 35 cents is worth about 12*s.*

8305. And the difference is about 18*s.*?—15*s.* to 18*s.* to bring them. Of course the heavy end of the freight is bringing it to the water at Duluth.

8306. (*Lord Vernon.*) Mr. Pell gave it as 18*s.*; that is from the farm to Liverpool?—It will be less now considerably.

8307. (*Mr. Giffen.*) But that does not pay the producer?—It is simply impossible that a man can raise an acre of wheat for a sovereign.

8308. That is the question that I was about to put to you. Would 50 cents a bushel pay the producer there?—I do not believe it would. They were getting 60 cents last year, and still they could not pay up on their mortgages, and every man that I find coming down from there is poverty stricken.

8309. 35 to 36 cents is 1*s.* 6*d.* per bushel?—Yes.

8310. Then the wheat land is producing wheat at Dakota which is being sold at 8*s.* per quarter less than you could produce it at?—I am merely talking of it generally.

8311. That is the tendency of your evidence as to the difference in the margin?—Yes; I know that wheat cannot be produced at present prices. They will have to stop.

Price of beef at Chicago.

8312. You have told us that there has been a falling off in the quality of the meat sold in the Chicago market in the last two years. Has that made much difference in the price?—No, because we grade up. It has given us a larger number of inferior cattle to handle. There will be a certain number of good cattle.

8313. I am speaking of the average price that you quoted, 75 cents. a cwt.?—I quoted those as to the general quality. We grade up cattle in the same way as wheat. We talk about a 1,400 lbs. to 1,500 lbs. bullock amongst ourselves; and we know exactly what that is.

8314. The quotation was for the same quality of meat all the way through?—Yes.

Sale by live weight.

8315. (*Mr. Clay.*) With regard to the selling by live weight, is not that nearly universal in America?—It is universal at the central markets.

8316. There is no authority from Washington to make it compulsory?—No, it is merely use and custom.

8317. The beef seller and the beef buyer are satisfied that it is the best mode?—It is universal; there was never any other way of doing it.

8318. And you consider that if the same line of selling cattle were adopted here, it would be beneficial to the

Mr. J. Clay, Junr. Feb. 1894.

farmer?—It would put him upon a much better basis, because he would know what he was doing.

8319. It would benefit the better quality rather than the lower grades?—It would benefit all, because the man with a good quality would be a little better off, and the man with bad quality would not be so well off.

8320. It would resolve itself into this, that it would put the farmer on equal terms with the butcher?—The farmer fixes the weight of his cattle four or five times in the year, and the butcher 300 days in the year.

8321. And the farmer would be paid on the exact weight of the animal?—He would get exactly the weight.

8322. And the difference in price per stone or per pound, as you have it in America, would only be regulated by the difference in quality?—Exactly.

raw.

8323. (*Mr. Little.*) Has the straw in the wheat-growing districts any value?—It has no value.

8324. It is not, as in England, a help to make up for the low prices?—In the wheat-growing districts it is generally burnt. In the districts where we have mixed farming it is used to a great extent.

8325. (*Mr. Chaplin.*) I think you described Dakota and Minnesota as one crop countries?—Yes; northern Minnesota and Dakota are practically one crop countries.

8326. Do I understand you to say that where it is possible for people who are now cultivating the land to leave, they are doing so?—A great number of people are leaving.

8327. But you say that those who have families are obliged to stay?—Yes; the floating population get away first, but the people with homes and families have got to stay.

8328. Do you anticipate that in the course of a few years they too will be gone?—I do not think that they will all go, but I do not think any large emigration, or any at all, would go to those places. We find that the amount of wheat growing there has been decreasing.

8329. They will have to continue to grow wheat whatever the price?—These people who are left will naturally have to keep on doing what they can, because this is the only thing they can get any cash out of.

all in rice of heat.

8330. What do you attribute this great fall in the price of wheat to?—In America we think that it comes from the competition with other countries; from India and Russia. We are standing still as a wheat producing people at the present time, and we find that the outside competition is cutting under us.

8331. It is some of the most fertile land in the world, is it not?—Yes.

8332. It is not heavily taxed, is it?—No.

8333. The freights are low?—Very low.

8334. How do you account for the fact that Russian wheat is able to undersell them?—Because they have a much lower labour bill than we have; for in India, as I understand it (I am not thoroughly read up in it) their labour is very much cheaper than ours.

8335. And that, as far as you know, is the main cause of your difficulty?—That is how we look at it.

8336. You talk about the railway roads being in the hands of receivers. At the present moment there are a vast number of railway roads in the United States in that condition, are there not?—I was referring to the receivers in the Santa Fè, in the Union Pacific, and the Northern Pacific Railways, which haul a great deal of wheat, more especially the last two railroads.

Freights.

8337. That is a thing that will right itself, and you may look forward to a rise in freights rather than otherwise, I suppose?—Yes, because those railroads will have to re-organise. It will make the wheat-growing a little higher in those districts.

8338. You state that when the land was exhausted that the habit in the more southern districts was to turn it into grass for two or three years?—Yes.

8339. And that it recovered?—You know that land going into grass, and more especially having stock put upon it, will get its fertility back.

Housing of American cattle.

8340. But that is impossible on account of the winter?—It is not impossible, but they could not raise them to house against the man in the Southern States, who does not house them at all.

8341. They must be housed; they cannot live as the buffalo does?—They could live, with very generous feeding, of course. I have seen an old cow subsist behind a haystack in Canada, but it is a very expensive system.

Mr. J. Clay, Junr. 22 Feb. 1894.

Decline of wheat growing.

8342. Then the general result of your experience is that wheat competition with this country, in those districts at all events, at present prices, sooner or later will cease?—It will cease to a great extent; it cannot help it.

8343. Until what time?—You will find within the next two or three years, at present prices, we will have to stop growing wheat up there; they could not go ahead.

"Ranche and range."

8344. You stated that the ranches had fallen off very much, and that the reason for that was that the land was not good enough. Do I understand you rightly to say that that is generally due to the production of cattle on the ranches?—I think you mistake me; what I said was this, that a great number of the ranges have been so cut up that, of course, cattle had no longer free range upon them, and that whenever you stop cattle from the natural range they do not die, but they fall off, and are worth much less than in an open range.

8345. Is that from not having sufficient extent to range over?—Exactly.

Pleuro-pneumonia.

8346. With regard to pleuro-pneumonia, you said that was extinct now in the United States; are you aware that information to that effect has been given to us on more than one occasion from the United States Government, and that outbreaks of that disease have occurred subsequently?—Well, I differ with the home people upon that question.

8347. Are you aware that there have been undoubted cases of pleuro-pneumonia landed in this country?—I doubt very much that it is pleuro-pneumonia. We undoubtedly deny it by our experts.

8348. I know that a great difference exists between American veterinary surgeons and the experts in this country, but you are aware of the fact that the experts in this country have declared that there have been repeated cases of pleuro-pneumonia brought from America?—During the last six months I have not seen cases reported.

8349. I think that this is within a less period than that?—I say that, practically speaking, we have no pleuro-pneumonia; I do not believe we have any. I take a great interest in that. I was one of the men, being heavily interested in live stock, that got this matter eradicated. I have a great deal to do with the department of animal industry there, and I have considerable faith in our veterinary department, many of them having come from this side. You take Dr. McEachran, the Canadian veterinarian, he does not believe in it. I have seen no disease there, and I have great faith in him, because he is a Canadian. And you take a great number of others. I am not going to say that you have not good veterinary surgeons. I have seen a great many of the lungs of those animals said to have been affected with pleuro-pneumonia, but, as far as I saw them, I do not believe it. Practically speaking, we have none. We have some in the dairy towns; you always have in dairies more or less of lung disease floating about.

8350. What do you call lung disease, pleuro-pneumonia?—No; you have an immense amount of tuberculosis.

8351. But I understand in the dairy towns there may be pleuro-pneumonia still in existence?—There might be.

8352. To that extent you qualify that statement of yours that the disease is extinct?—Practically it is extinct.

8353. (*Sir Nigel Kingscote.*) In the Western States?—I say it is practically extinct in the Eastern States. In the Western States we have none.

8354. (*Mr. Chaplin.*) You said that Canada was entirely free from disease?—Yes.

8355. Notwithstanding that, I think the year before last cargoes were landed from Canada into Scotland, which undoubtedly re-introduced pleuro-pneumonia and spread it over very large districts of the country?—Yes.

Export of cattle from

8356. How do you account for it getting to Canada, do you suppose it went from the United States?—No,

Mr. J. Clay, Juar. 22 Feb. 1894.

because there is no exportation from the United States to Canada. It may have gone in from thoroughbred cattle from here, but there is no export of cattle from the States to Canada; the whole drift is from the west to the east with us.

United States to Canada.

8357. Is there no risk of cattle being smuggled over the frontier line between the two countries?—It would do no good.

8358. Does it not occur?—The Canadians would rather send to us.

8359. Is there no object in the animals crossing from the United States to Canada?—There might be an object in sending a bull of a high grade for instance, but still it would scarcely occur.

8360. You would repudiate the idea that Canada, which was free from this disease as far as anybody knows, is so affected by animals from the United States?—Practically I do not see how it could occur, because we know every animal that is exported from the United States to Canada, and it is practically nothing.

United States store cattle and restrictions on imports.

8361. Then you told us that the United States would have no surplus cattle, in your opinion, in the course of a very short time that they could send us as stores?—Exactly.

8362. If that is the case now, what has been the object of the Government of the United States in pressing us earnestly and very repeatedly for the removal of the restrictions which prevent live cattle coming into the interior of this country?—As I said, I entirely disagree with that idea; I do not believe it. I believe that we can send all the product that we have to send in the shape of dressed beef. I do not think that it would make a bit of difference.

8363. So that the removal of restrictions pressed upon us by the United States would be of no use to the United States?—None to the United States, but the removal of the restrictions would be of great importance to Canada. As far as the United States are concerned, that is my individual opinion. Of course, it is not shared by the vast population there, but I am giving my personal opinion. I do not think that it would make one whit of difference with us, and, as a large holder of stock, I do not care as long as you allow us to send our dressed beef over here.

8364. (*Mr. Lambert.*) With regard to the system of killing and dressing cattle, do you think the system of killing and dressing cattle that is in vogue in America could be applied in this country?—I do not see why you should not; you have it at Deptford and other places.

Disposal of offal.

8365. I mean as to the disposal of the offal?—There is nothing to hinder it.

8366. Do you think that it would be beneficial if such a system could be inaugurated that farmers could all combine together, and send their stock to a central depôt to have them slaughtered, so that the offal and such things could be utilised?—So far as the co-operation of the farmers is concerned, I do not think it could be done, but individuals or companies might rise up and do it.

Deterioration in quality of stock.

8367. You said that the stock had deteriorated, and that it would require pure blood to bring it up to its former condition?—Yes.

8368. But to bring in that pure blood it would increase the cost, I presume?—To a great extent; but you can buy a very good shorthorn bull with us for 10*l*.

8369. Why do they not?—We are preaching to them all the time, but they do not.

8370. So that they could better the quality of their stock there easily and cheaply?—Of course whenever the demand increases for the bulls they would go up. In the old States 25*l*. were given with us until a few years ago, and within the last two years they were bought from 8*l*. to 14*l*.

8371. Do you think that there will be a further increase of the area for the cultivation of wheat in America?—I think not.

Production of cattle and exports of beef.

8372. Will there be for the production of cattle?—Of course. When we have improved means we will produce more cattle, because we will grow more corn and hay, and we are opening up our lands; it will increase along with our population.

8373. Do you think that there would be a material increase in the exports of dressed meat to this country?—I think that the dressed beef industry and the live stock industry will rather decline.

Mr. J. Cla Juar. 22 Feb. 189

8374. You do not anticipate that there will be any decrease in the competition in this country for beef?—I think it will just about remain stationary for some years.

8375. And you do not anticipate a large increase in the cultivated area of the United States?—Our statistics show that it is decreasing.

Average size of farm

8376. (*Captain Owen-Thomas.*) What is the average size of farms which are being worked by the farmers themselves?—As you know, all our farms run from 80 acres generally up to any amount, but the general average is 160 acres that one man has.

8377. Are they their own landlords; do they own the property?—Yes, to a certain extent; but the system of renting is increasing wonderfully with us. The large blocks of land are going into the hands of capitalists.

8378. (*Viscount Cobham.*) What States are you speaking of in that connexion?—I am talking of all over the West, but, taking the older Western States, such as Illinois, there are a great number of land owners there.

8379. (*Captain Owen-Thomas.*) Have those farmers much capital of their own?—Some of them have, but the general average of farmers do not have much capital with us.

8380. Have they increased their capital lately?—In the corn States they have, but in the wheat States they have not.

Local rate

8381. You mentioned rates; what would farmers pay in the way of rates?—It differs, of course, in the various States, but generally we pay about 2 per cent. upon a very low valuation. Land is generally valued at about one-half of its actual value, and the rates run from 1 to 2 per cent.

8382. (*Mr. Everett.*) Is that the capital value or the annual value?—The capital value; and then it is only put at about 50 per cent., and sometimes only one-third.

8383. (*Captain Owen-Thomas.*) Are there many farms to let in the States?—It has not become a business like it has here; but in certain districts you will find a great number of farms are held upon leases, the leases generally being annual ones.

8384. Anyone going from here would not find much difficulty in getting a farm?—No.

Rent per acre.

8385. At what rent per acre?—It differs. In Illinois you find them from 12*s*. to 20*s*. an acre, it very seldom being 20*s*. per acre. In Illinois, where there are a large number, the rents are pretty fairly established generally at 16*s*. per acre.

8386. (*Mr. Clay.*) Are not some of them made out on the share system?—Yes, but this gentleman is asking about cash rents. In many cases it is a share rent. You take a rent farm growing Indian corn, it is generally a half share and the owner supplies the seed, and that of course makes, if it is a good crop, a good thing for both of them.

Average yield of wheat, co and oats.

8387. What is the average yield for wheat, say, in America?—The average yield over the whole country is about 12½ bushels.

8388. And the yield of Indian corn?—About 28 bushels.

8389. And oats?—I cannot say as to oats.

8390. The oat crop in Illinois is sometimes very large, is it not?—I have seen it run up to nearly 50 bushels, but that is far above the average.

Amount mortgage

8391. (*Captain Owen-Thomas.*) What amount of mortgage would there be on a farm of 200 acres?—You take good farms in Illinois, for instance, they are worth 50 dollars an acre, at 200 acres; that would be 10,000 dollars, which is 2,000*l*., and you could readily borrow 1,000*l*. at 6 per cent.

Root growing.

8392. (*Mr. Everett.*) The American farmers do not, as a rule, grow roots and turnips and mangolds?—It is almost unknown with us.

8393. Their cattle are kept in the winter either on the hay or corn or the natural growth of the earth?—Either. Of course, in Illinois, Missouri, and Kansas the blue grass cures upon the ground.

Mr. J. Clay. Junr. 22 Feb. 1894.

8394. The bulk of the American farmers have farmed their own land?—To a great extent, but the renting system is coming in.

8395. But still at present they are quite in the minority?—Oh, yes, very much so.

Fixity of tenure, free sale, and fair rents.

8396. But speaking generally, the American farmers have not been oppressed by their landlords; they enjoy fixity of tenure?—They do, but we have a landlord of another class, that is the owner of mortgages, that is practically the same thing.

8397. The usurer?—I do not call him a usurer, because you can borrow of him.

8398. But the American farmers are, most of them, in the enjoyment of the three F's—fixity of tenure, free sale, and fair rents; and their rent, if they have to borrow money, is the interest on the mortgage; otherwise they have no rent?—They have, of course. The thrifty farmer there has it.

8399. They have the three F's?—But most of the farmers have come up from the working classes, and they are not generally good financiers.

8400. Notwithstanding their having them, they have not prospered; but they are in great distress as a whole?—In the wheat States they are in a bad condition, and in the other States they are in a fairly good condition.

Population and wheat area.

8401. The population of America, I believe, is constantly increasing, rapidly?—Yes.

8402. And you have told us that the area of wheat cultivation there has been stationary practically for the last—how many years?—For the last two or three years; for the last 10 years practically. Our wheat census has increased very little.

8403. But the population has been all the while increasing at a great rate?—Yes.

8404. I suppose the great bulk of the wheat in the United States is consumed in the country—by far the larger portion?—By far the larger portion.

8405. Does it not strike you as a curious thing that with a rapidly increasing population and a stationary area of wheat growing, the price of wheat in America should be falling instead of rising?—The price of our wheat depends upon what we can get for the surplus, and we have had to meet that, of course, being undersold in this market. If we raise 100,000,000 bushels of wheat more than we can sell we have got to take what we can get for it in the outside market, and we have been getting a poor price, but the price of wheat in Chicago is ruled by the prices of London to-day. Before we do any business at Chicago we have got cables from the London and Liverpool markets.

Fall in price of wheat.

8406. It seems a little curious too, that while you consume the great bulk of it the internal prices should be ruled by the price of the small quantity that you export?—We send out, probably, one-fifth of our wheat—60,000,000 to 100,000,000 bushels we send out.

8407. You consume five times as much as you export, and your home price has been steadily going down?—Yes.

8408. Mr. Chaplin asked you what the Americans attributed the fall in prices to?—We attribute it to being undersold by other people in this market.

8409. One can see why that would affect what you export, but why should it affect the great bulk of your growth that you consume in the country?—What you export will make the standard of the price, it does that in beef, and it will do it in wheat.

8410. Do you know anything of the American Farmers' Alliance organisations?—I have read a good deal about them. Two years ago they were very strong, but at the present moment they seem to be going to pieces.

The currency.

8411. Was not one of their planks more money—was that not one of their claims, to ask their own Government that they should supply them more abundantly?—They wanted to grind out currency, they wanted to inflate the currency, they wanted to increase money.

8412. Is there not a strong impression in America that the fall in prices there and in Europe is owing to changes in currency laws?—That is the opinion of a small portion of the people in the West. I do not think that it is the opinion of financiers and capitalists and the people who live in the Eastern States, and also in the Central States. We have had a very great proof of that in America last summer, when we had the panic, which came about entirely from our people thinking that we should have an inflated currency.

Mr. J. Clay. Junr. 22 Feb. 1894.

8413. In that panic, money, any kind of money, was at a premium, was it not; in that panic the difficulty was to get money—it was not that you had too much money, but you could not get at money at all?—We had but little.

8414. People would not part with what they had; they hoarded it?—What caused that panic was that our Government had been coining so much silver—not coining but buying it—and hiding it away.

8415. That silver was in circulation by its paper representative?—Yes, by silver certificates.

8416. (*Mr. Lambert.*) Did it not increase the trade?—It seemed to curtail it.

8417. (*Mr. Everett.*) But even with the addition of the silver money the United States fell into trouble from not having money enough?—If you put 100 dollars or 20*l.* into a man's pocket it does not matter how much currency is ground out. You could never have enough of it last summer.

8418. The panic led to hoarding. Is it not a fact that nearly all the representatives of the Western States fought for the free coinage of silver in the House of Representatives?—Not the whole, but nearly the whole.

8419. And the opposition to it comes from the usurers?—And the men who come from the silver-using States have all fought for the free coinage of silver.

8420. And the representatives of the agricultural and cotton States, have they not?—To a great extent, it is pretty well divided there.

Tenure.

8421. (*Mr. Elton.*) You were telling us just now about the American farmers having fixity of tenure and fair rent and all those things which are characteristic of leaseholds in England; you meant the leasehold of farms, and not the freehold?—I meant the freehold, but as to the leaseholds, we have not got to the position of having very extraordinary leases.

8422. You were not so familiar with our English ways of talking, and I was going to suggest to you that a freehold has nothing to do with fixity of tenure, except, of course, in a metaphorical way. Of course a freehold includes all these things?—Yes.

8423. When you spoke of a freeholder having a fair rent, I suppose you did not attach that meaning to it?—Oh no, he has not got any rent at all.

Wheat growing in Illinois.

8424. Now about Illinois. You were telling us about the increase of the leasehold system in Illinois, and you also mentioned that you knew of corn growing to 50 bushels per acre there; is not the general rate more like 11 to 12 bushels of wheat?—I was talking of 50 bushels of Indian corn. We have never 50 bushels of wheat with us.

8425. I thought Illinois was planted with wheat?—Yes, but the average is about 15 bushels.

8426. And not so low as I put it, 12 bushels?—No; the general average is 12½, but you have to take Texas, Virginia, and other places. Illinois is a very large wheat-producing State.

8427. But it is going back in area?—Yes, gradually.

8428. The yield is getting less?—Yes.

8429. And the leasehold system is being introduced into that part?—The leasehold system is more in connexion with corn.

8430. It would appear curious, would it not, that the landlord system should suddenly come in, which means people buying and finding tenants on the wheat area, which is a decreasing area and a decreasing produce? It is more Indian corn, is it not?—You must understand that in Illinois, which is a mixed farming district, we have not any farms given entirely to wheat or to corn or to oats; it is more like what we have in England here.

8431. I am speaking of those mixed farms which used to grow wheat, and which have decreased in growing wheat now?—They have decreased.

Nebraska.

8432. Now as to Nebraska, is that going back?—That is decreasing very much in the way of wheat growing; they grow a very small percentage of wheat; I am talking of corn, that is maize. That is the great fertile belt for maize growing.

Mr. J. Clay, Junr. 22 Feb. 1894.

8433. Do you think that farming has improved or increased; is the renting of farms a thriving industry?—It is very thriving. Nebraska is a thriving place.

"Share rents."

8434. The share rent is something like the Metier system. When the owner lets it on that system, does the owner live at a distance?—He may be living here; for instance, I know men who live in London and have land in the Western States.

8435. Is not it necessary to live upon the spot to get a share? How is that difficulty got over?—You have an agent who looks after it, but as a rule those farms are in the hands of men who have retired from them and accumulated money, and gone into the small towns, probably.

8436. Has it to be watched?—Yes, by an agent.

New Mexico and cattle rearing.

8437. About the increase of cattle, are not there districts well adapted for cattle and not yet fully occupied, like New Mexico, or is that too hot for cattle?—In New Mexico we have been declining; it is all a range country, and they have had a great deal of trouble with their grasses being eaten up.

8438. It used to stand a bison?—Only in small quantities, and they died out when they got too numerous for the country.

8439. (*Viscount Cobham.*) Do you deal in cattle from New Mexico?—Yes.

8440. (*Mr. Elton.*) What do you say as to the new reserves of Omaha?—That is going to be a grazing and cattle country.

8441. It is a very good country, is it not?—Excellent.

Disposal of offal.

8442. With regard to stock killing, you told us about the offal being used in a great many ways in America; do you use the term offal in the sense that we use it, that is to say, the inferior parts of the meat?—No. The inferior parts of the meat with us are put into cans. I am talking of the stomach and puddings, and all the fat is taken out and boiled out.

8443. When we talk of it we mean a lot of things that are eaten and sold, and there is a very great demand for it. We say that there are five quarters, and the butcher's quarter is the offal?—The ordinary course is for the inferior bullock's fore quarter to be put into cans, and the hind quarters go for dressed beef.

8444. And this manure would be only the waste offal, bones, and blood?—Well, the puddings are boiled down and all the fat taken off them.

8445. And then, in America you have the demand of a peculiar class of people who want this manure, the owners of land in the cotton States?—You could export it here; it is merely because we get the most money for it there.

8446. You have a peculiar soil in the Southern States which prefers that; do you think that this would be a soil for it?—Yes, we have blood manure here to a large extent, and bones.

8447. Would it be profitable to set up a manufacture of it at Deptford?—I do not see why they should not take the bones at Deptford and use them as they do in the Southern States of America.

8448. I was leading you with the view of suggesting what might be a sudden new development of the trade?—It is merely this, that you take the general average butcher; he does not make any use of his bones or blood for manure, it all runs away. I merely assert that the dressed beef system is the most economical, and in America they do it in a wholesale way, and it is much easier done there then here.

8449. You mean the worst bones?—Yes.

8450. What I think you mean is this, that they utilise the refuse and the material down to the refuse in America, and if they do not do it here they ought to do it?—That is so, exactly.

8451. You do not pass a judgment on them, but you say they do not do it?—I mean to say you take the average butcher who kills his own meat he makes very little use of the offal. If you come down to Kelso, where I have been living this winter, you will see the blood running away, guts and everything, thrown into the river. It is a profit in itself that he is throwing away.

8452. But that would not occur in a large place like Deptford?—No.

Wheat growing a profit.

8453. (*Lord Vernon*) You are quite certain that wheat cannot be grown at a profit of 30*s.* per quarter?—I would not like to say that it cannot, but it is my opinion that it will not. Take it and calculate it up yourself.

Mr. J. Clay, Junr. 22 Feb. 1894.

8454. At what prices do you think it could be grown at a profit?—I held always that 40*s.* was the lowest it could be grown at, but I have found that I have been wrong, for it can be grown below that; that is, for delivery here at that price.

8455. You are aware that the Commissioners that went over to America declared to the Richmond Commission that wheat could not be grown and delivered at 48*s.* per quarter to pay?—I am perfectly aware of it.

8456. Are you aware that it is being sold in England at an average price of very little over 30*s.* since 1885?—I admit that we made a mistake, Mr. Read, and Mr. Pell, and myself also. They eventually reduced their figures to about 42*s.*, and the opinion that I always held up to that time was that it would be 40*s.* or 42*s.*, but I confess that I was wrong. The great mistake we made was in the freights; they have come down so much more than we thought was likely.

8457. What reason have you for supposing that you are more right than they were in those days?—I merely put it in this way. I see the decline in the wheat districts, that is a very sure indication. In the years between 1878 and 1880, when Mr. Read and Mr. Pell reported, there was a great influx of emigration, and, of course, that gave rise to greater production.

Increasing population and exports of wheat.

8458. How do you account for the very large increase in the population of the United States since then, and that you have supplied all their wants and been able to export to England in 1883, 39,000,000 cwts.; in 1887, 40,000,000 cwts; and in 1891, 43,000,000 cwts.; so that you have exported 4,000,000 cwts. more in 1891 than in 1883; how do you account for them having had that surplus to export if it is impossible to grow it at that price?—We had that wheat to sell, and had to send it.

8459. But during the last 15 years they have gone on increasing the area under cultivation?—But that has stopped, our Government statistics show that it has stopped, and you can see it by going through the country.

Registration of mortgages.

8460. Did you not say that almost all the farms were held under mortgages?—A great number of them.

8461. Were not the large majority of them?—Yes.

8462. Are the mortgages registered?—Yes.

8463. Are they all registered?—They are all registered.

8464. Are they registered in the State or by the central Government?—They are registered in every county.

8465. In every State?—In every county of every State; the States are all divided into counties.

8466. What does the form of registering mortgages consist of?—The mortgage is signed by the man, and by his wife to save the dower right that is in it. For about 5*s.* you could register that mortgage, and it becomes a first lien upon the property, there is no expense attached to it.

8467. Everybody is obliged to do that?—He is not obliged to do it, but to make up your security. I loan a large amount on mortgage for clients (I do not do it so much now) and I have to register those mortgages for security.

8468. What do you mean by saying you have to do it?—Because that man may go and give another mortgage, and if that was recorded it would be against yours, and that would be the first lien.

8469. It is an increase of security?—It is *the* security.

8470. Is there any objection amongst landowners to register mortgages?—Not the slightest.

8471. Do not they object to their debts being recorded?—It is the only way to have security. What security would you have if you did not have it recorded?

8472. Mortgages are not registered in England?—But you can go and search the records and see that they are there.

8473. No, that is what I want to arrive at. Can anybody in America go to the registration offices and search to find out if a man's land is mortgaged?—Yes.

Mr. J. Clay, Junr. 12 Feb. 1894.

The very first thing we do before making a loan is to get the district registry of property to show if there are any mortgages over it.

8474. Then the Government can practically tell how much the land of the country is mortgaged for?—Yes.

8475. And for the purposes of taxation that would be a great advantage to the Government?—Well, practically we do not follow mortgages for taxation at all.

8476. Still, if you have direct taxation it would be of some use?—Yes, to a certain extent it would.

Mortgages *v.* rents.

8477. Do you consider that the mortgagee is any easier to deal with than the English landlord?—He is in an entirely different position; he is lending a man so much money, and when it comes due, he says you must pay it or I will take the land.

8478. It practically comes to the same thing. I say to a tenant, "You must pay your rent or you must leave, I will take the land"; so that it practically comes to the same thing, the mortgagor is the land owner?—But your tenant is only paying an interest upon capital, whereas the man who had borrowed the money had borrowed a large amount on the principal of his land. For instance, you have a farm which is worth 20,000*l.*, and you get 1,000*l.* a year for it, and you have a tenant unable to pay the interest upon the capital, but the mortgagee, the party who loans upon the land, has advanced half the principal upon that land.

8479. What I want to arrive at is this: with your experience of land mortgaged in America, do you consider that a man with a mortgage on his property is in a bit better position than the man who rents land from an English landlord?—If it comes to that he is generally in a worse position. The man who has the mortgage takes the land; it is a pure business transaction.

Change of currency.

8480. Referring to what Mr. Everett said, I suppose really the Western people who are in favour of the change of currency wish to pay the interest on their mortgages in a depreciated currency?—Exactly.

8481. Then they wish to repudiate part of their debts?—That is the way we look at it. All the mortgages are now drawn payable in gold.

8482. (*Mr. Everett.*) May I put it the other way, is it not the case that the farmers in America have mortgaged farms subject to paying an appreciated interest? They object to the interest while the sum nominally in amount is really very much more burthensome to them than it was?—I cannot exactly say. What I look at as a business man is this: I have paid that man in gold, and I want to be paid back in gold.

8483. (*Mr. Giffen.*) And the practice now is to draw the mortgages in gold so that there is no mistake?—Not only so, but if you go to a bank it is payable in gold.

Deterioration of cattle.

8484. (*Lord Vernon.*) With your experience of cattle dealing in America, do you consider there is any truth in the prevalent idea that, owing to the climate, animals deteriorate unless new blood is introduced?—There is a certain amount of truth in that. I look upon our English cattle as being very much better than we have them in America. Our cattle in the Southern States, deteriorate where they are under a warmer climate.

Housing of cattle.

8485. For how many months are you forced to house cattle in the United States where they are principally raised?—In three-fourths of the States you do not need to house cattle at all, it is only probably one-fourth part that is housed at all. I would say that 80 to 90 per cent. of our cattle are never housed in America.

8486. Is not that a great advantage that you have over us?—Yes.

8487. That is a permanent advantage that you have over the farmer here?—I would not say that, because there are many parts where they should be housed, but the large amount of capital that would have to be put into buildings deters people from doing it. In some parts I say that it is not an advantage, but in the greater portion of the agricultural country we cannot afford to put such amounts in buildings.

8488. And in many counties ought they to be housed?—It depends upon the length of the winter; about Chicago we have practically five months of winter, but as a rule it is about four months.

Sale by live weight.

8489. One other question. You were talking about the weigh-bridges and the system of selling by live weight; do you consider that the farmers, from what you know of farming over here, suffer really much from any great disadvantages in selling to the butchers?—I think that the system of selling by the lump and not weighing them at all is bad.

Mr. J. Clay Junr. 22 Feb. 1894.

8490. As they do here you mean?—Yes.

Mortgages.

8491. (*Viscount Cobham.*) Has not a good deal of money been lost by lending on land which has been run out after a few years?—I would not say that there is much lost; do you refer to mortgages?

8492. Yes?—I know the general average of loss is very small.

8493. We have it in evidence before us that a great deal has been lost by the farmers throwing up their farms?—There is no doubt that in some parts of the country that is so, but taking the general average it has been good, the percentage has been very small.

8494. You cannot speak as to Manitoba?—No, I have not been there for 12 or 15 years.

Cost wheat growing.

8495. We have had some interesting evidence from that part of the world, the upshot of which is that wheat could be placed on the British market at a cost of 21*s.* or 22*s.* per quarter?—I do not see how they can do it.

8496. You are not able to point out the circumstances under which it could be done?—Take the wheat-growing States in the West and the South; I cannot see how it could be done.

8497. You do not think there is anything in the condition of the two countries that could possibly explain such a difference in the cost of production?—I cannot see it. The production of Manitoba is practically the same as Dakota, and the freights are no cheaper. They are lying in the same zone next door to one another.

Working capital per acre.

8498. What would you consider the working capital per acre would be, on a wheat farm in the Western States?—It is practically nothing. If a man has a team, and a plough, and a barrow, he can always hire, and have his reaping done, and his thrashing.

8499. With regard to the smaller mixed farms of Illinois, they are something more like the English farms?—That varies very much. As a general average, about half what you have in England; the houses are much cheaper, and the implements are much cheaper.

Local rates in Illinois.

8500. Have not the local rates increased in Illinois?—They are stationary in Illinois. I farm in Illinois, and my rates have not increased but rather decreased in the last 10 years.

8501. As to road-making and maintenance, who pays for it?—It is a bad system, of course, there. We have it done practically by the people who live on the roads; the amount of actual cash put into road-making is very little.

8502. You do not find that the local burdens do increase at all, either in Illinois or in the newer States?—I think not.

Average size of farms.

8503. (*Chairman.*) What do you consider an average farm?—About 160 acres.

8504. How much of that would be under the plough?—Certainly not more than 60 acres; the rest would be pasture.

8505. The remainder would be under fallow?—No, pasture.

8506. Is any of it under fallow?—No, they do not follow that system at all.

8507. Would the farmer work it with himself and his family?—Yes, with himself and family, and where there is no family with a man from outside.

8508. That would be considered enough?—Yes; on my farm of 250 acres I never keep more than three men, and only two in winter.

8509. I am speaking of an average farm of 160 acres could the owner work it with his family or with one labourer?—Yes.

8510. Do you rent your land?—I keep it as a pleasure farm.

Life of American and English farmer compared.

8511. And the farmer who lives on 160 acres has a very hard life of it?—Exceedingly; he does not compare with the English farmer, but with the English agricultural labourer.

Mr J. Clay, Junr. 22 Feb. 1894.

8512. (*Lord Vernon.*) When you say that, do you speak generally of all the agriculturists in the United States?—No, I say that I am talking of the Western States. When you come to the Eastern States you find that the farmer there compares with our farmer, he lives more economically, but in the Western States he is badly housed, badly fed, and he has to do a great deal of hard work.

8513. Would you say what you mean by a Western farmer?—You take, for instance, farmers going anywhere West of the Mississippi River.

Mr. J. Clay, Junr. 22 Feb. 1894.

8514–15. (*Mr. Everett.*) With regard to these mortgaged farmers, are you aware that until 1873 silver was the full legal tender in America just the same as gold?—No.

The witness withdrew.

Mr. R. H. Pringle.

MR. R. HUNTER PRINGLE called and examined.

Mr. R. H. Pringle.

8516. (*Chairman.*) You are one of the Assistant Commissioners who have reported upon the state of agriculture in various parts of the country?—Yes.

Burdens on land in Essex.

8517. If you refer to page 79 of your Report with regard to rates, you will see that you have given four cases of actual demands for rates. There are four different places, and they vary from 1*s.* 6*d.* in the pound to 2*s.* 8*d.* in the pound. Then later in paragraph 189, you say, "The burdens upon land in most districts in Essex are, at the present time, very onerous"; and there you put the poor, and highway, and county rates at 3*s.* 6*d.* in the pound. Is that an estimate of your own, or is it based on any figures?—Paragraph 189 is a quotation from a report which was given to me.

8518. I see it is not your own; but it does not seem to be compatible with the previous statement of the particular data covered by your own inquiry?—The first statement is a statement of fact which was handed to me.

8519. Do you gather from that that the statement made to you by those persons that the poor, highway, and county rate is 3*s.* 6*d.*; that it cannot be altogether relied upon?—No; they are different unions.

8520. Paragraph 189 as compared with the previous statement, derived from your own observation on the four cases, is rather different. You will observe that the rates are stated to be from 1*s.* 6¼*d.* to 2*s.* 8¼*d.*?—The county rates in the first place mentioned are not included in the 2*s.* 1*d.* The county rates are included in the second case I mention. The county rate for this year was 6*d.*; that would bring the top figure up to 2*s.* 7*d.*

8521. This would hardly account for this very considerable difference?—It would not.

8522. We may take it that this statement in paragraph 189 is one made to you, but not confirmed by actual inquiry?—No; because it referred to the district of the gentleman who gave it to me, the agent of a very large estate. The rates vary considerably in Essex, but I did look over the figures, and I thought it was a very fair statement.

Ratio of rate assessments to rent.

8523. Now if you turn to the last page in the Appendix of your Report, page 127, you find there a statement showing the assessment of rates in the pound on various farms. They seem to be extraordinarily heavy, and I should imagine they could hardly be accurate. The assessment in the pound is more than the rent. 52*l.* is the assessment more than the rent, and the rate in the pound on land is 22*s.*?—I see it; I was rather surprised at it myself. I only got this table the very day that I returned, and I have not finally revised it.

8524. (*Mr. Little.*) What you desire to say is, that the ratio of the assessment to the actual rent is as 22*s.* to a pound; you do not mean that the rate levied is 22*s.* in the pound?—This table is an exact copy from statements that were made to me by a certain gentleman, and I wish that he had given the rents and all particulars, but he did not do so.

8525. (*Chairman.*) I think you should ask him for further particulars, because it looks so startling a statement, unless it is actually verified one would hardly like to draw conclusions from it?—I can get the particulars without the slightest difficulty.

Scotch farmers in Essex.

8526. In your account of the Scotch farmers in Essex, an extremely interesting account, you seem to come to the conclusion that on the whole they are doing fairly well?—I would not like to go so far as that.

8527. Not quite so far; that is the conclusion I draw from your Report; what would you say of them?—I think I could put my fingers upon three of them that are doing fairly well, considering the times. I think that the Scotch settlers, taking everything into consideration, are holding their own.

8528. "Holding their own"?—I put it in this way; I think they are losing less.

8529. That is a different conclusion to holding their own?—They are losing less than their neighbours.

8530. There is some difference between holding their own, and losing less?—Perhaps so, but I think they are losing less than the people round about them, and consequently they are doing more than holding their own.

8531. The last two years were exceptionally bad years were they not?—Yes.

Seasons and profits.

8532. And even the Scotch farmers must have done badly during the last two years, on account of the bad seasons?—Yes, Appendix C. II. comes from a Scotch farm. His balance sheets show a profit of 12½ per cent. on capital; that is on page 95 of the Summary.

8533. I have not examined carefully the whole of these figures. Does that show a 12½ per cent. profit on this year?—Yes, 1892–93 is included.

8534–8. Including the two bad years 1892–93?—Yes, both years are included.

8539. I presume where there is only 71 acres out of 636 acres under the plough, it is mainly for consumption on the farm, or almost entirely?—Almost entirely.

8540. And therefore the price of the corn would not affect the farm?—Not much.

8541. (*Mr. Chaplin.*) Upon the question of Essex I think it would save time if I call your attention to paragraph 47, page 41, in which you say this, "I must "confess that I thought the character of the seasons "between 1880 and 1892 did not receive quite fair "treatment in Essex"; and then you go on to say this at the end, "It is a matter of history that of 12 "years referred to, 7 are under average, but it was "repeatedly stated by the farmers of mixed soil that "had it not been for the low prices, and the heavy "and increasing cost of labour, and the want of farm-"ing capital, on the three-horse land, the general run "of the Essex farms was not very far astray." I should like to have that cleared up?—Yes.

8542. (*Chairman.*) If we are to take the average profit of the years before 1892, they have been for six or seven years distinctly above the average per acre. If you look at this Return (*see* Appendix B.) of the seasons before 1892 you will see that the produce of corn was distinctly above the average, and then came two years, 1892 and 1893, which were extraordinarily bad. I would like to ask you whether the Scotch farmers, some of them at all events, are in occupation of some of the very bad land you have spoken of in your Report?—I visited four farmers on the very worst land, the very stiffest clay in the Dengie Hundred.

Scotch farmers in Essex.

8543. How were the Scotch farmers doing there?—It is not very easy to say how they were doing; they were there.

8544. Were they holding their own, apart from the bad season?—They were suffering, but they do not spend money often on the stiffest lands in cultivating, and tilling the land, and consequently they are less out of pocket.

8545. (*Viscount Cobham.*) Do they work harder?—No doubt about it; they all work.

8546. Do the family all work?—Yes.

8547. (*Chairman.*) Do you think that they understood better how to lay down the land to grass?—I was not at all satisfied with the attempts at establishing pastures, either temporary or permanent, in the stiffer lands, but when I went with a farmer on the mixed soils, a man who understood his business, I was impressed with the

fact that undoubtedly the pastures were good, and that I attribute to their knowledge of grass-farming.

8548. You say in paragragh 69 that "The Scotchman "carries out the temporary pasture system, keeping as "small an acreage in cultivation as possible, and cutting "expenses down to the lowest working figure"; that would seem to indicate that they have introduced a somewhat different system?—So they have.

8549. And that system has operated on the whole better?—I think it has.

8550. Is their example being followed by Essex farmers?—Yes, to a small extent; but I do not think that it has pleased them. One or two I met were decidedly in favour of it, and it had suited, and proved satisfactory. Others were not pleased with their experience, and were still of opinion that it is not a good system.

Essex farmers.

8551. Among the Essex farmers, other than the Scotch farmers, have you found any that pursued the old system; were they holding their own?—No, I do not think so.

8552. Are they all losing money?—I certainly think so, as far as I was in a position to judge.

8553. In that district that you speak of?—All through these unions that you deputed me to go through.

8554. Then they have not imitated the Scotch farmers, and cut down expenses, and done their own labouring in the same degree?—I would not like to say that the Essex farmers do not work themselves, because I think that the Essex farmers were as hard working as the Scotchmen. I could not find any fault with them, but they, as a rule, have bigger concerns; they have more horses and more labourers, and more land under cultivation, and consequently a man would be rather making a fool of himself if he took a spade and dug a hole; he ought to be superintending his men.

8555. They still keep up the corn?—There is no doubt about that; I had that impression almost everywhere.

8556. Is the land only suitable to wheat, or would it grow other corn?—The mixed soils are suited to mixed farming.

8557. What do you say as to the very stiff soils?—The evidence shows me that the old rotation was the best system.

Heavy soils.

8558. But the very heavy soils, are they suited only to the growth of wheat?—I did not see any good temporary grass in the heavy soils.

8559. I am not now talking about grass, but as between wheat and other corn?—Barley, I do not think does well there; oats can grow fairly well, but wheat undoubtedly is the crop, and beans also.

8560. We may take it that they have suffered from the low price of wheat as compared with land suitable for growing other corn from the fact that wheat is mainly the crop that is suited to them?—I think so.

8561. (*Viscount Cobham.*) I do not quite understand why this heavy land should not go to grass under a proper system?—The difficulty in the first place is this, it is very difficult as far as I could judge to get a plant. I was not there in the spring, but I think it would be rather difficult to get a nice seed bed for grass seeds, that is the first difficulty, and on that very deep stiff London clay if a track of wet weather set on, the land would get waterlogged below, and then the grass roots might rot out.

8562. Even if well drained?—Yes. Good thorough drainage would help. I have seen very admirable pastures on the stiff clay in Strathearn in Scotland.

8563. And on the London clay in places?—Do you mean the old pastures?

8564. Yes?—I could not say that they were very good. I do not think that they were like pastures that would fatten a bullock.

8565. You did not see any promising pastures?—I did not see any pastures under 20 years old that I would consider had the makings of a good pasture, but I was there in November and December, and could hardly form a very good opinion.

Scotch farmers in Essex.

8566. I suppose the Scotch farmers were attracted by the extreme lowness of the rent?—Yes, and the proximity to London.

8567. Would not they have done better with better land elsewhere at a higher rent?—The Scotch farmers never contrasted Essex with any other English county, but they contrasted Essex freely with Scotland, and they expressed themselves as satisfied.

8568. They fared better than they would have done if they had stopped in Scotland?—Yes.

8569. (*Mr. Whitehead.*) There is no market garden cultivation in the district you visited?—None.

8570. That would be above, at Rainham?—That would be nearer to London.

8571. However, there is none in the district you visited?—None.

Cost of wheat growing abroad.

8572. (*Mr. Giffen.*) You recommend the Commission to get reliable information upon what is the cost of growing wheat in foreign countries. Have you any information that you could give us?—No, I wish I had. The only information that I might have added to this Report if I had been called upon to do so, was that which I received from an Argentine farmer a month ago, and if his statement is true they can grow wheat at a fair profit in the Argentine Republic at a figure that fairly startled me. He said that it could be done at 20*s.* a quarter, and he could make a fair profit of it.

8573. 20*s.* a quarter in London?—Yes, he said so, and I took figures which I have in my book.

8574. You state, on page 82, paragraph 196, "At "present witnesses are not wanting who are prepared "to prove that even were the price of wheat to fall to "26*s.* per quarter, it will be grown in America and "shipped to the British market?"—Yes.

8575. You heard Mr. Clay's evidence, did you not?—I did.

8576. And it seemed rather to point to the fact that the prices would be a great deal more than 26*s.* per quarter for the American producer?—Yes.

8577. Who are the witnesses to whom you refer?—They were two gentlemen whom I met in the train between Chelmsford and Colchester, and they worked out figures—17*s.* 6*d.* was the figure of one of them, and the other was 22*s.*

8578. Do you think that at that price growers of wheat in the United States could send it to the London market?—These gentlemen came to me and said so.

8579. What is your conclusion regarding it comparing the evidence of those two gentleman whom you have heard yourself and the evidence of Mr. Clay which you have heard this morning?—I have not an opinion upon the subject, there is such an immense difference between the two that it would be almost impossible to say anything.

8580. Were they speaking of the wheat from the same localities, that is the far West?—They were talking of wheat growing states in the West, I think Dakota was mentioned.

8581. But you cannot carry the information upon the subject any further?—No, but it has made me think that I would like uncommonly well to know what they really can sell wheat at with profit.

Area of land out of cultivation in Essex.

8582. Can you give us the per-centage of land in Essex that you think is not able to pay any rent. Have you formed any calculation upon that point?—I tried, in the first place, to form a calculation, but I thought that any calculation I could form would be of no value to the Commission, so I prepared a lot of maps, or got them prepared, and they are here to show some of the land that has gone out of cultivation, and I could not think of any better way of answering a question of that kind. May I show them to you? (*The maps were produced. See map appended to Mr. Hunter Pringle's Report on Essex.*) This is known as the Dengie Hundred, and there are two or three specimen parishes taken out, and that land crossed red has gone out of cultivation.

8583. (*Mr. Chaplin.*) All the land within the red marks?—No; this is a six-inch scale, and all these fields crossed have gone out of cultivation. 20 years ago these were all in cultivation; they were then in arable cultivation. This parish (*pointing*) has not been marked; I went over a good deal of it. Latchingdon is as bad as this; I should say, perhaps, worse.

8584. But you have not had time to go over it?—This map was made for me by two gentlemen in Maldon, and they undertook as much as they could, and there is a key here which says, "At present, parti-"culars have only been obtained of the land out of "cultivation in the parishes of Woodham Ferris, Stow "Maries, north of the Hundred, and Cold Norton. "These are the parishes (*pointing*)." Particulars are

Mr. E. H. Pringle. 22 Feb. 1894

being obtained of the land out of cultivation in Purleigh, Latchingdon, Althorne, Mayland, and Cricksea, and it may be generally stated that there is as much land out of cultivation in these parishes as in the parishes above mentioned, which are typical parishes; so that you may conclude that the remarks on the map which are over these parishes, might very safely be extended over the district.

8585. (*Mr. Giffen.*) You have not reduced it to a percentage?—No, I would not like to undertake that, till the maps are completed.

8586. And that applies to the very stiff clay land?—That does; but here we will go to another union (*producing another map*). This is a map of the Chelmsford Union, and this was kindly done for me by Mr. Lawrence Marriage and Lord Petre's agent, Mr. Coverdale; this was done within the last fortnight. What is painted brown is all out of cultivation; the part marked green has been seeded down with permanent pasture seed.

8587. Is this land as stiff as that in the Dengie Hundred?—Almost.

8588. (*Mr. Whitehead.*) Have you got the acreage of the union?—It is not a whole union.

8589. (*Mr. Giffen.*) Is this particularly over a considerable part of Essex?—Yes, it is all the heavy land, it is near Canewdon; this is very stiff clay. I walked over this (*pointing*), and rode over that, and I am afraid most of it is out of cultivation.

8590. (*Mr. Chaplin.*) What area does that represent?—About 28,000 acres are represented by this ordnance sheet.

8591. In one district alone?—On this map I should think there is about not quite half of the land gone out of cultivation. In some other districts there is certainly three-fourths gone out of cultivation. This (*producing another map*) is a very bad parish. This is Purleigh; the top end is taken in in this map, and it is really almost all gone out of cultivation. These maps do not cover the whole ground. It is only districts; this uncultivated land extends over parishes that have not been taken in at all.

8592. (*Chairman.*) When you speak of the land out of cultivation do you mean that it is unlet and not in occupation?—It is occupied.

8593. But allowed to go down into grass?—That is it.

8594. Has grass been laid down or has it fallen back into grass?—Some of it has never been seeded down at all; it has been allowed to tumble down.

8595. But other portions have been laid down in grass?—A good deal of it was sown with Italian rye grass and clovers, and has not been broken up.
